To which question I replied that a system under which each individual plans for himself, his family, and his business, is not chaotic. Intelligent individuals soon learn that their own well-being depends on the welfare of others. They learn to adjust and cooperate. They take a social point of view that leads to a synthesis of their plans.

This sort of free individual cooperation is facilitated by business associations, trade-unions, and reasonable Government regulations.

One master plan, however, means subjecting all of us to a master. It means collectivism and a maximum of coercion to force each and every individual to conform to a plan in the making of which he had no part.

Free individual choice is the basis of democracy. And to have freedom, each individual must plan for himself, subject only to the limitations required by the plans of other individuals.

Then I was asked, "Don't you think that we should definitely plan for post-war participation by Government in business and by labor in management?"

Well, as implied above, I think that business must be regulated by Government, but that is not participation in business. The Government makes a very poor businessman, and the more democratic it is the worse it is as a business enterprise. That is exactly why in wartimes we give up democratic procedures in Government and make the President a temporary dictator.

So businessmen should welcome governmental regulation to insure fair competition and Government research, information, and advice. Aside from that, let the politicians have no control over business except in cases of monopoly and public utility.

As to labor participation in management, this would amount to making the workers more than laborers. It would require them to participate in business risks and to take business losses. Their time would be taken up trying to study business problems and market conditions.

NO PROFIT SHARING

The world has seen plenty of experiments with profit sharing and cooperation in production, but these have never resulted in any general success. Even in the special cases where they have been sustained they are not highly successful.

The function of business organization and direction is definitely different from the function of labor, and must have profits as a reward. To mix wages and profits does not work well.

Businessmen have been forced to learn more about the importance of labor and the rights of the workingman and his organizations. This is well. But now it seems that the laborers, in their turn, are going to have to learn more about the nature and importance of the enterpriser's function. They cannot be expected to participate in management in any decisive way unless they bear the responsibility and run the risks of business enterprise.

I conclude: Democratic government is as different from business as peace is different from war. Labor is as different from management as the big-shot labor leader is different from the average laborer.

Defense Against Chaos—Open Letter to the President

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting open letter, addressed to the President of the United States, by Harry E. Sharkey, published in the column headed "Fact and Fancy," of the June 29, 1943, issue of the York (Pa.) Gazette and Daily.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FACT AND FANCY

AN OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

DEAR MR. PRESIDENT: Speak to the American people. Congress has thrown the Nation into chaos in its mad and irresponsible efforts to destroy you.

You cannot ignore that challenge. You must take your fight to the American people.

And you must do it, not to defend yourself against Congress, but to defend the Nation against the chaos that Congress is bringing upon us.

You, as an individual, regardless of how the rioters in Congress may hate you, are not an issue in this matter. You, as the Commander in Chief of the United States Army, fighting the most desperate war in the history of the Republic, are very much an issue.

You must lead the people in the fight against those who are trying to destroy your effectiveness as Commander in Chief. You must lead the fight of the people against those who are creating the confusion that may well result in our losing hundreds of thousands of lives of American boys and possibly losing the war.

Mr. President, we in the United States have been mumbling to ourselves for a long time, "These men are not unpatriotic. They don't seek to overthrow the Republic. It is an honest difference of opinion."

The same thing was said in France just before the debacle. The home front cracked when it was discovered that the dissidents did want to overthrow the French Republic. Their price was complete domination of the French Government. They would rather lose the war and hold control of the reins of government than win the war with democratic control of the Government.

Mr. President, if you had been a weakling like Daladier, this country would have cracked a year ago, and for the same reasons.

It might well be that some of these men are not unpatriotic. Whether or not this is true, they are at least playing into the hands of those who are seeking to destroy the Nation. And they could not be any more effective if they were deliberately plotting against the Government. They, at least, are creating a state of confusion which is the kind of environment in which those who have been plotting our destruction can best operate.

Mr. President, in all the months since Pearl Harbor, those confusionists have struggled against your administration. They would vote for appropriations for the war, but they would hedge those appropriations about with conditions which impeded your administration of the war effort. Their support of you

as Commander in Chief stopped with voting appropriations. They have not even supported you on matters of providing an Army. They have made a mockery of your efforts to finance the war. They have deliberately sabotaged your efforts to prevent inflation. They have interpreted your good intentions as signs of weakness. They have deliberately wrecked the morale of the working people of this country, the people on whom we are depending to produce the materials of war. They have tried to destroy the confidence of the people in the integrity of the Office of War Information to the end that the one official source of information would become the source of doubt.

Moreover, Mr. President, the confusionists in Congress have had more than a little aid from the outside. The press of the country has never been half-way fair to you. During the period in which the confusionists were creating a lot of racket and disunity, the press has been cheering them on. The Hearst-McCormick-Patterson axis has been the cheerleader. The National Association of Manufacturers and the United States Chamber of Commerce have given aid in helping to destroy national morale on the labor front. Their agents in the war agencies, too, have thought more of laying the groundwork for control of the economy than of programming production for expediting the war.

In spite of all the efforts at confusion, in spite of all the efforts to mislead them, the people of the United States are still behind you, Mr. President. The confusion has not yet completely demoralized them. But unless you speak up and carry your fight against the confusionists to the people, your leadership as Commander in Chief will be seriously jeopardized.

Mr. President, the people are listening for your voice. And they want to hear a tough note in it when you speak.

HARRY E. SHARKEY.

The Eleventh Hour

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Jewish Comment, published by the World Jewish Congress:

THE ELEVENTH HOUR

The preceding issue of Jewish Comment noted the heightened German propaganda of Jew-hatred, the threats of reprisals against the Jews for losses by bombing and for Allied victories. The past week has demonstrated how deadly serious were those threats. In four countries—France, the Netherlands, Czechoslovakia, and Bulgaria—heavy, in most cases mortal, blows have been reported against the Jewish community. Even in this war, so weighted with frightfulness for the Jews, there has hardly been so tragic a week's news.

The occurrence of a violent turn against the Jews all over Europe at almost the same time cannot be a mere accident. It indicates that the Nazis are rigorously pursuing their purpose of completing the extermination of the Jews. Every military set-back is answered by the Germans by a renewed attack on the Jews. The time for the prevention of this horror is growing rapidly shorter. Many of those who could have been saved yesterday can no longer be rescued today; and those who can be saved today will tomorrow be lost.

The most damaging acts of brutality were committed by Germany itself in Czechoslovakia and the Netherlands. As yet unconfirmed but highly credible reports state that in reprisal for the bombing of Möhne and Eder Dams the Jewish internment center of Terezin (Theresienstadt) in Bohemia-Moravia has been liquidated. In this town were incarcerated some 50,000 Jews from Germany, Austria, and Czechoslovakia. The internees were in large part aged persons who had not much longer to live and to whom the International Red Cross was permitted to transmit gift packages from abroad. To the ordinary human mind, even thinking in purely cold-blooded terms, the deportation to "unknown destinations" of helpless old men and women, partly maintained from abroad, would seem like pointless savagery. Yet the Germans seem to have deliberately done this deed—a fact which, when it is further confirmed, ought to satisfy any questions which still may remain in anyone's mind how far the Germans are prepared to go in the plan of annihilating the Jews.

In the Netherlands last week it was reported the Germans forbade Jews to reside in the last city still open to them, Amsterdam. Temporary internment camps in the Dutch interior are rapidly being emptied of their Jews, who are being disposed of in batches in such execution centers as the notorious Treblinka camp in Poland. The day when the Netherlands will be completely "judenrein" (except for scattered Jews in hiding) is in sight, despite the heroic resistance of the Dutch. If the Germans desired only to evacuate Jews from the coastal Provinces in order to prevent them from helping Allied landings, they could have maintained the internment camps in the interior, and need not have ordered killings. Their actual procedure shows they had another purpose as well—the familiar aim of completing the destruction of the Jews in lands Germany controls.

A typically Nazi abuse of law is the voiding of the citizenship of all French Jews naturalized since 1927, which was ordered by the Nazi puppet Pierre Laval, to become effective on Sunday, June 27. To deprive peaceful, law-abiding citizens of their ultimate source of protection and security solely on the grounds of their descent is unconstitutional in France, whose legal system forbids the annulment of legally acquired rights. It is cruel and exceptional persecution of a kind practiced only by brutal and disorderly government. The mass of newly declared "alien Jews" will, of course, be treated as were other alien Jews resident in France; unless something is done to prevent it, they will be deported to areas in the east and disposed of there in the usual way.

Perhaps the most tragic case of all is that of Bulgaria. Only a few months ago, it looked as though a beginning was going to be made in Bulgaria of the evacuation of small groups of Jewish children, accompanied by adults. If successful, such a start might have led to similar projects in Rumania, Hungary, and even Italy. It would also have created a situation between parts of the Axis satellite population and the United Nations which would greatly have facilitated invasion. But this opportunity has been lost. Our information indicates that delay on purely technical and administrative matters gave Germany the opportunity to kill the project. Bulgaria has been crowded into the extreme of antihumane behavior. High officials of their Department of the Interior are reported to have stated that Jews will not be allowed to leave either for Turkey or Palestine. Bulgarian authorities, revealing the conditions in internment camps to which Jews have been sent, state that epidemics of typhus have broken out which Jewish doctors cannot prevent for lack of medical supplies. Even if the Sofia Jews are not sent to Polish or Rumanian prison areas, their prospects are grim.

What are the Nazi purposes in their implacable drive to finish off the Jews? One purpose is clear and unmistakable. They have declared the Jews their mortal enemies, and they are determined to destroy them wherever they have the power to do so. Every defeat of German arms makes it all the more necessary to hasten this operation where they still exercise power.

Another purpose is almost equally plain. For the Germans, the decision of any of their satellites to relax or increase their persecution of the Jews has a very simple but cardinal importance. They are fully aware of the effect that the imminence of invasion has upon their satellites; and they know that many of them would like to keep the door open for a graceful exit from belligerency at the "proper" moment and under "suitable" conditions. One of the methods of placating the Allies, the Germans believe, is to tone down the anti-Jewish laws. It follows, therefore, that German interests lie in the opposite direction: they must bring about a greater stringency in the anti-Jewish laws of all their associates; force them deeper into their complicity with Germany in its inhuman crimes; and thus cut off the possibility of an approach by an Axis partner to the civilized portion of humanity.

The interest of the Allies in this matter seems plain. Every success of the Germans in driving their satellites into anti-Semitic crimes is likely to increase the fidelity of those groups to the German cause on the day of the Allied invasion.

The United Nations must adopt an active policy in this matter. We are aware that the German leaders can no longer be approached in terms of the ordinary remedies of wartime brutalities. They yield only to the threat of immediate, overwhelming reprisals, without which they will not abide by any international rules concerning the treatment of civilian populations. Threats of post-war retribution do not affect them since their leaders are apparently determined to impose themselves as the lawless masters of the world or risk death in defeat.

But their subordinates and associates cannot all be megalomaniacs. Such must share the ordinary scruples and fears of mankind about the consequences of inhuman conduct. They must be brought to realize that continued association with the Axis and the mad crimes of its leaders must lead to disaster. In some cases even the governments of Axis satellites may be susceptible to pressure on this score. Certainly the past record of Bulgaria and Hungary, which have maintained the forms of parliamentary rule, justify belief that their governments will not lead them headlong and without throught down the path to destruction along which the Germans are piping them. The hour is late; and Hitler, by threat and persuasion, has neglected no opportunity to implicate all his partners in his own crimes; but it may not be too late to turn some of the Axis satellite states to better courses.

In Germany itself and in countries which Quisling leaders have sold out, there can already be no hope for anything but purely military defeat. There is nothing th eleaders in such countries can do any longer to clear themselves before the world. Their stains of guilt are too deep-dyed. It is for this very reason that they are so furiously intent on making their own guilt common to as many subordinates as possible. There is no reason whatsoever for the United Nations to accept this situation. Only those with

clean hands will help the Allied invasion; those who have been involved in guilt will aid the enemy as they have been aiding him all along. They have violated the commands of conscience and religion; they have broken with the basic rules of law and order. In defense, they may claim they have done all this not "on their own responsibility," but "under orders" from their superiors. When the time of invasion comes they will still be under orders—to resist the Allies.

The United Nations must break this fiction. An officer who assists in murder and looting, or a citizen who does not shelter the hunted and despoiled, cannot disclaim responsibility. It must be made plain that no subordinate official or private citizen is obliged to respect orders based on laws which are contrary to the elementary principles of morality and of all civilized constitutions. Any person required to assist in the enforcement of such acts must be regarded as an accomplice in treason and in the specific crimes committed; if he fails, to the extent of his opportunities, to impede or sabotage their execution. The projected international commission on war crimes must begin to list the guilt of such accomplices and to pass sentence upon them. The underground movements in Europe must be instructed, wherever possible, to assist the victims of Quislingism.

All these measures would tend to preserve and heighten the spirit of resistance in Europe and prepare the ground for invasion. The present passivity can only have the opposite effects.

War Expenditures of the United Nations

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. GWYNNE. Mr. Speaker, the tremendous expenditures involved in the present war are well set out in the figures prepared by the Legislative Reference Service of the Library of Congress. War expenditures of the Allied countries for the latest year for which figures are available approximate $105,000,000,000. Of that amount the expenditures of the United States are $67,584,000,000, or almost twice as much as all the other Allied Nations put together. The figures for the various nations are as follows:

WAR EXPENDITURES OF THE UNITED NATIONS

1. AUSTRALIA

Year ending June 30—	Original currency	Exchange rate	United States currency
1939	£A9,974,000	$3.71	$37,004,000
1940	55,715,000	3.29	183,302,000
1941	170,828,000	3.23	551,774,000
1942	319,500,000	3.23	1,031,985,000
1943	[1] 359,970,000	3.23	1,162,703,000
	[2] 440,000,000	3.23	1,421,200,000

[1] 8 months through Feb. 28, 1943.

Our Post-War Policy

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which recently appeared in the Chippewa Herald-Telegram, Chippewa Falls, Wis., commenting on the address recently delivered by the Senator from Wisconsin [Mr. WILEY] before the Republican convention in Appleton, Wis., referring specifically to the subject of our post-war policy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR POST-WAR POLICY

Senator WILEY, in his speech at the Republican State convention at Appleton on Sunday, stated his own position on American post-war policy in forthright language.

Shortly after he concluded his address the convention, itself, adopted a resolution which squared with the Senator's position in every particular.

Senator WILEY said:

"In the field of world affairs the Republican Party proposes that never again will the American people be compelled to face with so few weapons such deadly danger as struck out at us on December 7, 1941, at Pearl Harbor.

"The Republican Party proposes that never again shall the United States undertake any international commitment without the necessary Army and Navy and Air Force to make the commitment good.

"Let me make this point clear:

"The Republican Party will continue to lend its influence to any real program of world disarmament. That is in the American tradition. The American people have never and do not now love armament for its own sake. But we do love this land of ours. We do love our freedom. We do love our children. That is why we must never again invite such deadly risk as we invited a year ago last December. That is why we must never again send out our sons as gallant expendables to buy time for us on some future Bataan or Wake Island or Guadalcanal.

"And finally:

"The Republican Party recognizes that as one of the major nations of the earth, the United States must accept a major share in helping to restore and preserve international law and order in the post-war period.

"The Republican Party proposes that the people of this country stand ready to join all like-minded peoples in seeing to it that never again shall any gang of national savages and international outlaws be permitted to destroy the peace of the world in a lethal challenge to every standard of human decency which the nations of the earth have raised up through 3,000 years of slow and painful and persistent effort.

"The Republican Party proposes that a strong America shall be a strong champion of international justice; that a purposeful America shall help weave the pattern of a durable international peace; that an America aware and confident of her own great future shall help relight the lamps of freedom for all the groping nations of men.

"The Republican Party insists that all this can be done without the sacrifice of any vital American interest or the undue expenditure of any American wealth or the yielding of any sovereign American right.

"Only men of good will and nations of good will can build a world of good will. Our fighting sons have proven to us that, with proper will and purpose, a way can be found no matter how beset with hazards. We must prove to them in turn that we are worthy to be their fathers and their mothers."

The resolution, adopted shortly after the Senator concluded his address, reads as follows:

"Whereas the United States has become involved in two great wars within a quarter of a century; and

"Whereas it is a matter of record that, in the earlier years, before each war this country followed a policy of strict international neutrality; and

"Whereas it is also a matter of record that even in the years immediately before each war, this country still clung to this policy until in each instance our National Govern-

ment became convinced that continuation of the policy would gravely endanger our national security; and

"Whereas in the years before each war, and indeed during all our national existence, the United States maintained such a minimum of armaments as to make it obvious to all the world that we had no designs of any sort against other nations; and

"Whereas it is now obvious that our previous policies of neutrality and minimum armaments have failed: Now, therefore, be it

"Resolved by the Republican Party of Wisconsin in convention assembled, That it is our considered conviction that at the conclusion of this war the United States must cooperate actively with all other like-minded nations in an effort to preserve world peace; be it further

"Resolved, That the Republican Party of Wisconsin believes that world peace can be best assured only when sovereign states, while preserving their own full sovereignty and their own essential interests, find common ground on which to work together.

"The Republican Party of Wisconsin believes this common ground can and must be found and an international reign of law and order developed; be it further

"Resolved, That the Republican Party of Wisconsin believes that in the immediate post-war years, and until such time as international relationships become beyond all question orderly and secure, the United States should maintain such armaments as will not only enable us to discharge our international obligations but will assure our national security."

Both the Senator's speech and the resolution which followed it place Wisconsin Republicanism squarely on record in favor of a realistic approach to post-war conditions.

It should be obvious to all that in the dangerous post-war world only a strong America can be a secure America, and only a strong America can discharge our international obligations.

It should be obvious, too, that there can be no real peace unless a common ground can be found on which to build it. And although neither speech nor resolution said so, it seems to us that the only way to find a common ground is to clear away the obstacles which now clutter the approaches to it. This can best be done through a series of treaties between the major states of the United Nations. We say "treaties" advisedly, because a treaty is not a surrender of sovereignty to some superstate; it is an agreement between sovereign states. The treaty approach is the only realistic approach because it is specifically designed to remove obstacles to a mutual understanding and to remove them obstacle by obstacle.

Only through the removal of obstacles, only by the elimination of frictions and differences, only through the organization of the strong in the interests of international order can a reign of international order be assured.

To close our eyes to these obstinate facts is not to assure peace; it is to invite chaos.

A Plea for Post-War Employment

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carl A. Gray, president, the Grenby Co., Plainville, and former head of the Governor's employment commission:

A PLEA FOR POST-WAR EMPLOYMENT

(By Carl A. Gray, president, the Grenby Co., Plainville, and former head of the Governor's employment commission)

In all public discussions, so far, of plans for a post-war world, the vision of most statesmen seems to be focused on lands far off. Perhaps this is only right and proper, for the future welfare of the United States and its prosperity may well be dependent on the welfare of the Chinese or the Algerians. However, there is a real danger that in our zeal to remake the pattern of our international relations, we may overlook some of the realistic problems at which we must ultimately come to grips here at home. Not the least of these is the readjustment of several million young men back into the civilian economy at a period when most of our important industries will be struggling to resume peacetime production. Moreover, it will be necessary to retain many who are now making high wages and think they are skilled.

Unpleasant memories dim quickly, and there are few people today who have a keen recollection of the maladjustments, the injustices, or the real harm that was done to citizens subsequent to the last war by our unpreparedness for peace. Perhaps those who were shoved unceremoniously back into civilian life can remember and there is no doubt in my mind that the clamor for bonuses and special favors arose from the fact that no definite plan for readjusting these men to civilian life had been made. The shout for a bonus was a cry, a protest against a society which had used men—and yet gave no thought to them when they had returned.

This time, we may be sure, we cannot, with safety to our form of government, tell these men to sell apples, nor can we insult them with made work under the name of Work Projects Administration or any other label. National programs will say "jobs for all," to which I agree, but all must be qualified to take those jobs or else we will have coddling, and private initiative will die out. We must not promote wards of the state.

What I suggest is a plan for absorbing these men back into productive society with the least pain to them and with the most profit to society. This plan is not based on nebulous thinking but on practical experience and insight I have gained by studies into some of the unemployment sequels of the last war.

A few years ago, when the State of Connecticut was trying to find a solution to the problem of unemployment, an analysis was made of the educational and vocational background of those who were without work or income. Starting out as an effort to solve the unemployment problem of the man over 40, the scope of the inquiry was soon expanded.

Tragically enough, it was soon discovered that these men were unemployed because they had nothing to offer that had present value. They had no trade, skill, experience, or training for anything that American industry needed. The fundamental prejudice was not against men over 40 but against men over 40 who had no training.

Of the employable unemployed between the ages of 16 and 26, untrained and inexperienced, there were few, indeed, who had ever held a real job in their lives—young people unable to get any job requiring experience, young people of whom it could truly be said, "They haven't had a chance." Many of these youths were only 9 or 10 years old when the first great depression started, and these had only heard of relief payments at home. These were about one-third of the unemployed.

Another third were "skill rusty" older workers; men who had formerly worked as artisans but who had been away from their trade so long that their touch had been blunted and their reaction slowed down.

To meet this situation manufacturers of the State were queried to find out what kind of tradesmen were most needed, and having gotten this information a start was made in training these groups for specific job families. This simple formula requiring only a small expenditure, soon became known throughout the country as the "Connecticut plan."

At first blush this may seem to have no relation to the problem we are going to face in the post-war era—but the facts are analogous. Going into the Army now are young men who are fresh from school; others have been in business or industry for too short a period to have developed a skill. Normally, these next 2 or 3 years would be the period of discovery, placement, and experience. Because of the unrealistic type of training most of these boys have received in our high schools and colleges, they are unprepared for work on leaving school. Their actual scholastic training ordinarily, in the course of things, is leavened by work experience, which makes them a salable product on the labor market.

We are plucking from these lives now this period of orientation. When our boys return to civilian life after the Army, they will be mature—indeed with an accelerated maturity. They will be restless, a little bitter, but still without the fundamental sales qualities which will make them easily placeable in a highly competitive society among older men and women who have learned to work productively.

But these men must be fitted back or we shall reap the whirlwind.

PSYCHOLOGICAL WAR MUST BE WON

It is my suggestion that in our conversion to peace we utilize the machinery of war, and with a disregard for cost, on a scale of actual warfare. Make no mistake about it—when peace comes we shall be waging another kind of war—a psychological war for the preservation of our American way of life here at home. To meet this threat we must keep our resources mobilized and working cooperatively.

The machinery of a broad selective service, the technical, professional resources, the expenditure of money, should be maintained—the machinery, however, thrown into reverse and utilized for the replacement of these men back into civil life.

If a country can take a man from a job or from school, submit him to intensive medical, physical, neurological, psychological, psychiatric, and vocational interview; train him at great expense over a period of months; equip him with the best to muster him into military service—then that same country must have the imagination and the courage and the willingness to bear great expense, to do the same thing in mustering that man back into civil life.

To repeat the errors of the hastily contrived honorable discharge, the parades, the homecomings, and then the bleak days and weeks and months seeking employment is to court disasters far worse than a march on Washington for a bonus.

Fortunately, the exigencies of war have provided the very machinery we shall need for such a peacetime conversion, with one notable exception. When the Army organizes for battle, it provides a bill of specifications; it orders so many cooks, so many tank drivers, so many infantrymen, so many medical men, so many Signal Corps men, and so many artillerymen. Then the manpower group, through selective service, sets out to provide the trained material. Requisitions are made for the number and the kind of men who are needed.

It is possible to forecast trends in business. It is possible to forecast manpower needs, even in specific categories. Not only is it possible, but it is being done every day now.

Why should the adjustment, the training of new entrees into the business and commercial world in peace be left to chance, when in war it can be done so specifically? Men are being chosen every day in the Army for the Air Corps, to drive a tank, for the Adjutant General's Office, to become cooks, infantrymen, or to go to Officers' Candidate School. By reversing the process of selective service, we can make those things come true in civil life; we can say with a degree of certitude that a great many cooks, truck drivers, tool makers, school teachers, lawyers, physicians, clerks, or textile machine operators are going to be needed in a certain area. Then we must proceed to train our demobilized troops who are not definitely and certainly tied in with a job or a business.

Many, through former connections, family, or friends, will slide back noiselessly into civilian life, but our attention is focused on those who would otherwise be left adrift.

They must get as thorough a going-over as they got when they went into the Army. Their vocational interview must be no cursory thing. It should last for an hour or for a day if necessary; aptitude tests must be given; trained employment interviewers and psychologists must consult with the soldier, talk to him about his plans, and steer him into the right kind of training. It must be done well.

The man with an I. Q. of 155 must be discouraged from seeking retreat into a menial job, and the I. Q. of 75 must be dissuaded from trying to study medicine.

Impossible, you say? It is being done today. It was done yesterday. It must be done tomorrow. The weeding process is going on in every Army reception center of the country. The machinery is here waiting to be used.

Industry may need some help, too. Industry should be encouraged to convert to peace, so that it can help our young men to be converted to peace.

All we need to do is reverse the process from ingress to egress. Going out of the Army should be as meticulous a process as going in.

Should Government subsidize veterans so that they may get their training for civil life? Yes; and why not? Government trains and pays men to learn to kill. How much better to pay them to learn to live and to produce for our general welfare. Where would these men be trained? Where are men being trained now? In every conceivable wartime trade—these training centers could easily be converted to peacetime pursuits.

NO POLITICS HERE

Costs a lot of money you say? Has anybody so far squawked about the cost of the war? Has anyone objected to a small subsidy to either a key manufacturer or an embryonic officer? All this plan needs is a readjustment of thought so that we can maintain the eye-on-the-goal type of thinking that persists in wartime, and which lapses into selfish indifference and pinching pennies in peacetime.

This is no political program. There is no place in it for professional politicians who have their eyes on higher rungs of the ladder. This is a program for trained technicians and professional people, just the same as running the Army and providing it with trained personnel and finished material is no job for politicians.

HOW PLAN WOULD WORK

How would it work? Well, let's take Bill Jones. They took him into the Army after he had finished his third year in high school. Bill was taking the commercial course, hoping some day to work in a bank or insurance company. He played on the football team at school, and when he got in the Army certain qualities of leadership developed. He got to be a corporal and finally went to officers' candidate school. Perhaps when the war ends he will be a sure enough captain with a good record.

Should Bill go back to high school? He's only 22 now, but he has the maturity of a man of 30. He has been through things, and has assumed responsibility. Should he be a bank teller, or an insurance clerk, working 40 hours a week at $40 and with no responsibility for people?

Taking up the thread of our hypothetical organization: Bill is once again processed before being returned to civilian life. When the results come in Bill finds he has an I. Q. and a personality that warrants aspiration to a much higher level of society than to which he had aspired. He is given his choice. He can go through medical school; he can go to a school of political economy and civil administration. Bill chooses to be a doctor because, as he says, at the interview when the facts are presented, "That's what I always wanted to be—a surgeon, but I knew I could never make it because I never had enough money."

The Government pays Bill's tuition, and his room and board—and pays him a salary. Experiment? It has worked out well in at least one country. Bill will contribute eventually more than he got.

Take another case, also hypothetical: That of Trumbull J. Hooker who was drafted from his second year in Yale Law School, entered the Army, sure that in a matter of weeks he would be a major at least, but who finished the war as a buck private in the tank repair division. He would have been a sergeant at least if he had shown as much interest in his fellows as in the transmission of tanks.

The interviewers tell him kindly, "You don't want to be a lawyer. Your people want you be one—but you know a whole lot more about gears and such stuff than you do about people." Then they point out that Litchfield County, where he would expect to resume life, is already overstaffed with good lawyers. "But there is a crying need for men who have a feeling for machines—now we'll put you through school and find a place for you."

On a slightly lower employment level, we find the ordinary guy who has been driving a truck when he should be selling shoes, or real estate; the machinist who should go to a good plumber and get an apprenticeship; the tough, rough, embryonic fireman on the railroad, who is told that his aptitudes are along mathematical lines, and why doesn't he take this special high school course to prepare him to be an expert accountant? These problems can be, and should be, met.

Turning the wheels of selective service into reverse should be done the minute we have an army as large as we need, and long before peace is a prosaic, hackneyed fact. This reversal needs to be done in advance for the same reason that it is important to seed your lawn with a good grade of grass seed before the weeds get strong. Unless, through a combination of government and those pariahs who are now being suffered to operate making war goods (the industrialists), there is a definite plan to greet the American soldier, he will have a good reason for turning with anger against both.

The lack of a definite plan here at home, the lack of a definitely planned reception of our soldiers, will mean the sprouting of "isms" and crackpot "causes" that may plague America and Americans for at least a generation.

I remember very well my own discomfiture, disappointment, when more than 4 years ago I wrote to a high Government official, now a Presidential adviser, in an attempt to suggest that the unemployed should be given specific training rather than allowed to drift on Work Projects Administration. We had a shortage of skilled hands even in the 1930's but, even so, in reply I got a curt and evasive reply from his secretary. It seems this great social thinker wasn't interested.

However, we went ahead and the original Connecticut plan for training machine workers was at the disposal of Federal authorities more than a year before Washington saw the need. This training program was set up and operating long before this Government got into the war, thank God. When the war started, the program was already turning out 1,500 qualified beginners for industrial jobs every 5 weeks (over 45,000 today in Connecticut). As these workers were trained, our eyes were on the rest of the country where many people raked leaves and complained of what the country should be doing for them. We were then training people to do something for the country. There was no high-paid staff. The work was being done by volunteers, with a total cost to the State of less than $1,000 in 2 years.

In our plans for the future (now that men's minds are absorbed with war) there must be a few who are concerned with peace and the reconstruction. I do not disagree with Mr. WALLACE and the need for milk for the children of all the world. But I do insist that, here at home, we must get our house ready for the homecoming: The program should include no apples to sell, no leaves to rake, no $150,000 fly casting pools to build, all eked out expensively at the high cost of another Work Projects Administration.

Are we ready for this homecoming? Are we making our homeland a place where our boys can pick up the thread of their ambitions, their dreams, to prove that America not only offers a promise but a fulfillment of that promise?

THE FRAMEWORK OF THE PLAN

Reduced to the barest details the post-war manpower rehabilitation plan for returning servicemen may be broken down into seven sections, or groupings, as follows:

1. All men returning home who have their previous jobs back and wish to return to those jobs would be released from the armed services. Those who believe they would prefer to get into other work, or if they did not have jobs, would stay in the Army.

2. The Army then, in cooperation with existing agencies and personnel, should start making a complete analysis of its men.

3. A corps of trained experts would be assigned to each camp to begin the work of interviewing, checking records, and analyzing—testing each man. This cannot be any cursory interview. It may take hours or days of study. The experts would be made up of experienced men and women trained in their respective fields, knowledge of skills required in each of the many industries. For example in guidance and knowledge—vocational education—occupational therapy, personnel administration, psychology, psychiatry. Tests would be given each man, and the combined judgment would be filed. These people must have a knowledge of the skills required for industry, business, agriculture, and the many occupational fields.

(While mistakes can be made and it is true that misfits have been put in many of the wrong places while going into the armed services and particularly in some of the War Production Board jobs, nevertheless this job can be done a lot better if we really get people to do this work who know their business.)

However, as a check against the I. Q. tests and the interviews and the decision to guide a person into certain occupations, if this corps of interview experts makes mistakes it may be checked by the next step which is the vestibule schools.

4. Vestibule schools would be set up on a regional basis. While the man is still in the Army and under Army supervision he is transferred to the regional vestibule school. His Army pay continues and he has barracks

at these schools—or places approved by the Army where he lives.

At the regional vestibule school he has an opportunity to try out one or several of the occupations which he has chosen or been advised by the guidance experts to try. Those courses are perhaps not over 6-week courses. He may decide or his instructors may decide in this short-term course that he is a misfit for that particular work and he tries perhaps another 6 weeks' course in the regional school where he finds he is enthusiastic about the work. Also he is closely watched and rated by his instructors and if they approve he carries on. (For example, in our 200-hour mechanical job training started under the Connecticut plan, we found in a few days whether or not a man had any mechanical ability. This was because our instructors were men from industry and knew their job. They could spot a misfit in short order. Not all vocations are as easy. However, if we succeed in steering 75 percent of our men in the right direction the plan will have been worth while.)

5. Once the man has been graduated from the vestibule school and passed by his instructors he then goes to a special school. He can be graduated ahead of time, and, with the approval of his commanding officer and instructors, sent to the special school which gives him a basic training in the occupation he has chosen. His expenses and traveling expenses are to be paid just as if he were to be shifted from one post to another in the Army. The length of the course at the special school of training may take anywhere from 6 months to 2 years depending on the type of occupation.

If a man had been just examined by the guidance experts and found to have the ability and background he might not go to a vestibule school but directly to, for example, a technical college where he is given 2 or more years professional training. He would have had to be found extremely able to make this jump, just as the man who thinks he is able will have to be persuaded to go to a vestibule and thence to a special school that would give a training in skills that do not call for college grad ability.

6. From the special school of training the graduate would then he ready as a beginner in whatever occupation he had chosen. When the man is placed upon graduation from the special school of training he is then released from the Army.

7. A record and follow-up would be made of each man so that any elements found lacking in his basic-training courses could be changed to correct any future errors.

The Origin of National Rural Electric Cooperative Association

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Judson King, director of the National Popular Government League, entitled "What Is the True Origin of N. R. E. C. A.?"—the National Rural Electric Cooperative Association. The document is a very interesting one, and I hope it will be widely read.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Public Utilities Fortnightly, Washington, D. C., of July 8, 1943]

WHAT IS THE TRUE ORIGIN OF NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION?

IS THE RECENTLY FORMED NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION TRULY REPRESENTATIVE OF THE GRASS ROOTS IN THE RURAL ELECTRIFICATION MOVEMENT? WHY ARE ATTEMPTS BEING MADE TO EXPAND THE CO-OP PROGRAM BEYOND THE PRIMARY OBJECTIVE OF BRINGING POWER TO THE FARMS?

(By Judson King, director, National Popular Government League)

Since mid-May the executive officers of the recently created National Rural Electric Cooperative Association have been conducting a campaign against Administrator Harry Slattery, of the Rural Electrification Administration, demanding his removal from office.

Coming so soon after the first national convention of the association in St. Louis in January, where the Administrator made an address, and where relations appeared harmonious, the assault—for assault it is—has caused surprise and concern for the future of Rural Electrification Administration. This agency is rightly acclaimed as one of the finest and most needed achievements of this administration. In private and public utility circles alike, Mr. Slattery is known as a "straight shooter." His integrity is unquestioned. Every right-thinking citizen wants to see Rural Electrification Administration, Tennessee Valley Authority, and like agencies kept out of politics and free from self-seekers, without and within. This episode is creating misapprehension and confusion everywhere. Its cause lies in an unexpected quarter. It involves not only the future of Rural Electrification Administration and the farm cooperatives, but clean government and honest administration, especially where governments—municipal, State, or National—are operating enterprises involving electric power. It is important that the people and State and Federal officials, as well as private utility executives, know the truth about this matter, and now.

Since the Public Utilities Fortnightly has a national circulation in official circles, I am glad to contribute an article to the Fortnightly forum on this controversy, as I have in the past on other disputed issues.

The St. Louis convention of the National Rural Electric Cooperative Association challenged the attention of the utility world, as indicated by Mr. Farrar's article in the Fortnightly of May 27. What did the newcomer actually signify and what was really behind it? Public power people took it to be a genuine rural grass-roots organization, inspired, organized, and controlled by the cooperatives, that was formed to defend the co-ops against attack from without and to speed up rural electrification after the war.

Private power people and politicos saw in it also, among other things, the possible makings of a political machine instigated in fact, if not in theory, by the Roosevelt administration, which would be useful in congressional elections and the Presidential contest of 1944, in addition to unwarranted and ill-advised invasion of the domain of private enterprise outside the utility field.

The truth is that neither of these assumptions is correct.

The association was not inspired by Administrator Slattery, Secretary Wickard, and certainly not by President Roosevelt. The evidence herein presented would indicate it is primarily the brain child of one man—Robert B. Craig, a deputy administrator of Rural Electrification Administration up to his resignation on May 6.

Many of the activities of the high-powered executives of the association, working in close cooperation with Mr. Craig, are just as much a surprise to the high officials named and will be to the distinguished gentleman who spoke at the St. Louis convention and to myself, as they doubtless were to the members of Chairman TARVER'S subcommittee in charge of agriculture's appropriations who inquired how this new association happened to happen.

To make my position clear at the start, I have advocated rural electrification since the struggle over Muscle Shoals, resulting in Tennessee Valley Authority, began in 1921, I have been special consultant on power policy to Administrators Carmody and Slattery since 1937. I believe in an organization of the Rural Electrification Administration co-ops from the bottom up—and not from the top down—and hoped this might be carefully managed and become one.

THE OFFICIAL THEORY OF 1943

Steve C. Tate, president of the association, in his address at the St. Louis convention, gave an official account of its origin. He began:

"The birth of your association is almost like fiction. As a result of copper hearings during the months of November and December 1941 before the Tarver subcommittee of the House Appropriations Committee, there were those of us from all sections of the country, who had the pleasure of meeting and exchanging views as to the Rural Electrification Administration program and, growing out of this meeting, there was expressed a feeling from all parts of the country that a national association of the cooperatives would be an ideal means of fighting for, and the mutual protection of, all the cooperatives since it was evidenced at the congressional hearing that there was a concerted private utility opposition to our program." (CONGRESSIONAL RECORD, March 5, 1943, p. A1054.)

The impression here given is that cooperative leaders from the country themselves got the idea of this association in December 1941. (Note the date.) To say the least, Mr. Tate's historical account needs to be supplemented.

DEPUTY CRAIG'S PLAN OF 1940

John A. Becker is a substantial businessman of Hartford, Wis., and director in several companies. For many years he has been an advocate of rural electrification and became a strong supporter of Rural Electrification Administration. He was director of rural electrification for the State under the governorship of Phil La Follette to August 1938 when the Wisconsin Development Authority was created. He was its manager until July 1940 when illness forced him to resign. He is still a director.

Some 5 months later, on Saturday afternoon, December 14, Becker, in Washington on business, was invited by Mr. Craig to meet him at a luncheon conference. It lasted nearly 3 hours. At that time Craig outlined a scheme for organizing Rural Electrification Administration co-ops on a national scale which he was promoting. He tried to enlist Becker's interest, insisted that they keep in touch, but did not offer him a position at that time. Later Craig instructed a Rural Electrification Administration official under his jurisdiction to interview Backer and offer him a position with the Rural Electrification Administration. Becker was not interested, however, although he was not aware that the offer was made at Craig's direction.

Three days after this conference Becker wrote a memorandum on the substance of Craig's talk, in which he states, "To me the scheme looked very sinister, unscrupulous,

and politically corrupt * * * [and] I am just putting it in type for future reference."

This document, known to but few, and never published, is before me with the author's permission to quote therefrom. The following will show that Craig's plan, then outlined, is in the main essentially of the same pattern as the association now operating and which President Tate reports in effect was originated by himself and other back-home cooperators a whole year later.

Ambition, tutor, and tactics

Mr. Becker records that Craig first told him of securing the discharge of certain head men in Rural Electrification Administration who had refused to cooperate with him. He went on to say that he had learned his politics right in Columbus, where Harding was nominated and from whence the United States was run for some time. Craig said his tutor was Harry Daugherty, who was the smartest politician of his time, and from Daugherty he had learned that in public life you either had to rule or be ruled, and that he made up his mind when he came to Rural Electrification Administration to run it. He said he was running it from within, but if anything should come up that he could not do so he would run it from without.

It will be remembered that Harry Daugherty was the leader of the famous "Ohio Gang" of the 1920's and was Attorney General under President Harding.

Personal control and how exercised

Mr. Becker wrote that Craig then proceeded to elaborate on his plans and described a method of greatly reducing rural electric rates, for which he claimed to have secured support in high places. Craig said in substance that this would be a spectacular plan, would get a lot of publicity, and make friends among the cooperatives. Cashing in on this popularity and confidence, purchasing groups would be set up.

These groups will send to the central group all their orders for appliances and equipment and the central organization will buy from the manufacturers on bid or negotiated basis and send merchandise to the groups, allowing them a small commission, but they would sell to farmers at a considerably lower figure than other retail outlets. Payments would be extended over long periods at about 4 percent. These groups would be their most important and loyal contacts with the public, and absolute control over them would be secured through the commissions on merchandise. These local groups would be allowed to collect from 25 to 35 cents from each member of the cooperatives, of which 10 cents would be remitted to the central organization. This would give the central organization, which Craig proposed to control directly or indirectly, $100,000 from membership fees alone. The country would be regionalized into 10 regions and staffed with personnel absolutely loyal to himself. This would give him absolute control of the field from the organizational, economic, and political angles. There would be no whisper in the field that he would not hear.

POLITICS AND CAMPAIGN FUNDS

Mr. Becker records that Craig went on with his elaboration and explained that through these purchasing groups and the central organization he and his associates would be in a position to control many congressional and several senatorial offices. They would have 1,000,000 members, which means about 4,000,000 votes. Further, they would have manufacturers doing millions of dollars worth of business with them, and during campaigns they could raise lots of money for their political friends from these sources. Craig explained that, as a matter of fact, the purchasing plan itself would be set up in such manner as to allow a certain percentage of sales for campaign purposes and boasted that with 4,000,000 votes and several hundred thousands in campaign funds, they would maintain in public office enough friends that even the devil could not hurt them.

Craig's machine

Mr. Becker records Craig's description of the methods he intended to employ to accomplish his ends. His memorandum goes on, in effect, to state that Craig told him that he, Becker, must realize that to accomplish this program he would have to have in the organization people who were loyal beyond any possibility of a doubt and who were able (the organization appeared to include people inside as well as outside Rural Electrification Administration). Craig said he would have to have the same type of people in the field (as in Washington), and that is where the hard job would come, because outside people could not be watched closely like those in the office; but Craig was sure that he would have that part of the organization working satisfactorily. He urged Becker to keep in touch with him and said that so-and-so had assured him Becker was reliable.

Mr. Becker's prophesies

Concluding his "Transcript of Conversation," as he heads this remarkable memorandum, Becker notes that on returning to his hotel he told a friend:

"Without going into details, that Mr. Craig intends to run Rural Electrification Administration for some time to come, either from within or without."

He adds:

"Allowing the so-called 'State-wide' or purchasing groups to tax members for the benefit of individuals who will run these groups, he will have their support. Political manipulations of farmer votes are a matter of disreputable record of many pseudo farm leaders. I can see that Craig, if permitted to carry his plan through, may become one of the moral menaces of Rural Electrification Administration and our political and social well-being. Yet, what can I do?"

Had this memo been given publicity at the time it was written, it would have appeared preposterous, since Mr. Craig had a general reputation of being an able, forceful, loyal, hard-working Deputy Administrator, enthusiastically devoted to the Rural Electrification Administration program and public power generally. Becker, himself, thought it might be a "pipe dream," but the astonishing fact remains that Craig has apparently put over much of his plan by essentially the methods he described to Becker.

THE NATIONAL IS INCORPORATED

Fifteen months later, on March 19, 1942, the National Rural Electric Cooperative Association was incorporated in the District of Columbia by 10 men who named themselves its board of directors. These gentlemen, while connected in various capacities with Rural Electrification Administration co-ops in their respective States—some being employees, others members of co-op boards—were not sent by the co-op or State co-op organizations to Washington to start a national association. It is now known that they were acceptable to, if not selected by, Deputy Craig. Indeed, several persons are unkind enough to assert that they were handpicked.

The next day a reception was held at the Willard Hotel. Testifying before Chairman TARVER'S subcommittee on agriculture appropriations on March 3, 1943, Mr. Craig said, "I attended, on invitation, the meeting when the directors came to Washington. They invited Members of Congress, the Administrator, and myself. I think they invited the Secretary of Agriculture to a meeting here at the Williard Hotel." (Hearings, p. 1244.) Senator Norris and Representative RANKIN, among others, attended. Thus the National Rural Electric Cooperative Association got off to an auspicious start under the apparent aegis of official Washington, including the two most distinguished proponents of rural electrification in Congress. These names they could and did use as their sponsors and inspirers.

Administrator Slattery had not been consulted and knew nothing about the incorporation of the new association until invited to attend the reception at the Willard. The writer was likewise in the dark. When he asked Deputy Craig concerning its origin, Craig definitely stated that he did not know, that it was the work of the farmers, and gave the impression that he was as much surprised as Mr. Slattery and the writer.

A vigorous membership campaign was launched, with the incorporators paying their own expenses at the start. The cooperatives were solicited by letter and personal visitation. President Tate, in St. Louis, reported that he traveled 30,000 miles and covered 30 States. Deputy Craig was also active behind the scenes.

After Congressman Clyde T. Ellis, of Arkansas, lost his race for the United States Senate that fall, he was made executive manager. Mr. Ellis had introduced the Arkansas Valley Authority bill and was known throughout Washington as a sincere fighter for rural electrification and public power. He and Craig were close friends, and still are. His reputation was a strong factor in inspiring the confidence of the farmer members of the co-ops and the power bloc in Congress in the new association.

In the canvass, as was right and to be expected, chief emphasis was placed upon the purpose of the association to fight the Power Trust. The farm cooperatives had long felt the need of united effort for mutual protection because most of them had suffered from opposition.

Next came plans for reducing insurance costs, a new safety program, cheaper appliances and equipment, and a national magazine.

ST. LOUIS CONVENTION

Came January and the spectacular St. Louis convention, where increased confidence was inspired by the character of the chief speakers and further emphasis on the need of protection.

It is small wonder that the public and even official Washington was confused, failed to distinguish between the Rural Electrification Administration, the administration, and the new association. It appeared at first that the latter was a child of the administration and Rural Electrification Administration, and the whole affair a family birthday party. Why not? The promoters had secured letters from the President and the Vice President; Secretary Wickard also sent a message, read by Administrator Slattery, who made an address. Secretary Ickes wound up the rogram with a night address; Chairman Olds, of the Federal Power Commission, and Director Pope, of the Tennessee Valley Authority, were speakers. Senator Norris made an address; Representative Rankin sent one to be read; Senator Russell was a speaker; also two Republican Senators, Mr. Aiken, of Vermont, and Mr. Butler, of Nebraska.

The subject of Deputy Robert B. Craig was Rural Electrification Administration and Tomorrow. President Tate spoke on Progress of the National Rural Electric Cooperative Association to Date. Executive Manager Ellis explained Why We Are Here.

The major theme of the convention was reflected in newspaper headlines—"Electrifying every farm is keynote here"; "Norris relates a never-told story of Rural Electrification Administration"; "Ickes denounces 'selfish patriotism of money' of private power interests." All of which was normal, exactly what the public power forces of the Nation would expect and approve, and which certainly expressed the will of the thousand and more earnest, honest, farm co-op people in attendance.

It needs to be pointed out, however, that what brought over 1,000 delegates to St. Louis at that time at the expense of their local co-ops was, not the association, but a Rural Electrification Administration "food-for-victory war conference." This was held at a hotel on January 21–22. By holding its convention on January 19 and 20, the association got the benefit of the whole attendance, since most of them came 2 days in advance to attend both events. Not more than one-third of the auditorium audience were delegates to the association convention.

As a boost for Rural Electrification Administration and public power, the National Rural Electric Cooperative Association affair was helpful and a great success.

But, there was something else afoot—unknown to the distinguished speakers, the audience, and, my guess is, even some of the incorporators. Suppose Bob Craig had set forth in his speech what he had told to Becker?

The fact is that a majority of the co-ops would have preferred a national association which grew, as they express it, "from the bottom up." They do today Many of them feared the possibility of manipulation by a small coterie in this venture being promoted "from the top down." But this, of course, is exactly what Craig wanted, as revealed in the Becker interview. The existing board of directors was officially elected, with some changes. Reports were made and business transacted since when the executives, in speeches, letters, and official bulletins have constantly impressed on the members that "this is your organization." The high-powered campaign proceeded under its supposedly high sponsorship; many of the hesitating grass-root cooperatives, but by no means all, went along, joined up, and waited for future developments.

When Mr. Tate started his membership drive after incorporation in March 1942, Deputy Craig got busy in the Rural Electrification Administration. His first lieutenant was the late Charles O. Falkenwald, chief of the Division of Applications and Loans, which was directly under Craig's supervision. Here Craig had the loyalty and ability he desired because "Charley," as he was affectionately known, honestly believed in the plans for the new organization in principle. There came a time, however.

It is known (and investigation would establish) that, true to the tactics revealed to Becker, Craig built up a personal machine among the home office and field personnel of the Rural Electrification Administration and also among the cooperatives. These kept him constantly informed and used their influence to urge the co-ops to join the association. This despite an order issued by Secretary Wickard on July 22, 1942, forbidding employees to take part in "promoting" the National Rural Electric Cooperative Association. This was in accordance with a general rule of the Department prohibiting employees from promoting or aiding membership campaigns in general farm organizations. The Craig following naturally wanted him to become Administrator and Craig was willing. It is my opinion that he even had such ambition at the time Slattery was named Administrator.

Always pleasant and captivating in manner, Craig could be quite bluntly forthright when he encountered opposition.

Recalling Craig's idea of tapping private corporations, it is interesting to note that Tate and Ellis were apt pupils. The St. Louis Sunday newspapers for January 17 preceding the convention carried an impressive, full-page ad inviting the public to attend, with cuts of five of the distinguished speakers. At the bottom we read: "This advertisement sponsored by manufacturers and distributors of electrical equipment and appliances." Contributions were solicited, not volunteered. Some responded, others did not, but that is another story.

When Mr. Craig himself described the pretentious magazine the association proposed to publish with a prospective circulation of 1,000,000 copies monthly, I asked him, "Bob, how pay for all this?" He replied, "Advertising." I answered, "No. Better publish a 12-page mimeograph sheet than put your necks in that noose." And the fight was on.

THE INSURANCE PROGRAM

The war and priorities forced a postponement of the plan of Becker of setting up appliance and equipment purchase concerns as subsidiaries controlled by the central organization, and insurance took first place.

It had been made a main sales feature of the membership drive. Everywhere it was assumed the set-up would parallel the no-profit-to-anybody Rochdale cooperatives, or mutuals, with which farmers are familiar.

But here again Mr. Craig had been quietly in the lead with his own ideas. Max M. Drefkoff has been head of the insurance section of the cooperatives' operations division of Rural Electrification Administration. He did the spade work for Craig on the insurance scheme. He was recently suspended for insubordination and other reasons. A statement by John Carson, submitted personally and not for the Cooperative League of the United States, of which he is the Washington representative, and used in these suspension proceedings, contains the following:

Mr. Carson states that in the spring of 1942, not long after the association was incorporated, Dreikoff came to him seeking information about cooperative insurance companies, explaining that they were thinking of developing a Rural Electrification Administration insurance cooperative.

Carson asked Drefkoff why this was advisable, since the co-op members could get cheap insurance from reliable cooperative insurance companies, of which many Rural Electrification Administration people were already members. Why duplicate? Drefkoff replied, "Oh, no; we are going to have our own company. We want our own insurance company that Bob (Craig) and I can control."

Carson said, "That is just what I suspected. You are no more interested in the welfare of Rural Electrification Administration cooperative members than is the average insurance company official."

On January 6, 1943, two companies, the Rural Mutual Casualty Insurance Corporation, and the Rural Mutual Fire Insurance Corporation, were incorporated in Maryland by two directors and the two counsel of the association acting as individuals. The National Rural Electric Cooperative Association, per se, is not mentioned and has no control. Steve C. Tate was made president of both.

At about this time Mr. Falkenwald, who had, in connection with his other duties and under the direction of Craig, advocated the insurance plan in private sessions of many co-op meetings, rebelled. He quarreled with Craig, withdrew his support, and reported to the Administrator who then first learned about the change in the insurance plan.

Falkenwald had supposed that the working capital of the insurance mutuals would be derived from memberships which gave the co-ops control. He discovered, however, that the plan actually developing was that the mutuals, set up as private corporations, proposed to raise $1,000,000 or more as loans from the cooperatives on unsecured notes.

Mr. Slattery had already requested Secretary Wickard[1] to have an opinion prepared on the legality of the use for insurance purposes of any funds of the Rural Electrification Administration cooperative borrowers. He learned from Falkenwald for the first time of the switch to the loan plan, which astonished him. No opinion has yet been handed down by the department solicitor or by the Attorney General. Nevertheless, the promoters of the mutuals have boldly and confidently assured the cooperatives that they have such rights and have gone ahead. Many thousands of dollars have been already received.

The Administrator was disturbed still more when later he received from a local co-op official a 20-page, mimeographed pamphlet which the executive manager, Clyde Ellis, was preparing to send out. It was titled "A Comprehensive Insurance Plan for Rural Electrification Administration Cooperatives." This shows that the enterprising promoters were then planning not only to insure the co-ops per se but to vend all sorts of insurance to individual members and their immediate families. We quote from the heading "Benefits to be derived from rural mutuals," the following:

"44. Question. Will Rural Electrification Administration directors, trustees, superintendents, and employees, derive any special benefit from the insurance program of the rural mutuals?

"Answer. Yes, in a very substantial way, directors, trustees, superintendents, and employees on the 800 Rural Electrification Administration systems aggregate over 15,000 persons, a group sufficient to benefit from a program of accident prevention, health, and hospitalization insurance, which may either be written by the rural mutuals or purchased at greatly reduced rates from other companies through rural mutuals. This group of over 15,000 persons is large enough to procure advantageous rates of group life insurance, also.

"45. Question. Will individual members of the cooperatives benefit from the insurance program of the rural mutuals?

"Answer. Decidedly. The charters and bylaws of both the Rural Mutual Casualty Insurance Co. and the Rural Mutual Fire Insurance Co. are broad enough to cover a large number of insurance activities which may directly be used to benefit individual members and their families.

"46. Question. Specifically, what types of insurance may the rural mutuals write in accordance with their charters and bylaws?

"Answer. The rural mutuals may, in addition to other types, insure specifically against:

"1. Loss or liability for bodily injury, death by accident, disability, sickness, or disease, including employees' liability and workmen's compensation.

"2. Loss or liability resulting from the ownership of automobiles or other vehicles, excluding losses by fire (fire losses are covered under separate charter).

"3. Loss or damage to machinery or boilers, transmission lines, etc.

"4. Make contracts for hospitalization insurance.

"5. Make contracts for fidelity and surety bonds

"6. Losses or damage by fire, lightning, hail, frost, snow, or explosion, on all types of property, real or personal.

"7. Losses or damage caused by action of the elements or adverse manifestations of nature."

The question arises where President Tate and his board were to get the money to repay these loans on a 3-percent interest rate It is proposed to organize appliance and equipment mutuals in some form, probably along the lines Craig described to Becker, and out of the returns settle the loans. Craig's plan envisioned a business of millions of dollars, with many corporations and most of the co-ops.

Pressure was now brought upon Administrator Slattery. On March 25, in St. Louis,

[1] It is understood that the Solicitor of the Agriculture Department has prepared such an opinion (now pending for release in the Attorney General's office) and that it generally sustains the right of the Rural Electrification Administration to restrict the use of funds and revenues (including membership fees) of mortgaged co-ops.

Executive Manager Ellis, and others came, laid upon his desk a prepared letter for his signature, endorsing the mutuals, to be mimeographed and sent to all cooperatives, together with a copy of the pamphlet above described. This, in effect, would make a Government official a kind of super insurance salesman for a private corporation. Slattery refused to sign, and a scene ensued, which was broken up by a telephone message that Charles Falkenwald had been seized by a heart attack at his home and was dying. Mr. Slattery immediately left for the bedside.

Later Ellis sent the Administrator a long letter, charging that he had been kept fully informed about the insurance plan and was now double-crossing the association by declining to endorse it.

On April 19, in response to a large number of inquiries from the cooperatives asking advice, the Administrator mailed to all cooperatives a stop, look, and listen letter, which had been carefully prepared with the assistance of General Counsel Nicholson, of Rural Electrification Administration, and high officials of the Department of Agriculture.

On April 23, at a session of the executive board of the association in Washington and in its presence, President Tate called Mr. Slattery over the long-distance phone at St. Louis, expressed indignation at the letter of April 19, and threatened to drive him out of public life. Slattery stood pat.

Tate, Ellis, et al., then made charges against the administrator to Secretary Wickard and on May 8 sent a letter to the President, demanding his resignation. An intensive lobbying campaign against Mr. Slattery among Senators, Congressmen, and Washington officials was begun and releases were sent to the press. The St. Louis Post Dispatch, for example, on May 19 carried a front-page article headed "Rural electric co-ops seek to oust Slattery. Association attacks him because he opposes their two insurance projects." Ellis afterward denied their opposition grew out of the Administrator's failure to endorse the insurance plan and alleged the real reason as incompetency.

It is extremely doubtful, however, that, had Mr. Slattery signed the letter of endorsement, as demanded, and approved the famous catechism, these charges would have ever been brought.

In an attempt to buttress the incompetency allegations, association spokesmen have alleged that the resignation of Deputy Administrator Craig, on May 5, was due to his inability to work longer with Mr. Slattery. There are other things, however, which appear to have a significant bearing upon his resignation. On March 3, when the Rural Electrification Administration appropriation was under scrutiny by Chairman TARVER'S House subcommittee, the origin of the National Rural Electric Cooperative Association was brought up. Congressman DIRKSEN, who had been inquiring as to whether Rural Electrification Administration men had been guiding the destinies of the association, turned to Craig and asked, "Mr. Craig, did you have anything to do with it? Have you any identity with it? * * *" Craig replied, "* * * Now, as to guiding its destinies, I have not guided its destinies in any way whatsoever." (House hearings, p. 1245.)

To sum up, the conduct of the Washington office of National Rural Electric Cooperative Association checks with the original Craig determination to control the policies and personnel of the Rural Electrification Administration either from within or without, or both. He is still influential in the association. The June issue of its bulletin carries his picture and an editorial headed "We are not happy over Dr. Craig's resignation."

Mr. Craig, incidentally, went directly from St. Louis to Pittsburgh to accept a position with a wire equipment company. He was last reported in Mexico representing this corporation. Subsequently, William J. Neal, well-known New Hampshire farmer, president of the New Hampshire Rural Electrification Administration cooperatives, and master of the State grange, was appointed by Secretary Wickard to succeed Craig as deputy administrator.

The framers of the Rural Electrification Administration Act did their best to keep the administration of Rural Electrification Administration strictly nonpartisan. The spirit and text of the act have been observed, and that is one reason why Rural Electrification Administration stands so high in public esteem in addition to its splendid financial record.

The imminent danger is that this unfortunate episode be made a football of partisan politics which would be a crime against the great cause of rural electrification.

WHAT THE EDITORS SAY

The following excerpts are reproduced from the Pages With the Editors department of Public Utilities Fortnightly of July 8, 1943:

There is increasing evidence that the rural electrification program has reached a very important crossroads in this, the seventh year of its statutory life. The fundamental issue involved seems to be whether the Rural Electrification Administration co-ops will continue under Federal supervision or whether they will strike out for a greater measure of home rule. Unfortunately, there are complicating issues which rob the current controversy of any such clear-cut distinction.

The National Rural Electric Cooperative Association (N. R. E. C. A.), claiming to represent 580 of the 740 Rural Electrification Administration cooperatives, is taking a position as champion of more home-rule independence for the co-ops. Harry Slattery, at this writing Administrator of Rural Electrification Administration, sees danger, however, in certain specific programs sponsored by the National Rural Electric Cooperative Association. National Rural Electric Cooperative Association, in turn, sees danger in continuing Mr. Slattery in office. So we see right off that it is not simply a matter of cutting the co-ops loose from paternalistic apron strings tied to Washington.

With so much smoke in the air we decided that there must be a raging fire somewhere. It did not seem tc us that such a modest program as starting up a mutual insurance company for the co-ops could really be the basis for such a broad conflagration. In our effort to get Administrator Slattery's side of the story we went to a well-known figure in the public power field, a man who has been a close associate of Rural Electrification Administration and Administrator Slattery, virtually since Rural Electrification Administration took form.

He is Judson King, director of the National Popular Government League, who will need no further introduction to many of our readers because of his past contributions to this magazine. Differ as we may on questions of power policy, we have known Judson King too long to question his sincerity as a consistent advocate of public power and rural electrification. Admittedly, Mr. King has a personal interest in presenting his side of this controversy in the opening article which appears in this issue, since he is one of those whose association with Rural Electrification Administration has been under attack by National Rural Electric Cooperative Association. He frankly concedes this.

In addition, however, all who are familiar with Judson King's record of many years as a liberal leader well know that he has always opposed racketeering in any form and is dead set against having the Rural Electrification Administration or its sponsored cooperatives become a football of partisan politics.

Philip A. Bennett

MEMORIAL ADDRESS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 26, 1943

On the life, character, and public service of Hon. PHILIP ALLEN BENNETT, late a Representative from the State of Missouri

Mr. CANNON of Missouri. Mr. Speaker, the death of PHILIP A. BENNETT brought to a brief close the legislative career of one of the most promising of all the large number who entered the House in the Seventy-seventh Congress. Few members have made so favorable an impression and have achieved so much in their first term.

The end came so suddenly and so unpectedly, following almost immediately upon the approval of his record by his district and his reelection to the House, that his colleagues, and particularly the Members of the Missouri delegation, suffer not only a deep sense of loss but a feeling that something inexplicable had happened.

I cannot say and I will not say that he is dead—he is just away;
With a cherry smile and a wave of the hand, he has vanished into an unknown land.

PHIL BENNET was peculiarly gifted as a man, and especially adapted to congressional service. His long experience in newspaper work had given him an insight into character, a familiarity with public issues and the happy faculty of clear and convincing expression, that stood him in good stead on all occasions. He was already attaining an enviable position in the House and was recognized as one of the outstanding men of his delegation. He sleeps while it is yet day.

His people will remember him; his State will remember him, and those who are left in this busy forum will remember him with affection and regard as a comrade and as a friend.

His life was gentle and the elements
So mixed in him that Nature might stand up
And say to all the world
"This was a man!"

Post-War Construction

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. MAAS. Mr. Speaker, the war has of necessity forced the abandonment of practically all municipal, county, and State construction work, and in fact much needed repair work has had to be postponed until after the war. Unfortunately, practically nothing is being

done in the meantime by way of providing orderly plans for this work when the war is over. Actually, such work will constitute an enormous reservoir of public work that could be instituted to take up the slack created by the cancelation of war contracts upon the termination of the war. Without a definite plan there will be great chaos resulting in a huge unemployment problem and the origin of a vicious cycle that will depress business by drying up purchasing power in the hands of the people. The more that happens the more there will be a shut-down in even normal business activities resulting in an ever-mounting unemployment. Instituting public works projects of an essential character that can be progressively launched as war industries shut down will help to take up the slack in employment and also to level off the decline in business as the result of disappearing pay rolls in war plants. If this is to be accomplished the plans for such public works projects must be made now so that they will be available for immediate use when hostilities cease.

To this end I have introduced a bill that provides Federal assistance to States, counties, and municipalities to make plans now for such future essential public works. The bill, while it grants up to 50 percent of the cost of making such plans, does not commit the Government to pay for the actual construction of such public works that may be instituted under the program when the war is over. While we are talking so much about post-war world plans, we had better do some thinking and take some action on post-war domestic plans or we may not be in a position to carry out any post-war world plans.

In support of my views I am including an address by a distinguished engineer, Col. William N. Carey, Corps of Engineers, Chief Engineer, Federal Works Agency, presented before the thirteenth annual convention of the League of Minnesota Municipalities, St. Paul, Minn., June 11, 1943:

It is with exceptional pleasure to me that I am privileged to speak today before your thirtieth annual convention of the League of Minnesota Municipalities. We are not strangers to each other. Among your members are many of my oldest and best friends and former associates. During the past 20 years, in happier times and in times not so happy, I have attended your annual conventions and have spoken fairly often from your platform. My subject was then, as it is now, Public Works. My text today can be put as a double-barreled question, Will we need a post-war public-works program, and, if so, how can the construction of needed public works be programmed in order to provide the maximum possible public benefit during the inevitable period of post-war economic readjustment?

No speaker on any phase of the post-war problem denies for a moment that our immediate job is the winning of the war as quickly as possible. There are some citizens, however, who assert that the problem of winning the war is so all-absorbing that there is no time or place now for consideration of post-war readjustments. This view, to me, is as senseless as would be the attempt of a man with two good eyes to traverse a difficult path with one eye willfully closed. The winning of the war is indeed our imperative and immediate necessity, but victory is but a means to an end—peace. To win the war but to lose the peace would be an empty victory. To approach the day of armistice without definite plans for action thereafter would assure the loss of the peace.

There is no dearth of post-war plans. Everybody has one. Members of Congress have evolved 27 or more bills on post-war plans since the first of the year, but no general public-works planning bill has yet passed, or even been reported out of committee. Plans and ideas for our salvation in the post-war period are advanced and discussed daily at hundreds of conventions, lunch clubs, and dinner tables all over the country, and the subject is prominent in the thoughts and conversations of our armed forces. Post-war thinking ranges from the one extreme of a 100-percent federally controlled national economy to the other extreme of complete negation of any planning now by any local, State, or Federal unit of government for any post-war activity. It is reasonable to assume that the sound path lies somewhere between these two extremes. Your group primarily is concerned with but one phase of the peacetime readjustment, with but one of the win-the-peace objectives, namely, "freedom from want."

Unemployment and want always have been Siamese twin ghosts ready to haunt any municipality at the slightest opportunity. We have been well haunted before. Must we face that fear again? Is there real danger of large-scale unemployment lurking just beyond the armistice? With 11,000,000 or more men in the armed services at the end of this war and other millions in specialized war industries it is anyone's guess as to just how many men there will be, able and willing to work, who cannot immediately be absorbed by private industry and agriculture after peace is declared. Experts disagree on this point, and they use different bases for their figures. While their guesses cannot be truly averaged, we cannot escape the assumption that there may be many millions. If employment is not planned for now there will be found among these millions war veterans in the bread lines, in the soup kitchens, among the street corner apple sellers, and there will be those other thousands forced to exist on a bare subsistence wage made possible by make-work projects. Here will be found hungry and hopeless men in worn remnants of the uniforms of their country leaning on long-handled shovels and staring blankly back to the foxholes of Bataan or the steaming jungles of Guadalcanal, wondering bitterly if their sacrifice was worth the effort. Whether the potential array of the unemployed numbers one or several millions makes little real difference to the worker who cannot find work because there are no jobs. The spectre of want will ride the shoulders of unemployment just the same. To the degree that we permit unemployment and want to follow the war we will have lost the peace.

We Americans learn the hard way. Until action is forced upon us we seem incapable of profiting by the experience of other peoples. What always has happened to other countries in a given set of dire circumstances cannot happen to us—or so we usually assume up to the very moment it does happen. All of us have not always been so blindly optimistic, but for more than a century in times of peace the majority has been either too blind or too busy to be bothered with many matters national in scope. In years of prosperity and plenty we consistently have refused to fill our granaries against future years of famine. The economic famine years which began in 1929 furnished us a hard lesson. Time alone will prove whether or not we have learned it.

In spite of the presumably great and wise men who then assured us that there could never again be a period of economic drought in the United States, the contrary became true with a vengeance. Our vaunted wealth and prosperity dried up almost overnight. We became one vast economic "dust bowl", with no signs of rain, and with no plans for irrigation ditches to bring our parched economy back to life. There were those who said that there was really nothing to worry about, that the economic cycle was simply proceeding on its destined course and quite according to schedule. The theory was that at least once in each generation a sort of national purge must occur. During the purge half of the business firms would go bankrupt, which would take care of the problem of too much production, and the jobless millions would starve to death, which would very neatly solve the problem of the surplus labor supply. Thus, the evil would cure itself, the surviving business concerns would again prosper, the labor that managed to survive would again find jobs, and the economy thus would automatically right itself until the cycle spun around again.

Those wishful thinking optimists who feel that we shall very gracefully glide from our wartime economy into a period of great and lasting prosperity for all usually base their expectation upon the great reduction in the volume of consumer goods which is occurring during the war. They point to the fact that many consumer wants are now being deferred and that large mass savings in the form of War bonds are accumulating. These savings, they believe, will be spent for consumer goods the day after we turn back to business from celebrating a new armistice day marking our certain victory over the Axis. But we may well wonder what there will be to buy during those first months of our hard-won peace. Stocks of consumer goods, household equipment, and automobiles available to wholesalers, jobbers, and merchants are steadily dwindling, and those stocks cannot be fully replenished until factories now making war goods have retooled to produce peace goods. This retooling process takes time, and it doesn't employ a great deal of labor.

It is said that it took Henry Ford 18 months to reconvert from the production of the old model T car to the production of the model A. Not all factories would need that much time, but some might need even more. It is not simply a matter of taking out the present machines and putting the old ones back in place and going on from where we left off when war came. Some of the old machines will have become obsolete, will have rusted away or have been broken up for scrap. In many instances entirely new machinery will have to be built as it will become necessary, or certainly desirable, to incorporate into manufacturing processes the lessons learned during the war regarding the more effective use of materials. So it seems to be entirely possible that, by the time the factories are again ready to turn out consumers' durable goods in quantity, and to employ additional millions of workers in the process, the returned soldiers and the displaced war workers will have used up their savings merely to pay the rent and keep alive.

Even though we may continue to avoid looking at it objectively, the sharp sword of mass unemployment and want, sooner or later in the post-war period, hangs over our heads. The white light of the history of other peoples and of our own very recent experience sharply reveals the nature of this threat if we will but look at it with eyes to see and minds to reason clearly.

All of these facts are well recognized by level-headed leaders in Washington and in every State in the Union. Practically all of these leaders agree that needed public works must be made ready to absorb as many as possible of the employables who are not taken by industry and agriculture. Former Governor Harold E. Stassen, of your State, in an article in the May 15 issue of the Saturday Evening Post, puts this thesis most aptly. He says:

"What, then, are the principles from which we can develop the ways and means to answer America's problems and move toward America's objectives after victory?

"The first and foremost (principle) is to provide an environment in which free enterprise, individual initiative and ingenuity can produce with reasonably full effectiveness.

"The second is to maintain a supplementary program of valuable public improvements to make worth-while use of any portion of our manpower not used by private enterprise."

And the Governor adds two other principles, one social and one political.

In a letter dated May 22, just 20 days ago, President Roosevelt wrote the Vice President:

"It has been more than 2 years since I first called the attention of the Congress to the need for preparing in advance plans for public works and improvement projects to be undertaken in the post-war period. During the war we are deferring the construction of every project not vitally needed for war purposes. By so doing we are storing up a reservoir of work that can be undertaken when the war is over and thus be useful in providing employment opportunities and demands for materials. But if such projects are to be ready for rapid inauguration in the post-war period, the plans and specifications must be prepared during the war. I hope the Congress will approve the necessary legislation to make my recommendation in this matter effective * * *.

"I believe that a Federal grant to support the more general planning activities of these (local) governments along with reimbursable advances to cover the detailed planning for their individual projects would be an effective means to assure that plans will be ready when they are needed."

With further reference to post-war public-works projects, the President, in a memorandum of the same date to the heads of Federal departments and agencies, said, in part:

"If, however, such projects are to be ready for a quick start at the time (of need), the plans must be made ready in advance and all the possible preliminary arrangements completed."

It would be easy to assemble a hundred recent quotations in the same vein by prominent citizens, local and national, and of both political parties to show that these leaders are awake to the real need for detailed plans now for post-war work. A large program of public works ready for a quick start cannot be developed with a simple turn of the wrist, or even by appropriations of money by Congress, the States and municipalities. Time, much time, and effort must be expended, in addition to money, before a program can be made ready for operation. We are inclined to forget how much time is necessary even when money to build the needed works is ready and begging for use.

Let us look back for a moment to our experiences during the last deep depression when the Public Works Administration was created by Congress. To Public Works Administration was allotted $33,000,000,000 to aid, by means of loans and grants, in the construction of needed, sound public works. I talked on that subject then to many of you as officials of your respective municipalities and again at your league meetings. All were willing, in cooperation with Public Works Administration, to build the public works needed, but almost no one was ready to build at once. On a few purely Federal projects advance engineering had proceeded to a point where contracts could be let with little delay. States, municipalities, and other corporate bodies, which wished to participate in the program, generally had ideas, some rather fanciful, but they were all undeveloped. It was necessary to develop the sound ideas into workable, practical undertakings, adequately covered by legislation, financing, and engineering.

Generally speaking, a large majority of the projects submitted to Public Works Administration required, prior to construction, State or local legislation to authorize the work, to create a body to construct and operate the project, to authorize bond issues, and for many other purposes. It was necessary to formulate a practical and sound scheme of financing, in some instances to set up trusteeships, to negotiate the sale of securities, and to perform other functions of a financial nature. It was necessary to study the technical features of each contemplated project in detail, to coordinate the proposed work with existing facilities, to prepare working plans and specifications, and draft other contract documents. It was necessary to attend to and complete all of these operations, functions and details before a single man could be put to work on Public Works Administration construction. These preliminary, though absolutely vital, steps consumed time, the extent varying with size, type, location, and other factors. And the loss of time delayed the fulfillment of the then primary purpose of the program, which was to provide jobs quickly. Eighteen months went by before it was possible to put as many as 100,000 men to work.

But unemployment and want would not wait for engineers and architects to develop plans and specifications, for the slow processes of law and finance to take their devious courses, and for the many other things that had been left undone before the depression descended upon us. In this dire social emergency, rather than to distribute a dole as such, the President reallocated $400,000,000 of Public Works Administration funds to the Civil Works Administration through which the States improvised projects on which the unemployed could be put to work at once. This was the opening door for Work Projects Administration and the so-called security wage. In its earlier years Work Projects Administration also was forced to resort to improvised projects of doubtful if any permanent value as public works. Sharply divergent views as to proper methods of Federal participation in public works for unemployment relief purposes became political issues. It took a second war, with its resultant manpower shortage, to clear the air to the point where I believe nearly all thoughtful citizens will now agree upon the following general principles:

That Government, both Federal and local, has an obligation to help close the gap when private initiative cannot provide all the jobs necessary to maintain full employment.

That the most useful jobs Government can furnish are in the construction of soundly conceived public works which add to the Nation's wealth and promote the general welfare and convenience.

That worthwhile public works require months for advance preparation—for engineering surveys, the preparation of plans and specifications, and the acquisition of land. Jobs cannot be called into existence by money alone or by waving a magic wand.

The doles are enervating, undermine self-confidence, and that no honest man wants a dole as a substitute for a useful job at decent wages.

That improvised relief projects are useful in sustaining life, but seldom add much to permanent material wealth.

While these principles of a declaration of independence against unemployment are generally conceded among groups such as this, to date little has been accomplished to activate those principles. Only small and timid beginnings have been made. Congress, in December 1941, appropriated $10,000,000 to the Public Roads Administration, a unit of the Federal Works Agency, for the purpose of matching funds of States desiring to make working highway plans and specifications now for future highway development. This fund has been available for use for the past 17 months and but half of the $10,000,000 has been called for to date by the States. New York City is an outstanding example of one municipality which already has allotted substantial funds of its own for the purpose of developing final working plans and specifications for sound and needed public works. Some municipalities and States are accumulating reserves in the form of war bonds to finance public works after the war. Taking the country as a whole, however, surprisingly little has been done either nationally or locally toward translating public works ideas into plans and specifications on which bids could be taken. In this sense post-war public works construction is like Mark Twain's weather. Everybody discusses it but few are doing anything practical about it.

It seems to me that it should be plainly evident to all that a post-war public works program, for maximum success, must evolve from the municipalities and the States. It must have its original among the "grass roots" of the Nation. It is certain to be wasteful of money and non-contributive to permanent prosperity if apathy on the part of local subdivisions of Government shall finally force the national Government to pour some general emergency made-work program over the Nation as from a giant gravy boat.

Now, while we are still at war and when older engineers and architects are becoming available by the hundreds, we have the best opportunity we are ever likely to have to plan in detail a sound national program of public works. I think it is reasonable to suppose that we are not going to have a year or two after the war in which to commence to begin to get ready to start these plans. When the boys come home and the millions now working in war factories have been discharged, the need may be immediate. If we have a public works program well prepared in advance, we can provide millions of jobs at once. If we haven't a program prepared—and I mean prepared in all of its engineering and legal aspects—then we will probably go through the old expensive cycle of Civil Works Administration and Work Projects Administration, with hastily improvised projects of little permanent value on which people can be employed at bare subsistence wages. That isn't going to add up to prosperity for anybody. I have confidence in free enterprise and individual initiative. I believe that private business eventually will provide all the jobs necessary to maintain a general standard of living at a high level. I have seen nothing to convince me, however, that private business, unaided, can handle the colossal job of economic readjustment we must inevitably face in the immediate post-war period.

It would be ill advised for me to attempt to tell you how I think you should, in whole or in part, finance the work required to put in your municipal files the essential rolls of blueprints of working drawings for needed public works. Similarly, I offer no suggestion as to how the Federal Government's share of the planning or the construction costs should be provided. These are questions for the Congress, the States, the counties, and the cities to decide. I can and do point out, however, that it is high time some of these decisions were being made and working plans and specifications brought into being.

When we do develop a post-war public works construction program, reason dictates that it should be national in scope and control. It must be national so that it can be

integrated into local, regional, and national needs and be capable of management in such a way as to complement the reconstruction efforts of private business. With a controlled national reservoir of worth-while projects, the valve could be turned on in areas where private industry cannot provide all the jobs needed and shut off in areas where private industry alone can absorb the unemployed. It seems to me that it would be most uneconomic to prosecute with vigor public-works projects in Detroit, for example, at a time when they would add little to business recovery but simply come into competition with private industry for men and materials. In such case it might be desirable to slow down or defer public works in Detroit and speed them up in Chicago or the Twin Cities.

Moreover, without a properly balanced program, we run the risk of seeing public works left to the mercy of various pressure groups. The crowd that could make the most noise, or exert the greatest political influence, would press its pet projects at the expense of communities in greater need. This could involve an enormous waste of public money. For example, magnificent airports might be demanded and built in towns that don't need magnificent airports, superhighways, constructed in areas where present roads are adequate, monumental public buildings erected in cities which have a far greater need for adequate water-treatment works or sewage-disposal facilities, and other works constructed similarly wasteful of public funds.

The question is not, "Can we afford to take such steps as have been here indicated to insure full employment?" but, "Can we afford not to take them?" I need hardly remind you that depressions are exceedingly expensive. The last one is estimated to have cost the Nation $200,000,000,000. That sum does not include the staggering cost of relief; it is merely the cost of enforced idleness. It represents the wealth that would have been created if, instead of millions of unemployed, we had had full employment. For considerably less than the war is costing us in this 1 month of June 1943 we could underwrite full employment for years to come, and assure to ourselves and our children happier, more comfortable, and better living.

If we do not seize the present opportunity to avoid post-war unemployment and to build a better America, it will not be because of any shortage of men, materials, or money, but for some less convincing and respectable reason.

Stabilization of Currency

REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. CRAWFORD. Mr. Speaker, I ask unanimous consent to proceed for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection?

There was no objection.

Mr. CRAWFORD. Mr. Speaker, following the last war there was a long period of disordered currencies or unstabilized currencies throughout the world. The British pound was stabilized at its pre-war gold parity. The French franc was stabilized at a greatly depreciated value. This led to the flow of gold from England and other countries to France. The British people felt that America was largely responsible for many of the currency disorders, through our high tariffs and low prices which we maintained for some years. We were terribly criticized by the British and somewhat charged with acting in such manner as to cause gold to flow to Washington to be buried in the vaults.

The forthcoming discussions on the stabilization of currencies will be of interest to every Member of this House. The currency controls will have a tremendous influence on our internal economy when and if the program begins to operate. With the gentleman from Illinois [Mr. DEWEY] I join in hoping that this House will not ignore the importance of those discussions. At present I do not favor either plan that has been suggested.

The SPEAKER. The time of the gentleman has expired.

From Appeasers to Fighters

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sterling Morton from the February issue of Finance, a banking magazine:

FROM APPEASERS TO FIGHTERS—BUSINESSMEN MUST "STICK THEIR NECKS OUT" IF THEY ARE TO PRESERVE THE PRINCIPLES THAT HAVE MADE THE UNITED STATES A GREAT COUNTRY

(By Sterling Morton)

Being extremely interested in a project which did have a certain political flavor, I wrote to a number of my associates, asking their support. From one I received this reply: "While I approve heartily of your project, you must remember that I am in business, and a businessman cannot mix in politics."

To this I replied, "This seems like a one-sided arrangement. Politics has certainly mixed in business in a big way!"

I have served in various capacities in business organizations over a good many years, so when Finance asked me if I could advance any reason why the average public official gives such small weight to the wishes of businessmen, there was some experience to draw on. The answer is, of course, simple: A public official pays little attention to the businessman because the businessman pays little attention to the public official.

POLITICS A PROFESSION

To elaborate: Maybe it is because the average businessman considers himself above politics; maybe it is because he is too busy with his own affairs; maybe it is because he is just "too damn dumb." (The quotation is from Harry Hopkins.) But the truth is that the businessman who has any conception or knowledge of that very intricate profession known as politics is indeed a rare bird. For politics is a profession.

The businessman who thinks that political office is a haven for loafers, ne'er-do-wells, or even scoundrels, is sadly mistaken. Politics is a big game, and it engages the full time and attention of many very able men. True, these men do not deal in commodities or materials; they are not engaged in teaching or in healing the sick; yet, to be successful, they must have native ability and aptitude. Aside from the exceptional cases, they must serve a very rigorous apprenticeship. Furthermore, businessmen must realize that there is a sort of professional bond between politicians, regardless of party, just as there is between businessmen, regardless of line.

The Illinois Manufacturers' Association, which I have the honor of serving as president, is the oldest, largest, and strongest of such organizations. It is not afraid to express an opinion. It is not "too good" to get into the political field; in fact, it feels this to be a most important part of its work. For 49 years this association has worked to further the common interests of industry at the State capitol. It is common knowledge that the associations' recommendations are treated with respect and consideration. Further, during this time the State legislalature has passed very few laws adversely affecting industry. (The Federal Congress has, however, passed a multitude of crippling restrictions and restraints.) The association has been well and ably represented. We have found that our Illinois legislators are, on the whole, reasonable men, and that the majority of them listen sympathetically to a straightforward story from business. They know, too, that if they are reasonably cooperative with the association, our members are ready and willing to fight for them when they stand for reelection. No general assemblyman ever says to our people, "Where were you on election day?" He knows! Our people were in the field fighting for them or fighting against them. Our officers, prior to election, were making trips throughout the State, telling their fellow manufacturers who was who from the business standpoint.

WILL HE STAND HITCHED?

Now, we don't look into a candidate's politics. We are not particular about his race, color, or previous condition of servitude. What interests us, if he has served before, is: Was he open-minded on bills affecting business? And if he is a new candidate, would his record or reputation in his home community indicate that he would adopt such an attitude? For instance, in the campaign recently concluded, there were two State-wide offices open. We recommended a Democrat for one, a Republican for the other. Sometimes we run head on into reform organizations, who looking at a candidate through glasses colored differently from ours, feel he should be defeated. If—as is sometimes the case—he has been reasonable on business legislation, we favor his reelection. When elected, we do not ask blind following of our recommendations. If we can't prove our case to a reasonable man, we don't deserve his vote.

Many business associations are entirely technical, dealing with engineering, marketing, or other specialities. These are in a class apart. It is evident, though, that any association purporting to render a general service to its members cannot overlook the vital effect of decisions arrived at by political bodies chosen by political methods. If the businessman's association is unwilling to go into the practical actualities of our governmental bodies it cannot fully serve its members. Certainly, other groups in our country are not backward about mixing in politics. Labor, agriculture, silver—all manner of special interests—have their representatives, whose demands on the National and State legislatures are many and vociferous.

There are altogether too many businessmen who feel they "shouldn't stick their necks out." Well, those are the ones who

usually "get it" right in that part of their anatomy. The man who goes out and fights openly and squarely, stands on his convictions, and is not afraid to let the world know how he stands, usually gains the real respect of his opponents, who, incidentally, have nothing but contempt for the spineless jellyfish who, if he has any principles, won't fight for them.

A LOW SPECIES

Another low species of humanity, in my mind, is the local committee which, appointed to investigate suspicious happenings in local government, prefaces its work with the public statement, "We are not out to put anyone in jail. We merely want to take steps so that this sort of thing can't happen again." Well, such a committee might just as well fold up. It can spend contributors' or taxpayers' money and produce a lengthy report to the effect that the horse is missing from the barn. It may also get a very good idea of whose hand was on the halter when the animal left; but about the only effect on the guilty ones is to evoke a good laugh—of the equine variety. Why should businessmen waste time on such totally futile pursuits? If their objective is to stop graft in local government the way to do it is to convince the would-be grafters that to be caught means a jail sentence. Setting up budgets, limits on expenditures, and all those things mean absolutely nothing unless there are sanctions—penalties, real penalties with teeth in them—teeth capable of biting hard enough to cause the utmost discomfort to the transgressor.

Buinessmen, afraid to offend those temporarily in power, have allowed the most outrageous libels on business to go uncorrected. They have allowed two-by-four demagogues to vilify them from every rostrum. They have allowed cheap little local Hitlers to push them around from pillar to post. They go on paying, with only the mildest protest, ruinous local and other taxes, a substantial part of which are tribute to inefficiency, favoritism, and, often, plain graft. Their eyes are directed, by dulcet words, to far-away matters, while their very pockets are being rifled and their very livelihoods taken away from them at home. When one of them finally sees through the deception and gets up enough courage to make a protest, he is immediately "shushed" by his week-kneed associates. Those who make capital out of stirring up hate and unrest only chuckle the louder and go on with their attack on the system which, ably administered by the businessmen, has brought more happiness, more abundance, a better standard of living, to more people than any system the world has ever known.

CAME THE WAR

Then came the war. The businessmen, swallowing all the insults, took off their coats and went to work. It is an open secret that industry has produced such a flood of material that it has outstripped all plans to handle it, so cut-backs and cancelations are in order. No other group could do the job, clear up the mess—the mess so largely created by the contemners of business. The greatest statesman can't run a production line, while labor must have both tools and direction before it can produce. Business, industry, capitalists, furnished the tools, the experience, the "know how."

It may be that the war will force our businessmen into a different attitude toward government. I hope so, and I hope a change will come in our business organizations. I hope that from war they will learn how to fight. I have been close to them for a good many years, and I am convinced they will accomplish little unless and until they stop resolving and go to fighting, until they replace their appeasers with scrappers, unless they stop trying to be all things to all men, unless they decide that principle is more important than increased membership, and unless they are willing openly to back their friends in politics and just as openly fight their enemies.

Had anyone last spring told me that a man—even as able, genial, and, yes, inspired, a man as AL HAWKES—could go from the presidency of the Chamber of Commerce of the United States to the United States Senate in 6 short months, I would have put him down as a prophet undeserving of honor in any country. But it happened. It happened because AL HAWKES had the forthright courage to stand up for his principles early and late; because AL HAWKES refused to "pussyfoot"; because AL HAWKES is a real fighting man.

Other States have just as large a proportion of decent people, people who will support a man with courage, convictions, and sound basic principles, as has New Jersey. Perhaps they have men approaching AL HAWKES in character, who will follow his example. If so, this New Jersey election may be the dawn of a new day. I hope so. But if the "pussyfooters," the "keep-away-from-politics" boys have their way, the dawn will be a false one.

Falange: The Axis Secret Army in the Americas

REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. COFFEE. Mr. Speaker, today a new book, Falange: The Axis Secret Army in the Americas, by Allan Chase, has thrown the healthy spotlight of truth on one of the greatest dangers facing all of us. Not since Mein Kampf was made available to the world has one book so completely blueprinted the menace of a Fascist tyranny to the democratic peoples of the world. But unlike Mein Kampf, Falange is not the psychotic bragging of a Nazi but the sane and all-too-rational work of a patriotic American who has devoted himself to the task of opening the eyes of the United Nations to a Fascist conspiracy which can well cost the lives of an extra million allied war dead unless we act immediately.

The Falange Espanola Traditionalista—the sole political party in Fascist Spain (and its branches in every one of the Latin-American countries) is more than just another Fascist party. Since 1935, the Falange has been under the direct control of a Nazi general, one Wilhelm von Faupel. Mr. Chase, in his important book, has shown just how Von Faupel is leading an Axis army not only in Spain, which the Nazis control, but also in Latin America and in the Philippines. The details of this undercover army in the Americas which Mr. Chase exposes are too shocking to ignore. Time will permit me to cite only a few examples, chosen at random from this amazing book:

Back in 1934, Hitler made Von Faupel head of the Ibero-American Institute of Berlin. Through this office, the Nazi general planned the conquest of Spain and of the former Spanish Empire—a job the Nazis proposed to do by setting up a fake Spanish emperor owned by Germany. Franco became this candidate for the ersatz imperial crown. The Falange became Franco's party, by courtesy of Berlin.

To prepare Latin America and the Philippines for conquest, Von Faupel organized branches of the Falange in every Spanish-speaking country of the world. From Fascist Spain, Von Faupel shipped Nazi-trained Spanish leaders to run these exterior Falange branches. These Falange chiefs are so powerful that they even control the Spanish legations of the countries where they work. The only Spanish diplomats who do not have to take orders from these Falange chiefs are men like Consul General Jose del Castano, of Manila, who also happens to be the Falange chief of the Philippines.

These branches of the Falange have been doing Hitler's work since 1936. Their blue-shirted members receive military training, act as spies and propagandists for the Axis, and swear allegiance only to Franco—the sworn enemy of the United Nations. With German thoroughness, the Falange Exterior has been built into an international fifth column fraught with dangers of the enemies of Hitler.

A moment ago I mentioned Jose del Castano. Exactly one day after del Castano was made Spanish Consul General to Manila in November 1940 he was appointed to the post of chief of the Falange in the Philippines—an appointment which was duly announced in the Fascist press of Madrid. At that time the controlled Spanish press was also whooping up attacks on "Yankee paganism" in the Philippines.

Let us not forget the Philippines—

Wrote the Madrid official paper, Informaciones, when del Castano was sent to Manila.

Japan will impose a new order. Yankee domination can never cast out from the Archipelago what our forefathers sowed to last forever.

Acting on del Castanos orders, thousands of Falangistas swarmed into the civilian defense organization of the Philippines. Perhaps when you know these facts you can understand why Manila's civilian defense organization broke down as soon as the Japanese attacked the city—and why at shore points of the Archipelago trucks and busses owned by the Falange and its members were ready and watiing for Japanese landing troops exactly on schedule—the schedule of Axis Spain's Tokyo partners. When Arriba, the official organ of the Falange in Madrid, received the news of the fall of Manila, it declared:

The ancient and renowned culture of the magnificent Oriental Empire, and its exceptional human values, are shown in the important victories of the first days—victories that have won for Japan the admiration of the world.

And on January 5, 1942, the Japanese Imperial Government formally decorated the Philippine branch of the Spanish Falange for its role in the fall of Manila.

In Colombia, that strategic democracy which flanks the Panama Canal, the leaders of the Falange were promised military and material aid by Franco himself if they staged a fascist revolt.

In Cuba, the 30,000 members of the Falange have stopped at nothing in their war on the democracies. Espionage—particularly against American naval and air bases—is the least of the services they perform for Hitler. In raid after raid on the headquarters and homes of the Falange and its members, the Cuban secret police have found orders from Madrid and Berlin, caches of arms, anti-American propaganda printed in Spain and in Germany, and positive evidences linking the Falange to the oiling and servicing of Nazi secret submarine bases in the Caribbean and the South Atlantic.

In Mexico the Falange not only has its own militia but also works with the more than 5,000 agents of the S. I. M.—the Spanish Intelligence Service—operating in our sister republic. But more dangerous than the Falangist militia in Mexico is the Sinarquist movement, a subsidiary of the Spanish Falange, whose 500,000 members in Mexico, California, Texas, and Arizona are subject to the whims of General von Faupel and his Nazi bosses. The role of these Sinarquists in the recent soldier-civilian zoot-suit riots in lower California is only a slight hint of what lies in store for us in this quarter.

In Puerto Rico, a Latin-American nation under the flag of the United States, leaders of the Falange have swarmed into the civilian-defense organization. On March 10, 1942, Federal Judge Robert A. Cooper, sitting in San Juan, P. R., admitted to American citizenship 21 proven members of the Spanish Falange—a decision handed down despite positive evidence introduced at the hearings that the Falange and its members are sworn enemies of democracy. This decision must not go unchallenged.

But Mr. Chase, in his book, does more than expose the work of the Falange in country after country. He shows how the merchant marine which flies the Franco flag has become Hitler's bridge of spies to the Western Hemisphere. In the workings of this merchant fleet, which runs spies and arms and propaganda to North, South, and Central America and oil and other war supplies to the Axis from the Americas, you can find one of the reasons the Nazis invaded Spain in 1936 and set up their own puppet dictator.

I have in my hands a number of documents on which Mr. Chase has based only a few of the charges made in his book. If any of my colleagues here today would care to examine them, I would be glad to place them at your disposal.

But these documents, like Mr. Chase's vital and imperative book, must not be studied and then laid aside. Our Government can no longer avoid the implications and effects of Falangist Spain's being a German puppet state. For Fascist Spain has furnished the Axis with the diplomatic shield its agents need in every country which has broken diplomatic relations with Germany, Italy, and Japan. Hitler's officers command 500,000 Spanish and native troops in Spanish Morocco, Fascist divisions poised to strike at British and American troops in north Africa as bitterly as Franco's Falangist Blue Divisions are striking at the troops of our allies on the Russian front.

The Falange can no longer be ignored. Once before our Government was warned that the events which began in Spain on June 19, 1936—when the Nazis invaded Spain—menaced the lives of Americans in Kansas, on Bataan Peninsula, in my home State of Washington. Claude Bowers, now our Ambassador to Chile, but then our Ambassador to the Spanish Republic, repeatedly reported that the Spanish War was not a civil strife, but the opening of Germany's drive for world domination. His reports failed to move the State Department. The Honorable Henry L. Stimson, during the Spanish War, appealed to the State Department to lift the embargo on arms to the embattled Spanish Republic. He declared, on January 23, 1939, that—

> Any danger that may come to the people of the United States from the situation in Spain would not arise from any lawful sale of munitions in our markets to the Republican Government of Spain, but from assistance which our embargo has given to the enemies of Spain.

Subsequent events have tragically confirmed the warnings of informed Americans like Ambassador Bowers and Secretary Stimson. They more than confirm—they make it incumbent upon this Congress to delegate to a special committee the task of investigating the menace of the Falange and the role of Spain as an Axis satellite in this war.

Let us invite our sister nations in Latin America to contribute to this probe—nations like Cuba, Mexico, Colombia, Chile, and Uruguay, to name but a few—nations which have been fighting a valiant battle against the Falange fifth column within their borders. Let us hear from available American eyewitnesses about the Nazi submarine and oil bases in Spanish mainland, island, and colonial ports. Let us find out why North American newsprint should flow to publishers like Rivero of Cuba, Laos of Peru, Gomez of Colombia—publishers who openly back the Spanish Falange. Let us establish the truth about Spain and the Falange while there is still time to prevent Falange branches in Latin America, in north Africa, yes, even in the United States, from performing the type of treacherous services which won for the Falange division run by Spanish Consul General Jose del Castano in Manila the eternal gratitude and the formal decoration of the Jap murderers who bombed Pearl Harbor. Let us hear from Andres Soriano, now in Washington as a member of the Philippine Government in Exile, a man who was photographed giving the Fascist salute at a Falange rally in Manila shortly before Pearl Harbor. I have a copy of this picture in my hands.

A prominent European Fascist declared, on September 30, 1942, that—

> The great unity of the Axis includes Nazis, Fascists, and Spanish Falangistas. There is no longer any distinction between fascism, nazi-ism and falangismo.

The name of the Fascist who made this statement was Benito Mussolini. Let this jackal's boast be a challenge to this Congress—a challenge that will not pass unheeded.

Silver

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. SMITH of Ohio. Mr. Speaker, yesterday the gentleman from Arizona [Mr. MURDOCK] made certain statements with respect to my position on silver which are not in accordance with facts, and I wish at this time to correct same. He said:

> The gentleman from Ohio is the bitterest foe of silver whom I know of in this membership. He want all modern silver legislation repealed. He would demote one of the precious metals, one used since the dawn of civilization as money and recognized by the founders of this Republic, to the status of a mere commodity and stricken entirely from its proud place in our monetary system. At least, that is the way I judge his implied attitude toward the white metal. Be that as it may, he does want our Government-owned silver sold to private industry from the United States Treasury for 50 cents an ounce. Nor do I understand that the gentleman would have such Government silver sold to private parties exclusively for war uses. He would tell you this silver was purchased, at least some of it, by the Treasury for about 71 cents an ounce.

I feel certain that the gentleman from Arizona [Mr. MURDOCK] means to be fair and that he would concede to me the right to have my own opinion on some of these matters. In the first place, I do not think there is anything in my record which indicates that I have ever been a foe of silver. I think a disinterested reading of my record in respect of silver legislation will show that instead of having been the enemy of silver the very reverse comes nearer to stating the fact.

I contend it is the silver interests who are the real foe of silver. As I see it, the legislation enacted under the New Deal pertaining to silver has had the effect of destroying this metal for use as money instead of improving its position for such use.

Could anyone honestly believe the position of silver has been helped by the Silver Purchase Act that unleashed the worst orgy of speculation in this metal the world has ever known? Was it a benefit to silver when the Silver Purchase Act drained China of its silver, closed practically all of her banks, and threw her into a depression as severe as ours was, and from which the Chinese are still suffering?

Has it helped the monetary position of silver to overvalue it by law anywhere

from 200 to 400 percent, as has been done since 1934? Has the effect of paying the silver-mining interests a subsidy amounting to possibly as much as 120 percent in excess of its world market price increased confidence in silver for money, or has it decreased it?

As to the statement that I want our Government-owned silver sold to private industry from the United States Treasury for 50 cents an ounce the gentleman from Arizona is entirely in error. He did not read the amendment which I had prepared and which I intended to offer to cut the price from 71.11 cents to 50 cents. That amendment provided for a 50-cent price exclusively for war uses.

But if the gentleman from Arizona had listened a little more closely to my remarks he would not have made the error of stating that I want the Government-owned silver sold to private industry at 50 cents an ounce. If he will take the time to go over that speech he will see that the remarks contained therein refer entirely to the use of silver in war industries.

No, I think the real enemies against the use of the white metal for money are those who are responsible for placing the silver legislation on our statute books that has been enacted in the last 10 years. The real friends of silver are those who would wipe that legislation out and put an end once and for all to the silver subsidy program. If the silver-mining industry is really in such dire penury as to require public assistance this should be provided directly and forthrightly. It should not be done under the false pretense of enhancing its monetary usefulness.

Anyway, the loud protestations of love by the silver interests for silver as a monetary metal might have a truer ring if they had not personally benefited financially to the tune of one hundred and forty to two hundred and thirty million dollars in the form of a Federal handout.

United States Cadet Nurse Corps

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview with me by Mary Mason over N. B. C., July 3, 1943:

ANNOUNCER. From Washington the National Broadcasting Co. presents Representative FRANCES P. BOLTON, of Ohio.

Mrs. BOLTON is one of six Republican women Members of the House of Representatives and is a member of the House Foreign Affairs Committee. Tonight she will be interviewed on a law, recently enacted, that sets up a United States Cadet Nurse Corps. Representative BOLTON will be interviewed by Mary Mason, N. B. C.'s director of women's activities in Washington.

Miss MASON. For many years Representative FRANCES P. BOLTON, of Ohio, has concerned herself with public-health nursing, nursing education, social service, and other educational activities of like nature.

Mrs. BOLTON, have the funds necessary to implement your nursing been made available?

Answer. Yes, Miss Mason, the conferees for the House have accepted the provision made by the Senate for $45,000,000 covering a 6-months' period, during which time the Budget will give it further study so that adequate funds may then be provided for the full year on a basis of accomplishment.

You see, there could be no actual appropriation made until the bill was signed, and this came too late to be included when the Labor-Federal Security Appropriation bill was before the House. But there was no hesitation among the conferees as to the need of the amount inserted by the Senate upon recommendation of the Budget. Indeed there has been nothing but the finest appreciation of the need for a real nursing program in both the Senate and the House. I am happy to take this opportunity to pay tribute to the membership of both Houses for their intelligent efforts to bring H. R. 2664 to the point where it could become an activated Public Law No. 74.

Question. You must be very proud and happy, Mrs. BOLTON, to have sponsored successfully this bill that bears your name.

Answer. Indeed I am, Miss Mason, for nursing is to me the No. 1 service for women not only in time of war when hundreds of thousands of men's lives depend upon nursing care, but also in peacetime, when the nurse is not only caring for the sick but teaching health and so laying ever deeper foundation stones for a world where the incoming generations will have sound bodies and a chance for ever-increasing joy in living, physically, mentally, and spiritually. And, in addition, in making possible to our young women a constructive professional career, nursing training is the best preparation I know for marriage, homemaking, and motherhood.

Question. Is what you call nurse training very different from what it used to be?

Answer. Indeed, yes. It was after the Crimean War that Florence Nightingale started the first school for the teaching of sick care. Since then bit by bit the training of nurses has been brought from crude apprenticeship to scientific preparation for a broad and contributive professional career. This has been a slow and difficult progression, each step the outgrowth of clearly defined need.

This is dramatically true at this moment when need for highly skilled nurses has pyramided astronomically due to the requirements of the Army and Navy, of the new industrial centers and all phases of civil life.

Question. Have the nurses responded to the call to the colors, Mrs. BOLTON? One hears such conflicting stories.

Answer. The nurses of this country have been magnificent. Do you realize that there are some 30,000 of them serving with the forces here and all over the world? Do you realize that this has meant that those on the home front are doing at least double duty in many, many instances? They carry a heavy regular job and in addition volunteer to teach classes in first aid and home nursing, in addition to refresher courses for inactive nurses who are coming back into active service for the duration. I hope we can recognize the home front service in some suitable way—perhaps a special arm band, as in the last war. All the heroism is not on the battlefield.

And the nursing profession responded to the call too! Its leaders were quick to realize that many more nurses were going to be needed than the schools of the country could train unless these schools could have help. The first sign of war clouds brought together such women as Miss Annie W. Goodrich, head of the Army Nurse Corps of World War No. 1, and dean of the Army School of Nursing; Miss Isabella Stuart, much of whose original plan has found its way into the present program; Miss Mary Beard of the Red Cross; Sister Olivia, chairman of the Association of Collegiate Schools of Nursing, and others I have not time to name. With the setting up of the Health and Medical Committee of the Federal Security Agency there was born the subcommittee on nursing, whose executive secretary, Alma Haupt, was loaned by the Metropolitan Life Association. Out of the activities of these committees and others associated with them there came a program in 1941 under the Public Health Department that helped schools to expand and made available some subsidy for students, some of whom were graduate nurses taking refresher and special courses such as midwifery.

Question. Didn't you have a hand in that somewhere, Mrs. Bolton?

Answer. Only a tiny one, Miss Mason, though it was an exciting one to me. It was no more than a three-word amendment in an appropriation bill in the summer of 1941—just inserting "and student nurses" in a section that provided help for the graduate nurses. But if the program so begun and enlarged in 1942 had not been, it might well have been impossible to have secured from Congress the wonderful support given to the new program.

Of course, the money made available for this trial program has not been the deciding factor. If the work done under the Surgeon General for Public Health, Dr. Parran, by Miss Pearl McIver and her competent staff had been anything less than it has been, the Bolton bill would most surely have had very hard sledding.

Question. Did you actually write the bill, Mrs. BOLTON?

Answer. Oh, no, Miss Mason, as I have suggested, the program contained in this bill is the result of some 2 or 3 years of conferences of the representatives of all the groups with responsibility for the nursing of our forces and our civilians. The Army, the Navy, the Veterans Bureau, the Public Health Service, the American Nurses Association and its War Council, the League of Nursing Education too—indeed all branches of nursing have sat in, as have the doctors and the hospitals and a few educators. It has been my privilege to be invited to these meetings, perhaps to represent the laity—the public.

I wish I could give you all a real sense of the earnestness of purpose, indeed the determination to do the impossible that was always present. It very naturally gravitated to Dr. Parran's department to draft the bill itself and to prepare the substantiating evidence. Coming under the Federal Security Agency naturally its officials checked it with great care and carried some of the responsibility of obtaining the Budget O. K. so necessary for the passage of all legislation. Then when all that was done it came to me for sponsorship in the House, where, thanks to the sympathetic attitude of Mr. BULWINKLE of the Interstate and Foreign Commerce Committee and the members of both his Subcommittee and the full Interstate and Foreign Commerce Committee the bill was given immediate hearing, voted out and passed by unanimous consent in record time.

In the Senate it was sponsored by Senator BAILEY and Senator THOMAS of Utah, chairman of the Committee on Education, shepherded it through with almost equal speed. To me it is such a fine demonstration that the Congress can and does act without partisanship of any kind when human needs are involved.

Question. What are the main features of the law?

Answer. Public Law 74 is "An act to provide for the training of nurses for the armed

forces, governmental and civilian hospitals, health agencies, and war industries through grants to institutions providing such training." This training may be limited to student nurse training, post-graduate, or refresher nursing courses.

The law sets up the United States Cadet Nurse Corps—I like the sound of that. In the corps there are three ranks: Precadet, junior cadet, and senior cadet. Street uniforms will be supplied. I have just seen artist sketches of these uniforms and I want to say here and now that they are just tops!

In addition to uniforms, the student receives through her school her tuition and fees for the courses of study and training, maintenance, uniform, and insignia (and I can assure you that is tops too) with a small sum called a stipend, which is really a bit of spending money which I dare say will cover beauty shops and such very handily.

Graduate nurses also are included in these items, as determined upon by the regulations of the Surgeon General. To participate in this program you, whoever you are, agree that you "will be available for military or other Federal Government or essential services for the duration of the present war."

Question. What happens to the girls who are still in training when the war is over?

Answer. All students who have been in school 90 days have the privilege of finishing their course. Nothing less would have been justifiable.

The program will be carried out as a major division of the Public Health Service, known as the Nurse Education Division, Office of the Surgeon General, Bethesda, Md. Miss Petry, dean of the Cornell School of Nursing on leave of absence, is in charge. The advisory committee has met and passed upon the regulations and has been assured by Dr. Parran that he will not go forward without the sanction of this committee.

Question. You are enthusiastic over nursing as a service career for young women, aren't you, Mrs. BOLTON?

Answer. How could anyone fail to be! It offers so much, not just for the duration, but for a lifetime!

Yes, I say again, nursing is the No. 1 service for women. To begin with, the lives of hundreds upon hundreds of thousands of our boys are going to depend upon skilled nursing care. This care has to be given in field hospitals, in amublances, and planes en route to evacuation hospitals, in transport planes and ships and in the many hospitals here in America. Even after the guns are silenced many of these men of ours are going to need that same skilled care and the equally important understanding heart to meet the years that lie before them. There will not be an end to nursing work. And has it not always been women's work to bind up the wounds of the world? Is there any training so adequate as nursing training to make ready for the long and arduous and heartbreaking task that will face us as a part of an exhausted and devastated world?

Can you imagine any field that will need more dramatically skilled hands, trained minds, disciplined and understanding hearts than the field we call public health? That means all the people, old and young, without regard to economic status or to race or creed.

If I could do so I would like to go into every girls' school in America and say to them: Girls, life lies before you, life needs you, needs the best that is in you. You face a world that will challenge the essential magnificance of your womanhood. Suffering and agony increases on every hand. Anguish of body, mind, and soul follows in the wake of the world's war.

First upon your list of opportunities to fulfill your own need for deep experience in the great adventure of living is the profession of nursing, developed by women down the long halls of time. Look well into your hearts, examine well your inmost desire for fullness of living before you pass it by for some more seemingly worth-while vocation.

In the world that lies ahead no one will live in idleness. The unimaginable needs of all the people of earth will demand the constructive effort of each one. Nursing offers the discipline, the training, the rich experience of renewing life in re-creating the desire for constructive living. Nursing, as no other training that I know, prepares you to meet the shock of the devastation man has wrought in God's world and fits you to take your part, your woman's part, of re-creation in the world that we must build upon the ashes of that which has been destroyed.

To all nurses everywhere I would say: The people of America have no words with which to express their appreciation of your courage, your steadfastness, your faith. Wherever you serve, with the forces or on the home front that needs you so sorely too, know that our grateful hearts are with you. And may the Infinite and Eternal God constantly recharge you with His energy, His gentleness, His fortitude, and His divine love, that you may be upheld and strengthened in the work you have chosen to do. And may He give us all courage to uphold decency and honor and truth until in His own time we come again to Peace.

Ploeser Plan for Solving the Critical Meat Shortage

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PLOESER. Mr. Speaker, last Saturday, July 3, I proposed an over-all meat program to various Federal officials charged with responsibility of food production, distribution, and price. My letter to Fred M. Vinson, Director, Office of Economic Stabilization; Prentiss M. Brown, Administrator, Office of Price Administration; and Hon. Marvin Jones, Director, War Food Administration, Department of Agriculture, Washington, D. C., follows:

JULY 3, 1943.

The alarming and chaotic situation in the meat industry calls for early action, the establishment of an over-all program, which will be an incentive for production of meat and the proper movement of meat products through the market to the various consumers.

I have given many months of study to this problem as a part of my duties with the Small Business Committee of the House of Representatives and am, accordingly, proposing what I believe to be a workable plan in the light of Executive orders now in effect and in the hope that the 10-percent roll-back on meat prices can be held:

GENERAL PURPOSE STATEMENT

To propose a workable plan which will:

(1) Bring meats and poultry from producer to consumer in adequate amount to properly feed all our people.

(2) Provide ample supply for war needs.

(3) Increase production of meats and poultry.

(4) Function in conformity with the spirit and letter of the Price Control Act.

(5) Bring to the consuming public adequate supply at a fair price.

(6) Eliminate the black market.

(7) Protect the health of the Nation.

(8) Provide an adequate program to supply post-war needs.

(9) Preserve the small business units in the meat and poultry industry, and encourage them to greater production.

(10) Expedite the war effort.

RECOMMENDED PROGRAM

1. Revision of War Meat Board, as follows:

(a) Creation of Industry Section of 15—Beef, Pork, Lamb, and Veal.

Two cattle raisers.
Two cattle feeders.
Two sheep raisers.
Two hog raisers.
Two slaughterers one, independent; one large packer.
One wholesaler, nonslaughtering indepenent.
One nonslaughtering processor.
Two retailers: One independent; one chain.
One director, Government.

(b) Creation of industry section for poultry.

One western producer.
One eastern producer.
One western processor.
One eastern processor.
One live poultry receiver.
One live poultry shipper.
Two dressed poultry wholesalers.
Two retailers.
One director—Government.

Committees to work directly under the direction of the Honorable Fred Vinson, Director of Economic Stabilization, in order to coordinate program and function with both Office of Price Administration and the Office of War Food Administration.

2. Establishment of retail ceiling on all grades of dressed beef, except Government grade AA. Ceiling on all other grades of beef, lamb, veal, pork, and poultry to be that now established by Office of Price Administration, which is the rolled-back level.

It is believed that all steps of processing and distribution can live under this level if proper safeguards and ceilings and quotas are established at the various levels from producer to retailer.

3. Establish wholesale ceiling which allows a reasonable profit mark-up for retailer.

It must be emphasized that the retailer is much better protected if operating at a reasonable minimum profit with ample supply than at any wide margin without supply. Ample supply and accordingly larger volume has a definite bearing on operating cost at the retail level. The same is true of all other levels.

The plight of the retailer is the same today as the plight of the consumer—extreme shortage of supply. The problem of supply is, therefore, primary.

The history of the meat industry shows conclusively that the independent retailer has depended on the independent nonslaughtering wholesalers and processors as his chief source of supply. It is necessary, therefore, to insure the proper allocation of dressed meat and poultry products from the slaughterer to the wholesaler and the processor.

Failure to allocate the available civilian supply through these normal channels of distribution has caused maldistribution, black markets, and extreme shortage.

The wholesalers' profit mark-up can be fixed at 1½ cents per pound with no discounts either from the slaughterer or to the retailers.

4. Establish a slaughterers' selling price which is based on the cost of live animals

and poultry plus operating cost and shrinkages with allowance for minimum profit.

These operating costs and shrinkages are known factors. It, therefore, becomes necessary for the Office of Price Administration and the Department of Agriculture to establish live animal prices in order to make this cost a known factor. For example, slaughterering costs on beef are sufficiently constant so as to permit profitable operation at the margin of one-half cent per pound on dressed-beef carcasses.

Much of our present difficulties in the pricing of dresesd meat could be alleviated by proper pricing of offal products, as for example, hides and tallow. These byproducts are now price-fixed by Office of Price Administration at a level so low that consumer costs of dressed meat are bearing the burden of this squeeze. Release of this squeeze will permit a substantial release of the squeeze which holds back the production of dressed meats. The result has been shortage of dressed meats, shortages of fats and oil, and shortage of leather products, black market, and excesisvely high prices on meats to consumer.

Strict enforcement on slaughter licensing.

5. A feeders' selling price ceiling should be placed on all but cattle which will grade AA when dressed. Likewise, the feeder must be protected by placing a ceiling price on stocker and feeder cattle and beef calves.

The cattle feeder must be permitted a proper margin for the feeding of heavier and better beef cattle. Grain and miscellaneous feed cost must be adjusted so as to encourage a production of a greater poundage of meats and fats in each animal placed on feed.

Present loss of live-beef weight approximates 200 pounds per head of cattle. This total loss annually approximates over 2,000,000,000 pounds.

AA grade of dressed beef in accordance with United States Department of Agriculture figures normally only amounts to 5 percent of production, and therefore, can well be excluded from basic ceiling price fixing. It is a premium grade and should be so treated as to increase incentive for production of heavier and better cattle.

6. Producers and feeders of cattle should be protected in their feed costs.

This includes corn and miscellaneous feeds required in production of beef. In this way squeezes can be avoided and increased production and movement can be obtained for the protection of the cattle raisers and feeders. These groups are the keys to our meat production and distribution. Producers and feeders must be protected on their feed costs by the Government. Any deficiency in the proportionment of the over-all price range from producer to consumer may be aided at this point by incentive Government assistance.

SUMMATION

The plan outlined above is equally applicable to lamb, veal, pork, and poultry when the peculiarities of their production are analyzed similarly. Beef is the No. 1 problem of maldistribution and consumer shortage. There is not a shortage of live cattle. Lacking proper consumption and distribution a critical shortage may easily develop. The entire beef problem can quickly be solved by (a) proper adjustment of byproduct prices, (b) protection of feed costs, and (c) proper proportionment of the retail price.

Respectfully submitted and recommended.

WALTER C. PLOESER,
Member of Congress.

Identical letter sent to Hon. Fred M. Vinson and Judge Marvin Jones.

The Bennetts of Missouri

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. WILSON. Mr. Speaker, all of us who were here during the Seventy-seventh Congress recall the untiring efforts of the late Honorable Phil A. Bennett of the Sixth Congressional District of Missouri, to maintain our republican form of government. He was a man of vision, foresaw the evils seeking to destroy us today, and literally gave his very life in an effort to preserve for future generations the life, liberty, and happiness he had enjoyed.

Yes, Phil Bennett gave the best that was in him in representing the people of his district. He was one of the hardest working, most sincere, conscientious Members of the House of Representatives and we, who had admiringly watched his work, considered his loss a great one. When we were informed that his son, MARION T. BENNETT, had been elected to succeed him, we wondered to what extent he would be able to fill the place on the floor of this House, made vacant by the death of his very able father.

Barely 6 months have passed, and it is already evident that MARION is a "chip off the old block," that he is not only an able representative of the people of the Sixth Missouri District, but that he is a fighter and an enthusiastic supporter of the principles so ardently supported by his father.

It gives me a great deal of pleasure, as I am sure it does the rest of my colleagues, to see MARION step into and fill the shoes so ably filled by his father.

Missouri, you should be proud of him!

"Let Freedom Ring"

EXTENSION OF REMARKS
OF
HON. C. W. (RUNT) BISHOP
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. BISHOP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Daily Independent, Murphysboro, Ill., of July 3, 1943:

"LET FREEDOM RING"

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it and to institute new government laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."—(From the Declaration of Independence.)

One hundred and sixty-seven years ago, in downtown Philadelphia, a little band of fearful but courageous men proclaimed to the world certain human priciples which, from that day to this, have been the lodestar for this Nation.

Nothing in the Declaration of Independence was really new except its compilation in a single document in words that rang with sincerity and purpose. It is, as many have said, a document of glittering generalities, and yet it has provided inspiration for all the peoples who from that day to this have sought to struggle toward genuine, working democracy.

Of all the pungent phraseology in that Declaration, probably none expresses either the spirit of America or the goal toward which we now are fighting so well as one short clause:

"Governments derive their just powers from the consent of the governed."

It is all very well for ideologists and evangelists and zealots to dream of how we might make the whole world over into our own image, but the great mass of our people have in mind just two things they want to see come out of victory.

First. That this Nation itself shall maintain a government that derives its powers exclusively from the consent of the governed.

Second. That the rest of the world shall be guaranteed the opportunity to establish governments that derive their powers from the consent of the governed.

Everything else is secondary. Everything else flows from this one thing.

If, in the course of generations, we can assure that the governments of the world shall all derive their powers from the consent of the governed, everything else will follow automatically.

For all people, everywhere, want the same things that we do—freedom, prosperity, peace.

Never since that Declaration was signed, 167 years ago, has this Nation been in greater peril of losing a government "deriving its just powers from the consent of the governed."

Today a ghastly, unconstitutional, oppressive system of government by directives instead of government by law, has grown up in the United States. It is a foul and rank growth and it threatens the very existence of the Republic. It is a cancer eating at the heart of the Nation. If it is not cut out it will destroy our right to life, and to liberty, and to the pursuit of happiness. When government becomes master instead of servant human rights die. And when governments govern by orders and directives instead of by written laws they have advanced far upon the road to becoming masters.

We need a new Declaration of Independence in 1943. It is not one whit less important than winning the war.

Compulsory Savings Tax

EXTENSION OF REMARKS
OF
HON. EMORY H. PRICE
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PRICE. Mr. Speaker, for several weeks we have heard Congress criticized

for not attempting to take some action or propose some program in lieu of subsidies, incentive payments, and roll-backs that have been proposed by the Administration. We have been accused of fighting all these measures without offering any substitute.

I have introduced a bill that, in my estimation, will at least be a proposal to remedy the situation that we now find confronting us. I believe you will agree with me that—

First. Increased revenue is absolutely necessary.

Second. And it must be had in one of three ways:

a. Increased rates of income tax.

b. Sales tax.

c. Compulsory savings tax.

Third. Compulsory savings tax may make either of the other two unnecessary.

Fourth. The chances are that voluntary purchases of stamps and bonds will fall off considerably when withholding tax plan goes into effect.

Fifth. Experts tell us there is too much money in circulation for the amount of goods available.

Sixth. They also tell us the majority of previous bond purchases have been made by our banks and that this did not drain off an appreciable amount of this surplus money.

Seventh. I believe this compulsory savings tax would drain off this surplus money and thus serve a twofold purpose; first, of providing the money necessary, and, second, help prevent inflation by reducing the purchasing power of our people at this critical time.

Eighth. If the people realize the fact that we are going to be compelled to increase the revenue naturally they will prefer a savings tax.

Ninth. My purpose in introducing this bill at this time is to give the Members of the House an opportunity of getting the reaction of their people during the recess.

Excerpt From "Men in Motion"

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. ELLSWORTH. Mr. Speaker, in a recent book entitled "Men in Motion" by Henry J. Taylor, there appears a clear statement of some of the present social and political trends. Under leave to extend my remarks in the RECORD, I include an excerpt from the above-mentioned book, as follows:

When governments go bad in a large area anything can happend, for the mechanistic sphere, with all its mass action, communicates its political venoms.

This is why, since the mass forces took hold and the mechanistic sphere began to roam, occasions of economic and political crises have multiplied, and this is why there have been fewer crises affecting only one country—confined to a single nation.

The mass forces have presented mankind, therefore, with a new kind of crisis—the long-distance crisis in government ideas—which advances and spreads in the saturating way that a tide fills all crannies of a cave.

This is reflected in the amazing similarity of political movements all over the world, all in a direction away from self-faith and toward fascism, communism, or collectivism, and each in the hands of men who ride the forces of discontent in the way most practical for their special locality.

Therefore the brew of bad government has blended between nations, boiling to higher and higher levels as one moral value after another has been sacrificed to meet a general pattern of financial, social, and political expediency. And the tragedy of the world is that our own country, which should have repudiated this process with every act and every deed of its national life, took its place in the pattern along with the rest.

Instead of dedicating our Nation to arresting the swing away from self-faith, our New Deal leaders actually accelerated it.

Communism is the red. Fascism is the black. We are shepherded into a blending. We are both reddish and blackish. We are a brown. For the fundamentals of the government idea brought forward in our country were already prepared in a combination of the polyglot doctrines of Europe. Our Government became Europeanized.

In the name of a strong personality, American collectivists practiced in wider and wider measures a strange mixture of sheer opportunism, emotional economics, and reckless adventure, along with a hard-headed political program of making the labor unions and farmers of our Nation so dependent on special favors from them that they could control the votes of these two groups and thus maintain themselves in power indefinitely.

In this, they perform a profound disservice. For one of the political venoms communicated from abroad is that even America now wonders whether democracy will work. We are losing faith in our own system at home while we battle the system of our mortal enemy abroad.

The depression itself was not a direct reflection on the American principle of self-faith and the fundamentals of American Government.

In the worst months of the depression it seemed obvious that the closer we stuck to the fundamental truths—economic, political, and social—the quicker and more certain our recovery would be. The real danger was that we would lose our heads and go off on some tangent when our basic problem was to keep our heads and undo our mistakes one by one.

As with all, things were very difficult for me during these years. I had to meet my problems the same way that all others had to meet theirs—by working harder than ever before, by developing new products in the paper company I ultimately founded, and by protecting my savings as best I could.

Two Douglas airplanes had flown around the world—the first aircraft of any nation to circumnavigate the globe. They carried United States Army Air Service flyers. I was convinced that these ships were the best planes in the world, and I had bought a third interest in the Douglas Aircraft Co., at Santa Monica, Calif. I had all confidence in this company, and it turned out to be justified, but I had to sweat through it. There was nothing else to do.

I seldom left my office, and it did not seem possible to keep up with one disaster after another. Sometimes I didn't know whether I was coming or going, and I could see myself and my friends age in front of my very eyes. We were all up against it, and we were all up against it together.

Otto Schnering's immense confectionery company in Chicago went into the hands of a creditors' committee, owing me nearly all the money I had in the world. But every man who ever knew Otto Schnering trusted him. I had known him all my life.

"Harry," he said, "we can't collect the accounts due from our customers now. We can't pay your bills now. I know what this means to you, and I won't let you down. If everybody will wait and is willing to help, I can see this awful time through." His whole life centered on this task. His courage never faltered, and his word never weakened. He fought like a tiger to keep his business—and his honor. He did both. He paid every cent he owed. And through his self-faith and integrity his company retained its place as the largest candy manufacturer in the industry.

In all these trials and bewilderments it never occurred to him that the depression was proof that our Nation was weak and that free enterprise had failed in America. He knew that neither of these contentions was true. He did not think that any American had the right to lose confidence in himself or his country at a time like this, and, of course, his common sense rebelled at the assumption that we had become the greatest nation in the world by doing everything wrong.

I felt the same innate protest against the suggestion that we had reached our peak; that henceforth we could not have a national life of our own but must instead adjust ourselves to the qualities of a governmentalized civilization. I thought this a cynical and mischievous contention and I resented it as un-American.

I felt it just as untrue to believe that the depression had stabilized us at a low level as it had been to believe that the Coolidge prosperity had stabilized us at a high level, and, in any case, by the summer of 1932 it was clear to anyone who traveled around our country that we were on our way up. The real bet for the future of our Nation and the future of the world was that we make the grade soberly. The Europeanized new dealers, however, were sure to repudiate their promises, always and at any time, and scrap the good things with the bad in the process of their collectivism.

All my life I had been steeped in the cause of liberalism. And for a number of years I had been urging certain economic modifications in American and British technical periodicals. About this time I was invited to lecture before the economics and political science departments of a large New York university. In a question period afterward a student remarked: "I disagree with nearly everything you have said, sir; but, you see, I'm a liberal."

The term "liberal" had grown so out of hand that an honest use of it was impossible. I stopped saying I was a liberal. I have refrained ever since from saying I am a liberal. I answer that I am an American and let it go at that.

Collectivists stole the liberal label and falsified the concept.

It is typical of collectivism that it calls itself liberal when it is, in fact, reactionary. It is reactionary because it turns back the course of man's advance to the liberal social order which it seeks to overthrow. Its enemies are Chatham and Burke, Fox and Pitt, Palmerston and Cobden, Bright and Gladstone, and, on our side of the Atlantic, Washington and Franklin, Jefferson, Madison, Clay, Webster, Lincoln. Where in all history can be found a group of names like these, and in what teachings have there been more fruitful influences in the thoughts and institutions of mankind?

Instead, there had been various sorts of incompetents, like Karl Marx, preaching the doctrine of reactionary radicalism for the better part of a hundred years. But they were not listened to until the sudden growth and distortion of the mechanistic network, when new industrial, social, and economic problems began to face us with such force and in such a bewildering manner that, separated from the good earth, we hesitated to act in terms of what had, since the early immigrations to America, been the fundamental, underlying convictions of free people.

The great mass beliefs in a society of individuals, centering around Jeffersonian concepts of individualism, inalienable rights, natural prerogatives, freedom of contract, and similar conceptions, were appropriate to the task of instilling personal attitudes and habits favorable to individual life. It was only when the distortions within the mechanistic network diluted the power of these beliefs over the minds and hearts of discouraged Americans that the collectivists had their chance. History will never forgive them for having used their opportunity for experiments which led to weakness and cleverness when mankind all over the world had so much at stake in an American example of sobriety, stability, and integrity.

Surely, if our new dealers were honest and had no special involvements of their own, they would agree that it is moral principles, and moral principles alone, by which any individual's accomplishments should be limited. But they are herd minded, and they do have the special interest of converting our country to state collectivism.

The state is both useful and dangerous. But the fundamental lie of state collectivism is that it professes to be the sum of the state's citizens. It is really only the instrument of a few.

But our situation is temporary.

The changed world, with its problems of the mechanistic network, its lopsided development, its faster pace, its departure from old ways, and the simple life of Billy Harkness' time, has never outstripped the American spirit.

The destiny of our country is within our people. The things within us that make us Americans can never change, please God.

Let the Chips Fly—Cherokee Iron Ores Must Be Put To Work Despite Dollar-a-Year Big Steel Executives in W. P. B.

EXTENSION OF REMARKS

OF

HON. NAT PATTON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PATTON. Mr. Speaker, my recent statement on the floor of the Congress will have to stand even though it has disturbed certain quarters. In a faithful effort to represent my constituents I have always pursued a policy of giving credit where it is due. If there is hatchet work to be done, then let the chips fly.

I consider it my duty to focus the light onto the outstanding sore spot in our retarded war-production program. Those who are responsible for our present shortage of steel are found complacent and have the audacity to inspire publicity tables about miracles to their credit. I refer to the big steel companies who have somehow succeeded in placing their high-salaried executives in the W. P. B. In fact, they remain in control of every position of significance.

These executives are known as dollar-a-year men. They are entrusted with the authority of government. It is they who actually do the rejecting of applications which the small-business people present for employing local labor in operating furnaces to make iron and steel from native local iron ores.

"HE WHO PAYS THE PIPER * * *"

In my judgment such a practice is untenable. To so entrust Government responsibility to persons maintained at big salaries paid them by the very companies who are interested in stopping these potential but small competitors, only guarantees the big companies that their monopoly is not to be disturbed. What a vicious practice!

One need not have lived in my district to appreciate the tremendous iron-ore resources that abound in the Cherokee County area; for though they are now dormant, it is common knowledge that in this community more than 50 years ago, pig-iron production flourished as an established industry. In fact, its iron and steel castings by the thousands of tons are found in service to this day all over this region. Our State capitol, municipal castings, sewer pipes, water mains, and countless other articles of commerce were cast and machined with local labor from these local resources. A well-balanced economy was then in the making—when lo and behold, its continued existence was found to be an interference with the newly formed and rapidly growing iron and steel monopoly. Leave it to them, ways were found to put it out of business, in those days of rugged individualism, where the most lavishly financed competitor survived. For those were days when fair trade practice was without standing. Today there remains in these cose-to-the-surface deposits more than 100,000,000 tons of fine iron ore awaiting the opportunity to help expedite this war.

A more fortunate location for the production of good quality charcoal pig iron does not exist in these United States.

Like my constituents, we are struggling hardest to hasten the day of victory. We are also mindful of the problems that await the return of peace. What sort of opportunity is to await the return of those lads. From experience and memory we know that we have both the makings and the will to erect and maintain an almost ideal economy of unlimited employment opportunity. Countless industries are certain to locate again in this vicinity, once it is realized what low-cost and high-quality pig iron we are capable of making available to the foundry and metal trades. Numerous durable-goods industries can prosper for centuries on the native resources that abound beneath our feet.

Despite these overwhelming facts, my constituents' application to build a furnace has been given the merry run-around by the dollar-a-year executives. The only explanation that holds water is the inherent merit in this proposition, and the fact that monopoly fears competition.

The Wallace-Jones Case

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the following editorial from PM of July 6, 1943:

THE WALLACE-JONES CASE

There are several simple clues which will help the ordinary reader through the maze of facts hurled by both sides in the Wallace-Jones controversy:

1. Jones' reply boils down to an admission of delay in building up stock piles and to the excuse that in most cases this was due to the advice of other Government agencies, notably the Office of Production Management and its successor, the War Production Board, sometimes the State Department.

2. The difference between the two sides is a fundamental difference in approach to the war effort. Though the Board of Economic Warfare is also run largely by businessmen, the difference between the Board of Economic Warfare, on the one hand, and the Reconstruction Finance Corporation, War Production Board, and State Department, on the other, is a simple one. The former seems to have acted on the assumption that ordinary profit motivations and business-as-usual considerations could not be depended on to build up stock piles of strategic materials.

3. The reader will notice how often Jones gives as an excuse that he was only supposed to buy up those quantities left over after private business had bought what it wanted. Jones says it made no difference to the war effort whether these materials were in the hands of private concerns or the Government. The difference, however, was considerable—as the Truman committee showed in its investigation of rubber. Stocks in the hands of the Government were saved for emergencies. Stocks in the hands of the rubber companies were used to stage the greatest civilian boom in the industry's history.

Re Jesse Jones

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. COFFEE. Mr. Speaker, The Honorable Jesse Jones has been very much in the news lately. One of the great domestic newspapers of America is the St. Louis Post-Dispatch. In its editions of June 30 appeared an editorial which

is self-explanatory. I believe its reprinting in the CONGRESSIONAL RECORD would be helpful to the Congress and to the country.

Here it is:

JESSE JONES SHOULD BE FIRED

Vice President WALLACE is not a temperamental sort of person. He is studious, even-tempered, and fits of indignation are foreign to his nature. But the statement Mr. WALLACE made yesterday before the Senate Appropriations Committee, on the subject of the obstructionist tactics pursued by Jesse Jones in his dealings with the Board of Economic Warfare, was that of a patient man goaded beyond his endurance and now filled with flaming wrath.

The statement was more, however, than a denunciation of prolonged harassments of the Board of Economic Warfare by Jones, of his indulgence in "hamstringing bureaucracy and back-door complaining," of his "timid, business-as-usual procedures," of his "dismal failure" in building up stock piles of strategic materials.

Mr. WALLACE documented every charge with facts and figures. He told in detail how war agencies had called for the purchase of so many tons of certain vital materials, and how the Reconstruction Finance Corporation either failed to fill the orders or obtained only a small fraction of what was needed.

When the Vice President of the United States publicly assails a Cabinet member, a fellow-adviser of the President, it is an indication of how deep the rift within the administration has grown. It is apparent that WALLACE was unable to get rid of the Jones incubus by working in private, so he has been obliged to bring the whole affair out into the public eye in order to get action.

This is not the first time that the methods of Jesse Jones have been denounced. As Secretary of Commerce, Reconstruction Finance Corporation Chairman and head of its seven subsidiaries, Federal Loan Administrator, and War Production Board member, the former Houston banker wields tremendous power in the war effort. Time and again investigating committees have heard the same story from competent witnesses; that Jesse Jones' dilatory, penny-pinching policies are handicapping the Nation's war program.

When evidence of Jones' many failures came to light last year, the President acted. He did not make the clean sweep that was needed, but made his characteristic move of transferring powers. The Board of Economic Warfare on April 13, 1942, received authority for importing needed commodities, but Jones, as Reconstruction Finance Corporation Chairman, continued to hold its purse strings. The result has been a constant running battle between Board of Economic Warfare and Jones ever since, and the Wallace statement told how "he and his personnel down the line have thrown a great many obstacles in the way of our exercise of the powers given us to carry out wartime assignments."

This was another example of the divided control and the overlapping agencies which are obstructing the war on the home front. It brought the usual results. Now WALLACE, as Chairman of the Board of Economic Warfare, is obviously sick and tired of having Jones as the obstructionist banker of his highly useful agency. He proposed to the committee that Congress appropriate money directly to the Board of Economic Warfare instead of giving it to the Reconstruction Finance Corporation and its agencies, to be doled out at Banker Jones' discretion.

WALLACE showed restraint when he made this suggestion. Its acceptance might result in expediting the work of the Board of Economic Warfare, but the only way that the administration as a whole can be rescued from Jones' bungling and incompetence is for him to be removed outright from its councils.

His critics have many times invited Jones to resign. He clings tenaciously to his powerful posts, however, through all the barrages of criticism and all the exposures of failure.

It seems up to the President therefore. Mr. Roosevelt is chronically averse to dismissing an old associate who has failed to make good, but the episode of the cinchona seeds alone should be enough to convince the President of Jones' incompetence.

General MacArthur, newly arrived in Australia from Corregidor, cabled Washington on April 14, 1942, that 2,000,000 seeds of high-grade cinchona had been shipped on one of the last planes leaving the Philippines, and warned that "they must be planted without delay," WALLACE related. Cinchona is the source of quinine, the specific for malaria, and Jones had failed to lay in adequate supplies of this essential drug before the war. Nevertheless, the Reconstruction Finance Corporation considered and stalled for months about planting the precious seeds MacArthur had sent out of the Philippines because, WALLACE charges, it feared a possible dollar loss from the transaction!

Jesse Jones long ago lost his usefulness to the Administration in helping fight the war or preserve the home front The President should put the national interest first, and fire him outright.

A Short, Simple, Sensible Utterance on International Affairs

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Commercial Appeal, Memphis, Tenn., June 19, 1943:

FULBRIGHT'S RESOLUTION

Representative JAMES WILLIAM FULBRIGHT, Arkansas Democrat serving his first term in the National House of Representatives, has suddenly leaped to fame in the Nation for reasons none too flattering to the previous record of the Congress in which he serves. People all over the country are speaking well of Representative FULBRIGHT because he said something sensible in a very few simple words, and the wonder is greater because his subject was international relations. The so-called Fulbright resolution, unanimously approved by the House Foreign Affairs Committee, reads as follows:

"*Resolved by the House of Representatives (the Senate concurring)*, That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein."

The foregoing 51 words tell their own story, and it is interesting to find Representative FULBRIGHT, now 38 years old, saying it took him a dozen years to get ready to write them. His background is significant. He comes from the Ozarks of northwest Arkansas, and now and again strength comes from the hills. He graduated from the University of Arkansas, and later as a Rhodes scholar, studied political science and history at Oxford University in England. He then studied law at George Washington University in Washington, and became a professor of law there. He was president of the University of Arkansas from 1939 to 1941. In private life he is president of a lumber company and an investment company in Fayetteville, Ark., and lives on his farm near that town.

It may be hoped that Congress and the Roosevelt administration will be impressed and influenced by the great and joyous measure of public approval that has greeted a short, simple, sensible utterance on international affairs. Representative FULBRIGHT has rung the bell, and its tolling should awaken the visionaries and dwellers in ivory towers. Unless the Congress and the administration can and will formulate and express a plan for post-war activity that makes sense and can be understood by the rank and file of the American people, all their noble sentiments and well-intentioned plans will head for disaster.

The Man Who Knows Your Groceries—An Article From the Nation's Business Concerning Roy F. Hendrickson

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. HAGEN. Mr. Speaker, it is always gratifying to anyone to see an old friend receive recognition for his work.

It was indeed a pleasure for me to read an article about my colleague, friend, and classmate, Roy F. Hendrickson, in the Nation's Business for July 1943. It was written by Larston D. Farar.

The story was entitled "The Man Who Knows Your Groceries" and it related the work and life of Roy F. Hendrickson, who is at the present time Director of the Food Distribution Administration and is a Deputy to War Food Administrator Marvin Jones, a former Member of this House. Mr. Chester Davis resigned since the article was written.

I had the pleasure of attending St. Olaf College, a Lutheran liberal arts college at Northfield, Minn., with Mr. Hendrickson.

I think all the Members of this House will find the brief story of his life of great interest since Mr. Hendrickson is particularly concerned at this time with the subject of food and food distribution. Mr. Hendrickson has more to do with the food business than any other Government administrator, but he lets others take the headlines.

The article from the Nation's Business follows:

Every day Roy F. Hendrickson buys $7,000,000 worth of food. By December, he will be buying at the rate of $10,000,000 a day.

As director of the Food Distribution Administration and as deputy to War Food Administrator Chester Davis, Mr. Hendrickson has more to do with food than anyone else in America.

Judging by volume, he is the greatest allocator and distributor of food in history.

Mr. Hendrickson issues "set-aside" orders forcing canners to hold back part of their pack for shipment abroad. He tells Prentiss Brown when a commodity may, or may not, be rationed. He tells wholesalers they must reserve a portion of their stocks for his purchase.

He tells food processors they must limit production in certain items and increase it in others. He tells Edward Stettinius whether or not more food can be shipped to Russia—or England—or Iraq.

On top of all that, Mr. Hendrickson finds time to administer the school milk program, to supervise meat-grading, to direct public feeding programs, and "to plan for the needs of special groups based on nutrition requirements."

A mere outline of his powers and duties fills many pages of small type. All of his duties affect the businessman in one way or another.

At 39, Roy F. Hendrickson is at the highest point of a 10-year Government career, getting the highest salary ($10,600) he has ever received, and can look back on a long series of promotions. Typically, he came through the latest shake-up occasioned by the arrival of Chester Davis from St. Louis.

On the first morning Mr. Davis took office as administrator of War Food Administration, succeeding Claude R. Wickard, Secretary of Agriculture, he called Mr. Hendrickson on the phone. It was 9 a. m. and Mr. Hendrickson had not arrived.

"Well, when he gets in, tell him to come and see me," Mr. Davis said.

At 9:30 a. m., Mr. Hendrickson arrived, went straight to the new boss. There, he outlined his duties to Mr. Davis, whom he had known years before, but had seen only occasionally since the latter left for St. Louis.

"Well," said Davis, after the conference, "you are on top of your work. Keep at it."

That was not the first "reorganization" Roy Hendrickson had lived through. And, as he well knows, that if he stays in Washington it will not be his last.

Dr. M. L. Wilson, director of extension for the Department of Agriculture, likes to think of Mr. Hendrickson as one of his proteges.

They met in 1933, when the new Agricultural Adjustment Agency wheat program was about to be announced. The program, as evolved, was known in its entirety to only two men—Chester Davis, head of the Agricultural Adjustment Agency, and Dr. Wilson, wheat administrator—when it was sent to the White House.

Three days before the program was announced, however, the Associated Press carried a long description of its details, signed by Roy F. Hendrickson, then agricultural reporter for the news agency.

"I was so surprised, I didn't know what to think," Dr. Wilson recalls. "That story had the very points of our program, which was on the President's desk."

Forthwith, Dr. Wilson sent for the reporter.

"I know darned well there were no leaks, because only two of us knew the program," he said. "Tell me, how did you get that dope?"

WANTED HIM IN GOVERNMENT

Mr. Hendrickson explained that, having gathered all available information from congressional hearings, talks with policy makers (most of whom disagreed), and general knowledge of farm laws, he had deduced his own wheat program.

"If your program isn't like mine, yours isn't the best program," he said.

When word got around at Agriculture one of the bigwigs advised: "He's too smart to be on the outside. Offer him the first good job that is open."

That's why Dr. Wilson, when he became Director of the new Division of Subsistence in the Department of the Interior, in 1933, appointed Roy F. Hendrickson as his administrative assistant.

Dr. Wilson didn't know it, but a lot of officials were trying to catch Hendrickson in the Government net. In 1 month he had been offered as many as three jobs to leave the Associated Press.

The two have been firm friends through the years, although their positions have changed greatly. Today Hendrickson has the biggest administrative job in Agriculture, outside of Chester Davis; while Dr. Wilson, in his late 50's, might take orders from his protege at any time.

KNEW HE WOULD GO FAR

"I knew when I first met him that Hendrickson would go far in the Government," Dr. Wilson recalls. "He has two traits that stand out—a tremendous amount of physical and mental capacity, and the ability to make up his mind and stick to his decisions. When he gets the facts, he acts."

Other acquaintances (everybody seems to know him) explain the Hendrickson march to power with other accolades:

"He hasn't tried to run a publicity show for Hendrickson. His whole mind is on getting the job done, not on personal projects.

"Of all the men I knew years ago in the Department of Agriculture, I picked Hendrickson as the comer. He is the best administrator in the Government today, bar none."

"I kept him, didn't I?" says Chester Davis.

Mr. Hendrickson's Government career is a Horatio Alger story, Washington style. He left Subsistence Homesteads to go to the staff of HENRY L. WALLACE, Secretary of Agriculture, in 1934. After 2 years he became director of economic information for the Bureau of Agricultural Economics. A year later he was assistant director of personnel in the Department of Agriculture. Shortly after that he became director. He left his position in 1941 to become Administrator of the Surplus Marketing Administration and Director of Marketing, positions he held when he was made Director of the Food and Drug Administration in December 1942.

When he took on his latest position, he was in charge of food distribution and Herbert Parisius was in charge of food production, both under Secretary Wickard. They were known as "the Siamese twins of food." But Mr. Parisius left, with warnings about a coming crisis. Mr. Hendrickson stayed to face the crisis.

"As I see it," Mr. Hendrickson says, "my duties are very simple:

"The most important thing is to get food. I buy for lend-lease, for our overseas possessions, for the Red Cross.

"Next most important is procurement coordination. I must see that when the Army, Navy, Marines, Coast Guard, Veterans' Administration, and other big buyers go after food, the food is there and that they don't bid up prices or overlap in their purchases.

"The next big phase is allotting the food. We have procedures by which each group—lend-lease, armed services, etc.—put in their claims for certain portions of the total supply. We see that the food is available and that each group gets its fair share."

Mr. Hendrickson is chairman of the Inter-Agency Planning Committee, which plans how to speed up food production, and also is chairman of the Allocation Committee, which allots each claimant its percentage of the total supply.

On the production front, he and his men are planning ahead for 3 or 4 years, no matter if the war might end in 6 months—which he doubts.

He asks: "What's the use of taking a chance? We'll need enormous amounts of foods for some time after the war. Our job won't end on armistice day.'

Although he reduces it to simple terms in conversation, Mr. Hendrickson's job is most complicated. Congress, through the years, has passed some 26 regulatory laws which he not only must administer, but obey.

In addition, he must plan and issue the 55 emergency "set aside" orders. And, of course, he must see that these are obeyed after issuance.

"A Government administrator," he says, "must be able to make a big organization move within, or in spite of, the rules that have been built up through accumulated laws.

"Many persons who have been successful in business have found themselves frustrated and bewildered in Washington, because they couldn't slash through the rules and did not know how to operate within them.

"Administering a food program any time is difficult. In war it is like traveling in uncharted territory without a compass."

To go into this uncharted territory with him, Mr. Hendrickson has some 13,500 employees. Most are in Washington, but many work out of regional offices in San Francisco, Denver, Dallas, Atlanta, Des Moines, Chicago, and New York. Mr. Hendrickson's men check on the grocer to see that he doesn't accept milk deliveries from more than two dairies a day. They check on the packer to inspect and pass on meat. They check the broker to see that there is no "funny business" on the exchanges. They check the consumer by telling the Office of Price Administration what to ration.

FOUR HUNDRED DOLLAR PROFIT ON ONIONS

"Thunder," he says, "we have problems that nobody ever has faced before."

Roy F. Hendrickson (he won't give his middle name) was born December 29, 1903, in St. Ansgar, Iowa (population 934 today), where he still maintains his legal residence. His father, now retired and an Office of Civilian Defense blockleader in St. Ansgar, had a fair-sized farm, and Roy picked up a general knowledge of agriculture.

However, the only real experience he had in farming, he recalls, came when he was 14 years old. In that year, the elder Hendrickson gave Roy an acre of ground, staked him with a little cash, and the boy planted onions.

The onion market in 1918 "went to hell," he remembers, but he refused to sell for low prices. By the next summer, his onions had rotted.

Not to be outsmarted by economic forces, the next spring he planted two acres of onions. The market was good. After he paid back his father, he had $400 profit.

Years later, he sat down one afternoon and knocked out an essay entitled: "Onions by the River Bank," which The Country Gentleman bought for $50.

Roy's two brothers, Morris B. and Otto Hendrickson, are still farmers. One lives on the home place near St. Ansgar and the other at Fertile, Iowa. The girl in the family, Miss Esther Hendrickson, teaches biology.

At the time Roy went to St. Olaf's College at Northfield, Minn., he yearned to be a professor of literature. But after 3 years there, he wanted to write. He became editor of the school paper, The Manitou Messenger, in his sophomore year, and soon was correspondent for both the Associated Press and the United Press, serving the rivals so skillfully that both offered him regular jobs before he left school.

In the summer of 1923 he took a job with the Duluth News-Tribune, and by September was making $30 a week.

"Let me stay a year and save some money, I'll go back to school," he told his father.

"Do as you like, but not many people ever go back to school after a year out," the father replied—prophetically.

A short time later Roy Hendrickson accepted a job at $35 a week on the Sioux City (Iowa) Tribune. Within a year he was making $40 a week—much too much to leave to go back to school. Besides, he had won a

large automobile in a lottery and sold it for $1,400.

Striking out to see America, he did free-lance work through New England and beat around the East pretty thoroughly. Then he decided to keep his promise to return to school, and in the fall of 1925 he registered at the University of Minnesota, going to school by day and working for the Associated Press by night.

LIVES IN SUBURBS

When he chose $50 a week and leisure to less than that and school, he dropped out of the university. Besides, he had married Charlotte Nicholson. He soon became State capital reporter for the Associated Press, staying in St. Paul until 1929, when he became the Associated Press bureau chief at Minneapolis. He remained there until coming to Washington in 1932.

Today, Mr. Hendrickson lives in an old Washington suburb. Around his home is a half-acre of ground, with an orchard and a Victory garden.

He has three girls and two boys—"a full house in poker." Mr. Hendrickson is six feet tall, weighs 210 pounds and in normal years would keep his weight down by playing tennis. Now he spends his Sundays in his garden. He reads several books a week, does little entertaining, although he has many friends in Washington. Nominally a Lutheran, he attends no church regularly.

Mr. Hendrickson is wrapped up in his work. He is frequently on the radio, urging farmers to produce more and consumers to kick less. Like all human beings, he makes mistakes. One of these he would like to forget, but his friends remember it.

He was taking part in a discussion of food problems after attending a radio forum in which he defended grade labeling vigorously.

"Why bring in grade labeling now?" one of the debaters asked. "It's late in the war and will require thousands of new employees, despite our strained manpower situation."

"We won't have to use manpower," he replied, "We'll employ women."

He was considerably riled when the debater, a woman, rejoined: "Well, wait until Paul McNutt hears that you don't think womanpower is manpower."

Mrs. Hendrickson had the last word at this point. "Let's go home, dear," she is reported to have said.

The Wallace-Jones-Clayton Controversy

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Houston Post of July 2, 1943:

THE WALLACE-JONES-CLAYTON CONTROVERSY

The natural reaction of any informed person—and therefore, probably, of the American people generally—to Vice President Henry Wallace's assault upon Secretary of Commerce Jesse Jones and W. L. Clayton, Assistant Secretary of Commerce, is threefold:

1. Mr. WALLACE made about the worst possible choice of men to criticize for their services to the country, for they are two of the strongest in the Federal administration, and stand high in public esteem.

2. Mr. WALLACE is about the last man in the administration whom anyone would pick as a match for men of Jesse Jones' and Will Clayton's records and caliber.

3. Mr. WALLACE's attack was ill-advised and deplorable, considering their relative public services, and especially in view of President Roosevelt's instructions of last August that department heads come to him with their differences, rather than air them publicly. In this critical hour when the Nation's future hangs in the balances, and our governmental leaders should set a high example of unity, the Vice President showed extremely bad judgment and thought for the country's welfare in publicly agitating dissension which could and should have been settled by the President who placed all three men in their present positions, and to whom they should be accountable.

As for the merits of Mr. WALLACE's charge that Mr. Jones was guilty of "obstructionist tactics," anyone casually familiar with the diligent efforts Mr. Jones has given to the service of his country during the past decade will require more than the unsupported charge of HENRY WALLACE to convince them that Jesse Jones has employed "obstructionist tactics" against their welfare. The books of the Reconstruction Finance Corporation and the achievements of its Chairman attest that he is one Government official in Washington who has guarded the public interests.

As for the charge that Mr. Jones has hamstrung the Board of Economic Warfare, of which Mr. WALLACE is Chairman, the Galveston News put its editorial finger on the seat of that trouble when it said that the Reconstruction Finance Corporation holds the purse strings to money which the Board of Economic Warfare gets for its export and import operations, "and HENRY doesn't like it. He wants the Board of Economic Warfare to get its funds by direct congressional appropriation. * * * If Board of Economic Warfare got its money directly from Congress, Mr. WALLACE could spend it as he pleases—or thinks he could."

One branch of Congress—the Senate—has in effect replied to Mr. WALLACE's charge on this score by demonstrating its opinion as to which is the safer to control these funds—the level-headed businessman, Jesse Jones, whose financial acumen is a matter of Nation-wide knowledge, or the visionary theorist-reformer HENRY WALLACE. This the Senate did by voting to tighten restrictions on the Board of Economic Warfare by requiring a majority of the full Board, of which Jones is a member, to approve its programs, instead of leaving them more or less to Chairman WALLACE's determination.

As for Mr. WALLACE's charge that Messrs. Jones and Clayton failed to obtain sufficient stock piles of vital war materials, that is an old complaint of his which has been refuted time and again. Concerning rubber, the commodity of which most has been heard in this connection, only Monday the country heard some of the Nation's leading rubber manufacturers, at Houston's celebration of American Made Rubber Day, pay high tribute to Jesse Jones' vision and enterprise in acquiring the world's greatest stock pile of rubber, before Pearl Harbor.

Those tributes were only samples of the praise which Mr. Jones' accomplishments have won ever since his appointment on the Reconstruction Finance Corporation. He was first selected by a Republican President for that job, and then reappointed by a Democratic President. He is one high figure in the New Deal whom both Republicans and Democrats have endorsed. The former have claimed him as their contribution to the administration, though Mr. Jones is a lifelong Democrat.

And what about Mr. WALLACE? Who is for him? Remember the Democratic National Convention of 1940 in Chicago, when Mr. WALLACE had one backer for vice president, and the delegates were overwhelmingly opposed to him. No one pretended otherwise than that they nominated WALLACE only because the President insisted upon having him as his running mate, and his election automatically went with that of Mr. Roosevelt.

Thus, while Mr. Jones is in effect the choice of both major parties, Mr. WALLACE is the choice of neither. And this fact is pertinent to an appraisal of the present controversy.

Mr. Jones has demanded a congressional investigation, at which Mr. WALLACE would be required to substantiate his charges. That may be the best way to get at the bottom of the dispute. Meanwhile, the American people know enough about Mr. WALLACE and about Messrs. Jones and Clayton to form a reasonably satisfactory verdict in their own minds.

The Japanese Problem

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. J. LEROY JOHNSON. Mr. Speaker, the people of the Central Valley of California have had about 40 years' experience with Japanese. They are thoroughly familiar with their mode of living and with their general characteristics. I insert as part of these remarks a copy of a memorial to the Congress of the United States, setting forth the views of the hundreds of signers of this petition on how to handle the Japanese problem. I am glad to note that several of their suggestions are embodied in House Concurrent Resolution 29 and H. R. 3012, introduced by me and on which hearings will be requested after the present proposed recess.

MEMORIAL TO THE CONGRESS OF THE UNITED STATES

Whereas the present World War No. 2 has demonstrated beyond a doubt that the Japanese Government and the Japanese people are untrustworthy, treacherous, irresponsible, and faithless; and

Whereas the Japanese as a race are unassimilable and their mode of life incompatible with the American way of life: Now therefore,

We, the undersigned citizens of the United States, respectfully submit, That any treaty made or consummated between the Government of the United States and the Japanese Government which may be made following the close of the present World War No. 2 shall contain the following provisions:

1. That all alien Japanese be immediately deported.

2. That it provide that any American-born Japanese may be deported when it is shown that such Japanese holds dual citizenship; that the citizenship by birth of such Japanese be voided.

3. That such treaty provide that there shall not be established in the United States or any of its possessions, any Japanese language school, nor shall any Japanese language newspaper be published therein.

4. That no Japanese shall be permitted to fish in the waters of the Pacific Ocean adjacent to the United States and its possessions within the limits of 500 miles offshore.

5. That no person of Japanese extraction shall be permitted to perform any labor upon any farm, the products of which are placed

on the public market for human consumption.

6. That any labor employed on any public or private project in the United States shall consist of 98 percent American citizens.

7. That no alien shall be entitled to hold title to real property in the United States or its possessions, or lease, rent, or operate or labor upon any land in the United States or its possessions.

8. We especially demand that the Congress refrain from making any change or revision of any of the laws now on the statute books relating to Oriental exclusion and request that the matter be permitted to remain status quo.

9. We ask Congress at this time to give full assistance to the Chinese Republic and its fight for a free China, and to cooperate with the Chinese Republic in driving the Japanese from their native land.

Respectfully submitted.

The following is a copy of the signatures on the original memorial circulated in Sacramento and at a mass meeting held June 20, 1943. The addresses of the signers have been omitted so as to conserve paper and space:

Willard Williams, Mrs. R. B. Williams, R. B. Williams, R. J. Dyke, Bertha L. Dyke, Budd Wilcox, Leo Williams, Mrs. Mary A. Rogers, Charles Rogers, Charles E. Hill, W. H. Hastin, Mrs. Frank H. Bower, W. D. Waits, Edgar Booth, Walter E. Bennett, Louis E. Kruges, F. N. Treleaven, O. A. Krepp, Arthur P. Maehl, H. P. Freidenfelt, Dr. Kenneth E. Cole, Clarence A. Robinson, Dixie L. Lockett, Franklin Abadie, O. A. Evans, Gordon Ingram, C. H. Nichols, D. L. Connelly, R. Beavis, Wesley W. Davis, R. H. Lee, H. Wilson, Pyralinsa M. Waugh, C. A. Cooper, Milton P. Morgan, Gus J. Sparks, Mrs. Nina Mathews, and Benjamin H. Waits.

Exhibit No. 2,456,342X of "What's Wrong With the New Deal?"

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. MUNDT. Mr. Speaker, from every section of America loud wails are reaching Washington about the inefficiency and ineptitude of New Deal bungling and bureaucracy as political appointees seek to direct from the Capital City the complex activities of the economic life of a free economy. Lawyers are telling the farmers what to do; professors are dictating to production experts; those who have failed in private life are pulling the key strings in public positions; theorists and star-gazers are slowing down the productivity and progress of hard-headed and realistic businessmen. The following short squib clipped from a South Dakota newspaper tells a true story, which in significance and purport far exceeds what might be expected from so short an item:

HOW NOT TO RUN A FREE REPUBLIC

R. T. D. in the Vermillion Plain Talk: This little yarn comes to me from unofficial but usually reliable sources. In a nearby city the manager of a big wholesale food house had a visit from an Office of Price Administration official. The official's name seemed strangely familiar to the manager, but he couldn't place the man.

The official went into detail as to how the business should be run—what the company should do and what it shouldn't do. He practically blueprinted a plan of operation.

The manager sat and listened, and finally he said, "Your name is Mr. ———, isn't it?" The official confirmed the statement.

"I remember you now," the manager said. "You went broke in the grocery business a couple of years ago, owing us $4,000."

The Wallace-Jones Controversy

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. HOWELL. Mr. Speaker, to those millions of American citizens whose greatest desire is to gain the inevitable triumph over our enemies in this great world conflict, it is a distinct shock to learn of the highly publicized break between the Vice President, Mr. HENRY A. WALLACE, and the Honorable Jesse Jones, Secretary of Commerce and Director of the Reconstruction Finance Corporation.

These two distinguished gentlemen are in disagreement with reference to the acquisition of strategic war materials. Regardless of the seriousness or the truthfulness of the charges being exchanged between them concerning the Reconstruction Finance Corporation, headed by Mr. Jones, and the Board of Economic Warfare, headed by Vice President WALLACE, the incident is a sad and regrettable commentary on our national unity and our war effort.

But now that the break has occurred and since the charges and countercharges have been publicized in the newspapers and made the subject of considerable comment and speculation on the radio, there is only one thing to do.

That is to conduct a fair and impartial investigation, and do so at once, so that the trouble can be solved and eliminated.

Such an investigation has been suggested by the gentleman from Massachusetts, the Honorable RICHARD B. WIGGLESWORTH, in his House Resolution 277. The Wigglesworth resolution provides that the Rules Committee of the House of Representatives be authorized to conduct a complete investigation of the operations and expenditures of the Board of Economic Warfare, the Reconstruction Finance Corporation, and any other affiliated subsidiary corporation in the acquisition of critical materials for our war effort with a view to determining the truth or the falsity of these charges.

I congratulate our colleague, the gentleman from Massachusetts [Mr. WIGGLESWORTH] for his wisdom and forthright determination to establish the truth in this instance. I hope that every other Member of the House of Representatives will share my view that this investigation should be started immediately, so that the President and the people of the United States can be given the complete truth and at the same time

establish the guilt—if any exists—of any individuals or Federal bureaus which may be involved.

If ever in the history of our Nation we should forget partisan politics and petty internal differences, now is the time. With our Nation at war, with millions of our sons and daughters fighting for the rights of freemen all over the world, with millions of our people on the home front exerting every ounce of energy and every cent of money to achieve victory for the United Nations, certainly those officials in Washington responsible for the direction of our war effort should set an example for unity.

That is the only course to follow. Let us have no additional spectacles of internal dissension, quite unusual in the history of our country and very foreign to our system of free enterprise, private initiative, and self-government.

We should and must have the truth, and it is only fair to those patriotic Americans making every possible sacrifice in this war crisis that they receive it.

At the same time, I believe we should guarantee that the circumstances concerning both litigants be given full publicity in what is still the free press of America.

In this connection, like most Americans on the scene in Washington, I was greatly surprised to note that the White House recently saw fit to blame the American newspapers and the radio for much of the internal bickering in the Nation's Capital. Certainly, the break between Mr. WALLACE and Mr. Jones cannot be laid to the door of those enterprising correspondents and commentators assigned to the Washington front.

It is my understanding that mimeographed copies of Mr. WALLACE's statement, consisting of 28 pages, were handed to all news and radio correspondents and commentators without solicitation on their part so as to assure widespread publicity. As a matter of fact, Members of Congress received copies the following morning, accompanied by a note from Mr. Milo Perkins, Executive Director of the Board of Economic Warfare, calling our attention to the statement.

For an administration that has been notorious for gagging the American press—as shown by the recent treatment accorded our newspapermen at the food conference—is this not a strange reversal of form? What is behind this move? Has the administration guillotine been oiled and poised for another purge for some purpose that we do not yet surmise?

The break between Mr. WALLACE and Mr. Jones has again burst into print, this time on the issuance of a lengthy statement by Mr. Jones. He has gone the erstwhile Vice President at least 2 pages better, extending his reply and countercharges for 30 pages, 2 more than Mr. WALLACE used.

Mr. Jones likewise has followed the technique of the Vice President by providing a complete mimeographed copy for each Member of Congress.

The situation, then, seems to have passed beyond the statement stage. It is apparent that Congress once more must step into the breech and settle this latest of a long series of crises on the home front. This is why we must pass the Wigglesworth resolution or a similar one having the same objective.

Tell the American people the truth, and our country—as well as its destiny—will be safe.

The Meat Crisis

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LOUISIANA CATTLEMEN'S ASSOCIATION,
Lake Charles, La., July 2, 1943.

Hon. OVERTON BROOKS,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Acknowledging the receipt of your letter of June 26, in regard to your request for my opinion of a solution of the meat crisis. I don't pretend to know all the answers, but I will, as briefly as possible, furnish you with basic information known to me:

1. The cattle raiser or breeder, whose herd produces calves primarily for ultimate slaughter, who sells the cattle produced to feeders, other cattlemen for further grazing, or to the processor.

2. (a) The cattle "feeder," who is also often a grain farmer, purchases calves or steers of recognized beef breeding and heavily feeds them his forage, grain, and other purchased feed concentrates that make up a balanced ration, thus selling his farm products through the purchased cattle. The duration of the feeding period will largely determine the degree of finish.

(b) The cattlemen, who specialize in grass fattening cattle for feeders or slaughter. The pastures used by the cattlemen produce very nutritious grass.

3. The processor slaughters livestock suitable to yield edible meat.

(a) The meat "packer" operates a sanitary slaughterhouse, maintains ample refrigeration, and usually a rendering plant where the edible and inedible fats, with other byproducts, are saved. Moreover, a technically trained corps of workers, who salvage such glands as the pancreas from which insulin is made, gallstones needed in the treatment of human ills, as well as numerous other medicine ingredients. The packer usually possesses the equipment to sanitarily transport the carcasses or meat products from the packing plant to the retailer.

(b) The rural slaughterer who uses a shed, sometimes screened, in which to slaughter the animals, with only meager equipment, no refrigeration, and no facilities to salvage the fats and other byproducts. The offal is often fed to hogs. Seldom does the rural slaughterer have the proper equipment to transport the carcass.

4. The retailer who keeps the meat under refrigeration, cuts and dispenses it to the consumers.

It is hoped that this brief outline will indicate the necessary functions of the cattle raiser, feeder, and processor in the production of beef and veal. Any inequities that cause stoppage or curtail this chain of functions will become a bottleneck in the production and distribution of this important food.

Those who prepared the present livestock and meat program undoubtedly were motivated by good intentions, but their program is neither realistic nor practicable so far as this Nation of ours is concerned.

The price ceilings are so inequitable as to seriously impair the functions of the feeder and the responsible processor.

An example of the results of this program: In a neighboring Louisiana parish substantial number of calves have annually been shipped to the feeders of the Midwest. At shipping time these calves will average in weight approximately 300 pounds. After being on full feed in the Midwest for several months, these Louisiana calves will go to market weighing from 700 to 1,000 pounds, weight determined by period of time fed. Full feeding is very expensive. After the price ceilings went into effect last year, I was reliably informed that 10,000 less calves were shipped from one Louisiana point to the Midwest. The rural slaughterers bid the calves to a price that the feeder buyers could not purchase them due to the price ceiling on dressed beef. Result: These 10,000 calves were slaughtered, producing approximately 150 pounds of meat instead of 400 to 600 pounds if they had been fed in the Midwest.

While full feeding is very expensive, it produces the maximum amount of beef in the shortest period of time. In order to continue to operate, the feeders had to change their methods to a time-consuming but less expensive way. Such calves as were purchased were grazed on grain fields, fed forage and other less expensive feeds. It requires two or three times as long to develop an animal under this less expensive method as it does under full feeding, and then the meat is not as palatable.

The situation confronting the responsible processor is even more desperate than that of the feeder. The responsible processor has a large investment in his plant and equipment. He has an indispensable, large overhead, if he is to retain a capable organization. He is attempting to operate under impossible and impractical regulatory conditions. He has a Federal grader who arbitrarily grades every carcass processed at his plant and thereby fixes the price ceiling for which that carcass can be sold. His every move and all his records are under the constant scrutiny of some Government official. When he attempts to buy cattle he is outbid by the rural slaughterer. There are cases where the rural slaughterer will bid a price for the live animal which is within a cent of the responsible processor's ceiling price of the carcass. Whereas, the responsible processor has a Federal grader, the rural slaughterer does his own grading. The same carcass which the Federal grader would fix at $15.75 per hundredweight price ceiling, the rural slaughterer may by ignorance or dishonesty grade with a $20.75 per hundredweight price ceiling.

Moreover, some retail butchers have entered the slaughter business. They have no adequate facilities but they are not bound by the wholesale ceiling price. They operate only under the retail ceiling price. Quite obviously they can outbid the responsible processor.

The rural slaughterer and the retail butcher who have entered the slaughter business are not equipped to save the fats from the offal, the highly important medicine ingredients and other byproducts desperately needed.

Result: the slaughter of cattle is being diverted from the well-equipped, responsible processor to the poorly equipped and less efficient slaughterer, and far too often the black-market operator.

The livestock and meat industries are Nation-wide in scope. Moreover, they are so highly complicated with numerous ramifications that any program to be successful must of necessity be practicable, equitable, and simplified to a degree it is easily understood.

Because of the widespread and enormous operations of the black market substantial price-ceiling revisions must be made to the responsible operators in order that they can compete with the illegal operators. It will be far more costly and more difficult now than if a realistic, equitable, and practical program had been formulated in the first place.

As a result of the present program and the man-made meat shortage, much confusion has been caused. In the minds of some cattle owners and speculators, the much heralded meat shortage is confused with cattle shortage. As a consequence livestock that should have gone to the slaughter plants have either been retained on ranches or merely transferred to others at costs far in excess of the Government's ceiling prices. Fictitious values have been created by this speculation and the economic structure of the livestock industry seriously disturbed.

At this time when there are unprecedented numbers of cattle as well as an unprecedented demand for meat to supply the needs of our armed forces, lend-lease and civilian consumers, we are accumulating cattle instead of making a healthy reduction.

I apologize for the length of this letter.

With kind personal regards, I am,

Cordially yours,

P. T. SARTWELL,
Secretary-Treasurer.

The New Deal and the South

EXTENSION OF REMARKS
OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following article by Dr. H. C. Nixon of the faculty of Vanderbilt University which appeared in the current number of the Virginia Quarterly Review:

THE NEW DEAL AND THE SOUTH

(By H. Clarence Nixon)

The South during the years of the New Deal has experienced a development that enables it and tempts it to talk the confident language of a regular child of the national household, not the subservient terms of an undernourished stepchild or orphan. It has growing pains and is quarreling about those pains. It is diversifying its economy, making inroads into its poverty, complaining about these changes, and complaining about the complaining.

Governor Jones, of Louisiana, with many sympathizers, complains in the Saturday Evening Post that the New Deal has not done more about southern poverty within some sort of States' rights framework but without State matching of funds. It would seem quite an order to demand more States' rights and more Federal aid at the same time. The Manufacturers Record, with abundant support from southern rail officials and leaders in heavy industries, asserts that southern manufacturing between 1929 and 1941 gained relatively twice as much as that of the great industrial east, and goes on to take the New Deal to task for meddling with States' rights, publicizing southern poverty, and thus bringing double harm to the South.

The southern region is diversifying its thinking about the New Deal, as it is diversifying its thinking about freight rates, labor problems, race relations, war issues, and postwar planning. It is more a real and integral part of the United States today than at any other time since the administrations of Polk and Taylor—the last Presidents elected from the South. It has furnished to the Roosevelt administration the ranking Cabinet member in Cordell Hull, who heads the most conservative department; another conservative member in Jesse Jones; the most socially progressive Justice of the Supreme Court in Hugo Black; and one of the most liberal members of the War Labor Board in Frank Graham. It might be said that the South has the war-time deputy President in James F. Byrnes, the middle-of-the-road Director of Economic Stabilization. The Interstate Commerce Commission has four southern members, who were appointed by Roosevelt. One of these four, J. Haden Alldredge, economist, came up from the Tennessee Valley Authority, where he had made special studies of freight rates as affecting the South. Incidentally, a majority of the non-southern members of the Interstate Commerce Commission are from the West or Middle West, leaving the East distinctly in the minority.

The South has in the Tennessee Valley Authority the regional ace of the New Deal. This creation of the Roosevelt administration is one of the largest five or six national Government agencies in normal civilian employment, ranking in this sense above most of the cabinet departments. It is the only agency of such size located exclusively in one region of the Nation. The Tennessee Valley Authority serves the South and the country, as well as the United Nations, in the South. It has perhaps been directly responsible for the development in the South of more war industries, excluding textiles and shipbuilding, than any other one factor. The Tennessee Valley Authority could appropriately be stamped on many an airplane or part, other war equipment, or war chemical. The Tennessee Valley Authority power production has been rapidly expanded to meet the industrial demands of war. About three-fourths of its power is now serving war industries. By deeds and facts this agency has demonstrated in peace and in war that there is something to the theory of co-ordinated expansions of production and consumption in a wide range of goods and services. The point is being grasped by many Tennessee valley inhabitants, including white and colored share-croppers who are enjoying the conveniences of cheap electricity. It has been demonstrated to the understanding of not a few private utility executives.

High praise has come from Governor Jones who wrote an eloquent letter on Tennessee Valley Authority to its chairman, David E. Lilienthal, in December 1941. This letter appeared in the CONGRESSIONAL RECORD, April 1, 1943, shortly after the Jones attack came out in the Saturday Evening Post. The governor praised the Tennessee Valley Authority for its freight rate findings and for its programs in forestry, housing, fertilizer, soil conservation, and farmer education, adding that "you have done one of the outstanding jobs in the country."

The South's major farm groups, particularly the cotton-growing interests mainly wrote their own crop program as part of the Agricultural Adjustment Agency policy. Their program was broadened by legislation and administration to give more protection to tenant interests. When the whole Agricultural Adjustment Agency was modified for constitutional and scientific reasons, with emphasis on soil-improvement crops and conservation practices, the South reached gains that had been advocated in this region, largely in vain, for 100 years. Erosion control, terracing, and contour plowing came into vogue in the hills and slopes of Dixie as never before. The New Deal, for whatever reasons, has brought about an unprecedented soil saving in the South, where more land has been wasted by man than in all the rest of the country. The South has got something it badly needed in addition to the Agricultural Adjustment Agency cash benefit payments it so badly wanted.

The South has had the major stake in the tenant-aid program of the Farm Security Administration, since this region leads in farm tenants relatively and absolutely. More scutherners than others have been enabled to purchase family-size farms by this agency. More southerners than others have been included in its rural rehabilitation program, which has applied production loans and education to tenants as tenants, has reached hundreds of thousands of low-income farmers in the process, and has definitely improved the productive power, income, and net worth of these clients. These farmers were far ahead of other farmers in the increase in food production last year.

This rehabilitation work, which came under the new Farm Security Administration in 1937, was inaugurated in the spring of 1934 by the F. E. R. A. Its administrator, under Harry Hopkins, was Col. Lawrence Westbrook, a Texas planter. It was publicly launched at a conference in Atlanta of relief administrators, social workers, agricultural college officials, farm organization leaders, and actual farmers. It transferred rural families immediately from relief to a productive contractual status, and its results have been "thrilling," to quote Brooks Hays of Arkansas, who has moved from an Farm Security Administration office to Congress. The agency's good work is known and appreciated by other Southern Congressmen like TARVER, of Georgia, and SPARKMAN, of Alabama. Words of high praise for the Farm Security Administration's rehabilitation work have come from many southern sources, including Clarence Poe's Progressive Farmer. Not a few observers are like Elmer Peterson, the Oklahoma City editor, who is extremely critical of the Agricultural Adjustment Administration, but eloquently favorable to the Farm Security Administration. Governor Jones gives at least mixed praise to the Farm Security Administration, which has added variety to its work in Louisiana by extending loans and market guidance to a group of bayou trappers. My own favorable judgment is based on my experiences as an adviser in the early stages of the program, and later as a landlord dealing with Farm Security Administration tenants. I have seen the good works of economic and human rehabilitation.

The coming of the rehabilitation program was welcomed or accepted by many landlords and rural merchants, who at the time could not afford the risk and burden of financing down-and-out farmers. It was good business for the merchants and landlords. These are now more able than in over a dozen years to bear the burden of credit to tenants, and, moreover, the risks in such credit have come down considerably. It is thus only natural that there is a drive for pre-New Deal normalcy on the southern countryside.

Part of the criticism leveled at the Farm Security Administration is based on possible mistakes made by this administration in handling community projects and experiments inherited unavoidably from Rexford Tugwell's resettlement administration. Part of the criticism seems to stem from the success of Farm Security Administration in organizing forgotten men into rural cooperatives for purchasing, processing, and selling purposes, and

for medical service. Real investigation will most likely show nothing of the alleged communistic practices but something much nearer the Scandinavian pattern of organizing farmers.

The Farm Security Administration program has represented an approach to social security for bottom-rail farmers, who are more numerous in the South than elsewhere and who are not included in the permanent features of the industrial social security program. But organized labor in the South, which supports social security, is behind the movement for organized farm security. If the divided South sees the Farm Security Administration and its work scrapped, it may witness a more sweeping and highly organized movement of lowly farmers and farmworkers. The Congress of Industrial Organizations is in the field with a union of workers in agriculture and agricultural processing. For some years John Lewis has been eyeing the southern tenant-farm scene.

Labor in the South is changing more rapidly than many realize. Through wage-and-hour regulation, collective bargaining, and industrial trends, wage differentials between northern and southern laborers are attaining skills and increasing productivity. Absentee-owned corporations are leaving more pay-roll funds and social security taxes in the South. While labor-union membership in America was increasing by some 200 percent in the New Deal period, the gain for organized labor in the South was nearer 1,000 percent. The American Federation of Labor reports as of last March a southern membership jump since 1933 from 300,000 to 1,700,000. Beatings of labor organizers in industrial centers like Gadsden, Ala., have ceased. Cities like New Orleans and Memphis, through officials or political bosses, at first said they would have none of the Congress of Industrial Organizations. They have changed. The labor vote and influence are becoming important. Many laborers have begun to pay poll taxes in "poll-tax States." Labor power was an important factor in the abolition of the poll tax in Tennessee last winter. It is behind the movement at Washington to prevent poll-tax requirements in Federal elections.

The labor movement was affecting the South's traditional pattern of race relations before the coming of the present war. Negroes were becoming faithful members and officials of unions without adhering to Jim Crow divisions. This was particularly true, for instance, in the Congress of Industrial Organizations groups in the Birmingham district. It was less true in the older American Federation of Labor unions. There is a close connection between race tension and labor tension in the divided South. Both tensions, which strike at Southern paternalism, are intensified by the impact of the war, with new opportunities for southern laborers and southern Negroes. Both tensions mirror a national spread, with organized labor cutting its lag in the South and Negroes furnishing population to the North. The two tensions may be solved together, with stand-pat reactionaries finding little comfort in choosing between a Roosevelt or a Willkie.

The coming of war is bringing industrial changes in the South, which is also the greatest campground and training field for the Nation's armed forces. In the early stages this region got less than 10 percent of the industrial business flowing from the Government's defense program. This was not so much a discrimination against the South as it was an Army-Navy preference for big business, which has the inside track, with initial advantages in organization, technology, machine tools, and a supply of high-class labor. Roosevelt was in the position of Woodrow Wilson, who had not finished with disciplining the large business elements before he had to go to them for the sinews of war.

Wilson admittedly regretted the shift, and Roosevelt must not like it.

No southern conservative revolt against the New Deal could aid the New Deal in managing big business and aiding little business. Time and necessity, more than politics and sectional pressure, distributed the war business. This war is too big for big business or the big business section alone. Inevitable expansion and decentralization brought more industrial war work to the South, particularly in textiles and shipbuilding. In the past 2 years the South has approximately doubled its dollar proportion of the Nation's war contracts.

However, the South industrially is still holding only the national "hind tit." The handicap is in the South, not in the New Deal, whoever may be responsible for the original sin. This region could not forthwith take on a big job of producing the fine, high-quality instruments of warfare, because it lacked the organization, the technology, the machine tools, and the highly trained personnel required for such production. The South's peacetime industries had been more conspicuous for tonnage output than for dollar value. In spite of significant gains in the period between the two wars, Southern manufacturing was far below the national level. "In 1930," says Henry B. Kline, a Tennessee Valley Authority economist, "the per capita value added by manufacture in the 10 Southeastern States was only $96, compared with $187 for the country as a whole, and $272 in the 18 States north of the Ohio and Potomac, and east of the Mississippi." Southern commerce, with the rest of the country in 1940, showed an export balance of millions of tons, but an import balance of scores of millions of dollars. The region's unbalanced economy has a favorable balance of trade in quantity, with an unfavorable balance in quality. The war is stimulating a measure of qualitative production, particularly in the Tennessee Valley Authority country, and the Government sponsorship of industrial training of southern youth and adults contributes to this improvement. The accompanying taste of high wages is no small item in this progress. Southern institutional and service facilities are strained to accommodate the drastic shifts in population brought about by the industrial impact of the war. The inadequacy of these facilities is a conditioning factor in the racial tension.

The South's structure of industrial production and the southern freight-rate structure dovetail in a total picture. The two structures have developed together, and no one but a politician with a bias can say which caused the other. The two structures must be changed or corrected together, and the South is divided on the issues and methods of change.

Any point or criticism concerning railroad freight rates can be proved by selecting examples from class and commodity rates affecting over 14,000 items or groups of items and more than 5 times that number of stations in 5 major freight-rate territories of the United States. The southern territory is at a disadvantage in comparison with the official, or eastern, territory in rates on high-class manufactures, except where special adjustments have been made for important shippers or groups of shippers. This status adversely affects small diverified business and unborn business in the South. It serves as a tariff barrier against potentialities more than against actualities. Small and unborn interests are not very articulate or powerful.

The South enjoys many rate advantages on coal as well as other raw materials and cheap products. The interests behind these heavy industries in the South are distinctly articulate and powerful. They pay lower wages and lower freight rates than manufacturers of quality goods, and are not complaining about any regional colonial economy. Interregional uniformity could double squeeze them with higher wages and higher rates. They are against rate parity or uniformity between regions. They favor piecemeal adjustment and oppose the reforms. They have a varying degree of sympathy and support from southern rail interests, for whom they are great customers. Southern railroads have never liked "reform." The Southern railroad and heavy shipping interests constitute a combination of conservative economic forces that can be effective before administrative bodies and in State politics. These elements are strong in Jones' Louisiana, Dixon's Alabama, and Arnall's Georgia. Of course, there is abundant support in the North for their point of view. Any southern governor or group who would buck these forces and at the same time oppose or disown the New Deal is doomed to failure before starting. Freight-rate revision on the scale contemplated is a progressive step that is nothing less than national social planning. In fact, any planning for abundance must be based on efficient transportation and an equitable rate system. For such a step the New Deal offers the best bet.

Freight-rate revision is a national problem, affecting several regions and many economic interests that cut across regional borders. It is well for southerners to realize this, as did the late Bib Graves, ardent New Deal Governor of Alabama, in the middle thirties.

Though only a few specific downward revisions have followed the hearings of 1938, the general attack on the problem is making headway. By the Transportation Act of 1940 Congress declared for a policy free from interregional discrimination and called for an administrative investigation of the interregional workings of the rate structure. That investigation is going forward under a special expert group. It might be said that the Interstate Commerce Commission, with the South and West well represented in its membership, is working energetically at the task of doing justice. The Commission seems to be more broadly constructive and less legalistic than formerly. Its hearings on regional rate problems are extensive and of a broad scope.

The Tennessee Valley Authority is the best advocate the South has for freight-rate revision. This agency put a staff to studying the question in 1933. It has cooperated with southern Governors on a nonpolitical research basis, and this has been well recognized by southern Governors. It has released several reports and studies, notably the Regionalized Freight Rates: Barrier to National Productiveness, which President Roosevelt transmitted to Congress last March. Its experts envisage an enlargement and diversification of southern manufacturing under a freight-rate system free from regional discriminations. They point out that such a reconstruction can and should be made and that it will not rob Peter to pay Paul, whether Peter be a northern manufacturer, a southern railroad, or a southern shipper of raw material.

Differentials must be corrected together, not singly, for they operate together. The Roosevelt administration is clearly exploring the issue of freight-rate differentials. It has moved against a whole set of differentials affecting the South. The Hull trade agreements are checks to a tariff system that is a toll system against much of the South's agriculture. Southern wage differentials and other labor differences are admittedly being reduced. The economic differentials against Negroes are being tackled in the face of tremendous difficulties. In a sense, the South is escaping from a long-standing differential in opportunity. No New Deal or other Washington government alone can realize upon that enlarged opportunity for the region. The South or southerners have some responsibility for action. The region must furnish its own leadership and statesmanship.

Independence Against Tyranny

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include herein a speech made by me in Faneuil Hall, the American Cradle of Liberty, Boston, Mass., on July 5, 1943, on the occasion of the one hundred and sixty-seventh anniversary of the signing of the Declaration of Independence.

These exercises have been held each year from 1783 and always in this historic Cradle of Liberty, except one year when this historic building was being restored.

I am deeply conscious of the significance of today's anniversary. I am grateful to the distinguished mayor of Boston, Hon. Maurice J. Tobin, for conferring upon me the honor of appearing in the capacity that I am at this traditional meeting.

We are gathered today in this historic Faneuil Hall, the Cradle of Liberty, at a time when our country is engaged in the war that was thrust upon us, a war of survival, and during one of the most important and trying periods of the known history of man. We are also assembled at a time when our loved ones are fighting and dying for the preservation of our beloved country—of the religious civilization that we believe in, the origin of which is in God Himself.

Having in mind, as we all must have, the trying conditions that exist, I feel that the traditional kind of a speech for this occasion should be departed from, and therefore my observations will be mainly confined to the present war and the danger that confronts us.

There are similar basic considerations between those that confronted the people of the Thirteen Colonies of 167 years ago, and us of this generation of Americans of today.

In this historic building, the Cradle of Liberty, men gathered 167 years ago to fight to obtain freedom, liberty, and independence. They fought to escape the governmental absolutism of those days, the attempt to deny them the liberty which they sought and prized.

Today, we are gathered in the Cradle of Liberty and are faced with the necessity of preserving liberty, freedom, and independence. They gave us a free nation, giving to us the rights of the individual. Today we are faced with the attempt to destroy the free Government that they gave to us and to take away the rights of the individual that the hardy men and women of the Revolutionary and succeeding days established for our benefit. In 1776 they fought to obtain liberty. In 1943 we are fighting to retain liberty.

We remember reading in history of the living statement of the famous Patrick Henry, "Give me liberty or give me death." Today we could well paraphrase that famous utterance and say: "Retain my liberty or give me death."

Since those days several generations of Americans have come and gone. You and I possess the Government that the Founding Fathers established, the Government that each succeeding generation has preserved and strengthened.

You and I inherited that Government.

It is our duty and obligation to preserve those institutions of government and to pass them on—strengthened—but in no event weakened or destroyed, for the benefit of the generations of Americans to come.

That is our duty!

With the guidance of God and the spirit of those hardy and brave men and women of the Revolutionary days, and those who gathered in this historic building 167 years ago, animating us today, we will perform that duty with complete success.

One hundred and sixty-seven years ago, the courageous founders of our country—willing to make every worldly sacrifice, even life itself—declared the Independence of the Colonies of the Western Hemisphere. The Declaration of Independence is just as much a part of the fundamental law of our land as the Constitution of the United States itself.

The signers of the Declaration of Independence are long since dead, but their immortal words echo today just as strongly as they did 167 years ago. Those words will always echo and live. The Declaration of Independence is just as much a command to you and me of today—to fight and to die to preserve the inalienable rights of man, as it was to the signers of that immortal document.

The signers of the Declaration of Independence and the fathers of our country, gave us political freedom—a Government of laws and not of men. They gave each and every one of us the benefit of a free government—yes, they set forth the rights of the individual—God-given rights—and by solemn compact, obligated our Government to guaranty and protect those rights, as well as the free exercise thereof.

But they also recognized that these constitutional rights carried with them the obligation, the duty, and the responsibility of everyone exercising them in the best interest of our Government. And further, of fighting and dying, if necessary, to protect and preserve them, as well as our Government itself.

In the days of George Washington, our first President, the enemies of the new republic from within (the forces working for the establishment of a monarchy), were the main constant source of danger to our country. It was the personality of Washington that prevented these forces from receiving any popular support. He laid the sound foundation for the Nation which we enjoy and possess today.

nI the days of the War between the States—the Civil War—the existence of our country was threatened from within by internal division and disunion. Lack of sound leadership in those two periods of emergency might have resulted in the destruction of the United States of America as a sovereign Nation.

The same situation exists today.

We are confronted by the first external danger in the constitutional history of our country that threatens our very existence as a nation.

We can understand better the solution of our present problems; we can explore the unknown future more effectively by briefly reviewing the road over which we came, to where we are today. The landmarks of our path through history will guide us as we stride forward to success in this war and to a better, stronger life in the future.

Independence Day, ever since it originated in the dangerous period of 167 years ago, has reaffirmed and confirmed the landmark of freedom and liberty.

On the first Independence Day, the American patriots faced a desperate battle for life itself. Our forefathers bled and fought, risking their lives, and established the glorious fact of independence, a strong Nation built of a strong and fighting people.

I have made reference to the dark days of the Civil War when our Nation faced an equally grim decision. For 4 long years, we, as a Nation, fought, and the generation of the Civil War days died in the struggle for life and independence, and national unity. In our other wars, including the fierce struggle of 1918, we knew we had to win, but our national existence was not at stake.

We must bear in mind that if we lose this war, we lose not only a war, but we lose our country.

In this war more than in any other, we are fighting powerful enemies who are imbued with the monstrous doctrine of hatred, antireligious hatred, economic hatred, and racial hatred, determined to enslave the world. Our German and Japanese enemies would destroy our national life, our mode of living, everything that we hold dear. Axis domination of the air and sea would mean Axis strangling of America, perhaps economically at the start, but certainly economic starvation would be followed up by the firing squad and the bayonet. The enslaved countries of Europe have discovered this bitter truth.

We know well the odious nature of the enemy, his tenacity and his strength. That is why I say this is as desperate a war for Americans as was the War for Independence and the Civil War. It is a war of survival. We are fighting an enemy who would destroy Boston or any other city; whose leaders would happily tear this historic building down to a rubble of bricks. Why? Because Faneuil Hall is a landmark of independence and freedom.

We know these things from the mouths of the enemy's own leaders—Hitler, who said: "No economic policy is possible without a sword"; from the bemedalled Goering, who said, "Our business is not to do justice but to destroy and exterminate;" from the unlamented Yamamoto, who proposed to write the peace treaty in the White House at Washington. One Nazi newspaper put it this way: "Totalitarian victory means the utter destruction of the vanquished nation, and its complete and final disappearance from the historical arena."

Our enemies despise the rule of the majority, because their power lies in their own success in pillaging and destroying, in the burning of books and in the persecution of minorities, in the destruction of the dignity and personality of the individual. Their Quislings and puppets go further, and call democracy "an idiotic system where every individual has the same say in everything whether he understands it or not; where important questions about the future of nations are decided by an assembly of people without special insight into such things, elected by people who also have no insight." This shows their contempt of and hatred for democracies.

The Axis leaders who say these things are trying to win their war by dividing us, by shaking our confidence in our own way of life and our willingness to fight and die for independence and freedom. The Berlin radio is aiming special programs at this country, asking why we are fighting, and shedding crocodile tears for Americans because we are cutting down on gasoline, tires and food. That would be an effective way for the Axis to wage war, if our citizens listened and believed the German and Japanese lies and slanders, those which come over the airwaves, and the equally vicious ones spread here at home by a few traitorous fifth-columnists.

But the enemy's evil efforts to divide and discourage us are doomed to failure. They cannot win among our people on the home front, any more than their soldiers can win against our fighting men on the battle fronts. They cannot win because our people have known independence and freedom and demo-

cracy since 1776. We know we are fighting for our philosophy of life, for the principles and ideals for which our country stands, and the right to progress in our own chosen way to greater prosperity and happiness for all of us.

We should not underestimate our task merely because we have caught the enemy in a maze of lies about his own strength. Whilie we have not yet won the war, we are doing all that is humanly posssible to speed up the happy day of peace. But we have yet a long way to go.

The roads to Berlin and Tokyo are long and hard. Nazi Germany and Imperial Japan planned and built and looted for years, preparing for war. They produced great war stores of planes, tanks, guns, and submarines. They spent years testing and concentrating upon their military machines.

Three major elements are important to waging war—a nation's manpower, its economic resources, and the degree to which both are militarized. In the United States devotion to country is also a major element of our strength; in the Axis countries the slavemaster's lash forces men to die on the war fronts for the Herrenvolk, the master race. Germany, with all the captured countries under the lash, and Japan, with hundreds of millions of captives, have great manpower resources. They have already robbed China, the United States, Great Britain, and Holland of incalculable natural resources. And they have been busy getting ready for total war for many years, while we were building, we thought, for peace and prosperity.

Germany has made the Continent of Europe into a fortress, strongly armed, with short and secure communications lines. Our troops and weapons and supplies must travel thousands of miles to hit the enemy. It has been estimated that it takes 400 troop ships and 730 cargo ships to transport a million infantry soldiers overseas. It takes 10 to 18 tons of shipping to deliver a soldier and his equipment, depending upon what kind of fighting he is going to do, and it takes from 1 to 3 tons of shipping a month to keep him supplied. A single mechanized division burns up 18,000 gallons of gasoline every hour when it is on the move—and this fact explains why we are cutting out our own pleasure driving.

The war news is good. We have swept the Axis out of Africa, and we have driven the Japs back in the Solomons and the Aleutians. Further offensive action is now under way in the Far East.

But there is danger ahead for us if we assume, here at home, that the war is nearly over, or that the victory will come quickly or easily. Our advantages in production and planes are still largely offset by the distance from which we must wage war. When we land in Europe, we land in front of a wall of steel and guns.

We will win the war sooner if we realize what a difficult job we still have to do here at home. You may be sure that our soldiers abroad realize full well their grim and terrible task. Here at home, men and women on the production line, in the shipyards, and the factories, must continue at top speed. We must support the war up to the hilt. We must be prepared for mounting casualties. And when they come, we must remember that Hitler and Tojo and their murdering military machines are responsible for every American boy who is killed or wounded. We must never forget for a moment that we are fighting the most sinister enemies we ever had. We must never forget that our boys in Europe and in the Pacific are fighting for our homes and our freedom and independence.

We have done a good job so far in this war. Our fighting men and our producing factories and our railroads have accomplished feats that surpass anything in the history of mankind. Consider that Xerxes, the King of Persia, won undying fame because he assembled less than a million troops and transported them across the Hellespont, a few miles of water, to invade Europe and conquer Greece. In 19 brief months we have trained and transported more than 2,000,000 troops overseas, most of them for thousands of miles. None of the great military devastators of history, Napoleon, Genghis Khan, Attila, no, not even Hitler, even dreamed of the grand-scale accomplishments already attained by our Nation of peace lovers in the few brief months since Pearl Harbor.

United States participation in the war of 1917–18 lasted from April 6, 1917, to November 11, 1918, 4 days over 19 months. In 3 days from today we will have been at war with Japan and Germany for 19 months. There is nothing that I can see in the stars which indicates that Germany is weakening now as she did in 1918, or that we can count upon time and internal disruption to break down the resistance of the enemy. However, when the collapse comes, it will come quick.

But it can be said for certain that we have accomplished a far greater task in our first 19 months of war than we did in 1918 in terms of preparation, as well as in war itself, against an infinitely stronger enemy. Our Army is about twice as large now as the one we raised in 1917 and 1918. We are producing the weapons with which our allies are fighting, instead of having our allies supply us as they did then. We are out-producing the entire Axis in weapons and supplies of war after only 19 months, despite their 10-year start. In 1917–18 very few, if any, United States-made planes actually got into combat. Today we are supplying the Russians, the British, the Chinese, and many others of our allies with most of their fighting planes. The other day in the National House of Representatives we passed the largest wartime fighting bill in the whole long length of history, carrying over $71,000,000,000 for our Army alone. The fighting forces, military and industrial, will spend more than $100,000,000,000 in the fiscal year which started 4 days ago. Of war planes alone, we will produce more than 100,000; our fleet will be doubled by the end of this year, and we will be on our way to ultimate victory.

A little over 1 year ago we had a one-ocean Navy to participate in a two-ocean war. During the past 18 months, in addition to our recovery from the Pearl Harbor disaster and despite errors and blunders, we have made progress that has amazed the world. We are rapidly on the way to a two-ocean Navy. By the end of 1943 we shall have increased our Navy over our fleet of 1942 by 60 percent in tonnage and 100 percent in the number of vessels. We have transformed our peacetime merchant marine into the greatest wartime merchant marine fleet in all history, and, despite the attacks of enemy submarines, we are adding to that fleet by hundreds of thousands of tons.

We have assembled an Army of over 6,000,000 men, every one of whom either has been, or will be trained before going overseas. They have demonstrated prowess on the battlefields that stretch from Guadalcanal to Attu in the Pacific, to north Africa and the Mediterranean, and undoubtedly will in the near future, on the mainland of Europe itself. Our leadership on land and sea, and in the air, has been outstanding.

Our Navy is living up to the great traditions of the past.

Our fighting men on land, on the sea, and in the air, are fighting with courage and great success.

In passing, a tribute should be paid to the youth of this generation. The spirit and courage of the youth of today—of this generation—will always occupy foremost pages in the history of our country.

We have seen great changes take place during the past year. A year ago the outlook was dark and gloomy. Today, the situation has changed. The Nazi blitzkrieg is over. Nazi Germany is on the defensive. However, that does not mean that we should underestimate the fighting abilities of our enemy, and neither should this marked change for the better bring about a feeling of overconfidence on our part. This change for the better should create a stronger feeling of determination to carry the battle to the enemy and to administer the knock-out blow as soon as possible.

Every indication points to Italy's being eliminated from the war in the near future. We do not entertain the same feeling of bitterness toward the people of Italy that we do toward those of Nazi Germany and Imperial Japan. It has been apparent for a long time that the heart of the average person in Italy is not engaged in this war. However, whether Italy makes peace terms or not, every indication points to the fact that Italy's days of active participation in this war will be over in the near future. The elimination of Italy from the war will have a very favorable effect throughout the entire world. It will bring immediate relief to our Russian ally, and everyone will admit that Russia has played a heroic part in this dreadful conflict.

With Italy withdrawing from the war, it will mean 20 to 25 divisions of Italian soldiers withdrawing from the conquered Balkan states. Germany will have to draw upon her reserves to replace Italian withdrawals. With Italy under the control of the military leaders of the United Nations, German soldiers in a good part of the Balkan states would be open to a flank attack. The probabilities are that the control of Italy by the United Nations would force the German army to withdraw from some conquered parts of the Balkan peninsula. It will enable those of the conquered lands located in the Balkans to more openly battle the Nazi conqueror. It will enable us to make easier contact with them. It will enable us to locate air fields closer to the industrial part of Germany that heretofore has been practically immune from air attack. It will place the Mediterranean Sea completely under the control of the United Nations. It will greatly aid our transportation problem in the shipping of weapons of war to Russia, China, India, and to the European theater of war. The elimination of Italy from the war will ease the strain on Turkey, with probably favorable results to our cause.

But, above all, the elimination of Italy from the war will release a large part of the British Fleet and a good portion of the American Fleet now in that area, both of which are now engaged in protecting our lines of communication in the Mediterranean, and in the watching of the Italian Fleet. The elimination of Italy will enable a substantial part of the British Fleet and of our own fleet in that area to be released for fighting in the Far East. The elimination of Italy will not only have an immediate effect upon the European front, but it will be of decided advantage to us in releasing British and American naval vessels that can be used against the Japanese.

This will also greatly assist our brave ally, China, where under great difficulty, the situation is improving.

On the China front, the recapture of Burma, and the reopening of the Burma Road, is of vital importance. Many things are happening in that battle area that must be kept secret. But one thing is certain, that the people of the United States have a lasting feeling of friendship and respect for the

people of China. After victory, China will play a major part in the post-war world.

I can also say without disclosing any military secrets that President Roosevelt appreciates the importance of the part China plays in the Far East theater of war, and that he has and will see that everything possible is done to give Generalissimo Chiang Kai-shek and his brave men the maximum assistance possible. Increased aid is already flowing to China. Much more is needed. The difficulty is means of transportation.

The recapture and reopening of the Burma Road, affording the opportunity of land transportation to China, is generally recognized as a matter of primary importance. In any such future effort naval forces will have to play an important part.

We can, therefore, see that the release of American and British naval units in the Atlantic and the Mediterranean for service and fighting in the Far East might well be of inestimable assistance to brave China.

It took a great deal more than natural resources and manpower to accomplish these world-shaking feats. What it took, what made possible our great production progress, and what will bring about our ultimate victory, is the patriotism, the unity, the God-fearing willingness to fight and to sacrifice for freedom and for our country. Our soldiers have this patriotism and so do our industrial fighters, our home-front civilian workers, our farmers, our housewives, our boys, and our girls. They all know that there are no bystanders in this war as there have been in some previous wars. They know that the way to peace is through the combined efforts of everyone.

The home-front fighters as well as the men in uniform stand ready to make the sacrifices necessary to victory—long, back-breaking hours in factories and shipyards by many new and inexperienced workers, efforts to meet and surmount the dislocations in home and community life brought about by the need for more and more production, and the foregoing of useful and comfortable things which have long been integral parts of our standard of living. Our civilian fighters are making these sacrifices now, and they will make more, because they know that every act of wartime cooperation here backs up our fighting men on the battle fronts and helps to shorten the war's cost in money as well as in the blood of our young men.

Our duty on the home front is clear, in terms of the action that is needed. All of us must work for victory, in the place where we can do the best job and where we are most needed. All of us must put our money to work for victory, in War bonds and war relief. We must willingly assume any tax burdens necessary to the winning of the war.

All of us must waste nothing, and all of us must spread out and share among our people the necessary goods and services that are available. The more we save and share, the more there will be for our soldiers and those of our fighting allies. I do not need to labor the point that our soldiers must not be denied anything they need to fight—and a fighting man needs a great deal more.

No single one of our home-front sacrifices will win the war by itself. Our soldiers, brave as they are, cannot win without full support on the home front. Food by itself will not win the war. We must have weapons, too, and victory will come only through the successful interrelation and coordination of all the factors.

It is our Nation's policy to spread sacrifice as evenly as possible among all our people. There are bound to be inequalities based on time and place, but none because of favoritism by the Government. We are determined that no one shall use gasoline needlessly and for pleasure, when our boys in Africa, England, and the Solomons or elsewhere need that gasoline for their warplanes. At the same time we recognize that the sacrifices asked of most civilians, even though increased, are small and minor, compared with the sacrifices asked of our men in uniform and their wives and parents.

The measures taken to fight the war on the home front have caused many dislocations and inconveniences and some hardships. Some of these, perhaps, were avoidable. But you may be assured the steps that have been taken were taken because they were for the benefit of the armed forces and of the Nation—and aimed to help bring about more quickly ultimate victory. It is my confident observation that the public does not expect victory without inconvenience.

In short, the people are willing to make whatever sacrifice is necessary. But not all of us realize fully that a few careless errors of omission and of commission on the home front may seriously weaken our war fronts. I refer here to petty chiseling, hoarding of food, dealing with or operation of black markets, unjustified absence from war plant jobs, careless indifference, waste of money and material, selfish acts and attitudes, strikes or stoppages of production for any reason. Such offenses, even on the part of a small minority, can do much to slacken and damage the war efforts of all of us. I am convinced that our people soon will realize the danger caused by the few who are stupid or willful, and draw together their ranks to prevent such dangerous activities.

The housewife who realizes the devastating effects of black markets in causing an inflation which will cut her husband's pay check in half will not patronize the illegal merchant who bootlegs groceries at more than ceiling prices.

The worker who realizes that what he produces is an important contribution to the war, and everything, every service, whether consumed by soldier or civilian, is an important contribution to this all-out-war, the worker who realizes the importance of every hour's work, every minute's production, will not idle on the job, nor lose a minute from his machine.

The plant manager or superintendent who does not do his best to adjust working conditions to attain the best efficiency and harmony among workers under wartime conditions—he, too, must realize that workers are human beings, and that their contribution to the whole war effort may depend upon their health and safety, and the health and safety of their families and children.

We must realize that the war has not adjourned the social and economic problem of our country and our industries. It does no good for a worker to sacrifice his health through over-long hours, because that worker then will become a net loss to the war, to the Nation and to his family. We have need in wartime as in peace for job security, social security, recreation, health, and the other safeguards of life, liberty and the pursuit of happiness which make our labor and our industries the most productive in the world.

This Independence Day is an appropriate time to call attention to the fact that we are not alone in our fight for freedom. The United States has always been in the forefront in fighting for freedom, and independence and democracy, ever since we started on a new road in history 167 years ago today. But we have always sympathized with the myriad of peoples who have since then struggled for independence and democratic forms of self-government and self-expression, and helped them wherever we could.

This war presents again that same 1776 problem—independence against tyranny—for ourselves and for the whole world.

The United Nations, which became a reality 18 months ago have already become a fighting team of states waging a single fight on a world-wide front. We are pooling our strength, our manpower, our resources, our home fronts, and our strategy in whatever ways will most quickly and thoroughly crush the enemy.

The United Nations developed out of an immediate and historic need, symbolized by the treacherous attacks of the Japanese against us in Pearl Harbor and the Philippines, and by the Nazis' earlier, equally barbarous nvasions of Holland, Austria, Norway, Czechoslovakia, Belgium, and other countries. We have learned that Munich and appeasement are not the answer. We must crush the enemy forever.

To accomplish this necessary task, there exists the United Nations, a vast group of people working toward certain common objectives, people who live on every continent from the Arctic Circle to the Equator.

The United Nations is the largest and the most powerful combination of nations in history in organization and objectives, and it is actually working. The exchange of goods and services, the many joint war planning boards, and the Combined Chiefs of Staff, are only a few of the outstanding examples of international cooperation accomplished through the United Nations.

It is important that this vast and advancing army of 32 nations is marching on to war and to victory, and, after victory, realistic efforts to prevent a recurrence of this destructive conflict.

The cry from all the peace-loving people of the earth throughout this terrible holocaust has been: "What can we do to prevent this from happening again?"

This cry was answered by our country, when our Commander in Chief, President Franklin D. Roosevelt, in the United Nations Pact of Washington, which expands and carries further into definite promise of performance the Atlantic Charter drafted a few months previously by President Roosevelt and Prime Minister Churchill.

The United Nations pact binds all 32 subscribing nations against aggrandizement, territorial or otherwise, democratic consent of peoples concerned in any territorial changes, the right of all people to choose their own form of government, and, among other things, a continuing peace wherein all persons may live their lives in a normal way.

In a speech made by me January of 1942 at the Boston Chamber of Commerce, I said: "America is on the march, tyranny will soon be on the defensive and on the run."

Seventeen months have gone by since I made that statement.

America has been on the march. Tyranny is now on the defensive. The spirit of the signers of the Declaration of Independence is not dead in this day. It is alive, just as virile, active, and determined for victory today as it was then.

The spirit "for God and country" animates our people. It is that spirit which I detected right after the Jap treachery and which prompted me 17 months ago to confidently state: "America is on the march," and to predict ultimate victory in our darkest days of the war. And after victory, let us hope and pray that men of vision and courage will represent the United Nations and any other nations represented around the peace table, who will view the future from a forward-looking angle, who will unselfishly lay the foundation for future permanent peace based on equity and justice, and recognizing the necessity of complying with and following the teachings of the great lawmaker and judge, God Himself.

That gifted humorist, the late Will Rogers, once said:

"America has never lost a war nor never won a peace."

This time, God willing, we shall win both.

Silver in Industry

EXTENSION OF REMARKS

OF

HON. RANULF COMPTON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. COMPTON. Mr. Speaker, it is not my intention to offer any objection at this time to S. 35, which authorizes the use for war purposes of silver held or owned by the United States. In view of the statement of the distinguished Speaker, and the gentleman from Michigan [Mr. DINGELL], that it is vitally important that this bill pass immediately and that it should be passed without amendment, I shall raise no objection.

It would seem obvious however, from the way this bill is presented, that is, at the eleventh hour, and without opportunity to properly consider the question or to have any debate, would appear to be proof that the so-called silver bloc fears the open light of day on this whole question.

As is well known, the Treasury Department only this last March recommended that the minimum average price of silver for war uses should be 50 cents per ounce. The War Production Board through its Chairman, Donald M. Nelson, and the Office of Procurement and Materials of the Navy Department also urged that the silver at this price be released to our manufacturers everywhere in order that there would be a freer flow of the material. We all understand that at 71.11 cents per ounce there is no profit to the Government since the difference between 50 cents per ounce and 71.11 cents per ounce will simply be added to the cost of war material for which the Government will pay. The only interests served by the price of 71.11 cents per ounce are those of the domestic silver mining companies represented here and in the other body by the so-called Silver Bloc.

It is true that today apparently they are condescending enough to allow us to have this vitally necessary silver for war and industrial purposes, but only at their own inflationary price. They further evade the question by practically telling us that it would be unpatriotic if we do not immediately pass this bill.

The only comfort I can get out of this whole situation is that finally some affirmative action has been taken in this silver question and in spite of the fact that there is no assurance here today that this question will have further consideration in the committee responsible for this legislation in the House. Yet I am confident that public opinion will be reflected through this body during this Seventy-eighth Congress and we shall make some real progress toward dissipating the so far invulnerable position of the silver bloc and delivering the country from this pernicious subsidy which has no excuse for being except that it has the strength to be. I am still hopeful that my bill H. R. 2955 to repeal the Silver Purchase Act will have favorable consideration.

Distribution of Power From Fort Peck Dam, Montana

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks, I incorporate a news release by the Bureau of Reclamation quoting an announcement by Secretary of the Interior Harold L. Ickes on the distribution of power from Fort Peck Dam which began operations on the night of July 1. I join with Acting Commissioner Harry W. Bashore, of the Bureau of Reclamation, in congratulating the Corps of Engineers of the United States Army and the Glasgow (Mont.) Chamber of Commerce on the occasion, which has peculiar significance for the district which I have the honor to represent.

Fort Peck power is important to the war industries of Montana and Utah in the present national emergency, but it will be even more vital to the development of eastern Montana and western North Dakota when peace comes. Through pumping water from the Missouri and its tributaries, Fort Peck power will transform desert wastes into productive farm lands which will enable these States to support a far greater population.

I regret that I was unable to attend the supper at Glasgow on June 30 in honor of the opening of the power plant.

Mr. Speaker, it was my privilege to initiate and secure the appropriation in the House of $300,000 to install the necessary electrical appliances with which to develop electricity at this great dam. It is my hope and wish that the time is not far distant when the power facilities at this dam will be increased so that people on farms in northern, eastern, and southern Montana and other adjacent localities will be privileged to enjoy the use of this great convenience and comfort in their homes.

The news release is as follows:

The major part of the newly produced power at Fort Peck Dam, Mont., will be distributed by the Bureau of Reclamation to war industries in that State and Utah, Secretary of the Interior Harold L. Ickes announced today on the basis of a report from the Bureau's Acting Commissioner Harry W. Bashore.

The plant, which has begun commercial activity with more than 30,000 kilowatts of capacity, was constructed and is operated by the Corps of Engineers, War Department. The output is distributed by the Bureau of Reclamation, Department of the Interior, under a congressional act approved May 18, 1938. Rates are subject to approval by the Federal Power Commission.

Acting Commissioner Bashore advised Secretary Ickes that Fort Peck power would have an important place in the development and utilization, in the prosecution of the war, of the mineral resources of Montana and Utah. Practically all of the power developed in these two States is hydro and the Fort Peck output is a further conversion of natural resources of the West into useful channels, Mr. Bashore added. In peacetime, the power will be used largely to pump water from the Missouri River and its tributaries for irrigation developments to be located in eastern Montana and western North Dakota.

The addition of power from Fort Peck Dam to the Bureau of Reclamation systems in the West brings to more than 1,875,000 kilowatts the capacity of 31 plants on reclamation projects or the output of which is distributed by the Bureau.

Mr. Bashore made public the following telegram he dispatched to Josef Sklower, secretary of the chamber of commerce at Glasgow, Mont., near which Fort Peck Dam is located:

"The Bureau of Reclamation extends its congratulations to the Corps of Engineers and the Chamber of Commerce of Glasgow on the opening of the new power plant at Fort Peck Dam. This occasion is one of great significance in the prosecution of the war, and it paves the way for a major contribution to the permanent development of eastern Montana and western North Dakota when the clouds of war have been dissipated.

"The power from this plant will be used in war industries now, and later will pump irrigation water from the Missouri River and its tributaries that will transform many thousands of acres of desert and sagebrush into productive farm land. Thus the Upper Missouri Valley will be enabled to support a much greater population than is now possible. The increased purchasing power in peacetime, which will come from the developments and the stabilization of agricultural regions now subject to drought, will be of tremendous benefit to the country as a whole."

Naval Uniform Regulations

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. COLE of New York. Mr. Speaker, a short time ago the Navy Department announced certain changes in the regulations relating to uniforms which, because of misunderstanding, caused some criticisms and uncertainties. In response to several inquiries and complaints from Members of the House, the Naval Affairs Committee inquired into the matter and on July 2 the Navy Department issued a new order which removes all uncertainties and basis for complaints.

For the information of the House, I am including the new order as a part of my remarks:

MODIFICATION OF UNIFORM REGULATIONS

The recently announced changes in naval uniform regulations have been modified in the following respects:

1. The wearing of gray or white shirts with blue service uniforms is optional.

2. Half lace (gold sleeve stripes extending only from seam to seam) is optional on sleeves of blue service uniforms.

3. The uses of plain-visored caps for officers of the rank of commander or above, and black braid chin straps for all officers, is optional with service uniforms.

Service dress blue uniforms may be worn on occasions where the wearing of white uniforms is appropriate.

Gray working uniforms will be worn when available. As announced previously, during the necessary transition period officers will

be permitted to wear khaki uniforms, now in their possession or manufactured, until the supply of these uniforms in stock is exhausted or until those in possession are worn out.

Welcome, Frank Gannett

EXTENSION OF REMARKS
OF
HON. JOSEPH J. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Binghamton, (N. Y.) Sun of June 19, 1943, extolling Frank Gannett and complimenting him upon the purchase of the Binghamton Press:

WELCOME, FRANK GANNETT

Newspapers, as a rule, like to give the public all the details about any major real estate deal but when the transaction involves the newspaper itself, that's a different story. There is a natural reticence born, no doubt, of modesty and as a result some important facts escape attention in formal announcements of changes in ownership.

In the case of the sale of the Binghamton Press to the Frank E. Gannett interests, announced yesterday by the evening newspaper, one fact in particular is completely overlooked and it becomes the pleasant duty of the Sun to let the public in on something of real importance to the Triple Cities community. Otherwise nobody would know how fortunate the people of this section really are.

Mr. Gannett wasn't the only newspaper publisher interested in acquiring the local property. He was one of several bidders, as stated some time ago in the news columns of the Sun. Perhaps it is enough to say that if one or two, in particular, of these other bidders had been successful a type of journalism not wholly constructive—to state it mildly—might have been introduced here. And folks hereabouts know pretty well by this time just how destructive the wrong kind of a newspaper can be, how much damage can result from radical and sensational editorial policies.

Mr. Gannett's 20 other newspapers operating in this State, Illinois, New Jersey, and Connecticut, have never had the slightest tinge of "yellow" about them. They are conservative, well edited, and well managed. While all of them reflect the dominating policies of the central Gannett management and follow a fairly uniform pattern as to editorial expression, news content, features, make-up, and advertising, they are governed to some extent by local conditions and never depart from the first principle of the Gannett organization—wholesomeness and truth. The Binghamton Press, under Gannett ownership, will never become a "bad influence" locally and we might not have had this happy assurance if the deal had gone the other way.

As to the publisher himself, Triple Cities may well welcome him as an absentee owner who won't be absent too much of the time. He has long expressed, as a close neighbor, a lively interest in this community, an interest which has been mutual. Most people in this section of the State admire him greatly for his fearless battle to protect the integrity of the United States Supreme Court as well as for the soundness of his views on national and international politics.

Mr. Gannett and his newspapers have been vigorous in opposing governmental waste and mismanagement and the publisher never pulls his punches in his many outspoken expressions from the rostrum and in his editorial columns. Regarded as a strong national figure, not long ago a contender for the Presidency and even now prominently mentioned as the next United States Senator from this State, Mr. Gannett is bound to be a factor locally and a welcome addition to an ever-increasing circle of men of wide outside interests who are willing to sit in with our own civic leaders.

In its new status as Binghamton's only strictly independent and home-owned newspaper—for which we have to thank Mr. Gannett—the Binghamton Sun extends sincere congratulations to the new owner and to the present staff of the Binghamton Press with every good wish for continued success. Mr. Gannett and all of the executives of his organization will find a cordiality and cooperative spirit here of which we will be more than happy to be a part.

Where Price Control Got Off the Beam

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include the following article by Lawrence Sullivan from the July issue of Nation's Business.

It is a searching analysis into the ramifications of O. P. A. and a portrayal of the extent to which this agency has spread beyond the borders within which it was intended to function.

The article follows:

WHERE PRICE CONTROL GOT OFF THE BEAM

(By Lawrence Sullivan)

Office of Price Administration was set up originally to control prices and rents. Soon, however, its activities included everything from limiting inventories to prescribing manufacturing methods. To carry on its work for the coming year, it asked Congress for $177,335,000.

In April, when Office of Price Administration was just 2 years old, it submitted its annual budget for the fiscal year beginning July 1, 1943. Congress was shocked. The Budget called for $177,335,000—about $25,000,000 more than was appropriated for the entire United States Navy in the fiscal year ended June 30, 1916.

A number of men in Congress remember the Navy of 1916. It comprised 346 vessels of 1,500,000 tons displacement. Officers and enlisted personnel numbered 66,653 men.

No wonder then that when the Office of Price Administration budget reached the House Appropriations Committee, eyebrows were lifted.

"What are those fellows doing up there? Are their operations worth this much?"

These, as it turned out, were fair questions because nobody in Washington really had a clear conception of what Office of Price Administration was doing. Informal inquiry developed that Office of Price Administration itself was not altogether certain.

The thing had begun in April 1941, as the Office of Price Administration and Civilian Supply, created by Presidential decree. On the staff were Leon Henderson and eight assistants. To begin operations the President allocated $75,000 from emergency funds. But the work expanded prodigiously. Every time one price was fixed another got out of hand.

The Price Control Act was approved January 30, 1942. In April 1942 the Office of Price Administration's first annual budget went to Congress. It contemplated an organization of 90,000 persons. The funds requested were $110,000,000. Congress whacked off $20,000,000. Then came the second budget asking for $177,335,000. Congress determined to have a "look-see."

Committee members were surprised to learn that the Office of Price Administration was attempting not only to control prices and rents but to specify the length of women's stockings, limit retail and wholesale grocery inventories, prescribe manufacturing processes for hot water bottles, define roast reef, and fix margins of profit in 56 industries.

Congress launched three simultaneous investigations of the Office of Price Administration—through the Truman committee of the Senate, the House Committee on Small Business in Wartime, and the House Committee on Bureaucratic Excesses, the latter headed by Representative HOWARD W. SMITH, of Virginia. Before these committees American businessmen for the first time were afforded a hearing on the obstacles the Office of Price Administration regulations placed before them. A spokesman for the apartment house owners of Cleveland charged bluntly:

"A personal opinion, which was developed from my contact with certain officials of the Rent Section, is that the men administering this act have sabotaged it either through total ignorance of the business they are charged with administering or deliberately with subversive intent. Eleven months ago I would have preferred to accuse them of ignorance. Today I am inclined to accuse them of subversive intentions."

In the same vein, Rivers Peterson, managing director of the National Retail Hardware Association, charged that Office of Price Administration regulations which attempted "to control every element of the trade" were forcing independent dealers out of business.

Earl Constantine, president of the National Association of Hosiery Manufacturers, testified:

"Misunderstandings, suspicion, and even malice are what we have experienced with Office of Price Administration."

In New York, at a mass meeting, 2,000 restaurant owners threatened to close their doors unless rationing rules were simplified.

In Virginia, a local real-estate board charged that Office of Price Administration rent control had reached "the point of confiscation and control of property without trial or due process of law."

Many complaints reaching Congress from the business community charge that confusion in Office of Price Administration orders flow chiefly from divided sentiment among the top administrators as to the ultimate ends to be achieved. Congress established Office of Price Administration as a price-control mechanism, providing in section 2 (h):

"The powers granted in this section shall not be used, or made to operate, to compel changes in the business practices, or cost practices, or methods, means, or aids to distribution established in any industry, except to prevent circumvention or evasion of any price ceiling established under this act."

TOWARD SOCIALISM

Instead of following this mandate, many Office of Price Administration administrators have seized upon the price control mechanism as a heaven-sent opportunity to reor-

ganize the whole pattern of American business along the lines of state socialism.

In some instances, they have presumed to reduce or eliminate entirely the normal margins of profit. In other lines, they have undertaken to limit inventories arbitrarily, and to prescribe standards in packaging and retail services. Amid all this eager reform, the major job of controlling prices often has become almost a secondary consideration.

Testifying before the House Small Business Committee, Rowland Jones, representing the National Association of Retail Druggists, thus presented this aspect of Office of Price Administration operations:

"We believe that the Office of Price Administration has much more important tasks facing it than an attempt to revolutionize any business or industry. The wide dispersion of activity by Office of Price Administration is responsible for its failure to deal successfully with the main issue and its main job—the control of inflation. Office of Price Administration has embarked upon procedures that constitute meddling in all the technical and economic details of management in 1,700,000 retail establishments."

Jones pointed out that, although retail druggists were frozen at their March 1942 prices on 99 percent of their volume, every item of operating cost, including wages, rent, maintenance, and inventory replacement, advanced from month to month.

"Office of Price Administration has allowed costs to mount to a point where the druggist has three choices: to lose money; to violate the law; or go out of business. We believe some fatalities among retailers are inevitable bu*, if the maladministration in price control is not corrected, the death rate for small business enterprises will be enormous. If not corrected, prevailing price-control policy will continue to grope in the maze of its own making; black markets will absorb more and more of the goods available for civilian consumption; and, in the end, the degree of inflation will not be less than it would have been had we had no price-control legislation at all.

"Only Congress can now clear up the administrative chaos that has resulted."

RETAILERS' MARGIN CUT

After freezing all retail prices at the March 1942 level, Office of Price Administration authorized numerous price increases at wholesale, forcing retailers to absorb the entire increase. On one biological chemical, an 18 percent increase was authorized at wholesale. But the Office of Price Administration required the wholesaler to notify each purchaser that the increase must not result in a higher retail price. This order cut the retailers' margin in half. By this device, several hundred wholesale ceilings have been lifted with no concurrent increase in the old retail ceiling.

"It is economic murder, so far as the retailer is concerned," Jones told the House committee.

In another case, a candy manufacturer was authorized to increase his wholesale price 6.25 percent. The order required that the trade announcement carry this language:

"The Office of Price Administration has not permitted you or any other seller to raise maximum prices on the sale of said item. In order that we may continue to supply you, it will be necessary for you to accept this reduction in your margin."

In this instance, the item in question did not offer an average retail margin of 6 percent. The net effect of the order, therefore, was to require the retailer to sell it at a loss if he offered it at all.

"In orders of this type," Jones testified, "the Office of Price Administration, in violation of the statute, says in effect that the usual and customary profit margins may be reduced at the whim of the bureaucrats."

In another instance, the War Labor Board authorized certain cigar factories to increase wages. The Office of Price Administration then followed with permission to 11 manufacturers to increase their ceiling prices by the amount necessary to cover the wage increases. But here again the authorized increase at wholesale was combined with a warning that the retail price must not advance.

Again, distributors were authorized on November 7, 1942, to increase their wholesale ceiling prices on six items on condition that retail prices would not reflect the increases. In case of hardship, the order provided that the retailer might apply for relief at his district Office of Price Administration office, "provided that such action must be taken not later than November 30, 1942."

In this instance, most retailers did not learn of the authorized increase until November 14. They then had 2 weeks to obtain local adjustments. Of course, no distress petition to the Office of Price Administration can be "processed" in 2 weeks. Usually 6 weeks is the best possible clearance time.

Another Office of Price Administration device authorizes concealed price increases through a reduction in weight or package volume. When the weight of one candy specialty was reduced 10 percent, the Office of Price Administration order stipulating that the old retail ceiling, originally fixed for the larger package, might be continued for the smaller. Here, in fact, is a 10 percent price increase passed along in the habiliments of price maintenance.

MUDDLED CEILINGS

For some undisclosed reason Office of Price Administration fixed a wholesale ceiling price of $2.50 per hundredweight for Louisiana potatoes. At the same time the Texas price was fixed at $3.75. Thus Louisiana potatoes trucked across the State line brought 50 percent more than when sold in the accustomed local market. These muddled ceilings diverted normal supplies from New Orleans to create an acute shortage there, while Texas markets were flooded.

"The fault lies solely with O. P. A.," Representative JAMES H. MORRISON, of Louisiana, told Congress.

"I read in the papers that New York City is without potatoes. Washington is short of potatoes. And yet tons of potatoes in the ground in Louisiana may never be dug, because they have a ridiculous ceiling price of $2.50. Either an ulterior motive is behind this whole thing, or it is based upon gross incompetence."

MORRISON presented a survey by the Louisiana Agricultural College predicting that, if the $2.50 ceiling prevailed, Louisiana farmers would put in no crop to supply early potatoes in 1944.

Since 1941 Office of Price Administration has established 48 industry advisory committees. In theory, each industry is consulted on forthcoming regulations and orders. Office of Price Administration then inserts a stock sentence in every price-fixing decree:

"So far as practicable, the Price Administrator has advised and consulted with representative members of the industry which will be affected by this regulation."

This language skillfully glosses the fact that, under Office of Price Administration regulations, the industry advisory committees may act only in a consulting role. One set of regulations governing the operation of these committees reads in part:

"It should be noted carefully, however, that committees are advisory only, and that all decisions are made by the Government."

Another section of these unpublished regulations says that the committees may discuss any subject pertinent to the war effort and "furnish advice and recommendations to the Government presiding officer when requested to do so."

The regular practice has been for the Office of Price Administration to draw up its orders, then call a meeting of the industry committee. The Office of Price Administration's section chief appears at the meeting, reads the regulation, and announces the effective date. The industry representatives have no authority to veto the proposal or change the effective date.

Similar testimony has come from many witnesses. In one instance, members of an industry committee were summoned to New York from all parts of the country, one from Seattle. At the appointed hour, the Office of Price Administration's section chief entered, read the new order, explained the theory behind it, and bowed out with the statement that he must hurry to catch his train to Washington. The whole performance did not require 20 minutes.

Twenty-two business managers had left their plants in 17 cities. Their combined travel expenses to and from the meeting were tabulated at $4,750. They had not been permitted even to discuss the new order to the extent of getting an authoritative interpretation.

GROCERS HARDEST HIT

Grocers, perhaps, have been harder hit by conflicting and overlapping Office of Price Administration orders than any other retail group. When Office of Price Administration began, there were roundly 575,000 retail food outlets in the United States. Today those stores still in business are governed by 29 maximum price regulations, 63 other price controls applicable at the processor, wholesaler, or jobber level, plus 10 general ration orders governing food products.

All of these regulations are subject to amendment from day to day. The General Maximum Price Regulation, for example, has been amended 160 times in 13 months; and at least 15 supplementary orders have been issued under it.

In one case, a general price order was issued on May 10, 1943. On May 13, Office of Price Administration indicated through the press that these price tables would be changed. While retailers still were re-marking their stocks in line with the May 10 order, Office of Price Administration issued the revised order over the week-end of May 14–16. In this case, the official text of the May 10 order was not available in mimeographed form at Office of Price Administration headquarters until about 5 p. m. May 13, although the text had been published in the Federal Register for May 12, to be effective May 10.

By making it harder to do business, in whatever line, Office of Price Administration has served to hamper, curtail, and retard production and distribution at a time when every energy of the Nation should be mobilized for maximum efficiency. This bungling already has imposed an unnecessary burden on the whole war effort. That burden may be removed by either an administration house cleaning within Office of Price Administration, or by a thorough job of legislative overhauling by Congress.

Every business interest acknowledges the need of wartime price controls. Every segment of the population is eager to cooperate in all practical and workable measures against inflation.

Price control can be accomplished. But the job demands some "know how." If Office of Price Administration cannot supply it, another agency must. American business has a job to do—to maintain the home front to victory. That means food, clothing, shelter for all. No one should be allowed to get in the way of that job.

We Should Pay Our Own Board Bill in Full

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. JENSEN. Mr. Speaker, did it ever occur to you that the farmers' dollar from the year 1920 to 1942 was only worth an average of about 80 cents? Now, in plain understandable words, the consumers of farmers' products—which includes every one of us—jumped 20 percent of our board bill due the farmer during all that time. But now, when the large consuming industrial centers are asked to pay their board bill in full, a great howl is raised, and the President is persuaded by them to help them avoid a part of their food cost and pile the avoided portion on the backs of soldiers and sailors who will return victorious, and onto the backs of the children of all Americans for generations to come.

When President Roosevelt vetoed H. R. 2869, the Commodity Credit Corporation bill on July 2, he did just that. I did not and could not believe he would do this unfair thing, but it is plain to see this administration is determined to keep the farmers of America under complete control of the New Deal bureaucrats even while the farmer, his wife and children are straining every muscle to produce the food and fiber to win the war.

Mr. Speaker, it is a disheartening situation for our farmers, and every sound thinking American. Why cannot the administration see it is hindering production by all this regimentation and needless spending for subsidies and so-called roll-backs? All the farmer wants is a fair and equitable price at the market place, a price commensurate with the cost of commodities he must buy. Give him that and production will increase, then the greater supply will tend to keep prices in line. But, no, the big and little czars just will not have it that way. They scream "inflation" whenever farmers' prices are mentioned. Do they think all of us are so befuddled, as apparently they are, that we swallow their confusing theories, when they know that the greatest threat to stabilization is the inflationary printing of more Government bonds and paper money to pay the bills for all this nonessential New Deal waste and spending, to say nothing about the war expenditures. Why fool themselves? They are fooling no one else.

Hold the line. Bosh. F. D. R. by his own acts since 1933 has broken the line in hundreds of places in his spending spree, and when he vetoed this bill he again broke that line and should know it. I say the President has and is listening to the gang he has around him, his personally selected advisers and appointees, for whom he is solely responsible and who I have every reason to feel know less than nothing about running the home front. It is his own mistake and wholly his responsibility. All the freedoms wrapped up in the words American liberty and American justice, for which our armed forces fight and die, are being destroyed, and let me say here and now, we had better restore them before the boys come home.

Here are excerpts from folks in my district about this disturbing situation. I have received hundreds of like statements. These folks are not being fooled and they are not chronic complainers, as the New Dealers call everybody who dares criticize them. To the contrary they are all sound thinking, square dealing, patriotic American citizens who are worried about the future of their country. I direct the attention of the President to what these good people have to say, in the hope that it might help clear up a beclouded situation regardless of the fact that John L. Lewis demanded food prices be rolled back.

AUDUBON, IOWA, *June 17, 1943.*

Hon. BEN F. JENSEN.

DEAR BEN: I happen to be in touch with the farmers all over about 12 counties and wanted you to know the situation if you don't already know it.

Cattle feeders all over the country are not refilling their feed yards and are not going to unless feeder cattle are going to be cheaper or the ceiling raised on the finished steer.

Feeder cattle are being sold at about 16 cents and that is what the finished products will bring. Unless this situation is cleared up soon less beef will be grown than any time within 30 years and one of the largest shortages, instead of more beef, will be noticed all over the country.

BEN, if you can work to that end it will be one of the best services ever rendered to southwest Iowa. And I am sure every one concerned will appreciate your efforts.

Very truly,

L. H. MCCLAREN.

ELK HORN, IOWA, *June 15, 1943.*

Hon. BEN F. JENSEN,

Washington, D. C.

DEAR REPRESENTATIVE: As an individual and leader of a farm organization, I want to inform you I greatly oppose the subsidy program and the roll-back price of food. As a farmer and producer of food, I feel I am being let down and that any efforts, hard work, and long days are unappreciated. In effect, my wages are cut down and rolled back while industrial wages, already far above parity, are being further raised.

I have a fairly large amount of livestock on my farm, some purchased at a high figure, about ready for market; and now to see those prices deliberately dropped is most discouraging. My plans for future production must be changed.

I much prefer the absence of expensive governmental red tape and receive a fair price for my products on the market.

I am not alone in this. There are many with me, and I urge this be corrected immediately before further damage is done.

Producers of food want and deserve a fair treatment. If we cannot have a fair balance while we are fighting for democratic principles, it just does not look right. It seems to me the subsidy program is a plan of kidding one's self and at the same time taking a beating.

Thanking you and yours,

J. EMORY FREDERICKSON,

President, Shelby County Farm Bureau.

AUDUBON, IOWA, *June 16. 1943.*

Hon. BEN F. JENSEN,

Washington, D. C.

DEAR BEN: I have noticed for the last few weeks that the administration at Washington is attempting to roll back prices by means of a subsidy that will place increased burdens of taxes upon generations born and unborn.

To my way of thinking, this is about the most vicious and deceptive method of sleight-of-hand finance that can well be imagined. Just think of it, BEN, when practically every class in the United States is obtaining an income, salary, or wages that makes them more able to pay their way in the world, and at higher prices than ever before in the history of the country, and yet now the Government is going to pay a part of that price of commodities, and especially foods, and charge it back to the whole Nation and have it paid in the future by way of taxation. To me it is sickening.

You boys that claim to have some backbone in Congress, as I believe that you have, ought to fight a thing of this nature as you would a serpent. I believe if it is necessary to advance prices in order to get the value of commodities in harmony with each other or if it is necessary to advance them in order that each party through whom the commodities pass gets a fair profit, then advance them. What is the use of coddling the public and leading them to believe that you are keeping prices down when in truth and in fact you are advancing them? Better tell the truth and go forward and fight for it.

Sincerely yours.

CHARLES S. WHITE,

Attorney at Law.

HARLAN, IOWA, *July 1, 1943.*

Hon. BEN F. JENSEN, M. C.,

Washington, D. C.

MY DEAR CONGRESSMAN: The sealed corn loans we signed last year carried a clause making loans callable July 15, but few farmers seemed to have noticed it, and are therefore much surprised to have their 1941 loans called June 30 and immediately have their 1942 corn loans called at a time when there is no assurance at all of a 1943 crop.

In fact the season is late and much of this 1942 crop may be needed by the farmer himself. A Harlan paper last week carried a front page editorial voicing the farmers complaint and I have personally heard many farmers complain.

As a concrete example I have bought back 1,168 bushels of 1941 corn. I have also on hand 2,297 bushels of 1942 corn which I will also feed this year or next, depending on the outcome of this year's crop.

It seems the Commodity Credit Corporation is playing into the hands of the speculators at the expense of the farmer, the farmers who have gone to a great deal of trouble and expense to provide a lot of extra storage, stood the shrink and paid the interest all this time.

So it is unjust that the farmers should be compelled to sell now and buy back later at an advance in price or sacrifice his feeders.

As Congress is the only body according to our United States Constitution that can alter a financial contract, I appeal to you to do something about this matter at once.

Yours sincerely,

CARL C. CARLSEN.

P. S.—Hope this "roll-back prices" doesn't succeed as I recall some serious consequences following such a procedure in 1920 and the dire results of 1932–33.

C. C. C.

FONTANELLE, IOWA.

Hon. BEN F. JENSEN:

Instead of offering additional subsidies it is time now to abolish all such payments. Even pensions and other so-called security benefits may better be met by the States or by local governments, if not by local charity, rather than add this load to the heavily burdened Federal debt. The practice of loaning money to individuals from Federal funds adds to the burden and can well be stopped. The public must not be misled with those postwar utopian plans that call for further outpourings of money from the Public Treasury.

No one questions the necessary costs of the war. But now, while employment remains high, the present is the most opportune time to cut to the bone all nonwar Federal expenses. Rationing, price ceilings, and other forms of regimentation cannot safely be relaxed even after the war unless this is done.

The road back to a balanced budget may not be easy, but the reestablishment of a financially sound government is the only solution that can assure the people that their life savings will retain a semblance of their normal value. Thomas Jefferson has said: "I place public debt as the greatest menace of all dangers to be feared."

THE STATE SAVINGS BANK,
Fontanelle, Iowa.

SHELBY, IOWA, *June 28, 1943.*

Mr. PRENTISS M. BROWN,
Office of Price Administration Director,
Washington, D. C.

DEAR SIR: As a producer of beef cattle, I am writing you in regard to the recent reduction in the wholesale price of beef.

During the winter and early spring months of this year we were urged by the Department of Agriculture to produce all the beef we possibly could as it was urgently needed for our armed forces and lend-lease and we were sincerely promised by the then Office of Price Administration Director that there would not be anything done by that office that would directly cause any financial loss to the producers of beef; so, as a patriotic duty to our country, we made arrangement to produce beef to full capacity even if we had to do it at cost of production.

Then, a few weeks ago, like a flash of lightning from a clear sky came the order to the slaughterers of beef to reduce the wholesale price of beef $2 per hundredweight, which in turn meant that the price of live cattle had to be reduced $1 per hundredweight, or about $10 per head. I doubt very much whether either Hitler or Mussolini would dare to impose such a brazen violation of a public trust on their people, although Tojo might do such a thing.

I do not know how many hasty and unwise actions like this it will take to break down the morale of the American people completely, but I do know this action has had a very unsatisfactory effect on the beef producers of this country. I do not like to write letters like this but feel that as a citizen of these United States it is my duty to do so.

Very truly yours,

F. O. PETERS,
Shelby, Iowa.

P. S.—I am sending copies of this letter to both Iowa Senators and Congressmen from this district.

War Information for the People

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. BULWINKLE. Mr. Speaker, during World War No. 1 those who were in charge of the information to be given to the public in regard to the war were often unjustly criticized, especially by those who were motivated by partisanship or for some other reason; yet I felt then that a very fine piece of work was done by those in authority.

During this present war, World War No. 2, a little over a year ago, June 13, 1942, to be exact, there was established by order of the President an agency of the Government designed to keep the people correctly informed on the progress of the people's war and to wage a war of ideas against our enemies to aid in hastening victory and thus save many precious lives of our fighting men. That ageney was called the Office of War Information, now familiarly known throughout the land as O. W. I. As its director, the President appointed a very capable and a very efficient man, Mr. Elmer Davis. Mr. Davis has had wide experience with both the newspapers and on the radio. And I think you will agree with me that when Mr. Davis was a news commentator that he was one of the very best. Personally, I was very much pleased when he accepted the appointment.

It is not amiss for me to speak about the Office of War Information—to give you information about it that I know of my own knowledge—things that you will be interested in and will be glad to know.

You have been hearing a lot lately about O. W. I.—some of it bad. Comparatively few people fully appreciate the tremendous job O. W. I. did during the first year of its existence. But our fighters in north Africa—thousands of whom are alive today because of O. W. I.—appreciate it. They know, from first-hand experience, that if the pen is not mightier than the sword, it is at least a powerful weapon in supplementing the sword's effectiveness. The power of well-directed propaganda was brought home to them when they saw tens of thousands of surrendering Germans and Italians streaming into our stockades, hopefully pulling from their pockets the leaflets that had been dropped behind their lines by the millions. Everyone proudly displayed his leaflet as if it were his passport to freedom.

Leaflets were not the only weapon that had been used with telling effect. The moment our troops landed on the shores of north Africa last November, O. W. I. mobile units with special field broadcasting equipment, printing presses, and other means of effective propaganda—staffed with experts in psychological warfare—were on the spot and went immediately into action. They stayed in action until the last enemy soldier laid down his arms in Tunisia. They demonstrated the effectiveness of propaganda as an important instrument of warfare, which, as Mr. Davis recently said, has been "recognized by military commanders all the way down from Julius Caesar to George C. Marshall."

But that instrument and the means of making it effective did not just suddenly appear, to be picked out of thin air at the moment they were to be put to use. Months of meticulous and secret preparations had to be made. Way back, when most Americans little dreamed that a north African campaign had even been thought of, O. W. I. experts were preparing the mental ammunition that was to prove so deadly. Working in the utmost secrecy, they were preparing leaflets, writing radio scripts, and making vitally important recordings for broadcast at the right moment, including President Roosevelt's words of advice to the French and other inhabitants of north Africa. There is abundant evidence that these measures bore fruit in lessening—and in some places even eliminating—resistance to our landing on African soil. How many lives were spared that otherwise would have been destroyed no man can say, but if the life of your boy or mine was saved by this action, I am sure you would agree that it was worth while.

Somebody may say that may be all very well, that perhaps the Overseas Branch of O. W. I. has done a worthwhile job, but that we do not need the Domestic Branch—that part of O. W. I. devoted to keeping our own people informed about the war. That is a popular misconception of the function of O. W. I. It is like saying, "Let's tell all the world except ourselves what is happening on the battle fronts and on the home front." The kernel of the whole O. W. I. set-up was that the Domestic and Overseas Branches should mesh together like well-oiled gears. The Domestic Branch, in addition to furnishing the information the American people need to win the war, is the feeder of raw material to the Overseas Branch. It goes to the sources of information, sifts out the inconsequential, resolves the conflicting versions of various Government agencies, and presents the facts in their true perspective.

If you want to know what the American people think of the domestic operations of Office of War Information, ask the man who knows from personal contact, not from hearsay. Ask the radio commentators, who could not possibly cover the multitude of scattered news faucets and get any sort of perspective for their daily broadcasts. Ask the hundreds of newspaper reporters how much time and leg work they have saved by having Office of War Information place at their disposal all the essential facts from which to write their dispatches.

The work of Office of War Information, both domestic and foreign, is so vast and has so many ramifications that I cannot begin to describe it all within the time limits of this address. I can only give you a few illustrative facts. The Domestic News Bureau, for example, serves the news columns of nearly 2,000 daily papers throughout the country having a total circulation of 41,000,000. It furnishes accurate war facts to another 1,380 foreign language papers published in as many as 27 languages. It supplies the rural press with information designed for their special needs, and gives special interpretations of the news for women's pages and the collegiate press. Besides, it gets out over 30,000 words a day to be sent to all parts of the country on teletype machines.

The domestic branch in its duty of keeping the people informed has three main objectives:

First. To eliminate conflicts and confusion in information that would occur if all agencies having to do with the war were to handle their own news;

Second. To safeguard the public interest by giving, as accurately and speedily as possible, the people all the news consistent with national security; and

Third. To enlist the cooperation of non-government agencies—newspapers, radio, motion pictures, and other means of telling the story of the war.

Untold savings have resulted in eliminating duplication by the various other agencies of government. By using specially selected mailing lists of trade papers it is estimated that there has been a saving of over 500,000 copies of releases by the Office of Price Administration alone, and over a million copies that would have had to be handled by the War Production Board. These are just isolated but typical examples.

By enlisting the patriotic cooperation of private means of informing the people, O. W. I.'s accomplishments have been even more spectacular. The radio networks and individual radio stations of the country have cooperated with the Domestic Branch of O. W. I. to the extent of donating broadcasting time that would have cost commercial advertisers at least $100,000,000—20 or 25 times as much as it cost to operate the whole Domestic Branch during its first year's existence. Newspaper advertisers have spent a like amount in carrying the message of freedom to the people on behalf of their Government. Besides, the newspapers and magazines of the country have thrown open their columns with unstinted patriotism to carry to the people the war information largely originated by O. W. I.

Of course, much of the free radio time would have been given and much of the advertising money would have been spent without the existence of O. W. I. but I think few people can doubt that if O. W. I. had not coordinated and given direction to the material it would have lost much of its effectiveness and sense of proportion. Such scattered efforts would have been like the story of the man who jumped on his horse and rode off in all directions.

Handling the daily grist of news—with its hundreds of separate items, statements, speeches and announcements—is of course one of the big jobs of O. W. I.'s Domestic Branch. But it is by no means all or the most important. The people cannot be expected to be informed about the war alone by glancing at a news item here or hearing snatches of a speech there. O. W. I. has done, and is doing, a superior job in going back of the day-to-day news, unraveling the skein of daily items and weaving a background fabric on various subjects to give the people a better perspective from a longer view. Such stories as O. W. I.'s round-up reports on transportation, air transport, drinking in Army camps and the like are cases in point.

My friends, the story of O. W. I. is an essential part of the story of the American people's determination to win this war of freedom—and win it as soon as possible. I am convinced that the Office of War Information is one war weapon we can ill afford to discard or allow to get dull for lack of funds necessary to keep its cutting edge in fighting shape.

I felt that it was my duty in the House of Representatives, for the benefit of the American people, to vote against the reduction in the appropriation for the Office of War Information, and just recently again when this bill came back from conference, it was my privilege to vote for the restoration of the greater part of the funds which had been reduced by the House in its previous bill.

The people of the United States are entitled to the very best and the fullest information in regard to the war—in regard to production—in regard to the domestic home front against inflation—and against economic disaster provided, of course, that it does not give aid and comfort to the enemy.

When this war is over, it shall be written down by the historians of the future that the work of the Office of War Information, Mr. Elmer Davis and his associates, played a great part in the winning of the final victory.

Food Distribution

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. McKENZIE. Mr. Speaker, here is more evidence of the terrible and almost criminal manner in which the food distribution problem is being handled, or I should say mishandled, in this country. We are supposed to be and actually are facing a food shortage, yet there is no market for "victory" potatoes. Why? Is it because O. P. A.'s arbitrary and senseless price ruling makes it illegal for a farmer or merchant to sell a sub-grade at a lesser price than the regular grade United States No. 1?

Certainly there are many thousands of housewives in the cities of this country who would be glad to purchase these "victory" potatoes if they were just made available to them. Why do the big produce merchants refuse to buy them? Why does the O. P. A. and the Food Administration permit these valuable food units to waste and rot in the cars when thousands upon thousands of people in this country are begging for potatoes to supplement their food rations? Mr. Speaker, the responsibility for this outrage, this sabotage, lies at the door of Prentiss Brown, Claude Wickard, and Marvin Jones. Theirs is the obligation and duty to see that this situation is promptly corrected, not only as regards potatoes, but also meat, butter, eggs, milk, cheese, and fresh vegetables—all products of the farm—all vital articles of food. It is the duty of these three gentlemen to put an immediate stop to this waste and to see that the responsible parties, no matter whom they may be, are summarily and severely dealt with. Failing in this duty, these gentlemen should resign. Mr. Speaker, I quote below an article from the West Carroll Gazette, Oak Grove, La., under the date of July 1, 1943. It speaks in eloquent condemnation of our present lack of system and use of common sense in marketing our food crops so there will be an even and uninterrupted flow between the farmer and the consumer:

"VICTORY" POTATO MARKET IS HALTED—23 SACKS RUINED

After shipping four carloads of Irish potatoes from West Carroll to eastern markets 2 weeks ago the local market is "halted" this week because "victory" potatoes are not wanted—only those which are classed as No. 1.

"Victory" potatoes are those which measure from 1½ inches in diameter up, while the No. 1 variety has to be uniform in size, C. M. Tillman, manager of the West Carroll Marketing Service, Inc., parish farmers' cooperative, pointed out.

"Last week an entire carload of potatoes stayed in the boxcar until 23 sacks of them ruined," Jesse M. Kees, parish farm agent, advised. "There was just no market for them," he said. "Not even the market in New Orleans will handle 'victory' potatoes."

Mr. Tillman wired Food Administrator Claude R. Wickard Friday: "We have been told that our Nation faces a food shortage. Our farmers have been told to raise all the food possible, and many additional acres of farm land have been converted to food production crops. However, we now face a situation of not being able to sell several cars of Irish potatoes which are spoiling on account of our not being able to find a market * * * this is very discouraging to the farmers who are bending every effort to help win the war."

The answer was: "Potato support program now active. Suggest you communicate with Lester J. Cappleman in Dallas." The wire was signed by Carl G. Wooster. A representative of Cappleman was here at the time of the receipt of the wire, Kees said, but the Dallas representative pointed out that there was no market in sight for "victory" potatoes.

Statement of O. C. Bailey to Subcommittee of the Naval Affairs Committee

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. HARRIS of Arkansas. Mr. Speaker, on June 21, 1943, a subcommittee of the Naval Affairs Committee of the House of Representatives held a hearing at El Dorado, Ark., on the petroleum situation affecting the progress of the war. Under leave to extend my remarks, I include the statement of O. C. Bailey, chairman of the Arkansas Oil & Gas Commission, made to that committee. It gives a very fine picture of the subject with reference to reserves, discoveries, materials, labor, and price. I commend to every Member of this House this statement as the problems there are no different from those in other sections of the Nation.

Chairman RIVERS and members of the Naval Affairs Subcommittee, we are honored to have the members of your committee here today and welcome the opportunity it affords us to present information needed in your study of conditions prevailing in the oil industry.

Your responsibility is a great one in the gathering, for the information of our Congress, the essential facts, bearing upon the available supplies of crude petroleum and its products necessary to the successful prosecution of the war. It is reassuring to see you use your valuable time, at so much personal inconvenience of travel, to appear here today in the acquisition of first-hand factual knowledge upon the important subject of your inquiry. No more eligible or equal method has been known to our Congress, or perhaps to legislative bodies of other free countries than the method we witness today of this most important committee of our Congress meeting face to face with the men of the industry in order to collect the facts for use as a guide in determining the legislative policies of our Congress.

The gentlemen who are to follow me as witnesses before your committee represent a cross-section of the petroleum industry of Arkansas. They can answer specifically any question that may be of concern. We wish it were possible to take you to our fields and show you the operating practices prevailing today, to let you see our repressuring plants, natural gasoline plants and the new remarkable desulfurization plants, wherein so-called "sour" gas is being processed and made available to the war effort.

I will attempt to give you a general picture and then to answer any questions that I am qualified to answer.

While Arkansas ranks ninth among the oil-producing States in volume of dairy production, the operating conditions reflect a true picture of the industry as a whole. Our production ranges from shallow stripper wells producing a few barrels of oil per day to high pressure condensate wells over 9,000 feet in depth. Drilling costs range from $10,000 per well or less for the shallow wells to $100,000 each for the deep wells.

Our oil production at the present time is approximately 75,000 barrels per day. Fifty percent of our production is refined by our seven local refineries and the remainder finds adequate transportation facilities through existing pipe lines, waterways, and splendid rail connections. Approximately 80 percent of the gas produced incident to the production of this oil is being consumed by war industries and other commercial users.

The utilization of this gas, which is commonly called casinghead gas, provides an interesting sidelight into the growing efficiency of the industry. The great majority of the gas produced contains hydrogen sulfide and other deleterious material. It is called "sour gas" and is found commonly in the Texas Panhandle, West Texas, and New Mexico.

Exploitation of the rich natural resources of Arkansas has been retarded due to a lack of cheap fuel. With the discovery of the tremendous reserve of sour gas (now estimated to be in excess of one trillion cubic feet) the best efforts of the industry, State and Federal Governments were exerted to find a means of freeing this gas from those things that made it "sour." After much experimentation, a way was found and now 13 war industries, representing an expenditure of over $500,000,000, are served by this sweetened gas.

Three large desulfurization plants are in operation or under construction, and at these plants not only is the hydrogen sulfide removed from the gas but it is saved as sulfur in its purest form. This same gas in part is used as new energy for our oil fields; that is, it is forced back into the oil-producing horizon and used again as a propulsive force in the movement of the oil from its reservoir to the surface. This gas supplies our refineries with fuel and powers the pumps in the older fields. Wastage of natural gas is unknown in Arkansas today.

The latest estimate on crude reserves of the State, as given by the Petroleum Administrator for War, is 295,000,000 barrels. At current rates of production this is approximately a 12-year supply. However, this reserve is not the same as bales of cotton in a warehouse or wheat in an elevator. It will take years to bring most of this oil to the surface, and the amount ultimately recovered has a direct relationship to price.

Our fields are being operated under the most advanced engineering practice known to the industry at this time, and the present rate of production cannot be stepped up unless new fields are discovered. We are operating under what is known as "optimum rate of flow." In other words, the oil is being produced at rates that will insure the greatest ultimate recovery by the husbanding of natural reservoir energy, commonly spoken of as "bottom hole pressure."

As the fields become older, water encroachment begins and to secure the greatest recovery, methods must be devised to combat salt water production, for a barrel of water produced consumes as much energy as a barrel of oil produced. This is a problem now confronting the operators in Arkansas.

On June 1, 1943, the Oil and Gas Commission called a meeting to which all operators with wells producing salt water were invited. At this meeting a Steering and Coordinating Committee was appointed to study the problem. Subcommittees were appointed for each field to give the problem detailed study. All of these committees are now at work.

On Wednesday, June 23, a hearing will be held to consider the application of the Carter Oil Co. to convert a well in the village pool to a salt water disposal well. If an effective means can be found to return the salt water to this deep reservoir, it will mean that production can be sustained at a higher rate than would be otherwise possible and the ultimate recovery can be greatly increased. However, this will add to the cost of producing oil.

We have a serious problem in maintaining production in the older fields of the State. Due to higher labor costs, shortage of manpower, and inability to secure necessary materials, many wells in the older settled fields are now reaching the end of their economic life. The rate of abandonment of wells has been accelerated in recent months. During the first 5 months of 1942, 29 wells were plugged and abandoned, while during the first 5 months of 1943, 61 wells were plugged and abandoned. On the 1st of January 1943, there were 3,178 wells operating in the State; on May 1, 1943, there were 3,063 wells operating. This indicates that in addition to the permanent abandonments many wells have been shut down and will be permanently abandoned later unless crude prices are increased to the point where they can be operated again at a profit.

The 1943 legislature authorized a study to be made by the oil and gas commission of the older fields of the State to determine which would offer practical prospects for the operation of secondary recovery projects. This study has been instituted under the direction of Dr. George H. Fancher, nationally known authority on secondary recovery methods.

In my opinion if present prices are continued for the next 2 years, in many of our older fields there will be so few wells remaining on production that secondary recovery projects will not be feasible and this reserve will be lost to the State and Nation.

The production in the stripper fields is owned largely by independents and also the independents do most of the wildcatting. During the first 5 months of this year, 47 wildcats were drilled in this State, 45 by independents and 2 by major operators. If the independents are forced out of business, it necessarily follows that the rate of wildcatting will decline and with it the number of new fields discovered.

Another factor retarding development is the inability to secure the necessary materials. Mr. D. R. Knowlton, director of production for Petroleum Administration for War, recently stated that the amount of steel allotted to the oil industry for the third quarter was about 25 percent less than requested. This is especially serious when it is realized that during the past 18 months the industry has exhausted the stock piles on hand when war was declared. I have talked to several operators recently and they advise me that they cannot get deliveries promised on casing or tubular goods earlier than September.

No prudent operator at this time is going to start a well until he has the casing on hand for completion of the well. This means that the drilling of many wells is being delayed until the operators can get the material. The difficulty of obtaining replacement parts is also affecting operations in the older fields. If an operator of a pumping well cannot get replacement parts, he has no recourse but to shut the well down.

Another factor retarding development is the burdensome restrictions imposed by some governmental agencies. These restrictions are especially severe upon the independent operators for they do not have the legal and engineering staffs necessary to fill out all applications and get the requests approved by these Washington bureaus.

Oil is the most essential of all commodities needed in the war effort. It is useless to build ships, tanks, or planes without sufficient supplies of petroleum products to operate them. For this reason it is imperative that sufficient supplies be allotted to the oil industry to carry on its operations and prices should be increased to the point necessary to produce the oil.

Rev. George Hildner

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 4, 1943

Mr. CANNON of Missouri. Mr. Speaker, under leave granted me I want to introduce to the Members of the House the most dynamic personality I have ever met—Father George Hildner, pastor of St. John's Church, Gildehaus, Franklin County, Mo.

He is, paradoxically, an eminent clergyman and a distinguished agricultural scientist, and because of the contagious enthusiasm with which he attacks and solves seemingly hopeless problems he is frequently referred to as "Missouri's fighting priest."

Reared in the city, he has made his greatest success in soil conservation and in an enriched rural life and is also dubbed affectionately in Missouri farm conferences as "Alfalfa George." He radiates energy, inspiration, and confidence, and, withal, he is the personification of tact and diplomacy, and is equally versatile whether officiating as pastor, farmer, engineer, scientist, or financier in State conference or parochial service.

If my colleagues will visit me on my Missouri farm I will take them with me to call on Father Hildner, who is one of the most democratic of men and never

too busy in his crowded life to reach out a hospitable hand and I will guarantee them not only a delightful visit but a memorable experience which they will treasure through life.

In the meantime, let me introduce him to you through the pages of the Reader's Digest, in a notable article by Carroll P. Streeter, condensed from the Farm Journal:

MISSOURI'S FIGHTING PRIEST

Up and down the Mississippi River for 100 miles from St. Louis he is known as the "levee priest." Brother clergymen call him "Alfalfa George." His actual title is the Very Reverend George J. Hildner, Vicar Foraine, dean of the Franklin County, Mo., deanery of the Catholic Church. But the name that describes him best is "the fighting priest."

A jovial, energetic 210-pound hulk of a man, Father Hildner has fought flood, drought, ignorance, legislators, or whatever stood in the farmer's way. Never, until war came along, had he lost any farm boys to the cities. He had seen to it that they had, at home, jobs, education, and recreation. Never has a couple that he married been separated.

In his college days, 40 years ago, George Hildner was a star semipro baseball player; in fact, he was offered $1,500—big money in those times—to play one summer in the Three-I League. Right then he had to decide whether to be a second baseman or a priest. Priest it was.

When Father Hildner's archbishop sent him to Claryville, Mo., a village of 100 people on the banks of the Mississippi, he knew nothing about farming. But a good rural pastor, he felt, should understand the farmer's day-to-day problems and be ready to suggest solutions. So he subscribed to farm publications and studied the latest agricultural methods. The first building he put up was a chicken house, built from Missouri College of Agriculture plans, and he became one of the college's poultry collaborators. He got a flock of the best Barred Rocks he could find, took some blue ribbons at the county fair, and was soon selling hatching eggs at a fancy price throughout Missouri and Kansas. That did all the preaching about poultry that was necessary.

The Claryville area often suffered from devastating floods. In 1922 the roaring river inundated the whole valley. Father Hildner, clad in hip boots and oilskins, stood in Claryville's general store in water up to his knees, telephoning for help. Then, into the night, he helped load the barges which were poled to haymow doors to take aboard such hogs as farmers had been able to get up there.

"If you want to have fun sometime," Father Hildner told me, "try loading scared and stubborn hogs onto a raft coated with slick, slimy mud, by lantern light, in a high wind and pouring rain."

The only consolation farmers got out of the recurrent floods was that some good black dirt washed in from up north. But, the priest concluded, there must be some cheaper way to build soil—clover and alfalfa, for instance. So he launched a one-man campaign to get the Federal Government to build a levee. He gathered the necessary data and bombarded his Congressman with telegrams.

At length the Government agreed to erect a levee. But it would cost $3,000,000, and the local farmers would have to raise $450,000. The priest now had to persuade the people to organize a levee district and vote bonds. When that was accomplished he had to sell the bonds. He held 3 public auctions at the church, with representatives present from some 40 midwestern bond houses. With true rural-church instinct, he gave the buyers the biggest chicken dinner the women of the parish could heap on the table. When it was all over he had sold the bonds over par and had a surplus of $1,650—surely a record for church chicken dinners.

Levee districts along the Mississippi have been notorious for defaulting on such bonds. Plenty of bondholders have settled for 25 cents on the dollar or less. But not one farmer in the priest's district was ever delinquent on his bond taxes. This year the last of the bonds will be retired, paid in full.

The farmers' next need, the priest perceived, was livestock. "Why ship out all your corn and let somebody else make the feeding profit?" he asked. But these Missouri farmers wanted to be shown. So Father Hildner rented Horse Island in the Mississippi River, installed a tenant farmer, raised a crop of corn, and then borrowed enough from the local bank to buy 85 steers and 200 hogs.

"Cattle feeding is a risky business even for a fellow who knows what it's all about," he told me, "but somebody had to have the guts to be first." Fortunately the markets let him cut with a whopping profit. Since then the farmers have been feeding their corn and harvesting not only the cash profit but the manure.

Father Hildner also looked beyond his own neighbor's problems to those of farmers throughout the country. He was one of the little group who met with Bishop Edwin V. O'Hara to organize the National Catholic Rural Life Conference, which has become one of the most active forces for the betterment of rural life. He is now treasurer of that organization.

Nine years ago the Archbishop promoted Father Hildner, moving him up to the St. Johns'-Gildehaus parish in Franklin County, 40 miles west of St. Louis. Here he found that the farmers were trying to raise wheat in a hilly country better suited to dairying. Though they were right on the doorstep of St. Louis, only a few sold milk there.

Hildner couldn't stand that. "The day of the two-cow dairyman is gone," he preached. "Why not learn something about the dairy business and really get into it?" He showed movies, presented speakers, ran a complete dairy school. Both Protestants and Catholics attended the lectures and demonstrations. Then the priest organized a local unit of the Sanitary Milk Products—the big cooperative that sells 75 percent of all milk entering St. Louis. Today, through his efforts, Franklin County is fourth in inspected-milk production among the 60 counties of the St. Louis milkshed and first among the Missouri counties.

Wheat-growing had encouraged soil erosion, and the hills were washing full of gullies. When Father Hildner heard of the new soil-conservation demonstration areas which the United States Department of Agriculture was establishing, he succeeded in getting one located in Franklin County. The farmers learned about contour farming, strip cropping, gully control, reforestation. Furthermore, they still practice what they learned, and the farms they hand on to their children will be better than the ones they received from their parents.

Two years ago Franklin County farmers were hard hit by drought. They paid $25 to $30 a ton for alfalfa, when they could find any. On his way to a Rural Life Conference in Kansas, Father Hildner saw from the train window hundreds of stacks of luxuriant alfalfa hay. Grabbing his suitcase, he bounded off, made a deal for 500 tons, got back on the next train. When he reached home he formed a partnership, borrowed money at the bank, organized a caravan of trucks and went after the alfalfa. The cost was $15 a ton, delivered.

Partly as a result of the priest's efforts and partly because of the thrift and hard work of the people, every one of the more than 100 families in the St. John's-Gildehaus parish owns its own farm. More extraordinary, not one of these farms is mortgaged. The farmers have good houses and modern conveniences. Considering that Franklin County has hilly land of only fair quality, this is a phenomenal record.

Father Hildner has been as active in his social work as in his agricultural program. As his Archbishop puts it, "He has been preventing human erosion as well as soil erosion."

He is particularly interested in helping to make happy and lasting marriages. Like many another priest he gives premarital counsel to his young people who plan to marry. In addition, after a marriage ceremony, he gives the couple a wedding breakfast in his home, and that evening there is a reception or dance to which the entire community is invited. Once a year he honors all those who have married during the preceding 12 months by reading their names from the pulpit. "In such ways," he explains, "we make something of marriage. A couple can't lightly toss it aside after community recognition and a celebration like that."

This country priest finds that, valuable as premarriage counsel is, many people need advice after marriage. He doesn't pose as a marriage expert, but believes that good horse sense, plus 37 years of observation as a priest, is worth something.

His advice is: "Be genuinely in love. Don't let any quarrel last more than 1 day—and don't take it to mama for sympathy. Be neat and clean in household and person. Take out an insurance policy. Own, or struggle to own, something. Have a religious home. Have children. That's not a complete list, but it's a good start."

Father Hildner has a dozen community jobs—all the way from being county defense chairman, to playing Santa Claus at the Christmas program. "My creed for a rural pastor is to be all things to all men," he explains. "A pastor's mission is to live for his flock, not off it. I may not have measured up to this ideal, but at least I have tried a few angles."

Ban on Driving to Summer Home Lifted

REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. MILLER of Connecticut. Mr. Speaker, I want to take advantage of this opportunity to commend the gentleman from New Jersey [Mr. HARTLEY] for his untiring efforts to relieve the gasoline shortage in the East. On June 24 I sat in on a conference with the gentleman from New Jersey [Mr. HARTLEY] and the gentleman from Massachusetts [Mr. LANE], along with representatives of the O. P. A. and P. A. W.

First of all, we asked O. P. A. to consider lifting the existing restrictions on holders of A gas-ration books. In other words, we asked that these people be permitted to use the small amount of gasoline available to them under the A book for whatever purpose they desired. This request was definitely turned down. I then asked that they consider allowing holders of A books to make one vacation trip to the lake, shore, or wherever they desired to spend their vacation, within the limitations of the A book. These representatives of the O. P. A. promised to take this request under consideration.

The result was the announcement just made by Mr. HARTLEY—that such vacation trips will be allowed. In all fair-

ness I should say at this point that Administrator Prentiss Brown seemed to be exceedingly sympathetic to the idea suggested to him. I am more than pleased to be able to tell you now that, this afternoon, I received an announcement from the O. P. A. containing the provisions by which motorists in the Northeastern gasoline restricted area, beginning July 15, may use their A rations for one round trip to a summer home or other vacation place.

I want to emphasize that in all other respects the nonessential driving ban will remain in full effect and will continue to be actively enforced. The supply of gasoline on the East Coast is exceedingly small, but I believe that the privilege extended by the forthcoming O. P. A. amendment will not be abused.

Before making such a trip, previously prohibited in this area by the ban on nonessential driving, motorists will be required under the plan to apply to their War Price and Rationing Board for a written authorization. This will be a simple form stating the starting point and destination of the trip, and the dates on which the trip will be made. Since boards cannot be supplied with the necessary forms until July 15, motorists should not apply to the boards before that date. This certificate will not constitute an extra ration. It will be simply a statement for the motorist's use should he be questioned about compliance with the ban on nonessential driving.

Vacation trips may be made only on the specific dates designated and only by the shortest and most direct route. Travel in disregard of these limitations constitutes violation of the ban on nonessential driving. A copy of the authorization will be retained by the board for enforcement purposes. Obtaining an authorization by false representation is ground for revocation of all rations and denial of future rations as well as being a criminal offense.

Before receiving one of these authorizations an applicant must satisfy his ration board and certify that he has sufficient gasoline purchased on A coupons in the fuel tank of his car, or has enough A coupons to make the complete trip. He must also give the board his speedometer reading at the time of application. Motorists making use of the authorization will not have recourse to further rations should they be stranded along the road.

Weekly Report to the People of My District

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over station WNBF, Binghamton, N. Y., on July 3, 1943:

Men, women, and young people of Binghamton, Johnson City, Endicott, and the Thirty-fourth Congressional District, there is an old saying which I think is only too true, "That which you will not yield, you must fight for—that which you will not fight for you must yield."

This adage applies not only to individuals but to nations. I suppose it is the universal law that started with the first living things on earth. When one creature became so self-satisfied and contented with his lot, he became soft and flabby. He did not hold on to what he had for long. Some fellow popped up who was a little stronger, a little better equipped for the battle of life and took it away from him. Unless he was prepared to fight for his own in a most determined way, he stood to lose his possessions and even his life.

It is the same with nations. Hitler found Germany's neighbors weak and unprepared. They didn't know how to put up a strong resistance. They had become oblivious to their peril. Therefore these nations fell to the ruthless conqueror one by one. They fell because they did not believe they would ever have to yield their wealth and their lands. They thought they could hold those earthly goods by sheer authority of the law. Their mistake was to believe they were secure without first making certain of their strength or weakness.

Before long, however, the might of the Nazi aggressors will bow to a greater power, American might guided by right. While Hitler grappled with weaker adversaries and laid waste to Europe, we gained time to build a military and naval supremacy over all other world powers, friends and foe alike. We are now prepared to carry the war into our opponents' back yard. When the signal comes for the invasion of the Axis-held mainland, you will see the greatest array of armed strength ever pitted against a foe. This will be the attacking American armies pressing forward on a dozen different fronts. These armies supported by our fleets will win the war, because they have what it takes to be victorious.

But who makes up these glorious American fighting forces? Who are these heroes of wide acclaim who are every day showing the world that free men are superior fighters to slaves?

I'll tell you who they are. They're your sons and husbands and sweethearts and relatives. They're Jack and Joe and Bill and Mike and 9,000,000 other honest-to-goodness Americans. They're scattered over the length and breadth of the world fighting for this Nation. Some of them won't come back after this war is over. But most of them will.

Yes, most of them will, and you can bet they are going to look for the same kind of freedom and the same kind of home they left behind. There's not a man in service who isn't hoping every day and praying every night that this hell will soon be over, so he can return to mother or dad or wife or sweetheart. It will be a day of days when he comes home, too. The country will welcome him with open arms.

But after the fanfare and the tumult and shouting die down, what then? Aye, there's the rub. What then? The job he had is gone. Either somebody grabbed it or it just vanished in thin air—it wasn't essential, you know. So he has no job.

Has he any wealth? Hardly. In the first place, whoever heard of anybody getting wealthy on $50 a month? That's a joke. He probably won't have more than a few dollars in his pocket, especially after he has paid for his railroad fare. They just don't pay soldiers' transportation here in America, even though a lot of us have agitated for it.

Well, things can't be as bad as all that. Let's see. Let's look around. This soldier ought to be all right. All he needs is to go to his little home or farm and think things over a few days. Something will come up. But wait. Does he have a home? Does he have a farm? Of course, he hasn't. He lost his home when he went into the Army. He couldn't raise enough to cover the payments. He was sure the home folks could keep it up. But they didn't, and so he lost his home. When food went so high they exhausted the little they had to buy it.

There must be some hope, some way he can turn. What about a good job? Like the one he had before the war? He pounds the pavements for weeks but finds war work has almost ceased. Nobody is making any more guns or tanks or fighter planes any more. You see, the war is over, and nobody is interested in producing weapons. Let's forget about them until the next war is thrust upon us. There will be plenty of time then to prepare. The only danger is that next time the enemy may strike at us while we're still unprepared.

But we have left our friend, Mr. Ex-soldier, trying to find a job. He can't. He is stumped. No peacetime goods moving, no war production, although it will be needed even in peacetime, no chance to own a home or a farm, no money in his pocket, no future for him—so far as he can see. From 5 to 10 million other men will find themselves in the same boat. A condition like this will be no laughing matter for America.

My suggestion is to start a little post-war planning here at home. I think we owe it to our boys and we certainly owe it to ourselves. While we're thinking about what we're going to do after the war with Tunisia, Ethiopia, France, Poland, and a score of others, it might be well to give a thought for the future of our own sons in the armed forces. We ought to do some post-war planning right here at home and immediately. Whatever attention we give to other nations and it seems we are administering to their needs remarkably well. I believe we owe the boys a debt of gratitude which can only be paid by planning a future for them after the war instead of offering them the same uncertainty, the same hard going and despair the fighters of the First World War had to go through.

I propose, then, to call for the passage of legislation guaranteeing the servicemen a place in the sun upon his return after victory. He must not come home to a Nation which no longer gives its citizens a chance in life. He has the right to expect to be placed on the equal basis he knew before the war. And, mark you, he is going to have that place at home or know the reason why.

I suggest that Uncle Sam keep every soldier, sailor, and marine on the pay roll at least a year after victory has been won or at least until he obtains a job which returns him more than base Army and Navy pay. This will keep him from becoming desperate as the home-coming servicemen were last time when every door was closed against them, every job was filled, and no plans had been conceived for his future well-being.

Probably only a minority of the men would ever stay on the pay roll the length of time I have specified. After all, no man wants to live on below subsistence when there is a chance to make good money. And we should furnish the chance to every serviceman to return to peacetime pursuits as soon as possible.

By the end of this war, our production will be the greatest ever conceived by man. We will have facilities for elaborate and extensive war industry far greater than the rest of the world. We will have ironed out the obstacles, corrected our mistakes, perfected our production system. We will really be geared for war.

Why not then convert a large part of this wartime industry to supply the unlimited demands which peace will thrust upon our people? Why not put just as much effort into our post war production which will know no bounds if the American people are allowed to participate once more in the fuller, richer life which they most certainly deserve?

Our internal planning will be as important as any we pursue abroad. If we do it thoroughly we need not fear what is to become of the millions who will come back from the armed forces. If we plan unselfishly for our own people, we are sure to do right by the rest of the world. A man's treatment of his neighbors depends on how kind he is to his family. We must not fail our own.

Today our factories are filled with women, who are the mothers, wives, and sisters of our fighting men. More of them will be there before the war is over. But the vast majority of these women do not plan to remain in the factory after victory comes. When their loved ones return, they want to go back to their American homes. They will return to keep house just as they did before.

There is no reason then, why the jobs these women leave vacant should not be filled immediately. They should be turned into peacetime jobs, with as good pay as the present workers receive. The servicemen should be given priority over all for jobs converted from war production to the manufacture of consumers goods.

Even if only 50 percent of war plants were changed over, it is easy to visualize the construction of enough automobiles, radios, refrigerators, washing machines, and other household equipment to meet the needs of this country and the entire world. I hope the powers that be recognize the right of people everywhere to be happy and prosperous. If they will present post-war plans which assure our citizens of a higher standard of living and a greater measure of security than they ever knew before, it will be all right with me.

The men coming back from this war will never accept another world of greed and selfishness. They will be the power behind any regime or administration. They will represent a great force for good in America. If wisdom and sound judgment prevail in our treatment of them, the armed forces can be assimilated into peaceful pursuits with a minimum of confusion. If on the other hand neglect and delay persist in future relations with these war heroes, and everyone is a hero, you cannot expect other than unrest, violence, and serious results to the safety and well-being of our Nation.

I am sure we will profit by the mistakes of the past in dealing with our future veterans. I know you join with me when I say that the future of America is wrapped up in our boys at the front. Let us waste no time in acting immediately upon some post-war plans which will assure them jobs, reasonable security, and, I repeat, a place in the sun.

Federal Union

EXTENSION OF REMARKS

OF

HON. HOWARD J. McMURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. McMURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Capt. John Schmidt to Clarence Streit on the subject of Federal Union:

JUNE 20, 1943.

DEAR MR. STREIT: Having read your books Union Now and Union Now With Britain, as well as various short articles and statements of yours, I should like to take this opportunity to express some of my thoughts on the subject of organization of the people of the world to keep the peace.

Since I read your books, I have talked over the Federal Union idea with many people. The reaction of the vast majority is extremely encouraging. The Federal Union principle makes sense to most of us, and it is the only system so far proposed that does make sense.

However, there are a few dissenters. Among the arguments advanced is the one that the problems facing us today if we attempt to accomplish a world federation are not the same as the problems faced by the founders of our own Federal Union when they formed our Government. The statement is undoubtedly true; but as an argument against attempting a world federation now, it is absolutely pointless. Since our own Union came into being, the federal principle has been adopted by numerous other countries: Australia, Brazil, Canada, Mexico, South Africa, and Switzerland, to name a few, all have federated governments. I am sure that no two of those governments faced identical problems in their creation; nor were the problems of any of them identical with the problems of Franklin, Madison, Hamilton, Jay, and George Washington. In no two instances were the situations alike, and undoubtedly there were wide extremes among the various nations named. Yet, none of them found the difficulties to be insurmountable obstacles.

By the same token, the problems we face today in organizing an international federation differ from the problems of other groups who have built federations. But our problems today are not insoluble, if we but determine to solve them.

When the question of the difficulty of forming a world federation is raised, I find myself wondering whether the aggregate difficulty is after all nearly so great as the one that faced our President and his military advisers on December 7, 1941. As has since been disclosed, after that historic act of infamy our Pacific Fleet was virtually nonexistent, most of our airplanes had been destroyed, and our west coast region was practically unprotected. Had the "yellow Aryans" known the success of their treachery, it is conceivable that they might have established a foothold on our very west coast mainland. But our leaders did not throw up their hands in despair, crying, "It can't be done; all is lost, all is lost." We all grimly got down to the business of making war as we had never done before.

Or take the British. I hope their problems as a nation are never greater than the one they faced after the surrender of Vichy France. They were without the tools of war, having left most of their equipment on the sands of Dunkerque. The immortal Churchill fired the determination of the British and the hopes of decent people all over the world when he said,

"Let us therefore brace ourselves to our duties and so bear ourselves that, if the British Empire and its Commonwealth last for a thousand years, men will still say, 'This was their finest hour.' "

I am sure, Mr. Streit, that the problems of organizing the world for peace are not nearly so difficult as the problems we have already faced and solved in saving ourselves from defeat.

Some folks I talk to object that the British will not give up anything pertaining to their Empire, and that the British will block any effort to cooperate with us. To that, there are several answers. One is that the British went into this war directly to help a third power, Poland. To be sure, indirectly, they knew they were fighting for themselves. But at least I give them credit for realizing that the cause of the immediate victim was their cause also. We in our infinite wisdom did not even realize that, but had to wait until we were attacked. The British know the value of collective security.

Another answer is that the British have suffered terribly in this war. They have seen their cities almost destroyed by unparalleled savagery, they have seen their children's arms, legs, or heads blown off by bombs that fell "where they were intended to fall." Truly, the cave dwellers of London have felt the terrible consequences of being too close to Germany I feel that they will not forget all that in a few moments, but that they will gladly cooperate so that they need not again bear the rain of death upon their heads.

(I am reminded at this time of Britain's offer to France of a federal union in 1940. But the defeatists had their way, and the French Government rejected the offer.)

I have heard, too, that Federal Union is not necessary to keep the Prussian military spirit from again setting the world on fire. But I think back upon how utterly defeated Germany was in 1918—even upon the hopeless outlook for Germany in 1930. I am not impressed by the assurance that, "this time," Germany will not be allowed to come back. We are kidding ourselves when we talk that way. England, France, and the United States were closely allied in 1918, and the United States fought that war to end war. But when the open necessity for the alliance disappeared, we could not agree among the three of us. Indeed, none of us could even find any unanimity of opinion at home. We were torn internally by social upheavals, economic depression made us reluctant to worry about circumstances beyond our borders, and we were in excellent condition for a Hitler to come along and unify the leaderless Germans. It happened then, and it can happen again.

The former three great allies were actually divided against themselves. The remarkable foresight and wisdom of our own founding fathers is in point at this time. In the second paragraph of The Federalist No. 6, Modern Library Edition, Alexander Hamilton wrote, as follows:

"A man must be far gone in Utopian speculations who can seriously doubt that, if these States should either be wholly disunited, or only united in partial confederacies, the subdivisions into which they might be thrown would have frequent and violent contests with each other. To presume a want of motives for such contests as an argument against their existence, would be to forget that men are ambitious, vindictive, and rapacious. To look for a continuation of harmony between a number of independent, unconnected sovereignties in the same neighborhood, would be to disregard the uniform course of human events, and to set at defiance the accumulated experience of ages."

Surely what Hamilton said many years ago is applicable now. When this war is over, the present United Nations will find many causes for quarrels, and while we squabble amongst ourselves, the next hopelessly defeated Germany will rise up at the bidding of another Schickelgruber; and slap us down one by one.

Note in the above quotation from Hamilton the reference to Utopia. Occasionally, someone refers to federal union as being a Utopian system. I have found it possible

to stop those critics by the simple expedient of asking whether they have read Utopia. The answer is always "No." I have read it, and can find no comparison. The Utopian system required a fundamental change in human nature. Federal union, on the other hand, takes human nature as it is. For example, federal union advocates know that no human can be trusted with absolute power. Accordingly, the federal union system makes the acquisition of such power virtually impossible. The system of checks and balances in our own Government is too well known to require explanation here.

In the face of rapidly rising sentiment in this country favoring our participation in world affairs, comes now the stern warning of an isolationist Senator, exhorting us to be realistic. Good. I am a stark realist, so I welcome the warning. To my mind, there is nothing so realistic as a corpse on the battlefield. To satisfy our realistic Senator, let us say, a stinking corpse on the battlefield. Just a few days ago, that corpse was a live human being, a man. He breathed, walked; he loved and was loved. Realistic, isn't it? Maybe he had two little children. Maybe they were curly little tow-headed boys like mine. When Daddy left, there probably were wonderings in their little heads. If those kids are like mine, they probably asked: "Where Daddy go?" Adding, "Daddy come back?" they were assured by Mommy and Daddy that Daddy would come back. Probably they repeated those questions at irregular intervals as the days, weeks, months passed, and Mommy repeated the assurance, "Yes, Daddy will come back." Then, one day, the inevitable telegram, "killed in action."

Mr. Streit, how would you explain that to a trusting little shaver only 3 or 4 years old? My older boy has a touching faith in my ability to fix everything. He breaks a toy, and brings it to me to fix. The trouble is that he does not distinguish between damage and total destruction. His faith in me bothers me, because I cannot always fix it. Similarly, his faith in my ability to protect him worries me. The air raid siren is practically in our front yard. The sound of that siren terrifies him. His little body trembles all over and his cries are nearly hysterical. For days after a practice air raid he says, "Siren not goin' blow today, no," as we put him to bed, expecting, of course, that I shall assure him that it will not blow. When I know there is to be a drill, I cannot so assure him, because I will not lie to him. When I am forced to tell him that the siren will blow, he is indignant, thinking I have control over it.

If I have that difficulty with him over practice drills, I wonder how he will react if and when the bombs fall. How the poor British, Russians, Chinese, French, Poles, Norwegians, Greeks, and all the others (the list is long), must have suffered in trying to explain the savage cruelty of an international gang of arsonists, thieves, and murderers, to their innocent children. It would be simpler to be killed.

But I digress, maybe. Let us return to our realistic Senator. He wants us to remember that, after all, the British, the Russians, and the Chinese are fighting this war for, respectively, Britain, Russia, and China. His fine sense of altruism finds the instinct for self-preservation repugnant. Let us look at the record. If our isolationist Senator ran true to form, he doubtless voted against repeal of the Arms Embargo Act (or so-called Neutrality Act), he voted against lease-lend. In so voting, he refused to extend a helping hand to people who were fighting for their very lives against unprovoked, sadistic aggression. He is in no position to point the accusing finger, and would do better to keep quiet. Also, he probably opposed extension of military service to 18 months from the original year. That was very realistic, inasmuch as it indicates either that he thought we would not be involved, or he wanted our boys to be insufficiently prepared.

Being realistic, I take note of history. I note that sovereign powers cannot exist side by side where their interests clash, without coming into armed conflict. I note that all attempts to solve the problem fail so long as sovereignty remains unlimited. Evidence is the long history of the failure of alliances, treaties, and leagues, to keep the peace. As soon as sovereignty is limited, people get along very well, as in a Federal Union.

No, I have not overlooked our own so-called Civil War. It is not an instance of failure of the Federal Union principle. That war had to be fought to decide whether or not members of the Union had the right to secede. The Union victory decided the issue, and it will probably never again be raised.

Occasionally I hear the argument that we must not mention Federal Union to the people in just those terms, because that might frighten them away from the whole subject of collective security and international cooperation. Whether or not that is true is a question of fact, and the question is not answered by loud assertions of the people on either side of the question. But I would approach that question in this way: The Federal Union idea makes sense to sensible people; other systems do not. The people of the United States of America are fundamentally sensible folks. Therefore, Federal Union will make sense to them.

I have a lot of faith in the common people. I consider myself one of them. I have faith in the ability of the people to understand the basic principles of Federal Union. I am confident that I could go to the people directly and tell them about Federal Union, and that the large majority of them would see it as readily as Benjamin Franklin, Jefferson, Hamilton, Washington, and the others saw it. I believe I could do this in spite of the combined efforts of the demagogs, isolationists, imperialists, reactionaries, and all other opposition, who will throw up their hands in horror at the thought of the people of the United States giving up any of their national sovereignty, and they will try to make out that the people will thereby give up certain inalienable rights. One of those rights that the opposition will conveniently forget to mention is our right to be shot at and bombed every 20 years or so. That right we enjoy to the full under present world anarchy. The people are beginning to see through these "phonies." The people are more intelligent than most of our misinformed, self-styled public leaders. It should take very little argument to show them that the man who shouts the loudest about not surrendering any of the people's rights is usually one of the first to deprive them of those rights. Hitler and Mussolini are cases in point. On this point it is interesting to realize that demagogs we have always with us, and they will eternally harp on the subject of the rights of the common man. Alexander Hamilton recognized this in the Federalist No. 1, wherein he wrote:

"A dangerous ambition more often lurks behind the specious mask of zeal for the rights of the people than under the forbidding appearance of zeal for the firmness and efficiency of government. History will teach us that the former has been found a much more certain road to the introduction of despotism than the latter, and that of those men who have overturned the liberties of republics the greatest number have begun their career by paying an obsequious court to the people, commencing demagogs and ending tyrants."

Moreover, I should have no fear in taking Federal Union to our people for their approval, because it is as American as the hot dog. It is our own history, our own national existence, and as such will appeal to them.

Once in a while I get the impression that someone thinks I was born with a prejudice in favor of Federal Union. But I still remember the critical frame of mind in which I approached your book Union Now. I, too, thought then it was a fine thing for the theorists, but not for a practical person like me. But since reading your treatment of the idea, I have been firmly convinced of the practicality of Federal Union as applied to the world. The amazing part of it all is the simplicity of the basic principles of Federal Union. Surely the people can understand it and will support it.

When I hear league advocates argue in favor of another League of Nations instead of a Federal Union, I keep thinking of Alexander Hamilton's oft-repeated reference to a league as an imbecility. Understand, of course, I do not refer to the League advocates as imbeciles. It is more becoming in me to let Hamilton do that.

Hamilton had good reason for such a statement. A league is a government of nations instead of a government of men. Of this system he wrote in the Federalist No. 15:

"Government implies the power of making laws. It is essential to the idea of a law, that it be attended with a sanction; or, in other words, a penalty or punishment for disobedience. If there be no penalty annexed to disobedience, the resolutions or commands which pretend to be laws will, in fact, amount to nothing more than advice or recommendation. This penalty, whatever it may be, can only be inflicted in two ways: by the agency of the courts and ministers of justice, or by military force; by the coercion of the magistracy, or by the coercion of arms. The first kind can evidently apply only to men; the last kind must of necessity, be employed against bodies politic, or communities, or states. It is evident that there is no process of a court by which the observance of the laws can, in the last resort, be enforced. Sentences may be denounced against them for violations of their duty; but these sentences can only be carried into execution by the sword. In an association where the general authority is confined to the collective bodies of the communities that compose it, every breach of the laws must involve a state of war; and military execution must become the only instrument of civil obedience. Such a state of things can certainly not deserve the name of government, nor would any prudent man choose to commit his happiness to it."

And at the end of the Federalist No. 20:

"A sovereignty over sovereigns, a government over governments, a legislation for communities, as contradistinguished from individuals, as it is a solecism in theory, so in practice it is subversive of the order and ends of civil polity, by substituting violence in place of law, or the destructive coercion of the sword in place of the mild and salutary coercion of the magistracy."

A recent suggestion by a midwest isolationist source of wisdom propounds that we accomplish Federal Union by admitting the British Commonwealth of Nations as States of our own United States. This is not a good-faith suggestion, but sounds like a deliberate attempt to discredit, undermine, and sabotage the whole Federal Union movement. A comparable offer would be for the British to suggest that we become a British dominion. But imagine the cries of horror that would bring from the isolationists. They would excitedly exclaim, "See? The damned British! Always trying to dominate."

Some people cannot understand why I get excited about Federal Union, and even accuse me of being almost evangelistic on the subject. I am honored to be in the uniform of the armed forces of my country, because I am fighting for the same liberties today—freedom of speech, religion, the press, conscience, etc.—as the great men of history have fought for. I shall never be great in the sense that children will read of me in the history books,

but I cannot be so small as to deny the dignity of man. This is my war as much as it is the war of the Chinese, the Russians, the French, or the British. But not being a Nazi, I have no use for any nonsense about the glories of war. War subjects the human soul to the meanest sort of indignity. And I see in Federal Union the opportunity to eliminate war.

Yes; I do get excited about Federal Union.

Sincerely yours,

JOHN F. SCHMIDT,
Arlington, Va.

Report and Program Submitted by the United Labor Committee Executive Board

EXTENSION OF REMARKS

OF

HON. LOUIS E. MILLER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MILLER of Missouri. Mr. Speaker, under leave to extend my remarks, I include a report and program submitted by the United Labor Committee Executive Board and adopted by the delegate conference in St. Louis, Mo., on June 30, 1943:

A CALL TO ACTION

Since the call for this conference went out, the drive against price control in Congress has reached heights which place before this conference of labor and other civic-minded groups the responsibility for immediate, urgent action to save the home front from economic collapse. Over and beyond the need to win the President's price-roll-back program, we face the danger of a complete scrapping of all checks on inflation, which would not only mean acute hardship for all of us but would stab our armies in the back at the very moment when they are ready for the final drive against our Axis enemies. Our country's war effort is in acute danger of defeat by the wreckers at home.

THE COST-OF-LIVING FACTS

Every consumer knows from personal experience what has happened to the cost of living. Official figures show that it is 25 percent above January 1941. Food costs in St. Louis in April are shown to be 43 percent above January 1941, 51 percent over August 1939, when the war started in Europe. Actual increases are greater than these figures show, and present price ceilings will allow further increases. Against this cost-of-living increase, which does not take increased taxes into account, organized workers have been allowed wage increases of 15 percent over January 1941. Millions of unorganized workers, and particularly office workers and teachers, have received much less than 15 percent; many have received no increase at all.

The cost of living has gone up steadily since May 1942, when it was supposed to be stabilized, and again since September 15, 1942, when the supposed stabilization of prices was written into law.

THE OFFICE OF PRICE ADMINISTRATION

We recognize that the Office of Price Administration has tried to do the job. We recognize also its manifest shortcomings, its weakness in enforcement, its long delays in establishing dollars and cents price ceilings, the fact that it has set ceilings much too high, the appointment to Office of Price Administration positions of many business officials devoted chiefly to sabotage of price control, the constant appeasement by Office of Price Administration of all the enemies of price control.

However, at this time Office of Price Administration is making an honest effort to carry out a real program. It is idle to consider the details of Office of Price Administration's weaknesses when these weaknesses merely reflect the fact that defeatists and special interests have organized effectively to block price control. The enemies of price control, working in and through Congress, appear to be on the verge of achieving the complete destruction of all price control. Only the common people, aroused to the country's danger, can turn the tide against inflation and for victory on the home front, essential to military victory.

CONGRESS SEEKS INFLATION

Whatever may be the motives of individual Members, both Houses of Congress have just taken action which can result only in uncontrolled inflation. They have forbidden subsidies and standardized grades (grade labeling), exactly those essential elements of price control which have proved their necessity and their effectiveness in the experience of our British allies.

Both the Senate and House have forbidden the use of subsidies to processors, despite the proved fact that such subsidies save many times their cost to the Nation. Both Houses would turn the main functions of price control over to Chester Davis, who has shown conclusively that he wants prices to rise. The House has gone further by proposing to forbid grade labeling, to turn the Office of Price Administration over to representatives of the Food Trust, and to cut Office of Price Administration funds for enforcement purposes by 45 percent.

The House program would destroy the Office of Price Administration now, but the Senate action on subsidies alone would achieve the same effect before long. Subsidies are needed, not only for a roll-back, but for any price control, since farm prices are not yet subject to real control. Defeat of the subsidy program would simply mean a vicious circle of pressure for constantly higher prices—one price increase pushing up another.

THE DANGER TO THE WAR EFFORT

Unchecked inflation today represents the greatest single threat to victory in the war because it would demoralize war workers and the whole civilian population, create tremendous unrest, if not chaos, on the home front, deprive our fighting men of the all-out support which they need as they attack the enemy, and set the stage for the reactionaries who would rather do business with Hitler than build democracy at home. We must look at this threat as part of a whole series of developments in recent weeks which the Senate War Mobilization Committee a few days ago described as "a further deterioration of the domestic war effort."

We have had the John L. Lewis strike over the opposition of the whole labor movement, and Lewis is an admitted advocate of inflation; the resultant ability of the reactionaries to enact the Connally-Smith bill, a strike-provoking measure, over the President's courageous veto; the current strike of meat packers, a strike just as treasonable as that of Lewis; the wave of race riots in major war-production centers, obviously with Fascist support; and the wholesale attack by the House of Representatives on important war services, such as the Office of War Information, the National Youth Administration, and the Office of Civilian Defense on the same day that it sought to wreck price control.

Undoubtedly, most of the Members of Congress want to win the war. But whether because of an antilabor bias or the pressure of special interests who put profits first and do not understand the real interests of the Nation, the majority of the Members in Congress today are giving active aid to Hitler at a time when he has his back to the wall and is fighting desperately to stop or weaken the coming invasion of Europe. Continued activity of this kind on the home front can save Hitler and bring disaster to this Nation.

The fight to save price control is a fight to win the war. To date support for real price control has come mainly from the American Federation of Labor, Congress of Industrial Organizations, Railroad Brotherhoods, and consumer groups. The fight has suffered from lack of organized leadership in Congress. A major step forward has just been taken by the formation of the Congressional Committee for the Protection of Consumers now numbering about 50 Members of the House. This committee last Friday held its first meeting with representatives of labor and consumer organizations from all over the country. The secretary of the United Labor Committee was one of several hundred delegates present. The committee's program is in effect our program. It is our job to rally backing for the committee and to demand that our Representatives support it.

WHAT IS NEEDED FOR EFFECTIVE PRICE CONTROL

1. Subsidies

The subsidy program is the key issue in price control. The most vicious opponents of price control, the defeatist leaders of the misnamed "farm bloc," have made it clear that what they want is unchecked price rises and unlimited profits. That is the demand of Herbert Hoover, veiled behind a lot of confusing words. The reaction of the very practical Chicago grain market to the Senate action against subsidies was much clearer than the speeches in the Senate. According to the Associated Press on June 26, the day after the Senate vote, "moves to make War Food Administrator Davis food czar and Senate passage of a bill prohibiting any further price-reducing subsidies combined to fire speculative enthusiasm."

Subsidies would stop this speculation, and thereby save many times their cost. Any one subsidy would reduce the retail price by more than the amount of subsidy. Since the ceiling at each step from processor to consumer is based on a percentage mark-up over the ceiling at the previous step, the saving at the retail level is substantially more than the amount of subsidy paid at the processor level. More important is the fact that subsidies would have to be paid only to a small part of the processors who are unable to operate at a profit because investigation would show that most of the processors are making huge profits even at reduced prices. This is the very thing which the food trust does not want. It would expose their false cries of financial difficulty with which they are trying to hold up the American people and the war effort.

The "proof of the pudding" is given in the experience of Great Britain and Canada. By spending about $500,000,000 a year, less than 3 percent of the total budget, Britain has stabilized food prices so that on January 1, 1943, the food index was actually four points lower than on April 1, 1941. While this may not take into account some hidden price rises through lower qualities, the fact is that Great Britain has effectively stabilized its cost of living through subsidies. The same is true in Canada.

The food profiteers carry on their campaign against price control in the name of protect- a time when he has his back to the wall and tually are seeking greater profits at the expense of both farmer and retailer and of the whole war effort.

The small storekeepers, as distinguished from the chain operators who are part of

the Food Trust, are actually in favor of price control, provided they can be protected against extortion by the processors and wholesalers.

We must recognize that the farm bloc has been able to sell a bill of goods to many genuine farmers, since such a legitimate organization as the Missouri Farmers Association has come out against subsidies. These honest and patriotic farmers evidently overlook the fact that we are in a war economy in which the ordinary market controls do not work. It is just as necessary and fair to check the profits of the food trust as to limit wages, and it is to the direct interest of the farmers. By using subsidies to regulate the prices of processors, it is possible to insure a fair return for the farmer at one end, and protect the retailer and the consumer at the other end, instead of letting the food trust gouge the farmer and everybody else. And the farmer, as a consumer, has just as much at stake as the rest of the people in checking inflation. Small farmers also would be aided directly by subsidies where needed.

Subsidies are and have been in effect in numerous forms to aid industry and commerce. They are opposed now by the defeatists and profiteers, only when they would help the consumer and the whole Nation.

2. Grade labeling

Since brand names and qualities can be and are changed at will, ceilings on branded goods are meaningless without grade labeling. A study of the British experience by the very conservative Brookings Institution found that "standardization and classification are essential for successful price control of products normally characterized by many grades and qualities. In the absence of such measures * * * consumers are unable to distinguish moderate variations between grades or are afraid of losing their source of supply if they protest."

The attack on grade labeling is simply an effort by canners and manufacturers to evade all price restrictions.

3. Dollars and cents ceilings on all cost-of-living items

Price ceilings can be enforced, quite obviously, only if they are clearly understood by the general public. The proposal to return to an elaborate system of mark-ups is simply a proposal to make price control unworkable. The Office of Price Administration should immediately complete the issuance of dollars and cents ceilings, and correct those which are too high. Violators of ceilings should be treated by the Government and by the community as saboteurs of the war effort.

4. Continued rent control

Rent control has been the most effective part of the Office of Price Administration program. In the critical housing situation in St. Louis, rent control has saved vast sums of money for the average citizen. The records prove that the real estate owners have continued to make a fair return. The vicious campaign against rent control has been conducted by real estate speculators led by Cyrus Crane Willmore of St. Louis, president of the National Association of Real Estate Boards. This attack must be stopped.

5. A strengthened Office of Price Administration supported actively by the public

The enemies of price control have carefully confused the picture by creating a false issue, of the supposed need of a food czar, or food manager in Herbert Hoover's latest words. They have shown what they really want by seeking to place price control in the hands of Chester Davis, who wants higher prices. We hail President Roosevelt's action in forcing Mr. Davis' resignation.

All the other enemies of price control should be removed from the administration, and specifically from Office of Price Administration.

Office of Price Administration must be built up with a personnel completely devoted to price control, and then allowed to function. It must demand and obtain appropriations adequate for real enforcement. It must have the power to investigate the operations of the food processors and compel them to deliver supplies where needed. It must be able to end the withholding of supplies from the market as in the present meat-packers' strike.

The Office of Price Administration must receive the active backing of the public in the checking of price violations, the public participation which made real price control possible in England. The citizens of St. Louis can make their influence felt directly on stores which violate ceilings and in particular on such unpatriotic influences as the St. Louis Meat Packers Association and Mr. Willmore.

We must also demand that the mayor and the city administration assume their responsibility in this vital community problem, and act vigorously to prevent price violations and food shortages, whether artificial or real.

A PROGRAM OF ACTION

To give effect to the above price-control program for victory on the home front, it is necessary that the people of St. Louis organize to make themselves heard now, and first of all by Congress. We propose:

1. Petition campaign

Petitions summarizing the demand for necessary price-control action, to be addressed to Congress, should be prepared and circulated immediately for signature by all union members and by the general public.

2. Warn our Congressmen

The people of St. Louis must put their Representatives in Congress on notice that they will be judged at the polls not on their lip service to the war but on what they have done specifically in the interests of the war. They will be judged specifically on their record on the vital question of price control.

We call the attention of the delegates now to the available record of the two Missouri Senators and the St. Louis Congressmen.

Senator CLARK was the author of a bill to forbid roll-back subsidies. He has supported farm subsidies, but voted for the Byrd amendment to transfer the functions of Farm Security Administration, with its excellent record of aid to small farmers, to the Farm Credit Administration, dominated by the farm bloc. He worked against the President's veto of the vicious Bankhead bill.

Senator TRUMAN, after supporting the President's veto of the Bankhead bill and supporting Farm Security Administration, spoiled a fair record by voting for the amendment to bar roll-back subsidies.

Congressman PLOESER has been campaigning actively against price control as a member of the House Small Business Committee. He joined in the broadside attack on price control in the House action on June 19. He voted against farm-subsidy payments.

Congressman MILLER also joined the House attack on price control and was against farm-subsidy payments.

Congressman COCHRAN has been absent from most all votes on this issue, because of illness.

It is evident that our Representatives have not heard from us effectively. In seeing to it that our Representatives respond to our demands, we must make full use of the machinery of the new congressional committee for the protection of the consumer.

3. Use union funds for price-control fight

Unions have set aside the strike weapon for the duration. Price control is the most important fight they can carry on for their members on the home front. They should be prepared to draw upon their reserve funds for this fight.

4. Participate in enforcement

Even if the Office of Price Administration is adequately staffed, effective enforcement will still need action by the consumers. The price-control law provides for court action by individual consumers. We propose that unions with permanent headquarters be enlisted as price-control headquarters on a neighborhood basis, where all residents of the community can report violations. A union committee would then investigate the complaints and assist in taking the case to court. The same union committees would set up their own price police system on a neighborhood basis.

5. Committee for ward action on price control

We propose that the officers of the United Labor Committee designate active union leaders residing in each ward and in each township in the county to organize, along with officers of other organizations in those wards, committees to direct the application of this entire program on a ward and township basis. The work of these committees should be supervised by a top committee consisting of the United Labor Committee Executive Board and a representative of each organization subscribing to this program.

6. Work with the farmers

We propose that the top committee set up under point five approach the Missouri Farmers Association, Missouri Grange, and Missouri Farm Bureau Federation with a view to reaching a common understanding on our common problems, and joint action in support of effective price control, adequate returns for the farmer, and production of food for victory.

Appropriations for the Department of Agriculture

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a table of appropriations for the Department of Agriculture which shows the appropriations from all sources for 1942 and 1943 and the appropriations which will be available for expenditure in the fiscal year 1944.

The table is itemized in such fashion as to indicate amounts which will be available for all of the various activities of the Department and should prove helpful to Members as reference information.

I want to express my appreciation to the very able and efficient budget officer of the Department of Agriculture, Mr. William A. Jump, and his staff for compiling this information:

Subappropriation table of appropriations from all sources, fiscal years 1942, 1943, and 1944

[NOTE.—Figures in brackets not included in totals; 1942 and 1943 columns adjusted on basis of appropriation set-up in 1944 act, and include supplemental appropriations]

Bureau and item	Appropriations, 1942	Appropriations, 1943	Appropriations, 1944
Office of the Secretary	$1,841,704	$1,673,588	[1] $1,498,184
Working capital fund			400,000
Office of Solicitor	2,229,643	1,976,433	[1] 1,679,105
Office of Information:			
Salaries and expenses	641,781	546,038	[1] 439,257
Printing and binding	1,550,111	1,300,000	1,200,000
Reproduction of 1942 Yearbook of Agriculture			178,000
Total, Library	[2,191,892]	[1,846,038]	[1,817,257]
Library	486,318	469,007	468,932
Extension service:			
Payments to States:			
Capper-Ketcham extension work	1,480,000	1,480,000	1,480,000
Additional cooperative extension work	555,000	555,000	555,000
Extension work, sec. 21, Bankhead-Jones Act	12,000,000	12,000,000	12,000,000
Alaska	23,918	23,950	23,950
Puerto Rico	100,000	100,000	140,000
Cooperative agricultural extension work (permanent)	4,704,710	4,704,710	4,704,710
Total, payments to States	18,863,628	18,863,660	18,903,660
Salaries and expenses: Administration and coordination of extension work	634,696	641,358	658,843
Total	19,498,324	19,505,018	19,562,503
Bureau of Agricultural Economics:			
Economic investigations	2,881,040	2,206,806	[1] 2,127,236
Crop and livestock estimates	1,274,043	1,158,296	1,354,266
Total	4,155,083	3,365,102	3,481,502
Office of Foreign Agricultural Relations	223,841	[2] 321,795	[3] 420,670
Agricultural Research Administration:			
Office of Administrator	18,000	62,000	60,965
Special research fund	1,206,300	1,150,000	1,147,086
Office of Experiment Stations:			
Payments to States:			
Hatch Act	720,000	720,000	720,000
Adams Act	720,000	720,000	720,000
Purnell Act	2,880,000	2,880,000	2,880,000
Hawaii	67,500	67,500	90,000
Alaska	25,000	25,000	37,500
Puerto Rico	50,000	50,000	90,000
Title I, Bankhead-Jones Act	2,463,708	2,463,708	2,463,708
Total, payments to States	6,926,208	6,926,208	7,001,208
Salaries and expenses:			
Administration of grants and coordination of research with States	154,702	156,155	156,010
Insular experiment stations	83,482	90,592	[4] 100,000
Total, salaries and expenses	238,184	246,747	256,010

Total	5,259,000	5,140,337	4,787,376

[1] The 1944 appropriation act provides for decreases below 1943 in working funds available (by direct appropriation, and transfers to be continued in 1944) as follows: Office of the Secretary, $248,098; Office of Solicitor, $271,296; Office of Information, salaries and expenses, $107,781; and Bureau of Agricultural Economics, economic investigations, $162,970. (The amounts to be transferred are subject to adjustment.)

[2] Includes $100,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1943.

[3] Includes increase of $98,875 to establish on a full fiscal year basis the Combined Food Board for which $100,000 was provided on a half-year basis in 1943.

[4] Includes decreases of $7,300 and an increase of $16,708 for payment of foreign service salary differentials.

[5] Includes $16,500 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.

[6] Includes $375,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.

[7] Includes $680,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1943.

[8] Includes increase of $307,079 to establish on a full fiscal year basis additional meat inspection work made necessary by the war and by the extension of this activity to establishments concerned with intrastate commerce only. $680,000 was provided on a part-year basis in 1943.

[9] Includes $17,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.

[10] Includes $5,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.
[11] Includes $6,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.
[12] Includes $11,500 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.
[13] Appropriated in the Sixth Supplemental National Defense Appropriation Act, 1942.
[14] Appropriated in the First Deficiency Appropriation Act, 1943.
[15] Includes $20,000 appropriated in Second Supplemental National Defense Appropriation Act, 1942.
[16] Includes $30,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1943.
[17] Includes $20,000 appropriated in the Second Supplemental National Defense Appropriation Act, 1942.
[18] Includes $20,000 appropriated in the First Supplemental National Defense Appropriation Act, 1943.
[19] Includes decrease of $20,139 and an increase of $50,000 for study of new problems in human nutrition, food conservation, and food preservation.
[20] Appropriated in Second Supplemental National Defense Appropriation Act, 1942.
[21] Includes $500,000 for forest plantation care, appropriated in Sixth Supplemental National Defense Appropriation Act, 1942.
[22] Includes increase of $2,151,711 for "emergency forest-fire control" and $116,135 for handling increased volume of timber sales.
[23] Includes $175,000 appropriated in Second Supplemental National Defense Appropriation Act, 1942.
[24] Consists of $644,811 for "cooperative farm forestry" and $101,357 for "private forestry cooperation," which items are consolidated in the 1944 act.
[25] Appropriated in First Deficiency Appropriation Act, 1942.
[26] Appropriated in First Deficiency Appropriation Act, 1943.
[27] Includes $1,100,000 appropriated in the Second Deficiency Appropriation Act, 1941, and $5,000,000 appropriated in Sixth Supplemental National Defense Appropriation Act, 1942.
[28] Includes $4,200,000 appropriated in the Sixth Supplemental National Defense Appropriation Act, 1942, and $8,235,000 appropriated in Second Deficiency Appropriation Act, 1942.
[29] Appropriation of $19,000,000 contained in Second Supplemental National Defense Appropriation Act, 1943. In addition, $8,282,442 available in 1943 from funds appropriated in 1942.
[30] Available through Dec. 31, 1943.

United States Loans During World War No. 2 to Countries at War With the Axis

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. GWYNNE. Mr. Speaker, as part of this extension of remarks, I enclose a statement prepared by the Legislative Reference Service of the Library of Congress relative to loans made by the United States Government during World War No. 2 to countries at war with the Axis:

I. LOAN TO CHINA [1]

On March 21, 1942, the United States and China concluded an agreement providing for financial aid to China. By the terms of the agreement, the Secretary of the Treasury established on the books of the United States Treasury a credit in the name of the Republic of China for $500,000,000. The Secretary of the Treasury agreed to make transfers from this credit to accounts of the Government of the Republic of China in the Federal Reserve Bank of New York at such times and in such amounts as the Government of the Republic of China should request. This agreement was signed by the Secretary of the Treasury on behalf of the United States under the authority granted to him by Public Law No. 442, approved February 7, 1942.

In a joint statement, Secretary of the Treasury Morgenthau and T. V. Soong, Minister of Foreign Affairs of the Republic of China, said that the purpose of the agreement was to "contribute substantially toward facilitating the great efforts of the Chinese people and their Government to meet financial and economic burdens which have been imposed upon them by almost 5 years of continuous attack by Japan." A significant provisior in the agreement defers the final determination of the terms upon which the financial aid is given, including the benefits to be rendered to the United States in return, "until the progress of events after the war makes clearer the final terms and benefits which will be in the mutual interest of the United States and China and will promote the establishment of world peace and security."

II. RECONSTRUCTION FINANCE CORPORATION LOAN TO THE UNITED KINGDOM [2]

Under section 5d of the Reconstruction Finance Corporation Act, as amended,[3] the Corporation is authorized, upon the request of the Secretary of Commerce and the approval of the President, to make loans to foreign governments on the security of American obligations. Pursuant to this authority, the Reconstruction Finance Corporation in July 1941 authorized a loan to the United Kingdom of $425,000,000. The loan is secured by listed and unlisted securities of United States corporations (including 41 United States insurance companies) and by the assignment of earnings of the United States branches of 41 British insurance companies.[4] It bears interest at 3 percent and is to run for 15 years, subject to partial extension under certain conditions. The income accruing on the pledged investments is applied first to servicing the loan, and the balance is applied to reducing the principal of the loan. The proceeds of the loan are used by the United Kingdom to pay for war supplies contracted for in the United States prior to the enactment of the Lend-Lease Act.

By March 31, 1943, the Reconstruction Finance Corporation had advanced $390,000,000 of this loan to the United Kingdom. Repayments totaled about $30,600,000 as of that date. Such repayments were made partly out of interest, dividends, and other income from the pledged securities, and partly out of the proceeds of the sale of some of the collateral.

III. DEFENSE SUPPLIES CORPORATION LOAN TO AMTORG TRADING CORPORATION [5]

Prior to the extension of lend-lease aid to Russia in June 1941, Defense Supplies Corporation (a subsidiary of Reconstruction Finance Corporation) contracted with Amtorg Trading Corporation (a United States corporation owned by Russia) to purchase needed materials from the Soviet Union to the extent of $100,000,000 and made an advance payment of $49,668,247.96 in the form of a loan against their delivery, subject to the condition that such advance payment be used to purchase in this country supplies needed by the Soviet Union. Materials already shipped by the Soviet Union, through Amtorg Trading Corporation, including cargoes afloat or that have been sunk, include the following: Asbestos, buckthorn bark, chrome ore, goatskins, goose down, horsehair, licorice root, lumber, dead-burned magnesite, potash, platinum, pulpwood, sanonin, and sheep casings. By the end of 1942 the aggregate value of these items was in excess of $5,500,000.

IV. EXPORT-IMPORT BANK LOANS, DECEMBER 7, 1941 TO JUNE 15, 1943

See the attached table prepared by the Export-Import Bank:

Export-Import Bank of Washington statement of loans and commitments reflecting new and increased commitments and advances thereon in connection with credits within countries which have declared war on 1 or more of the Axis countries, for the period Dec. 7, 1941, to June 15, 1943

Country and borrower [1]	Commodity	Net amount authorized	Balance not yet disbursed, June 15, 1943 [2]	Amount disbursed
Bolivia	Machinery, equipment, materials, services, and miscellaneous.	$19, 537, 562. 75	$17, 533, 075. 02	[3] $2, 074, 578. 67
Brazil	Steel mill equipment, miscellaneous materials, equipment, and services.	40, 350, 000. 00	47, 417, 735. 68	[4] 12, 654, 593. 69
Canada	Aluminum	34, 250, 000. 00	31, 250, 000. 00	3, 000, 000. 00
Costa Rica	Dollar exchange and miscellaneous	3, 400, 000. 00	2, 200, 323. 18	[3 4] 5, 010, 743. 12
Cuba	Materials, equipment, and services	15, 000, 000. 00	15, 000, 000. 00	
El Salvador	Construction materials, equipment, and services.	1, 196, 000. 00	796, 000. 00	400, 000. 00
Haiti	United States agricultural and industrial products, materials, equipment, and services.	1, 500, 000. 00	1, 420, 000. 00	80, 000. 00
Honduras	Materials and equipment	2, 700, 000. 00	2, 650, 000. 00	50, 000. 00
Mexico	Steel mill equipment and Mexican handicraft	6, 100, 000. 00	6, 043, 729. 26	[3] 158, 902. 39
Nicaragua	United States agricultural and industrial products and miscellaneous.	750, 000. 00	750, 000. 00	[3]
Puerto Rico	Machinery and equipment	250, 000. 00	150, 000. 00	100, 000. 00
Total		125, 033, 562. 75	125, 210, 863. 14	23, 528, 817. 87

[1] Borrower includes not only the Government and political subdivisions but also banks and private concerns.
[2] Includes balance undisbursed of commitments prior to Dec. 7, 1941.
[3] Variations due to revolving credit lines.
[4] Variation due to reflecting only new and increased commitments since Dec. 7, 1941. Original commitments approved prior to Dec. 7, 1941.

Our Next Transportation Crisis

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. HAGEN. Mr. Speaker, the history of transportation during the past months has shown us that the automobile, truck, and bus are much more important to the war effort than was at first acknowledged or admitted.

Of every 100 United States war workers, 73 depend on passenger cars for transportation between home and job. Total motor-vehicle mileage is down. But the war has increased transportation needs in critical areas.

Motortrucks are indispensable to farm and factory. They move millions of tons of war plant goods and material. Besides moving vital foodstuffs to markets or terminals, trucks haul seeds, fertilizer, and other supplies back over the same roads to the farm.

In many States appropriations for road construction, repair, and maintenance were cut to the bone following Pearl Harbor. Highways, roads, and streets are visibly deteriorating, and if this trend is permitted to go on, the Nation will be faced with a transportation crisis that will do irreparable damage to our production efforts.

Although everyone seems to be interested in conserving tires and trucks and automobiles needed in the war effort, little thought is being given to the roads on which they run. Unless we keep our highway systems in repair we will court disaster.

For that reason I have asked that the following article by Curtis Fuller from the July issue of the Nation's Business be reprinted in the RECORD:

The slow disintegration of a highway is hardly as spectacular as the blowing out of a right rear tire. A thin spot today is a ravel next month and a chuck hole next spring. In a year it may be an axle-breaker.

Under weather and traffic, our roads are wearing out today almost as rapidly as our rubber stock pile is melting away.

Little more than a year ago the Government was following a policy which seemed to assign motorcars to a negligible and declining role in the war-transportation picture.

A few months of war and vast expansions of traffic demonstrated how preposterous this policy was. Now, instead of ignoring the automobile, the Nation is going to great lengths to conserve it.

There seems to be no realization, however, that the proper maintenance of highways is as essential as the maintenance of cars.

Probably the greatest misconception behind the attitude determining public highway policy today is that roads are permanent. Anyone who has maintained the sidewalk to his front door knows this is wrong. Even a concrete pavement has an expected life of only about 20 years. The lighter surfaces especially those on inadequate bases—need constant attention and maintenance. A gravel road may lose 100 to 200 cubic yards of stone per mile in a year. Bituminous highways ravel and pit and wear out.

Instead of requiring less maintenance because automobile traffic has declined, roads today need more because construction has been halted and heavy hauling has increased. Traffic, however, is probably not responsible for half of the disintegration of highways. Weather may cause even more.

Yet no one seems to be worrying about the roads in spite of the fact that they play a large role in moving men and goods.

According to Transportation Coordinator Joseph Eastman, trucks carry about a fourth as many ton-miles of property as the railroads. The great importance of trucks cannot be measured as much by the amount of goods they haul, however, as by the particularly important services they fulfill in short hauls and terminal distribution and collection.

Moreover, about two-thirds of the Nation's 150,000 busses are in school service especially vital to rural areas. Out of more than 1,000 cities over 10,000 population, nearly three-fourths depend wholly upon busses for their local public transportation.

Intercity busses carry passengers for about two-thirds as many miles as the railroads and travel 330,000 miles of highway while, in 749 war-production plants surveyed, nearly 500,000 workers were found to arrive by private automobile.

At one aircraft factory employing 50,000, 92 percent used private cars. In another 741 war-production plants, 65 percent of the incoming and 69 percent of the outgoing freight moved by highway.

Furthermore, the disintegration of highways could isolate more than 50,000 communities in the United States which are served only by highways for long-distance transportation.

In one of his last statements as Office of Price Administration Administrator, Leon Henderson declared that "reliance on the automobile or rubber-borne transportation is considerably more" than claimed in "even the loftiest statements made by the industries connected with the making of automobiles and tires," and by such organizations as the American Automobile Association.

In spite of these facts, the only roads now being built are those of direct value to the war effort, principally access roads serving war industries and military camps. Highway departments are reconciled to the halting of road construction while the war lasts, but they are genuinely concerned about maintenance, without which untold road mileages will collapse. The chief limiting factors in carrying out effective maintenance are shortages of men, money, materials, and equipment.

Of these perhaps the most serious situation is that involving equipment. New maintenance equipment is not available and the spare parts situation is even more urgent.

ANOTHER THREAT LOOMS

Another threat, difficult to assess at this time, is the possible requisitioning for the armed services of road equipment registered through the War Production Board Nationwide inventory of all construction machinery.

The armed forces have taken by negotiation some snow equipment in the North and a certain amount of county-owned maintenance equipment in the South. Although the amount taken so far is probably negligible, some War Production Board officials have talked as though a great amount might be forcibly requisitioned. This action could only mean the speedy disintegration of many highways.

The most important materials shortages are steel and bituminous. Steel is essential for bridge repairs and replacements in some locations and some way must be found to make it available in those cases where a road would otherwise be closed.

Except for the slow-curing light asphalts, the shortage of bituminous materials is largely one of transportation. It is responsible for serious damage to thin surfaces over light bases. All light bituminous surfaces are bound to ravel and pit as time passes and many such roads will have to be plowed unless asphalt or tar can be had. In fact, many lightly surfaced roads are already reverting to gravel.

At least three Federal agencies are concerned with highway maintenance, though none seems to be directly responsible and none, of itself, has authority to remedy the difficulties.

The Office of Defense Transportation, interested in highway transport, so far appears not to have thought beyond the motor vehicle.

The Public Roads Administration of the Federal Works Agency is organized primarily as a construction-supervisory agency for Federal-aid funds. It has little to do with maintenance, which is performed entirely by State and local units. Nevertheless, the Public Roads Administration has undertaken surveys designed to produce the evidence of highway disintegration that the War Production Board apparently needs before granting needed materials.

The third agency is the governmental division of the War Production Board, whose

interest in the matter apparently duplicates that of the Public Roads Administration. The governmental division has only recently given any evidence that it is aware of the highway maintenance problem.

Without maintenance, no one can say how long our roads will last. A few roads are badly hurt today. Some authorities have suggested 2 years. Many roads will be worn out long before that. Others might continue without maintenance for 5 years.

Once traffic is paralyzed it will be too late. The construction of new highways or the reconstruction of old requires much time, vast expenditures, and much manpower. Even extraordinary maintenance activity can at best only postpone reconstruction.

It would be only wise economy to make parts and materials for road equipment available now for another reason. Poor roads are much more costly than good roads in terms of vehicles, parts, and tires. Equipment parts for road machinery now will be saved many times over in parts for commercial and private vehicles later.

To prevent enormous losses by failure of our road transportation facilities, the Federal Government should make materials, parts, even equipment available. Selective Service officials should be instructed to consider skilled highway workers as important as skilled railroad workers.

To allow our highway system to disintegrate is to court disaster.

Hon. John C. Page

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. ANDERSON of New Mexico. Mr. Speaker, under leave to extend my remarks, I desire to insert a news release by the Department of the Interior which announces the resignation of John C. Page as Commissioner of the Bureau of Reclamation. The regret the people of the West feel at this event is tempered by the announcement by Secretary of the Interior Ickes that the Bureau of Reclamation will have the benefit of Mr. Page's continued service as a consulting engineer with headquarters at Denver, Colo.

John Page in the 32 years of his connection with the Bureau of Reclamation has rendered yeoman service to the cause of water conservation and western irrigation and power development. No man knows better than he the needs of the arid and semiarid regions nor has made more valiant effort to bring about results that have bettered conditions.

I join with President Roosevelt and Secretary Ickes in paying tribute to the great contributions Mr. Page has made to the advancement of the West and the country as shown in the following news release:

Following an announcement by President Roosevelt that he had accepted the resignation of John C. Page as Commissioner of Reclamation, Secretary of the Interior Harold L. Ickes today said he had appointed Mr. Page as consulting engineer for the Bureau of Reclamation with headquarters at Denver, Colo.

Commissioner Page, whose resignation was due to ill health, will spend some time in Denver and other western areas for the purpose of regaining his strength. His resignation will become effective at the expiration of accumulated leave.

Pending the appointment of a permanent successor to Mr. Page, Acting Commissioner Harry W. Bashore will be in charge of the Bureau of Reclamation, Secretary Ickes said.

"The strain of the war activities of the Bureau of Reclamation has told heavily on Commissioner Page's health," Secretary Ickes added. "I have ordered him to take a real rest so that the Bureau and the Department may have the advantage of his valuable services when he has regained his strength. I can ill afford to spare men of Mr. Page's ability and knowledge of the problems confronting me with respect to irrigation, power production, and related activities which are essential to the prosecution of the war, but like so many other of my able assistants he has given more of himself than nature could permit.

"I trust that the Bureau of Reclamation, the Department and the country will have Mr. Page's services for many years to come.

"The long experience of Mr. Bashore in the field and in the Washington office of the Bureau of Reclamation equips him well to carry on in Mr. Page's absence."

The correspondence between Mr. Page and the President is as follows:

The PRESIDENT, JUNE 12, 1943.
The White House.

MY DEAR MR. PRESIDENT: On advice of my physicians I hereby submit my resignation as Commissioner of the Bureau of Reclamation. I wish it to be effective whenever you and the Secretary of the Interior determine the most appropriate date.

Respectfully, JOHN C. PAGE.

THE WHITE HOUSE,
Washington, D. C., June 22, 1943.

Hon. JOHN C. PAGE,
Commissioner, Bureau of Reclamation,
Department of the Interior.

MY DEAR MR. PAGE: I have received your letter of June 12, tendering your resignation as Commissioner of Reclamation because of ill health. In these circumstances, I must, of course, accede to your wishes, though I do so with regret because you have made an outstanding record during the more than 6 years you have served in this position. Secretary Ickes tells me that he has persuaded you to stay on in a consulting capacity, and I am glad that the Government will continue to have the benefit of your extensive knowledge of the problems of the West in land and water utilization. Your resignation as Commissioner may be effective immediately preceding the date you enter on duty under the Secretary's appointment as consulting engineer.

You have my very best wishes for a speedy recovery.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

Appointed Commissioner of Reclamation by President Roosevelt in January 1937, Mr. Page has been associated with the Bureau of Reclamation for all but 9 years of the agency's 41 years of existence. Except for 2 years of work in another capacity shortly after he joined the organization, he has served continuously with the Bureau since 1909.

Born in Syracuse, Nebr., on October 12, 1887, he was graduated from the University of Nebraska in 1908 with the degree of bachelor of science in civil engineering. For 18 months thereafter he continued his studies at Cornell University, specializing in hydraulics and civil engineering. In 1909, after completing his education, he entered the employ of the United States Reclamation Service, as the Bureau of Reclamation was then known. Soon afterward he left the service to accept a position as assistant to the city engineer of Grand Junction, Colo., returning in 1911 to serve continuously from that time on.

Mr. Page became Superintendent of the Grand Valley Federal reclamation project (Colorado) in 1925 in which capacity he worked until 1930 when he was transferred to the Boulder Dam project to become Chief Administrative Assistant.

Five years later he was called to Washington by the late Dr. Elwood Mead, long-time Commissioner of Reclamation, to head the Engineering Division. When Dr. Mead died in 1936 Secretary of the Interior Harold L. Ickes designated Mr. Page as Acting Commissioner.

Mr. Page has served as a member of the Water Resources Committee of the National Resources Committee and as a member of the President's Great Plains Drought Committee. In 1941 he received the honorary degree of doctor of engineering from his alma mater, the University of Nebraska. He is a member of the American Society of Civil Engineers, is married and has two daughters. Mrs. Page and her daughter, Mildred, will accompany him to Denver where his married daughter resides.

Today's American Hero

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I desire to insert in the RECORD a broadcast heard over radio station WOL reported by Billy Repaid, the Flying Reporter. He related this story—a story filled with human interest and heroism. In ordinary news releases or news reporting, as Mr. Repaid said, the heading might have been simply, "More planes shot down."

This story is of special interest to me because the pilot of this Flying Fortress was Lt. Frank Hunter, a native of my own hometown. I have known him all his life and his parents and grandparents before him. Such heroism stirs to the very depths our gratitude to those few who have given so much for so many of us. I bow in reverence to this gallant crew and rejoice with their families who have every right to take a genuine pride in their gallant achievement.

The radio broadcast follows:

The words of a communique are as significant for what they don't tell as for what they tell.

Americans last week learned through the formal language of a statement from allied headquarters in north Africa that another raid had been made on Messina. More enemy planes were shot down.

Those were facts. But behind those facts are a score or so of dramatic human-interest stories. Stories of heroism and bravery. Like this one.

The sun was high over the dappled Mediterranean when the compact formation of Flying Fortresses left the coast of Tunisia

behind. On the trip to Messina, gunners calmly tested their equipment. And bombardiers and navigators swapped stories of battle and talked of the letters from home.

Soon the hills of Sicily appeared below. And suddenly the Fortresses were over the target. It was all over in a minute. The bombs had been dropped and the Fortresses had turned, and were headed for home.

In their Fortress Lt. Frank Hunter, of Salt Lake City, and Lt. Hohn Wylie, of Apollo, Pa., breathed a sigh of relief. But suddenly one of the crewmen shouted and pointed behind.

A crippled American bomber had lagged over Messina and now was engaged in a hot and heavy battle with enemy fighter planes. Lieutenant Hunter banked to go to the rescue of the hapless plane. And as he did, his Fortress shuddered and smoke billowed from one engine.

But, with one engine out, he went to the rescue, anyway. And his gunners went to work. Gunner Sgt. Kenneth Titus, of Huntingdon Park, Calif., bagged one Messerschmitt right away. Then Sgt. John Tenis, of Waterbury, Conn., got another.

The enemy planes scattered after that, and the crippled Fortress got away. But as Lieutenant Hunter banked to head for north Africa, a chance shot blasted out another of his engines. Two gone, two left. Copilot Wylie recalls:

"Things quieted down then, and we thought the excitement was over." But they were wrong. The crippled plane was about 80 miles off the Tunisian coast, flying low. Suddenly a pack of 15 to 20 Messerschmitts dived down on them from the rear, their guns spitting.

Quickly the gunners rushed to their stations. Lieutenant Wylie ran to the radio cabin, and there a sorry sight met his eyes. The cables from the pilot's cabin to the control surfaces hung like loops in a clothesline.

As the Messerschmitts came on, a shell smashed the rudder. The allerons snapped. The crippled bomber apparently was at the mercy of the Nazi wolf pack.

Lieutenant Hunter settled grimly to his job. With the cables gone, he maneuvered the plane with the devices used to keep a plane on an even keel. Ask a flying man what a job that is.

The gunners also were busy. Sergeant Titus got one enemy plane in his sights and pressed the trigger. He saw the plane fall apart. Sergeant Tenis got another. Sgt. Eugene Cantley, of West Virginia, smacked two out of the sky. Sgt. James O'Brien, of South Minneapolis, Minn., battled down another.

The deadly aim of the Fortress gunners was too much for the Nazis. The rest fled. When the boys brought their limping plane to base, they counted up seven planes they had shot down. That's a new record for the Mediterranean theater.

Now, that is the real story. Yet all the communique said was: "More enemy planes shot down."

Recognition for Gold Star Mothers

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. CASE. Mr. Speaker, under permission granted by the House, I desire to place in the RECORD a few facts about existing legislation pertaining to Gold Star Mothers, as supplied by the Library of Congress.

I do this for reference in connection with the bill to provide a Congressional Medal of Sacrifice which I have introduced today.

The reference service advises me that Gold Star Mothers do not appear to have been incorporated by Congress like some other groups connected with the World War, and, of course, my bill does not propose incorporation for them. It merely proposes that they be recognized by the award of a suitable medal embracing a gold star.

Congressional recognition has been given in the designation of an annual Gold Star Mothers' Day (U. S. C., title 36: 147, 148); and soon after the World War No. 1 provision was made for a pilgrimage of Gold Star Mothers to the battlefields of Europe at Government expense. (See acts of Mar. 2, 1929, 45 Stat. 1508; Apr. 19, 1930, 46 Stat. 225; and May 15, 1930, 46 Stat. 334.)

And, of course, that many Gold Star Mothers, not by that designation but as dependent relatives, receive compensation under the various veterans regulations. Code sections covering this phase are listed in the index under Gold Star Mothers' Act, as follows: United States Code, title 38, pages 424a, 472b–472e, 506, 509, 510, 512c.

Reference to all these, however, indicates that while we have various medals for soldiers, sailors, and members of the merchant marine, to wear, we have never provided an appropriate award in the way of a medal or emblem for the mothers of those who make the supreme sacrifice for their country.

The Library of Congress has provided me with a résumé of a movement designed to associate the Gold Star Mothers in an organization, and for its light upon my proposal for a medal of recognition, I place it in the RECORD at this point:

During the World War, service flags—blue stars in a red-bordered field of white—were familiar sights throughout America. Each star stood for a man or woman in war service. Sometimes a blue star was replaced by one of silver, signifying that someone had been wounded while serving his country. When a gold star appeared on the service flag it designated that someone had given his life for the ideals we worship. In the post-war years the mothers of the men who had fallen came to be known as Gold Star Mothers.

The service flag was introduced by the nationally organized association of the American War Mothers. This association originally comprised the three groups of mothers, those entitled to use the blue, silver, and gold stars. But during the years following the war the organization lost its hold on the latter group of women, who have endeavored to establish a federally organized body of Gold Star Mothers of America.[1]

The purpose of the organization has been neither political nor social. Its apparent aim has been to perpetuate the memories of the men who gave their lives in the service of their country.[2]

The National Association of Gold Star Mothers developed slowly after the war; at first it was known as the Gold Star Mothers of the World War, Inc. For a long time this organization embraced only the Gold Star Mothers of the State of New York. Movement to expand the organization had been sponsored for some time, but real interest developed in such a venture when other States were invited to join a pilgrimage to Washington, D. C., to mark the first observation of Gold Star Mothers' Day in 1932.[3]

Governor Roosevelt had designated September 25 as the official Gold Star Mothers' Day of the State of New York, at the request of the Gold Star Mothers themselves. This date was considered appropriate, since it marked the anniversary of the beginning of the last great offensive of the Allies.[4]

After a long and continually active role in the interests of a pilgrimage to the graves of their sons, the Gold Star Mothers realized their dream when on May 7, 1930, the first group of mothers sailed for France. Such pilgrimages continued periodically all summer, the last group returning on October 3, 1930, of that year. The trips were planned to take place throughout several summers in order to enable all those who so desired to visit the graves of their sons buried on foreign soil.[5]

There are 42,000 Gold Star Mothers in the United States, not all of whom belong to the organization; yet we find that this association has worked to obtain public aid for all. The average age in 1938 was 71; many of the members have been described as "pitifully poor."[6]

The advanced age of hundreds of the Gold Star Mothers prevented them from visiting the graves of their sons in France. Of the 17,389 eligible to make the pilgrimage at Government expense, 3,653 did so in 1930, and 1,766 in 1931. Although the pilgrimages extended over 2 more years the age and physical condition of many mothers prevented them from making the trip. The oldest to attempt such a journey was 92.[7]

The National Association of Gold Star Mothers of North America was organized June 20, 1936, with Mrs. Mathilda Burling, of Richmond Hill, N. Y., as president. For a number of years Mrs. Burling had been president of the Gold Star Mothers of the World War, Inc.

The new group was formed in Staunton, Va., at a business session of Gold Star Mothers from eastern States participating in a pilgrimage to the birthplace of Woodrow Wilson. Mrs. J. Frank Clemmer, Staunton, was elected vice president, and Mrs. Alice O'Sullivan, of New York, secretary. Named to the executive committee were Mrs. A. Wendell, of New York; Mrs. M. W. Dyson, of Tennessee; and Mrs. M. E. Rodman, of Maryland.[8] At this same place they held their first annual convention, September 28, 1937.

The Gold Star Mothers have upheld certain ideals and policies. They have been much opposed to United States residence for those swearing allegiance to a foreign country and feel such people should be promptly deported. They have favored restriction of immigration, mandatory deportation, and prohibiting employment of aliens in the Federal Government. Though opposed to foreign wars, they support a policy of adequate national defense.[9]

Numerous legislative measures have come before Congress relative to the Gold Star

[1] Information received from American War Mothers, Washington, D. C., March 26, 1942.

Mothers. Since 1936 President Roosevelt has issued annually a proclamation making the last Sunday in September Gold Star Mothers' Day, in accordance with the law of June 23, 1936, which set aside this day for this particular purpose.[10]

From time to time a pilgrimage to Europe by the Gold Star Mothers (as previously referred to) had been suggested. The crystallization of this dream was realized with the appropriation by Congress of a large sum of money to take care of the expense incurred by such an undertaking. The bills finally passed regarding this venture not only took care of the actual expense of the trip but the moneys needed for the preparation by the Government, and the individuals making the journey.[11]

The extension and increase of pensions for the Gold Star Mothers was passed by both Houses, but vetoed by the President. This measure was not passed over the President's veto.[12]

In the Seventy-sixth Congress a bill was introduced for the incorporation of the Gold Star Mothers.[13] But as yet they have not been incorporated under Federal law, due to the failure of any bill to pass.

Clean Bill Given to the O. P. A. in Boston

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include an article by Bill Cunningham which appeared in the Boston Herald, July 4, in which Mr. Cunningham pays due tribute to the excellent work which has been done by the O. P. A. in Boston.

Mr. Cunningham's conclusion was reached after a thorough study of the situation and should be read with close attention because of the frequent attacks which the O. P. A. has been subjected to of late.

Mr. Cunningham's article follows:

CLEAN BILL GIVEN TO OFFICE OF PRICE ADMINISTRATION IN BOSTON—BIG STAFF WORKS HARD, FINDS GASOLINE WORST HEADACHE, PRAISES PUBLIC AID

(By Bill Cunningham)

The botching and battling of the bureaucrats, the long-time target of these articles as readers will attest, has culminated in an open fight at headquarters. Chester Davis, the Food Administrator, and considered by all but the New Deal left wingers a good man, has resigned, stating that he found responsibility without authority an uninhabitable position.

Vice President WALLACE, perhaps the most impractical man in America, delivered a public tirade against one of the most practical of the original New Dealers, Jesse Jones, and the wealthy Texan fired back with both barrels.

President Roosevelt, testily accepting the resignation of Davis and expressing surprise and regret at the explosion between WALLACE and Jones, borrowed a term from the sports world and stressed the necessity for team work. The Chief Executive is just exactly correct. That has been the plaint, the plea, and the prayer of these theses all along.

To keep faith with our fighting men, to knit our home front solidly, to get all the punch, the power, all the fight and fire we possess solidly with full and unfaltering unity into the war effort, team work is just exactly what we need and must have. But team work calls for exactly what we don't possess under the existing order—a quarterback on the field with full authority.

No team can ever run a play if it stands back in the huddle, with each member trying to call signals more insistently than any other, and with no playing captain or quarterback with sufficient authority to tell the rest to stow their contradictory chatter, that here's the play, and either to cooperate or get out of the game.

There's no authority, no head, and, if anybody wants to insist that the President is the authority, there still is none in this domestic tangle, for although he has it, he has neither used it nor, as yet, has he really delegated it. In the meanwhile the headless bureaucrats are all trying to play quarterback and are mostly bumping heads and falling down.

But our mission today is to examine the most unpopular, the most criticized, the most personal bureau of all, so far as the average citizen goes—the Office of Price Administration. This probably rates as a journalistic first—the first time a reporter has been invited to walk in and tear such an outfit to pieces, if he could.

MUCH OF OFFICE OF PRICE ADMINISTRATION CRITICISM BASED ON SUSPICION

I'm not tearing. I'm against the entire idea of a political police force, all snoopers, informers, tin cops, and stool pigeons. But since we've evidently got to live with, and by, this program until further notice, a better understanding of what it is and how 't works, will undoubtedly clear up some confusion, scotch some lies, and bring some ease to the public mind.

The Office of Price Administration has had a miserable press, and anything like it is probably doomed to reap mostly resentment and criticism—a lot of it merely upon suspicion. It has done nothing to fight back, and that has led to the story that it refused to answer questions, and therefore probably had something to hide. This report, if nothing else, will prove that not to be true. The idea was my own, not the Office of Price Administration's. I believe in giving the other fellow the platform occasionally. I asked the hardest questions I could think of. They produced the answers without exception, or hesitancy. Those answers make a definite picture.

I couldn't take them all, so I took the biggest single unit in New England, the one affecting the lives of the greatest number in this general district. That's the so-called Boston district board, comprising 9 counties in eastern Massachusetts and servicing 3,235,870 people. There are 2 other districts, 1 in Worcester, the other in Springfield. They are much smaller. There is a regional headquarters. It likewise is smaller.

The first thing to realize is that the Office of Price Administration isn't a bunch of mysterious hobgoblins hived up somewhere in Boston plotting ways and means of pouncing upon the public. Your local rationing board is really the Office of Price Administration. That's where it starts and that's most of it, in this particular district, at any rate, although perhaps that is not its national Office of Price Administration policy. The official name of your neighborhood rationing board is War Price and Rationing Board, and its members are selected from a panel of names submitted by the community itself. So they're your neighbors.

There are 200 of these in this Boston district—11 in the city of Boston proper. Lawrence J. Bresnahan, the director, says this is probably a greater number than any other district in America has, but that it not only makes calls easier for the public, but fits more nearly into the traditional New England pattern, where communities prefer to handle their own affairs.

BOARD MEMBERS UNPAID, BOUND BY OATH

These board members are not paid, they are under oath, they may not hold political office, and their light, heat, and quarters are generally furnished by the communities. In fact, 171 communities furnish such quarters. There are 1,574 board members. They are supplemented by 4,200 additional volunteers. There is a paid personnel of 1,129 clerks and stenographers, appointed by the board chairman from civil-service lists furnished by the United States Civil Service Commission. There are 61 part-time helpers.

This makes a total of 6,964 people, 83 percent of whom receive no compensation, 17 percent being paid the civil-service scale. This is 45 cents and 50 cents per hour for part-time clerks, $1,080 to $1,440 per year for filing clerks and typists, $1,620 for chief clerks. They work six 8-hour days, with overtime only for Saturday afternoons. They work, so says Director Bresnahan, many additional hours at night for no money, and they get no holidays except Christmas.

The district headquarters staff, meaning Bresnahan's headquarters force, consists of 282 employees, all of which come without exception from the civil-service lists. Asked if politics plays a part in getting one of these jobs, Bresnahan, who frankly and even proudly states himself a New Dealer personally, said he can't deny that troops of people parade in with letters from this politician and that, but that none can, or does, get on that way. When he needs an employee, he is obligated to ask Civil Service for people available and qualified. From the names they send, he then selects.

The headquarters office, which is what most of us undoubtedly have in mind when we say, or think, Office of Price Administration, consists really of six departments. These are organization, rationing, prices, legal, and administration. The standard story is that clowns, political "bootlickers," and business failures hold all key posts, and that you have such comical situations as former ribbon-counter clerks trying to run the hardware business, and college professors trying to measure out coal.

And they probably have in some places, but we are examining this one and the facts here are that William Hale, heading organization, was vice president and sales manager for Bird & Son in Walpole for 26 years; John Deely, rationing officer, is president of the Lee Lime Co., a major industry in Lee, Mass.; Henry Silberman, price officer, was merchandising manager for Conrad's, long familiar with department store merchandising of all sorts; Ray Baldes, head of the legal division, is on loan from the Boston University Law School faculty; and Harold Dunney, head of administration, which means budgets, management, and personnel, is the one alumnus of the Work Projects Administration. The latter, however, has had 8 years' experience handling Government budgets and New Deal paper work, which, according to Bresnahan, is a science in itself and calls for a veteran in its intricacies.

MEN OF EXPERIENCE HANDLE OWN LINES

As for the men directly handling the most controversial commodities: Bill Little, in charge of fuel, has had 21 years of practical experience, including 15 years as Alvan T. Fuller's man on gas and oil, and 4 years as sales and service supervisor for the Metropolitan Coal Co. Jack Crooks, automobiles, was 17 years the general manager of Ford sales in Boston. John F. Doheny, meat, has had 21 years in the meat business in all parts of the country. Bill Hoyle, miscellaneous products, has had 35 years in the retail trade and was vice president of the Steiger-Cox Co. John Hamill, food, was 15 years with Lever Bros.

As to the sapience of these gentlemen, deponent sayeth not, because deponent knoweth not, but they, at least, should know their commodities by sight, which is contrary to the usual legend.

These men work in great part with the local boards. In fact, as much responsibility as possible, or as it can be prevailed upon to accept, is given the local board. Each of these is being organized into its own organization with its own specialists, price panels, and the rest. In this State, at any rate, the local board is pretty potent and a lot of the abuse hurled at something rather vague called the Office of Price Administration really belongs in the home neighborhood.

If you want to squawk about so many C cards, for instance, the Office of Price Administration headquarters has nothing to do with that. The local boards give them. There is a story going around about certain sections getting heavy cream at a lot of houses on doctors' prescriptions. That's local board business again.

The headquarters office, says the Director, wants and expects the local boards to try all alleged gasoline violations in their districts. Some do, but some don't want to because they don't want to risk the local hard feelings. Some are willing to but apparently just don't get around to it. To take care of those cases, district headquarters has set up three courts of its own.

The headquarters, now at 10 Post Office Square but soon to move to the old Houghton-Dutton Building, is a tremendously busy place. I was through it, and nobody's sitting around doing cross-word puzzles or a personal manicure. It receives 7,300 pieces of mail a day, and approximately 6,500 telephone calls at this time of the year, mostly about the use of gasoline. There's a switchboard serving 48 trunk lines. It sometimes gets so far behind that calls are from 5 to 7 minutes late going in, and from 16 to 17 minutes late going out. There is, in addition, a lot of extracurricular routine such as the distribution of ration book 3.

HUGE MASS OF CORRESPONDENCE HANDLED

An endless stream of documents and directives pour in steadily from Washington. These all have to be processed and passed on. An idea of correspondence and paper work is to be had from the records of the price section, a single unit, for the month of June.

This division received 1,754 personal visits from businessmen. It received 9,018 telephone calls and made 6,339. It wrote 1,912 letters, each double checked by the legal staff for accuracy. It received and filed 6,000 pieces of mail. During June, it prepared 2 orders for area pricing. The Boston order included 1,000 individual brands. Careful checking revealed that only 6 errors were made in the Boston area affecting 43 cities and towns. It mimeographed 15,000 copies of these orders, cut 130 stencils, and mailed 1,000 copies of each stencil to the local boards. In other words, it sent out approximately 130,000 pieces of material. This division says that in the case of material intended for merchants, it is not unusual for it to send 5,000 copies in a single distribution.

That's a sample of the clerical background, but, insofar as the public is concerned, the big story here is probably enforcement. The black market, big and little, is their target, says the Director. Instead of harassing the public or poking or snooping, he says, they move carefully and don't pounce until they are sure.

In testimony of this, he cites the 100-percent score in the case of criminal violators of the beef and poultry provisions. They've gone to trial with 15 cases, all prepared by their own legal staff, and they got 15 convictions, with sentences ranging from 10 days to 6 months and fines totaling $22,500. A total of 20 investigators worked on these cases for 4 months, interviewing hundreds of witnesses and examining a large number of records, vouchers, checks, and invoices.

This was straight, criminal, black-market stuff. After one trial and conviction involving three defendants, the defendants admitted that over a period of 4 months they accepted an amount in excess of $125,000 "on the side" for deliberately selling in defiance of the law.

But to get to the principal headache of all hands, which is gasoline, the public should understand, if it wants to be fair, that the Office of Price Administration has nothing to do with the matter of supply. In fact, it has nothing to do with supply in any interstate items such as meat, potatoes, gas, or fuel of any sort. There's no head to gasoline—in line with our opening paragraphs—no authority, and therefore no real responsibility.

ICKES IS BOSS, BUT HE ONLY MANS PUMP

Mr. Ickes is the official Coordinator of record, but he only mans the pump. The Army and Navy, having priority, tell him how much they require. That leaves so much for civilian consumption. He informs the Office of Price Administration, and their job is to see that nobody gets more than his card says he should and that he uses it only in the manner officially specified.

When the latest nonessential ban went on, Director Bresnahan says, hoping for the best, he didn't at first try to crack down. Instead he went on the radio pleading with the public to cooperate, and even thanking them for cooperating. Then came the first good Sunday, and the State registrar's office reported an increase of 51 percent in automobile travel. The State checks with those contraptions you've seen and probably wondered about, a small piece of rubber tubing stretched across some highway and connected with a metal can or box at one side of the road.

With this unexpected increase, the Department sent out its car stoppers, the "gestapo" you've read about. Regular police, State, county, or local, did the stopping, as they alone had the authority, but the Office of Price Administration inspectors did the interviewing. They turned in 5,000 names.

Of these 3,200 looked bad. The rest were thrown away. Of the 3,200, 1,363 looked like possible violators. Of these, 360 were reported to their local boards, and 87 were handled from headquarters. Of the 360 sent to local boards to date, the rations of 40 were revoked, 25 were found guilty but let off with a warning, and 27 were acquitted. At headquarters hearing offices, 24 were found guilty, 6 possibly guilty and warned, and 23 not guilty. A total of 916 were sent those letters which have been publicly criticized, but which Bresnahan defends as the best way to handle the matter, and these are still in the works.

These figures hold up to 10 days ago, and they say that of the 5,000 cars stopped, the rations of 64 drivers were revoked, 31 were warned, and 50 turned loose, with 916 cases still pending. Bresnahan says with 800,000 cars in the State, 500,000 in his district, and 116,000 C books, this is an excellent record and shows that the public is cooperating.

He says, incidentally, that his office is being flooded now with new calls following newspaper stories, and other stories to the effect that the East is newly flooded with gas. The actual facts are, he said, that a safe minimum for this region is a million barrels, that in December we had a million and a half barrels, that our absolute low point was April, when we had 393,000 barrels, and that, at the moment we have 663,000 barrels, a big up over April, but still far below our safe minimum.

AMAZED BY ATTITUDE OF DIRECTOR AND STAFF

Gasoline is the headache, he says. The rest would be easy. Gasoline was a luxury in the last war. It's a necessity now. It hits all business, and everybody in one way or another. Bresnahan says his sympathy is strictly with the public. He wishes there were more gas. He could use some himself, he says, but these are the rules and his job is to enforce them.

I'm frank to state that the attitude of the man and his entire staff amazed me. The public has done little but abuse them. They did little but praise the public. I gathered that they are as bewildered by a lot of it as the public they have to pass it on to, but I naturally couldn't try to place the man in the position of criticizing his superiors by asking him if he didn't personally consider it a lot of junk.

He was strictly explaining the workings of his own department. References to any other were incidental, and so obviously accidental that he hastened to slide back to his base before I could tag him out with a question. For instance, I asked, "In these investigations of yours, have you any going around deliberately trying to create incidents?"

"We have never had a 'shopper' in this district and we never will have," he snapped.

"But they have them in other places, don't they?" I asked him.

"We're discussing this district," he said with a smile.

"How about these week-end meat situations?" I asked him. "The papers come out with a statement that a great shipment of meat is headed for New England. Everybody's mouth starts to water, and the meat never shows up. I understand one of the reasons is that the meat gets here all right, but that the Army and Navy park their officers right on the tracks when they read the papers and grab it first. Is that correct?"

"You'll have to ask the Army and the Navy," he said. "Supply isn't our province. We supervise the sale of it in the civilian market."

"What's your considered opinion of the public reaction?" I asked him.

"For the preponderant part, it's been cooperative and really swell," he said. "There'll always be stinkers and cheats, and that's what we're here for. For example, we froze restaurant prices because the representatives of 90,000 war workers complained to us that restaurants and lunch carts around war plants were kiting their prices in some instances more than 100 percent. We investigated and they were correct. Some were charging 15 cents for a hot dog and 15 cents for a cup of coffee. We had a case of where one of the elevator girls out there bought a radio on credit for $25. When the bill came they had charged her $36, despite the fact that the ceiling price was $25. She didn't know that the law says, in case of that type of overcharge, the victim is entitled to three times the excess charged, or $50, whichever is the larger sum. But she came in here and we started to investigate. Their lawyer came running down with a bill of sale and the $50 for her."

PROUD OF JOB DISTRICT IS DOING

"Do you think all this is economical and sensible?" I asked him.

"I'll put this district against any in the Nation," he said, "for the job we have to do, I don't believe anybody does it better."

It's hard to quarrel with him there having seen, not alone the facts and figures but his

big and busy staff grinding steadily away. Maybe it's like taking pride in the fact that of a lot of broken legs, you've got the cleanest break, but this office and its figures seemed to say that: (1) here was no free ride for a lot of political free loaders, (2) the executives have had practical experience with the subjects they're handling, (3) they're a hard-working lot, and they stay abreast of their job, (4) they bear whatever fumigation civil-service rating gives them, (5) none has been asked his political affiliation, and (6) like the Light Brigade, theirs not to reason why, but just to do it.

It may not be true in a great many places, and the entire conception is open to challenge, but so far as doing a job by the rules set goes, this Boston job rates in the plus position.

Professional Responsibility

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. LaFOLLETTE. Mr. Speaker, on Monday, June 14, 1943, Mr. James R. Newkirk, president of the Indiana Bar Association, delivered an address to the Evansville Bar Association of Evansville, Ind. It is my opinion that the thinking expressed in Mr. Newkirk's speech includes so many observations which are pertinent to the questions confronting the country that I consider it an honor to cause the same to be inserted into the RECORD:

When the guns begin to rattle the voice of reason has been silenced. I wonder if we haven't blown out the light of wisdom and decided to fight it out in the dark. During the past decade I have read at least 200 books, listened to three or four hundred essays and addresses, followed a dozen commentators in the newspapers and over the radio, studied numerous court decisions, and exchanged views with men in every walk of life, and my thoughts, time and time again, have irresistibly focused upon the opening paragraph of The Tale of Two Cities, where Dickens begins by saying, "It was the best of times; it was the worst of times; it was the age of wisdom; it was the age of foolishness; it was the epoch of belief; it was the epoch of incredulity; it was the season of light; it was the season of darkness; it was the spring of hope; it was the winter of despair; we had everything before us; we had nothing before us; we were all going direct to heaven; we were all going direct the other way." This quotation does justice to the period through which we are living and during which we have been flinging so many piles of green wood upon the altar of freedom that the smoke from the smoldering fire obscures our vision. It is said that the flame remains feeble on which piles of green wood are flung. I intend to fling on some dry and seasoned chips this evening.

Dr. Robert M. Hutchins, in a recent address, said: "Until there can be some semblance of agreement upon the aims of human life and the ends of organized society, humanity must fumble on from catastrophe to catastrophe, learning little as it goes." History reveals from the very dawn of civilization a continuous struggle of men to organize a society or system of government under which they can live peaceably together and enjoy to the fullest extent the fruits of their own labor. More than 23 centuries ago Plato proposed the perfect state, which he admitted could neither be established nor maintained until rulers become philosophers or philosophers become rulers. His pupil, Aristotle, first gave expression to the principle that the rule of law is preferable to the rule of any individual and said, "He who bids the law rule may be deemed to bid God and reason alone rule, but he who bids man rule adds an element of the beast; for desire is a wild beast, and passion perverts the minds of rulers, even when they are the best men."

Cicero contended that laws governing human behavior were as natural and immutable as the laws of science; consequently we should treat them in the same manner by employing those that are conducive to happiness and checking those that are injurious to our existence. This can only be accomplished by recognizing the natural weaknesses in every person, such as passion, selfishness, greed, desire, and love of power, against which must be self-imposed checks, restraints, and controls. Polybius was probably the first to advocate checks and balances in organized society, and John Locke was the originator of the plan for separating government into separate and independent departments, to wit, legislative, executive, and judicial. It would add length but little substance to this discussion to enumerate all the philosophers who contributed the ideas and principles which are embraced in our Constitution. No other document has ever been conceived which provided checks, restraints, and controls of the natural and inherent weakness of mankind and at the same time recognized the individual as the servant of his Creator, in whose service he must be reasonably free to work, to think, to speak, and to own and to use property. The Constitution is predicated upon the fact that an individual has certain inalienable personal and property rights of which no government can justifiably deprive him. Property rights and personal rights are necessarily of equal importance to the individual and neither can have a preference over the other. The loss of one exterminates the other and the extinction of either leads to political dictatorship.

When we refer to dictatorship, we usually have in mind the philosopher of despair and oppression, Machiavelli. He was color-blind to commonplace morality, disregarded every ethical standard for political expediency, and considered the people as mere puppets who were always obedient to the will and command of their ruler. He said: "A prince, therefore, who is wise and prudent cannot and ought not keep his word when the keeping of it is to his prejudice. * * * He that best personates the fox has the better success. * * * It is great consequence to disguise your inclination and to play the hypocrite well. * * * It is honorable to seem mild, and merciful, and courteous, and religious, and sincere, and indeed to be so, provided your mind be so rectified and prepared that you can act quite contrary upon occasion. * * * A prince, then, is to have particular care that nothing falls from his mouth but what is full of the five qualities aforesaid, and that to see and hear him he appears all goodness, integrity, humanity, and religion, which last he ought to pretend to more than ordinarily, because more men do judge by the eye than by the touch; for everybody sees but few understand; everybody sees how you appear but few know what in reality you are, and those few dare not oppose the opinion of the multitude who have the majesty of their prince to defend them; * * * nothing recommends a prince so highly to the world as great enterprises and noble expressions of his own valor and conduct."

This political doctrine which places expediency above morality and all virtues and which countenances the use of craft and deceit by rulers is not the only kind of dictatorship against which we should ever be on guard. I refer to economic dictatorship which, without detection, develops within a country and in many instances has been the forerunner to political dictatorship. I therefore intend to consider this evening the centralization of economic power in this country and its effects upon everyone, but more particularly our profession. I may indicate a degree of stupidity and shortsightedness on the part of our professional leaders and then suggest the responsibility which our profession must necessarily assume in the restoration to the individual of his personal and property rights under our constitutional form of government.

What we have today is not the capitalism which made this country the envy of the world. The corporate structure has undermined and split the original conception of the right to own and to use private property. The thousands and millions of shareholders and bondholders neither manage, use, nor dispose of the property in which they technically have an interest, but the presidents and boards of directors of large corporations do manage, use, and dispose of property of which they are not the owners and in which they oftentimes have a very small interest. By virtue of their position they are, in a sense, merely trustees of property; however, they are not so charged under law, and they do not bear the risk or responsibility of owners. The managerial aristocracy has frequently mismanaged the corporate property and preserved nothing for the stockholders, yet they have rarely omitted to grant themselves high salaries and bonuses amounting to thousands and millions of dollars. Corporate officials of the large industrial and financial combinations manage what they do not own, reap in their own interest what they do not sow, and are gradually but effectively eliminating real private-property rights which constitute the basic principle of capitalism.

They are bureaucrats in the same manner and to the same extent as if they were managing Government property. It is only a short step from corporate bureaucracy to State bureaucracy when the Chief Executive can by a directive take over the corporate administrative system as a governmental agency. We have already, for a just and sufficient cause, observed several such transformations. The struggle between Wall Street and Washington is not then a conflict between capitalism and totalitarianism, or private property and State property, or private business and public business, but between corporate bureaucracy and political bureaucracy. In this conflict the individual is not directly involved and he should renew his opposition to both economic and political dictatorship, for the one is as dangerous as the other and neither is compatible with the rights and dignity of the individual.

We must admit that both the engineers and the promotional personnel in industry have been successful and each group profited by the achievements of the other. Financial institutions considered the abilities of those identified with American industry as good risks and made available to them fabulous funds for development and expansion. The advertising agencies were enlisted to sell their product to the public by appealing to the personal likes of the average individual, and particularly his sense of taste, beauty, and pleasure. A commodity of medium quality supported by clever advertising can be sold in vast quantities, but a like commodity of excellent quality unsupported by advertising cannot be sold. As sales increase the company expands and then the advertising not only praises the commodity but the corporation that produces it. Thus begins a power that envelops an entire field of production simply because quantity production reduces

the cost of the article or commodity and the less the cost the greater amount there is to allocate to wages and advertising and the more advertising the greater the sales. Advertising becomes so much more effective when it constantly refers to the fine working conditions of the employees, the high wages, the gifts and donations to charity, the taxes paid by the corporation, and then dividends incite much favorable comment in financial circles.

The process I have just outlined develops behind and in connection with a clever and convincing stream of advertising or propaganda, whichever term seems to you more appropriate, and there is no opposition, since the ultimate consequences of the corporate monster are so concealed and so remote that few can discern them. As a matter of fact people cannot balance the attraction of the immediate and palpable advantages against the danger of remote and concealed evils. To further accelerate the corporate growth and expansion the Congress of the United States and the legislatures of the States enact corporate and other legislation condoning all kinds of inside manipulations and authorizing mergers, consolidations, and other kinds of combinations. Add to this development the holding companies and subsidiary corporations plus the interlocking directorates and we find that free enterprise has become a mere myth and that competition is only a memory. Practically every industrial and manufacturing field is now dominated by a very limited number of corporations—one, of course, might be construed as a monopoly.

It is only natural for corporations to eliminate their competitors through purchase, merger and consolidation simply because it is easier to make profits when a corporation can fix, without fear of competition, the price for which it sells its products. I maintain that there is little or no competition or free enterprise in transportation, railroading, banking, moving-picture production, steel and coal production, communication, power and light distribution, manufacture of automobiles and accessories, manufacture of cement, soap, farm machinery, electrical appliances, rubber, automobiles, and numerous other articles and commodities. There is to a small extent both free enterprise and competition in the retail business but that is gradually and effectively succumbing to the large chain organizations which in the near future are likely to control the whole system of distribution of consumer goods.

This is an age wherein the sensate values of pleasure, utility, and expediency have been predominate. The heroes of the past decade have been the Babbitts, the Elmer Gentrys, the warped and morbid characters of Hemingway and Steinbeck. People of all classes revel in a cheap and debasing brand of pictures and stories which have become the stock and trade of a variety of debunking magazines and periodicals. Sex, love, and religion are distorted by mocking refrains such as the crooners' We Kiss and the Angels Sing, Heaven Can Wait, This Is Paradise, and Praise the Lord and Pass the Ammunition, all of which profane our most cherished moral and religious values. We construct the tallest buildings and boast that they are the best because they are the biggest. We maintain huge choruses and orchestras—the bigger the better. A book sold en masse is regarded as a masterpiece; a play enjoying the longest run is accepted as the best. Our motion pictures are conceived on a vast scale and endowed with sumptuous trimmings and accessories.

The bulk of one daily newspaper often exceeds the life output of many eminent thinkers. A person enjoying the biggest income, a college with the largest enrollment, a crooner with the biggest public, a phonograph record sold in the largest quantity, a preacher having the largest audience, a research project entailing the greatest cost, in short any commodity or service that is in some respect the biggest becomes for this reason alone the greatest or the best. Because of our materialistic philosophy we brag of possessing the largest number of schools and colleges; the greatest number of books published and plays produced; the largest number of churches, museums, plays, and the like. We have simply adopted the corporate slogan, "The bigger the better." and anything to be good and right must be colossal. The prevailing notion is that money alone can overcome oppression and depression, insure happiness and security, dispel fear and poverty.

It is not my purpose to condemn big business nor to indict the good people of this country; however, we can never cope with the problems facing us by ignoring the facts and existing conditions, some of which are both distasteful and unpleasant. At the present time there is hardly any ethical values common to and equally binding upon all races, religious groups, the rich and the poor, employers and employees, the oppressors and the oppressed. Our ethical and juridical values are quite contradictory and irreconcilable. The greatest tragedy of all is the fact that we no longer have a respected and independent judiciary, acceptable to all factions and whose decisions are equally authoritative upon all. We have developed into a society of endless contesting factions which are above any judicial control and the whole body of ethics has accordingly become a plaything of unscrupulous pressure groups, each of which tries to snatch as big a share of sensate values as possible at the expense of the other pressure groups. In any organized society issues between parties, regardless of size or influence, should be decided in an orderly process by courts of justice, but today the differences between the powerful forces are being handled by force and political pressure, which, if not checked, must ultimately lead to moral and financial bankruptcy.

Lawyers become impotent under any kind of dictatorship and we all know that our courts have purposely been ignored and avoided as a forum in which to adjudicate the conflicts between modern forces. The blackest pages in the history of our profession are those that reveal the aid and assistance we rendered in the promoting and building of the corporate powers which now challenge the very existence of our honorable and dignified profession. I am not unmindful of the fact that the large corporations employ men who are trained for the profession, yet working under a boss deprives them of independence, the very essence of their profession. The ethics and standards to which we all subscribe are impliedly a part of every engagement, yet we all know that our clients have little or no respect for them and our adherence thereto, in face of a large salary, may weaken. When the bread and butter for me and my family depends upon a salary or the benevolence of one corporate client I am very apt to yield to its commands and accept its directives, irrespective of my personal judgment and opinion.

A large percentage of our lawyer population by reason of necessity are simply servants of great corporations, unions, and Government, occupying a relation in which they dare not exercise their own judgment or assert their professional independence. I am indeed happy that we still have a great majority of our lawyers who have retained their independence and who are free to think and act according to their own judgment in all matters that come to them. I have always admired and I will continue to admire the medical profession for its courage in resisting the socialization of the practice of medicine. The doctors should have and do have our support. Our weakness seems to be in part due to an erroneous impression that we can legislate both morals and justice, therefore lawyers are not indispensable. How foolish it is to believe that the legislature or the Executive can command the laws of human behavior any more than those of science. I would not be surprised, however, to hear some modern intellectual advocating an Executive directive or an act of Congress dispensing with all mental and physical defects, enjoining sickness and pestilence throughout the world and thereby making available all the doctors for industrial employment. This seems ludicrous yet it is actually happening in the field of human relations.

The very nature of employment requires direction by the employer and obedience by the employee. This direction and obedience cannot be construed as dictatorship when industry is so diversified and so divided that employees have a reasonable opportunity to choose between numerous potential employers, but the centralization of industry plus the necessary limitation of individual ability to perform the highly technical type of work demanded, has brought about a condition where industry has become a benevolent dictator. An employee has to work for either one or two large corporations or not work at all. The worker is virtually compelled to force himself into employment and demand that wage and those working conditions conducive to a decent and respectable living. To resist this centralized economic power and the many abuses thereof labor unions were organized and we are now witnessing a critical conflict between two powerful forces, neither of them amenable to law nor controllable by courts of justice.

This is a situation which lawyers should have foreseen and against which lawyers should have warned the people. Lawyers are between the firing lines and dare not permit either side to win the battle because whichever side is victorious lawyers must necessarily be among the vanquished. There is in my opinion a solution and only one solution of this very serious controversy, and that is a return to constitutional government and the restoration of independent and locally owned and operated industrial companies. How is this to be accomplished and who should assume the major responsibility in this great conversion?

I do not wish to be numbered among those who view with alarm the trend of the Government and then fail to suggest a reasonable plan to extricate ourselves from the dilemma. The first thing to do is to reverse the process by which the economic power has been concentrated, that is to repeal all laws authorizing holding companies, mergers, consolidations, and combinations. Second, enact and enforce a law against monopoly. Third, amend the Constitution, if necessary, to permit Congress and the State legislatures to regulate, restrict, and control corporations and unions leaving the individual all the rights and freedoms enumerated in the Constitution; and, further, temporize the process by necessary relief measures supplemented by an educational program calculated to teach the aims of human life and the ends of organized society. In principle these things will be done, otherwise we might as well reconcile ourselves to some form of socialism or dictatorship because the forces about which I have been talking are incompatible with a republican form of government. I am not unaware of the fact that many people, including men in high positions, sincerely believe that the evils can be and are being eliminated by public welfare, social security, and cradle-to-the-grave measures, but these are designed to cushion the hardships and not to eradicate the evils. They are but attributes of appeasement. They scotch the snake instead of killing it.

We simply cannot countenance a system of economic powers and a philosophy of materialism wherein the individual is but a mere gadget wholly dependent either upon government or modern feudalism. The lords of our complex economic system can no better protect or secure their vassals than those of Europe in the Middle Ages. Material progress must necessarily be tied to and limited by the principles of the Creator of all things to whom we must inevitably account for our own conduct and for the stewardship of the many things entrusted to us.

No group of men is better qualified to assume the responsibility in the process of decentralization of these forces and the restoration of individual rights than the lawyers and no group stands to lose more in neglecting this duty than the lawyers. It is not a matter to be discharged by an organization of lawyers but rather by the individual help and assistance of every lawyer acting under the influence and guidance of his own conscience. This entails the envelopment of higher moral standards and a more thorough preparation for leadership in culture, science, philosophy, and jurisprudence. It simply means that we must again become leaders in every phase of intellectual pursuits and standards. We must champion the cause and uphold the rights of the average American citizen and thereby gain the confidence to which we are rightfully entitled. We should ever remember that justice not power or wealth is our ultimate goal. The fortunate and the privileged must have counsel, but the unfortunate and the underprivileged must never be neglected.

Some lawyers have money and some lawyers make mistakes, yet the rank and file of our profession are common, ordinary men who have dedicated their lives to the promotion of justice. We need not relax our effort to sponsor reforms of procedure and judicial administration and rededicating ourselves to the principle that men should be governed by law and that controversies should be seasonably disposed of by an impartial and independent judiciary.

Notwithstanding the constant criticism of our profession I say to you that man for man, the world around, in view of its temptations, its difficulties, and the grade of citizenship with which it deals, it is the cleanest and the most high-minded of all the learned professions. The marvel is, not that some lawyers go wrong, but that so many lawyers go right. Such is the nature of our calling that we are inevitably internes for the epidemic wards of humanity.

In the very nature of things, our profession could not exist in the absence of integrity and fidelity to trust and duty. So long as integrity is intact, the conscience may not be bartered for money or at all, while as to the accumulation of fortunes, Webster's dictum still carries the force and weight of judicial fiat, namely, "Lawyers work hard, live well, and die poor."

No man or class of men labors harder or more persistently; is criticized as much, or trusted as far; is as poorly paid in proportion to labor done, ability applied, and results accomplished. The legal profession demands that the lawyer be a manly man, an upright citizen, a tireless worker, a student of the affairs of life, and thoroughly familiar with the mainsprings of human nature.

It is he who, standing upon the high promontories of life, looks backward across the untold centuries to the dawn of time, forward to the boundary line of eternity, and, catching the message flashed by Omnipotence, observes written upon the face of all he sees, or hears, or feels, or knows, the decretal orders of the Supreme Justice of the Universe, and sets about, with all the powers at his command, to discover and to rationalize the relation of man to his Creator and of man to his fellowmen; recognizes that man can no more create the laws which apply to his fellowmen than he can create the laws which apply to his relations with his Creator; devotes his life to the ascertainment and the administration of the law; strives ever for the discovery, vindication, and establishment of the truth; concentrates his energies and the talents which God gave him to the triumph of right and the dispensation and promulgation of equity and justice between his fellowmen, and keeps constantly in mind, in office and in courtroom, his duty to his client, to the court, to the state, to his God, and to himself; he it is who is entitled to the proud distinction of being justly and appropriately termed—the lawyer.

There is no higher or nobler calling in all the earth than his profession. This sphere of endeavor is as broad; his domain of inquiry and investigation is as boundless; his commission is as high; his labors and achievements are as permanent; his powers for good and his contributions to progress are as great; and his memory and his monuments are as enduring as any that have been vouchsafed to the children of men since the world began. This is the most propitious time in the history of our profession for us to erect by acts, counsel, and guidance a great memorial to our profession. Let us champion the right of the common man and resist the forces which tend to undermine, discredit, and destroy the fundamental principles of justice, independence, and democratic processes. The bar relies upon logic and reason and its voice must rise above the cries of selfish interests. We must immediately liberate ourselves from that false and despicable impression that we have sold out lock, stock, and barrel to the new economic powers and special interests.

You know and I know that our people believe, and rightly believe, that our economy is unbalanced; that the standards of compensation are inequitable; that monopolies are present in every field of production; that free enterprise does not exist; that personal and property rights are in jeopardy; that security and freedom from want depends entirely upon receiving and enjoying to the fullest extent the fruits of our own labor; that government is our servant and not our master; and that our faith in God is indispensable. Someone asked Newton if he believed in Darwin's theory of evolution or in the biblical story of creation and Newton replied that he was on the side of the angels. I subscribe to the teachings of Jean Jacques Rousseau, who said "Men always desire their own good, but do not always discern it; the people are never corrupted, though often deceived, and it is only then that they seem to will evil. * * * The general will is always right, but the judgment which guides it is not always enlightened."

The people, as before stated, know that our economic system is out of balance and it is our duty to enlighten the political leaders of this country who have it within their power to make the necessary readjustments. Those who advocate the status quo are referred to as reactionaries; those who would build a paternalistic government are called liberals; and those who would change the whole form and structure of our Government are denominated radicals. Let us avoid all of these groups first by recognizing the real aims of human life and second by pointing out how these aims can be achieved under our Constitution.

The Constitution embraces only principles of political science and provides such checks and balances as to prevent the centralization of political power in one man or a small group of men. No political structure, however perfect in form, can long endure unless it exercises control over the economic forces under it. It is just as necessary to have checks and balances in our economic system as in our political system and it is the duty of the three departments of government to establish and maintain an economic balance by and through reasonable checks, restraints, and controls for which they have ample power under the Constitution.

States' Rights or Federal Bureaucracy

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "States' Rights or Federal Bureaucracy," delivered by me last evening over the facilities of the Columbia broadcasting network on the Congress Speaks program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The States' rights guaranty in the Constitution may well be called the lost amendment. The almost complete abrogation by the vast Federal bureaucracy under the New Deal has lost to the States the lion's share of the rights they once had.

The tenth amendment is the one that guaranteed to the States the rights which so often have been taken away by Federal power seekers. It was originally a guarantee of good government by the people who lived close to their elected officials. These officials they could see and reach and occasionally give them Hail Columbia if they didn't behave, Often they were neighbors.

At least the voters' will could be felt at the polls. But the Federal bureaus are impervious to the ballot. They are not elected. They dominate as designees of the dynasty. Article 10 of the amendments to the Constitution specifically states:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

It is inevitable that as government gets further removed from the people, then the further it gets away from a real first-hand knowledge of their best interests and their will and influence. In contrast with this remoteness, is the present draft board set-up, which—thank God—is still in the hands of the local people, who in most cases know the boys that may be called up and know their circumstances. And this draft board, with its strong local character, is one of the few efficient organizations among the United States Government agencies today. They have been subjected to less criticism than other wartime Federal agencies. Credit goes to the close local tie. But aside from the local draft board, local government and State rights have been taken over largely by the Federal Government. This repudiation of States' rights has become progressively serious since 1932.

Is it odd that the Republicans now have to champion the principles of Jeffersonian democracy which the New Dealers have forgotten so completely? Well, the Republicans must champion States' rights or soon there will be none left to protect. Here are some facts of what has happened under the New Deal:

The securities laws of the various States have become submerged to the Federal Securities and Exchange Commission regulations.

The agricultural welfare of the important agricultural States has been negated by Federal agricultural planning, to the point where now we may face a hungry America.

The inroads made on State education administration are serious, and State direction and control of education is further

threatened by a vast $300,000,000 program of Federal aid—involving Federal influence.

The State employment services have been brought under Federal control through domination of the United States Employment Service.

Remembering the history of the battle for State rights, we recall that Rhode Island was the first State to come out for State rights. Thomas Jefferson was an advocate for State rights and later on Calhoun was among its most notable exponents. America grew and prospered under this principle. State rights have been progressively usurped by the Federal Government since the New Deal administration took the reins. What happened soon after they took over—back in 1932 and 1933—was but prologue for the future.

In those years to pull us out of an economic debacle we were supposed to rely on the Federal Emergency Relief Administration and the Civil Works Administration. These agencies were State administered and they were to spend several billion dollars to help pull us out of a depression. Their programs were State administered. They did not last long. Harry Hopkins rose to the czardom of all spendthrift dynasties of the New Deal and he decreed that this great spending spree should be federally controlled, operated, managed, planned—yea, and spent.

When the Federal Government under Messrs. Roosevelt and Hopkins took over the administration of all relief, all depression spending—all the bloated billions of the age of political splurge—they dictated, then and there, the political future of this Nation. For they controlled the patronage, they controlled the purse, they controlled the rights of the people of all America, since those rights centered in economic matters then more than they ever had before.

This power the bureaucrats abused. This decade of decadent spending the American people now despise. Whenever men with the power of a federal government as great as the United States control a nation politically and economically by profligate spending, they become the masters of the nation's politics. Whenever they center that power in the Federal Government to the exclusion of the local interests then truly the power of a few men has but little offset. Their centralized power and might grow ever stronger.

Could this federalization have happened under a political doctrine that guaranteed States' rights? Was Maine to be forced to have sea walls because Hopkins said so? Was Nebraska to have to discard her program of decent economical government to accommodate a wasteful Work Projects Administration because Hopkins said so?

Is the great Nation of the United States to be desolated with desire—the desire for power in the hands of a few—a few in Washington? The very name of the great land where we live is the United States, but the States have been largely forgotten. The United has been made to mean united if you let us run it.

The Governors of the 48 great States that make up America are chosen by the people, too, but their voices have been falsettoed by the foster fathers of federalism. Whence came this evil? We American folks used to look to the county for a lot of our government. But it seems that the big county-seat town down on the Potomac has taken over.

Do States have rights? Do the people of the States have rights? Are these rights to be submerged through the planned perfidy of New Dealism? Today a Governor's conference has become a new battleground for States' rights.

At the recent Governors' Conference at Columbus, Ohio, June 24, a strong and healthy revitalization of State government through vigorous leadership of Republican Governors was indicated by their action demanding a return to the States of those powers so brashly borrowed by the Federal Government.

This Governors' Conference action of voicing demand for return of rights to the States is acknowledgment of the danger to good, decent, economical government in the post-war period unless the States have their proper share of administration of the people's rights.

The Governors also made it clear that they would investigate the vast bureaucracy that has been all too evident in their States, sometimes reaching ridiculous heights, such as there being many times as many Federal employees in their States as there are State employees.

In an article in this month's issue of Readers Digest by Senator BYRD, chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, it was stated that the total of Federal employees exceeds the combined total of all State, county, municipal, and all local governments in the United States. Surely this threatens rule from Washington.

Jefferson, the desecrated idol of the Collectivists who have used his name in blasphemy so many times to get $25 a plate at Jefferson Day dinners for the Democratic political expenses, said over and over again that no government could be strong without the support of the States that made it up.

Lincoln, a great welder of States, pointing to the hordes of office seekers, said some day that would be a greater problem than slavery, and today Federal bureaucracy has reached its zenith. The States should come alive. States' rights are at stake.

The Declaration of Independence contains this sentence: "He (King George) has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance."

Would you believe this was written in 1776?

The most destructive force to the States' rights in the Nation's history is the veritable flood of the 3,000,000 officeholders now on the Federal pay roll. They are concentrated in States to a degree ofttimes much greater than the entire State administration number. For instance, Ohio, where there are over three times as many Federal pay rollers in the State as there are State employees; Nebraska, where the Federal number is 24,600 and the State total only 5,680.

Every seizure of power, however small, is at the expense of the State. It is the only source of power to be tapped. The main trouble with Federal seizure of power is this: The national rule seldom fits any appreciable segment of the people or any appreciable number of States. There may be many men in the Army who wear size 44 uniforms, but that is no reason for fitting all soldiers with size 44. Any attempt to make a blanket order—as is usually done by Washington bureau chiefs on national matters—usually means a compromise on the multitude of widely divergent needs of the people of the various States with the result that such a blanket application seldom fits anyone.

Consequently the need of Government frequently is self-government within the State among the people who are best qualified to determine their own needs. The different characteristics of different areas are too often overlooked by the pompous Federal planners. Gas rationing by the Federal Government is a good example. For instance, when the New Deal professors and theorists, not knowing the broad reaches of the country outside of the big streetcar centers, took over gas rationing, they bungled the business, and howls were heard all over the Nation. What can a man who may have to drive 50 miles to reach a doctor do with 3 gallons of gas? It is evident that cognizance of local problems has not been taken by the New Deal dictators in this instance. Another example is the Federal Office of Price Administration regulation on chicken feed. Farmers used to buy feed for their chickens by the ton. Now they must buy it at not to exceed 200 pounds at a time. This requires them to go to town 5 times as often, and use lots more gas.

Federal order M68, designating 40 acres as the drilling area for one oil well, applicable alike in all States notwithstanding varying circumstances, is one of the primary causes of the threatened oil shortage. It caused the prohibition of drilling of several thousand wells (about 13,000 in 1942). Federal interference with State oil production plans is a glaring example of Federal encroachment on States rights, not only to the exclusion of the welfare of the people of those States, but to the detriment of the Nation at large. Even now that bit of czarism is crippling the war effort.

Federally fattened fuehrers rule more Government agencies affecting the daily life of the people of the States than there are States in the land.

Domineering New Dealers drum up more regulations for a supposedly free populace to live under than can be recorded in 100 fat volumes. The War Production Board's regulations alone fill some 20 thick books.

Free enterprise in State after State has been ruined by edicts of dictatorial Washington demagoges.

Today's test to democracy in America may be framed in the question: "Are we to have State's rights or Federal bureaucracy?"

Detroit's Part in Aviation

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William A. Mara, which appeared in the Detroiter of June 28, 1943:

DETROIT'S PART IN AVIATION

(By William A. Mara, Consolidated Vultee Aircraft, Inc.)

The development of both military and commercial aviation has been influenced to an amazing degree by work performed by the Detroit Board of Commerce and its members.

Harvey Campbell has asked me to tell this story which in retrospect is startling, because so many of the things we worked for and which seemed visionary at the time have now been dwarfed by actual achievement. Air lines, airplane manufacture, air races, air shows, glider competitions, exploration, balloon races, global planning, airports, airways, and a host of other projects were tackled with enthusiasm and ability. Therefore, if memory becomes hazy when looking back over a quarter of a century, and if the names and achievements of some of the actors who played important roles are omitted, the slight is unintentional.

Speaking first of air lines, the board has acted directly and indirectly in the creation of United Airlines, Northwest Airlines, Braniff Airways, and others. Detroit's part in these developments began one day in 1923.

Maj. Leon B. Lent, now Colonel Lent in charge of the National Inventors' Council in Washington, walked into the Board's offices with a plan for an air line to connect Detroit with Cleveland. Backing Lent financially was Inglis M. Uppercu, prominent Eastern

Cadillac distributor. Lent and Uppercu had acquired some twin engine World War No. 1 flying boats and had converted them into passenger-carrying planes. They had operated between Florida and Havana during the previous winter season. This was the pioneering step in our present aerial overwater networks.

Lent felt that a passenger operation between Cleveland and Detroit during the sumber months could be profitable, thus in effect giving them a year-round operation—Florida to Cuba in the winter and Detroit to Cleveland in the summer months.

Lent proposed what at the time seemed to be a rather difficult condition. He wished to have $25,000 worth of tickets sold prior to the opening of the line to Cleveland. The board was able to do this job.

On his staff Lent had two outstanding pilots: One was the late great Capt. Edward Musick, who later won international fame when, as Pan American Airways' chief pilot, he pioneered all of their far-reaching transoceanic services. Musick was chief pilot of the Detroit-Cleveland line. Operations manager was Roland Rholfs, who earlier had won the world airplane-speed championship held in Paris.

The first Cleveland-Detroit flight was made in the early summer of 1923. The passengers were Col. and Mrs. Sidney A. Waldon, Mr. and Mrs. Harvey Campbell, Colonel Lent, the writer and Mrs. Mara. Captain Musick was the pilot of the ship.

Detroiters were quick to patronize this new air service, which made the flight in 1 hour from a base on the Detroit River just above the Belle Isle Bridge to the docks in the heart of downtown Cleveland.

The success of this service furnished inspiration for the other air-line activities in which the board and Detroiters played important parts. Two members of the Board's Aviation Committee who acted on the inspiration were the late Howard E. Coffin, of Hudson Motors, and Carl B. Fritsche. They knew that the New York to San Francisco air-mail line was being operated by the Government through Assistant Postmaster General Paul Henderson. The Government was anxious to turn air-line operation over to private capital, but wished assurance of financial soundness to insure the continued growth of air mail, which had already been proven so necessary. Fritsche and Coffin asked the Board to make a study and prepare the prospectus for the section of this mail line which was to fly between New York and Chicago. In the meantime, Bill Boeing of Seattle, head of Boeing Aircraft that now builds the Flying Fortress, was making similar plans with the Post Office to take over the Chicago to San Francisco end of the line.

Carl Fritsche, Howard E. Coffin, Eugene W. Lewis, Walter L. Briggs, Charles Kettering, and the late Bill Metzger pledged their financial support and talked to leaders in eastern financial circles, including C. M. Keyes and the Ludingtons of Philadelphia. A meeting historic in the annals of air-line history was held one noon in 1925 in a private dining room at the Detroit Club. Gathered there were the Detroiters and easterners mentioned, together with Harvey Campbell and the writer. Plans were made for the formation of a company to be known as National Air Transport, Inc. Two million dollars was subscribed over the luncheon table to finance the new company. Shortly thereafter, Boeing completed his arrangements to handle the western end of the transcontinental line. The Government then relinquished its air-mail operation, turning it over to the two new groups. America's first privately operated transcontinental air line was born.

Later, a merger was effected between the two groups and the unified system now known as United Air Lines came into being.

Bill Stout, likewise a member of the board's aviation committee, has also played a strong hand in both airplane and air-line development. During World War No. 1, Bill built a "Batwing" airplane in Detroit. Later, he secured a contract from the Navy for a torpedo plane. Next came the "Tin Goose," an all-metal single-engine plane adaptable for either passengers or cargo. It carried seven passengers and was powered with a Liberty engine of 440 horsepower, developed in Detroit during World War No. 1. The board was instrumental in helping Stout organize and finance his company which flew the first passenger line between Detroit and Grand Rapids.

Stout's "Tin Geese" were also used by Mr. Ford, who pioneered America's first freight lines which operated daily between Ford plants in Detroit, Chicago, and Buffalo. The cargoes consisted of parts and materials which Mr. Ford interchanged between plants.

Later came Stout's association with Ford when the latter purchased the Stout Metal Airplane Co. and built the famous Ford trimotors which in themselves helped to establish a new transport era. These planes were successfully used on the first air-rail hook-up operated jointly by Transcontinental and Western Air and the Pennsylvania Railroad between New York and Los Angeles. Passengers flew by day on Ford planes and traveled by night via Pullman connection.

As proof of their inherently good design and long life, Ford trimotors, built in the early thirties, are still in operation today in Central and South America and probably in other parts of the world.

Later Stout, with the Board's assistance, began the operation of an air line bearing his name between Detroit and Cleveland. Detroit capital furnished the money for this enterprise, which was eventually absorbed, to the financial benefit of Detroit stockholders, by United Air Lines.

The board and its members—and I stress members because a board of commerce represents only the activities which its members inspire and carry through—had a hand in other successful promotional activities which affected the national aviation picture.

For example, the national air races were brought to Detroit in 1922. Apart from their value in making the public air conscious, the national air races served as a tremendous spur to the creative abilities of leading engineers and manufacturers who sought the prizes and prestige which went to national air race winners.

Formed also in the Board of Commerce, largely by reason of the work of the Board's committee, was the National Aeronautics Association, whose work in the early days was so important in the creation of a national force which helped to lay out the Nation's system of airways, airports, and aerial navigation aids in the form of beacons for night flying, and later the radio beam which furnishes an invisible aerial pathway along which you fly today.

Early in 1924, in an effort to sell air transportation to millions of people in other communities and thereby create a market for Detroit-made airplanes, Bill Metzger, Lee Barrett, Harvey Campbell, and the writer had a meeting. Metzger and Barrett had pioneered in the automobile industry. They helped to operate the early Glidden automobile tours. The idea back of the Glidden tour was a competition in which automobile manufacturers sent their cars cross-country to prove that they would actually run and thereby convince the public that they were practical. Don't you remember the day when duster-clad motor-car drivers were urged by wisecracking observers to "get a horse!"?

Harvey Campbell proposed at the meeting that the same idea be applied to airplanes. A course of approximately 2,000 miles was laid out. A formula for the race was established, and manufacturers were invited to enter their planes.

Through the good offices of William B. Mayo, then chief engineer of the Ford Motor Co., Henry and the late Edsel Ford became interested. Mr. Edsel Ford subscribed generously to the costs of the race and presented the handsome Edsel B. Ford trophy, which can be seen today at the Dearborn Inn. The event was known as the commercial airplane reliability tour, but by reason of Mr. Ford's trophy, was known as the Ford tour. The board, with the writer as manager, organized the first two tours. Later this work was carried on by Ray Cooper, now a colonel in the Army Air Forces, but at that time serving as assistant secretary of the board. Every airplane manufacturer of note entered these tours. The Ford trophy was the most sought-for prize in the industry. Most important, however, was the fact that these tours took the country's best airplanes to the people in many cities and helped to demonstrate the reliability of the airplane. As had been hoped, the tours' usefulness was ended as air lines operating on daily schedules began to reach many American cities. By reason of the daily demonstrations of air-line reliability, the need for the Ford tour ended. But, in the opinion of the industry, it exerted a powerful force in helping to make America air-minded.

And nobody can deny that the national air tours, initiated by the board of commerce, spawning State tours as they progressed, created the original demand for landing fields throughout America—fields that are now our finest airports.

Worthy of note also is the fact that tours were won largely by Detroit-made aircraft—Stinson winning in 1927 and Ford planes finishing in front on at least three other occasions, to win permanent possession of the trophy.

During the 1923–24 period aeronautical engineer Ralph H. Upson, who was also an international balloon champion, conceived the idea of a dirigible constructed entirely of metal. Through the promotional efforts of Carl Fritsche and other members of the board's aviation committee, the Aircraft Development Corporation was formed. A contract was secured from the Navy to build the world's first experimental metal dirigible which was affectionately known throughout the long years of its service as the "tin balloon." Associated in its development were two outstanding engineers and technicians, Art Schlosser and Eddie Hill, who also teamed up on another occasion to win the International Gordon Bennett Balloon Race, the stellar event of its kind. To Eddie Hill, who had a great mechanical mind, went the credit for developing a sort of sewing machine which used strands of aluminum wire instead of thread and made it possible to sew together the long sections of duralumin which were necessary in the dirigible's construction. While I make no claim as a lighter-than-air expert, I do know that the old Detroit-made "tin balloon" outlasted the Navy's larger ships, the Macon, Shenandoah, and Akron, and served illustriously for more than a decade until it was retired, all in one piece, a year or so ago.

In aviation's early days the Board attracted aeronautical engineers, pilots, manufacturers, and promoters from all parts of the United States. The late Anthony Fokker was a frequent visitor. Fokker, a Hollander, won fame during World War No. 1 for his pursuit planes which constituted Germany's chief aerial weapon. Fokker brought to the United States the first trimotored plane and entered it in the first of the Ford Airplane Reliability Tours.

A Fokker trimotor, *The Josephine Ford*, can be seen today in Mr. Ford's Edison Museum in Greenfield Village. With Ford's backing it made the first flight to the North

Pole, carrying on board Admiral Byrd and piloted by the late, great Floyd Bennett and the equally great Col. Berndt Balchen, who today serves illustriously in the Arctic with our Army Air Forces, and who made several notable rescues in Greenland not so long ago.

Later Admiral Byrd used a Ford trimotor to fly to the South Pole. Fokker, through his Detroit visits, was successful in securing the backing of General Motors. From that time on there was a battle of giants as Ford with his trimotor and General Motors with its Fokker competed for international air line business.

Detroit had also attracted the late Edward A. Stinson. Eddie was known as the dean of all aviators, having flown more than any other pilot in the world. During World War No. 1 he trained more pilots for the Army than any other man. Eddie was a frequent visitor to the board. Using a Junkers seven-passenger all-metal plane, in which he had established a world's endurance record of 26 hours, he operated a passenger and charter service and many a Detroiter was carried into the air for the first time in Eddie's plane.

He came to the Board one day with an idea on an old piece of brown wrapping paper. Before Harvey Campbell and the writer he unrolled the paper which contained the sketch of a biplane which had so many unusual features that at first it seemed fantastic. The plane, instead of being the conventional open type, had an enclosed and heated cabin. It was also to be inherently stable, meaning that it could fly safely with the pilot's hands and feet off the controls. It was equipped with an electric starter and finally, it was to have brakes on its wheels. None of these features had ever before been combined in one airplane. I remember that Harvey asked Eddie if he was an engineer and why he had come up with such a radical design. Eddie's reply was that he was not an engineer but he knew where he could get engineers and felt sure, from his experience, that this was the kind of plane that pilots wanted.

Neither of us had ever heard of inherent stability, so Eddie borrowed a pair of scissors and a sheet of Board of Commerce stationery and made a little paper model which demonstrated to our satisfaction at least, many of the theories of flight. Later we were to find that the real airplane was able to do all of the things just as successfully as they were demonstrated by the little piece of paper. It is also a matter of record that in order to be licensed all modern planes must be inherently stable.

Today, none of our air liners or military planes could possibly operate if it were not for the brakes. Landing at high speeds, they would overshoot the limits of the airports. Brakes are now a commonplace, yet they remain one of the greatest safety factors ever developed. When Stinson first suggested the use of brakes, aeronautical engineers set up a great hue and cry and learnedly contended that brakes could not be used. We listened to them but we must have listened more earnestly to Stinson. After all, we knew he was the world's most experienced pilot and he had a confident way of making one believe that he could back up his claims.

At any rate, the writer with Harvey Campbell's enthusiastic support undertook to organize the Stinson Airplane Syndicate for the purpose of building and demonstrating Eddie's airplane design. Practically every member of the board's aviation committee became a member of this syndicate. Eugene Lewis, Frank Blair, Luther Thomas, and other Detroit bankers came along. Bill Metzger, Edward S. Evans, D. B. Lee, and the late Tom Merrill, and others in the automotive industry were members. The advertising field was represented by Art Winter, Jim Evans, and George Slocum; the accounting profession by the late Dick Fitzgerald; insurance by George Carter, Jake Livingston, and the late Phil Marion, Sr. Even the city hall was represented in the person of the late John W. Smith, who was then mayor.

Stinson made another promise which seemed radical. He promised to completely design and build a plane in 3 months' time. Many were skeptical about this, feeling that a great deal more time would be required and that the $25,000 originally subscribed by the syndicate would also fall short of financial needs.

The first Stinson plane was built on the second floor of a little loft on Congress Street in downtown Detroit. There was considerable betting as to whether or not it could be taken out of the building without tearing the building down. However, Eddie guessed right in all respects. The plane came out of the building; it was built in the surprising time of 2 months and 10 days, and was first flown at Selfridge Field on January 25, 1926.

Later, in order to demonstrate the efficiency of the brakes, Eddie flew it one Sunday before several hundred people. Because the field was covered with snow and the tires would therefore slide when brakes were applied, Eddie put automobile tire chains on the wheels and demonstrated without question that brakes would work even in snow and ice.

Significant also in appraising Stinson's judgment was the fact that when a number of other Detroiters, at a luncheon meeting at the Detroit Athletic Club, subscribed the capital needed to turn the syndicate into the Stinson Aircraft Corporation more than $9,000 of the original $25,000 remained in the treasury of the syndicate.

At about the same time the Buhl family became interested in aviation's possibilities and secured the services of Fred Verville. Fred's work as an Army engineer had been outstanding. I believe that to him goes the credit for another great development—the retractable landing gear—which adds so much to the speed of present-day planes. Verville racers, built for the Army and flown by the Army pilots, won two of the Pulitzer races, then emblematic of the airplane-speed championship. In 1927 the name of the firm, Buhl-Verville Aircraft Co., was changed to the Buhl Aircraft Co. The Buhl planes had an excellent reputation and, if memory serves correctly, the Buhl "bull pup" was one of the first, if not the first, of the small planes built in what at that time was considered quantity production. It was a single-seater, wire-braced monoplane. The firm also produced a cabin biplane known as the Buhl air sedan.

Later Verville designed a four-place cabin monoplane and organized the Verville Aircraft Co. with a plant in Detroit.

Working in Detroit on an airplane-engine development was Eddie Rickenbacker who built the five-cylinder Detroit Bear Cat engine. That Rickenbacker dropped the engine project to become an outstanding success in the air-line field as president of Eastern Air Lines was no reflection on his original thinking with respect to small engines, as many thousands of light planes have since been powered with engines of the Bear Cat's approximate power.

At work also were two outstanding aeronautical motor engineers, Col. J. G. Vincent, vice president of Packard, and the late Captain Woolson, whose memorial plaque can be seen at the Detroit City Airport. They had designed water-cooled aviation engines which were successfully used and which I believe today form the basis for the Packard engines used in our PT boats which are such a thorn in the side of the Japanese Navy.

To this illustrious pair must also go credit for the creation of our first successful Diesel aircraft engine. For its test flights this engine was installed in a Stinson plane and the motors also operated daily in other Stinsons on the Thompson Airlines between Detroit, Cleveland, and Chicago. Captain Woolson's untimely death probably was responsible in some degree for the fact that Packard's Diesel experiments were not pressed.

Active also in the development of airplane motors was the Warner Aircraft Corporation and Continental Motors, both of whose products have won international acceptance and who are doing such a splendid job today in producing engines for the military services.

With the public now conscious of the possibilities of global air routes, which will fly across the top of the world to attain the shortest distance between two points, it is interesting to remember that the Board was aware of these opportunities 18 years ago.

The story of the backing given Admiral Byrd on his Polar flights has been mentioned briefly, but they offered definite proof that Polar flights could be made.

Interjected also into the picture was Sir Hubert Wilkins, who had the global idea and sought to find and claim land in the North Polar regions for bases for commercial or military operations. He found willings ears in Detroit. Backed by the Detroit Aviation Society, and assisted by the Board, Wilkins, Maj. Tom Lanphier, and Capt. Alger Graham made several notable flights, but, due to unfavorable weather conditions, the expedition missed its objectives on the first year's attempt.

The following year the party was known as the Detroit News-Wilkins Arctic Expedition. Stinson planes were used. On one memorable flight with the late famous Arctic flyer, Ben Eielson, as pilot, a landing was made on an icecap more remote from shore than the North Pole itself. Soundings showed only water below. Thus, while Wilkins found no land which he could claim, he covered thousands of miles of exploration of previously uncharted wastes.

Pursuing the idea of the northern routes to Europe, B. R. J. "Fish" Hassell, a pioneer pilot, came to Detroit in 1928 determined to demonstrate that an easy route to Sweden lay via Labrador, Greenland, and Iceland. He called this the "land route" to Europe because the water jumps between landing points are relatively short. Hassell, in a Stinson plane, made the first flight to Greenland. How right he was is proven by the fact that these bases are used today by untold numbers of our military planes which take this route to England. And still true to his belief is "Fish" Hassell, now a major in Air Transport Command, who is stationed at an Arctic base helping to get ships across.

No story of Detroit's early aviation days would be complete without touching briefly on airport development. In this the Board took a leading part. It pressed for airports just as strongly then as it is doing today. I think Mr. Ford must have heard our prayers. Certainly it can never be said of him that he lacked vision, because he made what seemed to be an overnight decision to build the Ford airport, which was then the most outstanding port in this country. I recall that when he built his airplane hanger it was regarded as a marvel in point of size, and many stated that it would never be filled with airplanes. How much, even in our optimistic thinking, we underestimated aviation's possibilities is indicated by the fact that the gigantic hangars on La Guardia Field in New York are already too small, though they cost $1,000,000 each.

There was also the day when the Board's aviation committee welcomed Dr. Hugo Eckener to Detroit. Eckener built the famous German Zeppelin ZR-3 and had flown it from Germany to the United States. We took Dr. Eckener to Packard and other Detroit factories, finally ending up at Mr. Ford's laboratory in Dearborn. Dr. Eckener could speak and understand little English. Mr. Ford could speak no German. The introduc-

tion was made by an interpreter and by way of greeting, Mr. Ford quoted Tennyson's poem, Locksley Hall.

"For I dipped into the future, far as human eye could see,
Saw the vision of the world, and all the wonder that would be;
Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales;
Heard the heavens fill with shouting, and there rained a ghastly dew
From the nations' airy navies grappling in the central blue;
Far along the world-wide whisper of the south wind rushing warm,
With the standards of the peoples plunging through the thunderstorm;
Till the war drum throbbed no longer, and the battle flags were furled
In the parliament of man, the federation of the world."

Mr. Ford believed this was the greatest aeronautical prophecy ever written. It had to be translated to the doctor who thereupon invited Mr. Ford to ride in the Zeppelin. Mr. Ford replied that he thought he would enjoy the flight and asked the Doctor to bring the Zeppelin to Detroit. Eckener said this would not be practical because Mr. Ford had no place to put the ship.

"What sort of a place do I need?" asked Mr. Ford.

"You need either a mooring mast or a large dirigible hangar," replied the doctor.

Mr. Ford studied for a moment and then said, "Which do you think would be best for my airport?"

Dr. Eckener recommended a mooring mast and Mr. Ford with no hesitation turned to Bill Mayo, his chief engineer, and said, "Bill, get the plans for a mooring mast."

"I already have them through the courtesy of the Navy," was Mayo's reply.

Whereupon Mr. Ford said, "Bill, you start in tomorrow morning and build a mooring mast." And so, a few weeks later steel was being erected and the present mooring mast on Ford Airport came into being.

The board's activities contributed to the establishment of three other airports and the saving of one—a very fortunate circumstance since two of these, Selfridge Field and Wayne County, are extremely important Army bases, and Grosse Ile is used as a Navy training station. The field saved was Selfridge. In the general let-down and disarmament proceedings which followed the last war and paved the way for this one, Army appropriations were cut to the bone and Selfridge was to be allowed to go to seed. The board's aviation committee secured the assistance of other Detroiters and a fight was led in the House by Bob Clancy, then our "good gray Congressman," who by dint of much personal persuasion and I believe by some parliamentary ruse, managed to save the day. The fight was also led for the Wayne County Airport. Finally, this mile-square port was secured. Again statements were made to the effect that this air field was too large, but history again refutes this argument.

However, to tell the story chronologically, the Detroit City Airport came first. Mayor John Smith called on the board to formulate plans for a city airport and named your reporter as the first aviation commissioner for the city. A great many sites were investigated, culminating finally in the present location. We failed to vision the day of blind or instrument flight when planes would land in the foggiest weather solely by instruments. For that reason, and because of the desire to locate the port as close to downtown Detroit as possible, we failed to pay sufficient attention to the hazards that exist in the shape of surrounding buildings. However, we did get an airport. The present site was available, and we took what we could get. It has rendered a service, even if now outmoded. Likewise, the hangar which was built by the late Albert Kahn was the largest in the United States. Here again the thought was widely expressed that it could never be filled.

With history repeating itself so many times not only in Detroit but with practically every airport in the United States, it is hard to understand Mayor Jeffries' lack of vision in not aggressively leading the fight for the airports the city so urgently requires.

The Grosse Ile Airport was brought into full flower by the Detroit Aircraft Corporation, who also acquired control of Lockheed Aircraft, of Burbank, Calif.; Ryan Aircraft, of San Diego; and Parks Air College, of St. Louis. Included also in their holdings was the all-metal dirigible previously described. That the Detroit group later relinquished control of Lockheed, Ryan, and Parks has no bearing at the moment. But it is important to know that Lockheed and Ryan are among the major airplane producers, and Parks has always been an outstanding air school which during the past few years has trained thousands of military pilots.

A great many of the Board's achievements came indirectly in the sense that if you assist in the birth of a child you become responsible in some degree for its activities. I can illustrate this with the case of Stinson Aircraft knowing its work best by reason of association. If Stinson is mentioned to the exclusion of other companies, whose work has been of equal importance, the reason is merely that I do not know their history quite so well.

Both Stinson and the Board of Commerce helped to sire Northwest Airlines, one of our four great transcontinental systems. On a Ford tour the writer met Colonel Britton of St. Paul and suggested the need for an air-mail line to link Chicago with the Twin Cities. Colonel Britton acknowledged the need. He felt that he could raise half of the money in St. Paul if we could raise the remainder in Detroit. The writer who was then associated with Stinson appealed to the Board of Commerce. Detroit's half of the money was raised promptly and Stinson equipment was purchased. However, it was not until some time later that St. Paul was able to furnish its financial quota.

Also at this time the Board and Stinson worked with Reed M. Chambers who was operating the No. 1 contract air-mail line between Atlanta and Miami. Chambers started his line with Ford single engine all metal planes. As a result of financial assistance secured in Detroit, Chambers extended his line using Stinson equipment. It was a temporary misfortune that the Florida real estate bubble burst and a hurricane struck more or less simultaneously wiping out most of Chambers' flying equipment on the one hand and emptying his potential customers' pockets on the other. It was Chambers who had the dream of air service from the United States to South America, which Pan American Airways has so successfully operated. Chambers, stopped temporarily on one aviation avenue, took another and organized U. S. Aviation Underwriters, the largest aviation insurance group and a highly successful one. Today, on leave of absence, he is vice president of the Rubber Development Corporation, in charge of getting vital rubber out of South America by air.

In 1928 the board of commerce took the initiative to sponsor and promote the first aircraft exposition of national scope. It was known as the all-American aircraft show and staged in Convention Hall. Sixty-seven planes, the products of 47 manufacturers, were exhibited to an attendance of more than 125,000 persons.

The first show was a financial success and it was decided to put the profits back into the promotion of aviation. For this purpose the aircraft bureau of the board was formed to promote and manage future events. Under the guidance of such Detroiters as William B. Mayo, Edward S. Evans, Thomas S. Merrill, Harry R. Graham, Charles T. Bush, Eugene W. Lewis, William E. Metzger, and a number of other prominent businessmen, the aircraft bureau staged more aircraft events of national scope than any similar organization in the United States.

Later, in 1928, the board staged the Detroit Air Olympics. The event began in the morning with the start of the fourth national air tour from the Ford Airport on a 6,000-mile tour to the Pacific coast and return. At 1 p. m. the finals of the boys' national model-airplane contest were held. This competition was between 500 winners of local contests held throughout the United States and several foreign countries. The day was climaxed by the start of the seventeenth Gordon Bennett international balloon race.

In addition to sponsoring both the 1927 and 1928 Gordon Bennett international balloon races, the board of commerce donated the third Gordon Bennett trophy at a cost of $4,000. This was done to continue this event, due to the face the second trophy had passed out of competition by having been won three consecutives times by the United States entries.

One of the outstanding events in 1930 was the All-American Flying Derby. This was sponsored by the American Cirrus Engine Co. of Marysville, Mich., with the assistance of the Aircraft Bureau of the Board. It was one of the most grueling tests of light planes and engines ever held. The race started from the city airport and followed a course of 5,700 miles in daily stages from city to city around the United States. Requirements were that all planes be powered by Cirrus engines rated at 95 horsepower. Entries ranged from specially built, streamlined racing planes to conventional type ships. Lee Gehlback won the contest in the Command Aire, averaging slightly over 200 miles per hour between Detroit and Buffalo on the first leg of the race and covered the entire 5,700 miles at an average in excess of 150 miles per hour. This contest was responsible for the development of many new types of light planes.

All-American Aircraft Shows were held in 1929 and 1930. Detroit shows had gained such prominence that in 1931, the National Aircraft Show was held in this city through joint sponsorship of the Aeronautical Chamber of Commerce and the Detroit Board of Commerce. This show was held in the new exposition hangar which had just been completed on the city airport. Here, for the first time at a major show, aircraft manufacturers could exhibit their wares and fly them as well. The hangar served as the showroom—the flying field as the actual demonstration point. This was one of the most successful shows ever held, as all exhibitors made sales. Indirectly, it had a bearing on changing the trend of air-line operations in this country.

The 1932 national aircraft show under the same sponsorship was again held at the Detroit City Airport. Space for exhibits was in such demand that it was necessary to place a three-pole circus tent on the apron of the hangar to accommodate the overflow.

In 1931 Stinson had built and was exhibiting its first trimotored airplane. At the show we met Paul Collins, one of the original air-mail pilots who had also had a lot of operating experience with Transcontinental & Western Air, Inc., and Eugene Vidal, who later became head of the Civil Aeronautics Authority. Collins and Vidal had the dream of an air line which would operate every hour on the hour between New York, Philadelphia, Baltimore, and Washington. Since they expected to receive no air-mail subsidy because

Eastern Airlines carried the mail on that route, all of their revenues would have to come from passenger traffic. They were looking for new air-line equipment purchasable at a price that would permit low operating cost and thus enable them to charge fares no greater than rail Pullman costs. They found it in the Stinson trimotor.

The Pennsylvania Railroad was one of their stockholders but since the controlling financial interest was owned by the Ludington Brothers of Philadelphia, the line was known as the Ludington Line. It operated so successfully for a period of more than a year that the frequent-service, low-cost policy which it established became the accepted practice on other air lines and paved the way for the growth in air transportation which followed. Ludington Lines were such a successful competitior that they were purchased by Eastern Airlines.

In 1930, E. L. Cord, having acquired the controlling interest in Stinson, was persuaded to start Century Airlines using Stinson equipment and also featuring frequent service at low fares. Century operated between Detroit, Cleveland, and Chicago, as did the Thompson Airlines. However, Century went further and flew also from Chicago to St. Louis and on the west coast from San Francisco to Los Angeles, Phoenix, and Tucson. Both of these lines later became a part of today's American Airlines' picture when Cord secured control of that organization.

After the war it seems logical that all first-class mail will be carried by air. Probably also every town will receive air-mail service. It is also probable, if operating costs work out favorably, that cargo planes will tow trains of cargo-carrying gliders which will be picked up by the tow plane while in full flight—without stopping. Later the gliders will be released from the tow plane and will glide down to their destinations.

The du Pont interests have already demonstrated the technical practicability of both ideas.

Since 1939, Richard du Pont's All American Aviation, Inc., using Stinson planes, has operated the world's first "pick-up" system for taking on and discharging air mail without landing the airplane. All American today serves many cities and small towns, many of them without airports, in Pennsylvania, New York, and West Virginia. In operation the plane slows down to about 100 miles per hour and picks the mail off the ground, simultaneously dropping mail for that city, in a manner somewhat similar, in results at least, to that used by railroads who pick up small city mail without stopping.

More spectacular, but equally practical, is the du Pont method in which the Stinson is again slowed down to 100 miles per hour and snatches a loaded glider from the ground and into the air in almost instantaneous motion. Reasons of military secrecy prevent greater description of du Pont's work in this respect at this time. But technical foundation for peacetime has been laid.

Stinson, and indirectly therefore the Detroit Board of Commerce, was also responsible for raising the initial money and suggested the idea which resulted in today's highly successful Braniff Airlines. It is significant to note that most of these enterprises have been successful ventures, in which the stockholders have made money.

The board has played a part in many other ventures which have done much to promote and develop interest in aviation. Edward E. Evans, president of the board's aircraft bureau, furnished the Evans' Glider Trophy which was competed for annually by the world's foremost gliding experts. Gliding was called prominently to the attention of the world when German gliders loaded with troops landed on and took possession of Crete. Today Henry Ford is turning out great numbers of 15-passenger troop-carrying gliders.

It must be true also that a great many of the boys who participated in the airplane model contests sponsored by the board of commerce are today manning our fighting planes.

History is important because it indicates that persons and cities who have achieved success in a given field have acquired a "know-how." Today we might easily have been numbered among Hitler's slaves if it were not for some of the aeronautical developments pioneered in Detroit and if it were not for the tremendous production of military equipment flowing out of our factories. Detroit faces a post-war world which finds her in a fortunate geographic position. By means of the airplane Detroit rather than New York and other coastal cities can become the take-off point for Europe, the Orient, and South America. We have the opportunity to profit handsomely in the post-war aviation growth which is certain to come.

Whether or not Detroit will realize on her potentialities depends on whether or not management, labor, and government have the vision and desire to team together to reach this golden goal.

Jefferson Day Address by Senator Barkley at University of Virginia

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD the very able address delivered by the Senator from Kentucky [Mr. BARKLEY] at the Jefferson Day celebration at the University of Virginia on July 4, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Darden, President Newcomb, ladies and gentlemen, all over the world today, and especially all over America, the memories and significance of this day are such as to stir our souls and lift them to new heights of emotion and resolution.

The celebration and observations of this day are marked by a trinity of associations. It constitutes a sort of triple observation of events linked forever in the history of America.

It marks the two hundredth anniversary of the birth of Thomas Jefferson.

It is the one hundred and sixty-seventh anniversary of the adoption of the Declaration of Independence which Jefferson wrote.

And it is the one hundred and seventeenth anniversary of the day on which he died in the eighty-fourth year of his life.

This day, therefore, is more intimately associated with the name and deeds of Jefferson than with those of any other single American in all our history.

The Fourth of July without Jefferson would be like Christmas without the Man of Sorrows.

In saying this I do not detract from the renown of any other illustrious names associated with the Declaration of Independence and the American Revolution. But Jefferson is the man who gave tone, color, substance, and vital breath to the document which proclaimed our independence and gave the reasons for that proclamation.

It was Jefferson who wrote the words and set the music to the immortal epic of our liberties. He was acknowledged by his comrades as the premier in the expression of American faith and determination in an era of transcendent movements in fixing the fate and welfare of America and the world.

No man can, in the space of one speech or one book, draw an adequate portrayal of Thomas Jefferson. No comprehensive or satisfactory biography of him as yet has been written. This is unfortunate but perhaps not strange. He was a man of such versatility, such breadth of research and range of intellectual and spiritual vision, of such prophetic understanding and yet of such simplicty of approach to and the mastery of every subject which absorbed his talents, that it is not easy to garner the vastness of his life and labors into one vehicle of expression, whether it be a single discourse or a collection of volumes.

His interest in, his accomplishments for, and his contributions to agriculture alone would afford the subject for fascinating discussion and contemplation.

His excursions in the field of science, his achievements as an applied mathematician, his faculty for mastering the difficulties of ancient and modern languages; his familiarity with the philosophical and metaphysical literature of the world's great thinkers; his knowledge of botany and zoology and his use of that knowledge in the cultivation of his lands and the beautification of his beloved home atop the "Little Mountain;" his devotion to the divine art of music and his contribution to that art, in which he says he spent no less than 3 hours per day for at least 12 years of his life; his warm and tender devotion to his family and his relations and his friends; his solicitude for the welfare of those for whom he was responsible, whether white or black, free or slave; each and all of these qualities of the man, and more that might readily come to mind, furnish material for interesting and fruitful discourses without number.

But it is not in these particular fields that I shall dwell on this occasion.

It has been truthfully said that some men are born great, some men achieve greatness, and some men have greatness thrust upon them.

Rare indeed is the man who combines all of these sources of greatness in himself.

Jefferson was born great. That is, he was born with the background and the environment and the physical and intellectual qualities that marked him from earliest boyhood for a rendezvous with destiny.

He certainly achieved greatness. The roll of his outstanding, and as it now appears indispensable, contributions to the welfare and history of organized society in his day and for all time cannot be exceeded for number or importance by those of any other man in our history or any history.

Assuredly, he had greatness thrust upon him. Modest, almost diffident in his aversion to public display, preferring in his heart the peace and quietude of his mountain sanctuary, yet he was drawn forth from it by the force of events and by the people's choice to a service and to honors covering a period of half a century.

When, if ever, has there lived such a mortal man born of woman and created in the image of God?

As I stand here at this hour in the shadow of the home he loved and the great seat of learning which he established, it seems as though his spirit hovers about us, and that his tall and manly form, with hands clasped behind him in contemplation, might be seen

to stride across this campus in benediction upon his handiwork.

It is in the field of statecraft, however, that Jefferson made his greatest impact upon our institutions.

Statecraft does not necessarily mean the holding of public office. If the mere holding of public office was a guaranty of statesmanship we would have little to worry about in this country or in the world. We know there is no such guaranty and we know that there are many men who may be called statesmen who never held a public office, who never commanded the applause of listening senates or bent the pregnant hinges of the knee that thrift might follow fawning.

They may be found in the pulpits, in the schoolrooms of the colleges or universities or in humbler scholastic stations. They may be found in medical or legal professions or in the counting rooms of business or finance. They may be found in the fields of cultivation and production close to nature and to nature's god.

Jefferson would have adorned the field of statecraft, of philosophical statecraft, if he had never held an elective or appointive office.

But the occupancy of these public stations from the burgesses to the Presidency, afforded the setting and the opportunity for the display of his transcendent abilities and human sympathies and for the skill with which he was endowed in translating his ideals into laws and proclamations and constitutions.

Most of these things which bear his name might not have come, or might not have come at that period, nor borne his impress upon them, had he not been in an official station where his aspirations for mankind could take form an be embedded in statutes written for the guidance and supervision of the people's affairs.

Jefferson has been called a dreamer. By his bitter enemies he was called a demagog. By the reactionaries, the tree sitters, and the stand-patters of his day, those whose timid or selfish souls are always in every age afraid to advance three paces from the status quo, he was denounced as a revolutionist.

Some of these things he may have been and undoubtedly was.

He was a dreamer. He dreamed amid the hills and mountains beyond the tidewater of a brighter day for the oppressed children of men. He dreamed of a new independent nation of free people dedicated to the establishment of self-government among men. He believed that men could govern themselves if given the opportunity, and he dreamed all through his long life that this eternal principle might find vindication in ever broadening fields in America and throughout the world.

He was beyond question a revolutionist. I do not mean that he sought to destroy existing orders merely for the pleasure of seeing them topple. His iconoclasm was not capricious. If he could have seen the rights of men as he believed in them recognized and established under the existing Government in the Colonies, he might never have sponsored the Separatist movement embodied in the American Revolution.

But to him the liberties of the people, their right to govern themselves, were more important than forms of government, and when he became convinced that these inherent rights could not be secured or preserved without a revolution, he became a revolutionist. He not only became a revolutionist for the special purposes he set out to accomplish for mankind, but he recommended revolution to all peoples and all generations as a remedy against the same or similar intolerable conditions as those which he challenged and helped to overthrow.

The very doctrines which he set forth in the Declaration of Independence were revolutionary. They were so considered by a majority of the people of the mother country and by a considerable element of the people of America at that time.

It is true, of course, that during the long and struggling history of mankind many men had proclaimed doctrines akin to those advocated by Jefferson, who himself acknowledged his indebtedness to them.

But when Jefferson constructed the Declaration of Independence he built it out of the experience, the suffering, the humiliation and the hopes and convictions of men who never conceded or believed that God created man in His own image and proscribed some of them in the enjoyment of rights essential to all of them.

When Jefferson started out to draw the resolution which he had been commissioned to frame, he did not indulge in ambiguities.

He did not say "We have a feeling that there is something wrong," or that "There is a suspicion abroad in the land that there are some inequalities that should be adjusted," or that "It is claimed that there ought to be a more substantial equalization of the privileges that are enjoyed under Government."

He boldly and unequivocably proclaimed "We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

In his conviction, there was no dispute, argument, doubt, or equivocation about the equality of men. It was not to be debated in any forum. It was not to be submitted to a jury, after argument, from whose verdict an appeal might be taken to a higher tribunal. It was not a problem to be submitted to the decision of a political campaign.

"We hold these truths to be self-evident"—beyond the peradventure of doubt—to be seen and acknowledged by all authorities—that all men are created equal."

The equality which Jefferson proclaimed was not physical nor intellectual equality, nor moral or financial equality. We know that there are variations in the physical, moral, and intellectual equipment of men which preclude any leveling off process for these divergent qualities.

What Jefferson was talking about and what the Continental Congress meant when it adopted his declaration was that all men are equal in their right to enjoy the privileges of freedom under a government of their own choosing which derives all its just powers from the consent of those who are governed.

It was a revolutionary doctrine to announce that these human beings were not only equal but that they had been endowed by their Creator with certain inalienable rights.

These rights were not to be the subject of barter or sale.

They could not be alienated by the people themselves, much less could they be alienated by some governmental agency that is presumed to have power over their lives and destinies.

These men for whom he spoke—in all ages, lands, and generations—for the truths which he announced as self-evident were timeless and without boundary—were not only equal but were endowed from on high with rights which could not be taken from them; and among these rights were life, liberty, and the pursuit of happiness.

It seems almost incredible that in view of the length of days and years and ages which has elapsed since the creation of man, and since even the dawn of history, it has been only 167 years since man's equality was proclaimed in the fullness of sweeping comprehension as set forth in the American charter of liberties. If these things were self-evident why had it taken 6,000 years of recorded history and 17 centuries of the Christian religion for even a small portion of mankind to realize it?

The answer to that question would take me beyond the scope of my present task.

But the answer to it is sufficiently apparent to explain why Jefferson was looked on and denounced as a revolutionary firebrand who was seeking to overthrow established society and build flames of unobtainable hope among the common people who were and should remain subservient to the aristocracy of wealth and position they had served so long.

While the immediate occasion for this burst of devotion to the equality and freedom of man was the intransigent policy of the British Government, the views he expressed and the language with which he clothed them were suitable for all generations of men and are as appropriate today in the world as it is now, as they were when Jefferson proclaimed them.

In the Declaration of Causes of taking up arms issued July 6, 1775, he said this:

"We have counted the cost of this contest and find nothing so dreadful as voluntary slavery. Honor, justice, and humanity forbid us to surrender tamely that freedom which we received from our gallant ancestors and which our innocent posterity have a right to receive from us. We cannot endure the infamy and guilt of resigning succeeding generations to that wretchedness which inevitably awaits them if we basely entail the hereditary bondage upon them.

"Our cause is just. Our union is perfect. Our internal resources are great, and, if necessary, foreign assistance is undoubtedly obtainable. We most solemnly, before God and the world, declare that, exerting the utmost energy of those powers which our beneficent Creator has graciously bestowed upon us, the arms we have been compelled by our enemies to assume we will, in defiance of every hazard, with unabating firmness and perseverance, employ for the preservation of our liberties; being with one mind resolved to die freemen rather than to live as slaves."

That quotation taken from a document that antedated the Declaration of Independence by 1 year, might well have been uttered yesterday by the President of the United States. For in terms as cogent and as unimpeachable it portrays the present determination of our Government and our people in the world-wide struggle we are waging now to preserve the things about which Jefferson was talking.

One of the great things which made Jefferson the political, philosophical, and intellectual leader of his day was his faith in man. This does not mean that he trusted the judgment or disinterestedness of every individual human being in all the world, but it means that he trusted mankind. He was convinced that man would avoid error when the facts were known. Hence he trusted man as a whole rather than a few who would enslave him. Hence he wanted him to be free. Political freedom was the goal of his life's devotion.

He had faith in the ability of man to fix his relation with his Creator. He held it to be a cardinal requirement in a democracy, and logical and appropriate under any government, that man's soul should be and remain unfettered by any restraint imposed by government; and because he believed this he fought for and accomplished the emancipation of man's soul by the Virginia statutes for religious liberty.

For this he was denounced as an atheist. He was pilloried by those who invoked the power of the state to bind man's eternal soul in the chains of a state-imposed and state-supported religion.

But he was gloriously vindicated in the Constitution of his country and in the enlightened opinion of mankind.

Jefferson knew that political and religious liberty, essential as they were, did not constitute the whole category of freedoms which should flourish in a democracy.

Therefore, he charted the way for intellectual freedom to go hand in hand with political and religious freedom, by advocating and striving to inaugurate a system of public education which would loose the chains of ignorance which bound and shackled the minds of the people.

In a letter to George Wythe, August 13, 1786, he had this to say:

"I think by far the most important bill in our whole code is that for the diffusion of knowledge among the people. No other surer foundation can be devised for the preservation of freedom and happiness. Preach, my dear sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils, and that the tax that will be paid for the purpose is not more than one thousandth part of what will be paid to kings and nobles who will rise up among us if we leave the people in ignorance."

One of the great disciples of Thomas Jefferson was Abraham Lincoln. All through his writings and public papers we may depict the influence of Jefferson upon Lincoln. In the midst of a great war between the States in an address at the battlefield of Gettysburg, Lincoln began as follows:

"Four score and seven years ago, our fathers brought forth upon this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great civil war testing whether that nation or any nation so conceived, and so dedicated, can long endure."

It has been 80 years since the delivery of that brief and immortal address. We might, with equal truth and equal solemnity, now say:

"Eight score and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great world war, testing whether that nation or any nation so conceived and so dedicated can long endure."

We who live today and who believe in the immortal principles which Thomas Jefferson wove into the fabric of our life are called upon to struggle beyond a wider field and more far-flung battle lines, but the issue is no less centered around the rights of the people in this struggle than it was in the day of Jefferson. It was natural for the timid soul in 1776 to hesitate about paying the price for the creation of liberty on this continent and for its extension throughout the world.

We have timid souls now in our midst and throughout the world who question whether we should have embarked in this struggle in defense of our liberties and our institutions but unless our Nation had arisen in all its might and power to preserve what Jefferson helped to create for us, we who speak and think of him today would have been unworthy of his heritage.

Jefferson died on the fiftieth anniversary of the immortal document which his brain conceived and his pen inscribed. He wanted to live until that day of anniversary.

On that same day died John Adams, his lifelong associate in the establishment of liberty and his friend until the grim reaper claimed his reward.

Jefferson's last words were, "This is the Fourth of July."

John Adam's last words were, "Jefferson still lives."

Those words of John Adams were prophetic and it is true and will be forever true that Jefferson still lives.

Post-War Idealism

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a speech delivered by me before a Republican rally at the Terrace Garden, Morrison Hotel, Chicago, on Thursday, July 1:

Americans have a right—nay, they have a positive duty—to scan carefully and examine minutely the post-war programs which, in simple abundance, put our victory gardens to shame.

I wish that some of these schemes for post-war activity were as substantial in common sense as the victory gardens are expected to be in nutriment.

Most of the post-war planning schemes which I have looked into, all of which are advanced under the bromide of "winning the peace," will produce a crop. But they won't produce a crop of international amity and friendship. They will produce a crop of international distrust, of international bitterness.

If they, or any of them, should by some disastrous lapse on the part of the people of the world be adopted, they will breed international pressure politics with the inevitable consequence of a war in comparison to which the present struggle is but a mere battle.

Conceived in super-state megalomania and nurtured in cheap ward politics by pseudo-idealists, these schemes are advanced and fostered without any consideration of the natural reactions of governments and of peoples.

Super-state politicians are rampant in Washington. They are tireless in their efforts to sell to the Congress and to the people the demagogic appeal that it is the duty of America to save the world.

America cannot save the world. America's duty now and when victory shall have been achieved is to save America.

We went to war to save America. We must go to the peace table with the same patriotic and high purpose.

We are told by all of those who are fostering these internationalist schemes that in the post-war world America must stand ready voluntarily and willingly to sacrifice portions of her sovereignty, part of her liberty, and much of her freedom—political, economic, and personal—to make the world a better place for other nations.

I cannot subscribe to that theory.

There is no more substantial manner in which America can contribute to the welfare of the world than by preserving completely and totally her political sovereignty, her economic liberty, and her personal freedom.

These have, in the past, been America's crowning examples to the world. They must be preserved in their entirety for only through their preservation can America and Americans furnish to the world an example which in time may lead other nations to substantial emulation.

Americans have again the right, and again the duty, to scan the credentials of those who advance what they are pleased to call post-war ideals. We have a right to test those credentials and their application to the ideals of America.

Have the schemes which are being advanced been applied satisfactorily in America? Have the proponents of these peacetime blueprints made their blueprints of a wartime America and a peacetime America work? For, make no mistake about it, the post-war schemers have a blueprint worked out in meticulous detail not only for the nations of the world but for the individual citizens of the post-war world state.

They already propose to tell the world and its people what they shall eat, what they shall wear, what they shall produce. They already propose to tell the world and its peoples what they shall think, what they shall say, and what they shall print. They already propose to tell the world how much a man or woman shall earn and how much of his earnings he may keep or spend. They already propose to tell the world and its peoples what shall be their conception of freedom and liberty—either not knowing or not caring that freedom is not something which is imposed from above but which intrinsically comes from below.

Many of these schemes have been tested in the United States and on its people over the last decade. They have been tested in peace and in war.

And history will show and common sense will demonstrate that these schemes, in their application to America and Americans, have been a 99-percent failure. In the 1 percent of their success they have served not the country but the selfish desires of their manipulators.

Let us briefly examine a few of the proposals which we are told must be in the portfolios of the delegation which we will send to the peace table. Let us test them in the light of their having been applied in the United States. In the test we will find the answer to the vicious and bitter personal attacks which an almost limitless army of propagandists and stooges level at all who dare to oppose them.

The source from which all of the internationalist schemes flow is the statement of the "four freedoms" as the objective for which we are fighting. The very statement of the "four freedoms" is a negation of freedom and liberty. For these "four freedoms" are not within the gift of any nation or any group of nations to bestow upon any other nation or any group of nations. The minute you impose a freedom on someone else it ceases to be a freedom and becomes a chain.

Freedoms are inherent. Sometimes we are deprived of them by outside forces. But we are never given them by outside forces.

But let us look into the "four freedoms" individually and how America is going to give them to the world.

Out of order, I take up "freedom of want." I do so because the international schemers have already sought to implement this freedom—at least in one direction—by an international conference on food. A conference which has been barren of results, but the sterility of which has not in any way dismayed the megalomaniac maneuverers.

Freedom from want means, in the simple old-fashioned American language, which is the only one I know, that everyone is going to have all he wants to eat, all he wants to wear, all he wants in the way of a home, all he wants of money, all he wants of moving pictures, or any other necessity, conveniences or luxury.

All these things the superstate is to supply when peace comes. It is to supply them to all the world and to all its peoples.

Do you think any state, national or international, can do it?

Do you think that that is the reason our men and our women are fighting on all the seas and all the continents?

We, here in America, have enjoyed the greatest freedom from want ever enjoyed by any people in any land. We have created here the highest known standard of living. Was that freedom from want given to us by the Government? Or was it won by us individually in the pursuance of our own

happiness and by our own energy and our own ability?

A few years ago it became the theory of some in our Government that the giving or withholding of freedom from want of Americans was the function of government. The same long-haired and short-brained theorists who now propose international dictation of everything stretched the long fingers of Washington into every State, every county, every home, and touched every individual in the United States.

Has that grasp of Washington brought greater abundance, greater prosperity, greater happiness, more freedom from want to Americans?

You and I know it has not. We know that impractical bureaucrats in Washington took the greatest producing country in the world and have reduced it to a Nation which cannot get what it wants and what it needs to eat.

By a series of Executive decrees our domestic economy has become so disrupted, our production so curtailed, and our distribution system so disastrously entangled that many fear that America can never be truly America again.

Think you that the men—and women—who brought want to the United States are capable of eliminating want from all the nations of the world?

I know it will be said that this want in America is due to the war. But it simply is not so. The food which you lack today has not gone to the countries associated with us.

That food has simply not been produced. An administration dedicated to the doctrine of economic scarcity made it impossible for Americans to produce and distribute the food which this country and its citizens need.

Rationing, adopted from foreign lands and heretofore unnecessary in America, came to us under the guise that it would promote equitable distribution. Actually, it was forced upon us because some bureaucrat thought it was a method of overcoming what he imagined was the complacency of Americans in the face of the war. And the rationing contributed to the muddle, to disrupted production and distorted distributions because it immediately put a damper on the will of Americans to produce.

Think you that the fathers of our muddle are capable or should be entrusted with putting all the nations of the world under a superinternational economic dictatorship?

Is all the world to be starved by those who killed little pigs by the millions and paid billions of dollars to farmers not to plant and not to grow food crops? Is that the way to freedom from want?

Let us look at another of the "four freedoms" and consider its world-wide application in the face of America's recent experiences. Let us take up freedom of the press and of speech.

For generations America preserved freedom of expression. It was preserved as a bulwark of all our other liberties and for generations no man in public life dared to shatter the guaranty which wise forefathers had written into the Constitution.

Now it is proposed by Washington that this constitutional guaranty shall be extended world-wide and it is said that this is one of the objectives for which our men are fighting.

Let us examine the fidelity to this American ideal of those who proclaim their intention to force freedom of the press upon all the world.

The radio stations of the Nation today have the hand of bureaucracy around their necks. They dare not say a word that will displease the masters. Their very existence is made contingent upon their saying what the master wants them to say and remaining silent when the master proclaims silence. Ask any radio station or radio chain official and if he is not overcome by fear he will tell you that.

To bravely assert their independence, to fight for their freedom, would mean that licenses would not be renewed and the radio station or chain destroyed.

See what the bureaucrats think of freedom of the newspapers. Have they been left their historic freedom and independence as guaranteed by the Constitution without molestation by those who are drunk with power and with a dream—or rather a nightmare or megalomania?

Why, the great Associated Press, the distributor of more news to more newspapers than any other organization in the world—not excepting the "kept" associations of European nations—is the objective of sneaking action designed to make it amenable to the theorists and their pets. Government proclaims that it will tell the Associated Press what it shall do with its news and to whom it shall give it.

Is that proof of good faith on the part of those who say that freedom of the press shall be made world-wide by official edict, and who say that that is what we are fighting for?

Recently there was held in the United States a so-called international food conference—at which presumably the abundance of America was to be further partitioned among other nations in order to bring scarcity to all.

Was the free press of the United States welcomed to that conference in order that Americans might be told what went on? Not so. Armed soldiers with gleaming bayonets herded the reporters and correspondents from the place of meeting And we don't know yet what went on at that session.

Are the men who do these things holders of substantial credentials for their guarantee of an international free press? Are those who stifle the one free press of the world—the American—likely to be the legitimate fathers of a world-wide free press reform?

Another of the group of "four freedoms" so loftily expressed and so secretly sabotaged is freedom of worship. Let me recall to you that this most sacred of freedoms was not proclaimed in the same stentorian tones as the other three. For diplomatic and political reasons it was soft-pedaled when the new proclamation came down from Mount Sinai.

And let me tell you that when its pronouncement is delayed for diplomatic or any other reason the guarantee becomes qualified. Americans don't want any qualification of their adherence to freedom of man to worship as and when he will. Not even when that qualification is designed to buy favor with one of the nations which valorously fights by our side.

So we come to the last of the "four freedoms" as announced by the new dispensation—freedom from fear. It sounds good. It sounded good when it was fathered on the steps of the Capitol by Mr. Roosevelt at his first inauguration long, long ago.

But again let us test this freedom by the credentials of those who have had it in their keeping for America and who now are to dispense it to the world.

How free from fear are you? Do you consider yourself secure in your property, secure in your traditional freedom, secure in your right to live your life as you see fit? You know that everything you do, everything you eat, everything you earn, is now dictated from the ivory towers of Washington. And that can't bring freedom from fear.

You know that what a dictatorially inclined Government gives today it will take from you tomorrow. Does this uncertainty bring freedom from fear?

Are you free from fear when you know that the very halls of justice are not free from the hand of the bureaucrat? Think you that those who would not hesitate to besmirch and control the Supreme Court of the United States are apt to be deterred from interfering with your personal life?

This Government which we now have lives and thrives on the very fear which it nobly says it will eliminate from the world.

Is the American farmer free from fear, with a myriad of Federal agents swarming his fields and threatening him with jail if he overplants and overproduces? Is the American worker free from fear when Government tells him what he may earn, where he may work, and threatens him with jail if he violates one of a myriad of incomprehensible and often contradictory orders and edicts? Is the American businessman free from fear when each day brings to his factory or his office or his plant scores of impractical orders from men and women in Government who don't know the first thing about business or industry?

Freedom from fear. The very words are a mockery when they come from the lips of those who distill hatred to one group while slavishly cringing before another.

Yet, these are the dreamers and schemers who say that freedom from fear shall become world-wide and that that is what our men are fighting and dying for.

Those who want Americans to lead in a world-wide crusade to establish an Utopia for all nations should give us first some proof of their faith in the principles to which they give lip service.

Let the New Dealers restore the four freedoms to America first.

They have endangered, if not destroyed, them here. Let the New Dealers set our own house in order before setting up new houses in other nations.

We are fighting this war and we will fight it to victory. We will fight it with every ounce of energy and ability we have. We will give our lives and our fortunes to its successful prosecution. But we are doing it to preserve America's freedoms for America.

And whatever treaty or treaties follow this war, whatever increases in our armies and our armaments follow this war, they will follow in order that America and Americans may remain free.

The Radio Investigation

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. BOREN. Mr. Speaker, at the conclusion of my remarks, I desire to place in the RECORD the column of George E. Sokolsky, found in the New York Sun of the 5th instant, concerning the investigation of the Federal Communications Commission now being conducted by a select committee of this House. The column portrays briefly a few of the things that are being done these days by departments and agencies which have wrapped about themselves the American flag, and, when challenged for waste and inefficiency, even for indulging in activities dangerous to the national war effort and security, cry from the housetops that those questioning their activities are interfering with the war effort.

It is high time that Congress, as millions of our people are now doing, take note of the fact that we are wasting our

taxpayers' money in carrying on alleged war activities which, when examined, are not war efforts at all, but are figments of the brains of bureaucrats who have been permitted to magnify their importance beyond all rhyme or reason. Certainly, the existence of a war constitutes no license to pilfer and waste the funds so generously and uncomplainingly being contributed to the Government through bond purchases and in the form of unusual and burdensome taxes which, as time goes on, must of necessity become more and more onerous.

There neither has been nor can there be any denial by the Chairman of the Federal Communications Commission of the facts found by the Joint Chiefs of Staff, upon which the recommendation was made for the transfer of the F. C. C.'s so-called intelligence activities to the military establishments, where such activities may be better and more safely utilized. The Secretaries of War and Navy have said that the so-called war functions of the F. C. C. are worthless. The Joint Chiefs of Staff have said the same thing, and it is unfortunate that Army and Navy officers have been silenced and prevented from giving testimony before the select committee now investigating the F. C. C. It is now known that both the Secretaries of War and Navy have informed the House committee of such a gag on their officers, although it is clear to all that testimony to the effect that F. C. C.'s alleged war activities render no valuable services to the military establishments from the standpoint of intelligence does not, and in the very nature of things cannot, involve the disclosure of any military or naval secrets. One has only to read, even carelessly, the testimony of the F. C. C.'s representatives in appropriations and other hearings, when the claimed importance of that agency's war activities have been glowingly described, to see that such hearings have involved disclosures which should not have been made in respect of the activities of any agency doing truly military or naval intelligence work.

There is but one conclusion to be drawn; and that is that the officials of the Federal Communications Commission are so afraid that an aroused Congress, now and at long last supported by public sentiment, might expose the utter uselessness of the F. C. C.'s war communications activities and curtail their huge appropriations. An outraged public is sure, at some time, to demand a curtailment of spending by our "squandermaniacs" on the domestic front. So, Mr. Speaker, why should we not have the facts concerning the F. C. C. as a starting point for better things to come in the way of economy and good government? If we do good there, further good may flow from other things which surely will follow.

It is to be remembered that the silencing of Army and Navy officers is not pitched upon a possible disclosure of military or naval secrets, or on a possible interference with the war effort. The order is predicated upon the tenuous ground that, to inquire into such matters, will be incompatible with the public interest. What greater interest can the public have than in seeing to it, through its duly elected Members of the Senate and House, that both our war and domestic affairs are conducted in a businesslike and economical way? And by what stretch of the imagination can it be said that the public interest is best served by covering up, rather than by exposing, wrongs against the people? Can the concealment of vital information be deeded paramount to the inherent right of Congress to demand and get information necessary to, and in furtherance of, corrective legislation?

I submit that the right and duty of Congress to conduct hearings, gather facts, and enact remedial and curative legislation are inherent in this legislative body—powers which cannot be, and must not be, frittered away. If the present trend and practices of the entrenched bureaucrats is permitted to continue, the time soon will come—and it is practically at hand—when the administrative and executive departments will wholly and successfully disregard and defy the will of Congress, and legislative procedures and progress will meet an untimely end.

The charge of the F. C. C. that the Army, Navy, and the House committee are conspiring to wreck the F. C. C. is without foundation in fact, for reasons too numerous to mention. The charge is so utterly absurd that its assertion reflects no glory upon its authors, if the charge had more than one author. Of course, the committee's staff could not be in the conspiracy, nor could the members of the committee, because the committee was not in existence when many of the things charged in the alleged conspiracy occurred.

Be all this as it may, however, there are conspiracies and conspiracies; and if, as clearly appears to be the case, the object of the concerted action of the committee will but serve to correct wrongs, stop waste, inefficiency, and bring about proper remedial legislation, then give the people of this country more such conspiracies.

THESE DAYS—THE RADIO INVESTIGATION

(By George E. Sokolsky)

Although every effort has been made to smear the Cox committee in advance of its open hearings, its counsel, Eugene L. Garey, has got off to a good start by a careful, documented statement of the problems arising from the expansion of the power and authority of the Federal Communications Commission, and by the release of his letter to Secretary of the Navy Knox and Secretary of War Stimson which, in effect, discloses that the military forces were in protest against the methods of the Federal Communications Commission and that their protest and criticism and the data pertaining thereto had been suppressed and withheld from the American people.

In his introductory statement, Mr. Garey said:

"It is clear that the practically unrestricted delegation of power made by the phrase 'public interest, convenience, or necessity,' without guiding standards and without the check and balance which a full judicial review might have provided, created ample and unlimited opportunity for the Commission, if so minded, to distribute unchecked Government favor and largess among the politically faithful and subservient; and ample power with which to whip and cow all political opponents possessing the temerity and courage to protest or challenge the actions or policies of the Commission.

"And it is claimed that the Commission has not altogether failed to take full advantage of the opportunities presented to establish its own purposes and policies and advance its own ends. It is said that the Commission has neither been slow nor loath to utilize its asserted powers so to intrench itself that on occasion it has even defied the Congress. Power always seeks and thrives on more power."

Mr. Garey, in this statement, lays down a proposition that is absolutely sound in a representative republic:

"It must be recognized that the existence of a state of war constitutes no license to raid the Treasury, either through waste and extravagance by lawfully constituted war agencies, through the operation of worthless activities under the guise of the furtherance of the war effort or otherwise. Hence this investigation has thus far proceeded in such matters in the belief that this committee, the Congress, and the public are entitled to know the facts surrounding the Commission's so-called war activities and functions, to the end that such activities and functions may be abolished, curtailed, or extended as the Congress shall see fit."

It has been anticipated that when this particular investigation got under way it would deal with the networks, radio stations, broadcasts, and such matters. Mr. Garey has apparently chosen a different course. He is going into the fundamentals of the administration of the Federal Communications Commission and is relating the problem to the war. For instance, in his letter to Secretary Stimson, Mr. Garey asks for this type of data:

"1. All Department files and correspondence pertaining to the Army's efforts to obtain approval of the use of ultra-high frequencies, and the difficulty encountered by the Army in getting the Federal Communications Commission to make a study of the subject.

"2. All files and correspondence pertaining to the Army's position favoring the passage of a bill to permit wire tapping and Chairman Fly's opposition to such bill.

"3. All files and correspondence pertaining to the Army's efforts to stop Japanese language radio broadcasts from Hawaii prior to Pearl Harbor and the reports of the Army officers of their activities in negotiating voluntary agreements to that end; and Chairman Fly's opposition to such action and his subsequent actions which are alleged to have caused such voluntary agreements to be abandoned."

Apparently, Mr. Garey possesses that data. His communications to Secretaries Stimson and Knox indicate that this is no fishing expedition; that what he asks for officially, he has already seen and heard and that he is rejecting a refusal in public of what was provided in private. Except as such information may serve the enemy, it ought to be available to the American people. But the phrase, "of aid and comfort" to the enemy ought not to be used as a cloak to cover up inefficiency, maladministration, or corruption. Mr. Garey wisely brings the problem into the open that the public may understand the seriousness of Federal Communication Commission control of radio.

Prepare a Tax Bill Now

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. KENNEDY. Mr. Speaker, because preparation of further safeguards against inflation is more essential than ever at this time, I wish to call the attention of Congress to the following editorial, which appeared in the New York Times of July 7:

PREPARE A TAX BILL NOW

The desire of Congressmen to get away from the stifling heat of Washington in the summer is understandable; but it is not in itself excuse for a recess at this time, while the fixed personnel at Washington and, in fact, the great mass of Americans everywhere are nailed to their jobs. A valid reason for a recess, however, is that it is important for the Representatives of the people to get in first-hand touch with their constituents, and learn the problems and the sentiment of their districts.

But it will be inexcusable for Congress to leave Washington now unless it sees to it that a new tax bill is prepared for its consideration as soon as it meets again. The sooner a new bill is passed, the sooner can the problem of excess purchasing power be brought under better control. There is no excuse for waiting until January 1 before a new bill is made effective. Certainly a general sales tax and heavier excise taxes should be put into effect long before then.

In the few days that now appear to remain before a recess, therefore, Congress should do at least one of two things. It should either invite the Treasury to prepare a new tax program in all its details, so that it will be ready to submit it to Congress as soon as that body meets again; or it should make sure that the House Ways and Means Committee prepares now a bill for submission at that time. It would do no harm if Congress did both. The inflationary problem increases daily. It would be tragic if the summer months were wasted without either action on it or study of it.

Overcharges for Electricity by States in 1942

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. RANKIN. Mr. Speaker, we are completing 10 years of arduous struggle for justice for the light and power consumers of America.

Unfortunately, my old friend and coworker, Senator George W. Norris, of Nebraska, is not here to help carry on the fight; but the effect of his work while he was in the Senate will never die. One of my services of which I am most proud is that of coauthor with him of the bill creating the T. V. A. It has turned out to be one of the greatest developments of all time.

My greatest service to the farmers of this country has been that of promoting rural electrification. As a result of my efforts there are at least 1,000,000 farm homes in this country that are enjoying the use of electric lights and power that probably would not have had them for another generation if I had failed in securing the adoption of the legislation I have sponsored for that purpose.

Every person in the district I represent that uses electricity at all gets it at the T. V. A. yardstick rates. It is true that we have not reached all the farmers of the district yet, but we expect to do so when materials are made available. In fact, we expect to electrify every farm home in America at these rates before we are through.

On June 30 I inserted in the RECORD some tables which I invite every one of you to take home and read to your constituents. They show that the American people last year were overcharged $1,185,233,674 for their electric lights and power. In other words, if they had all got their electricity at the rates paid by the people in the district I represent, they would have saved $1,185,233,674 last year on their light and power bills alone. I have broken these overcharges down by States to show how much the people of each State were overcharged.

ALABAMA

During the year 1942 the people of the State of Alabama used 3,693,914,000 kilowatt-hours of electricity, for which they paid $37,163,600.

Under the T. V. A. rates the cost to them would have been $25,897,377, or $11,266,223 less than they actually paid.

ARIZONA

During the year 1942 the people of the State of Arizona used 704,002,000 kilowatt-hours of electricity, for which they paid $12,764,400.

Under the T. V. A. rates the cost to them would have been $5,974,339, or $6,790,061 less than they actually paid.

ARKANSAS

During the year 1942 the people of the State of Arkansas used 683,145,000 kilowatt-hours of electricity, for which they paid $16,811,000.

Under the T. V. A. rates the cost to them would have been $8,945,934, or $7,865,006 less than they actually paid.

CALIFORNIA

During the year 1942 the people of the State of California used 12,005,897,000 kilowatt-hours of electricity, for which they paid $198,175,200.

Under the T. V. A. rates the cost to them would have been $152,321,279, or $45,853,921 less than they actually paid.

COLORADO

During the year 1942 the people of the State of Colorado used 847,821,000 kilowatt-hours of electricity, for which they paid $21,959,700.

Under the T. V. A. rates the cost to them would have been $11,927,125, or $10,032,575 less than they actually paid.

CONNECTICUT

During the year 1942 the people of the State of Connecticut used 2,418,832,000 kilowatt-hours of electricity, for which they paid $53,930,900.

Under the T. V. A. rates the cost to them would have been $29,062,632, or $24,868,268 less than they actually paid.

DELAWARE

During the year 1942 the people of the State of Delaware used 345,458,000 kilowatt-hours of electricity, for which they paid $6,884,800.

Under the T. V. A. rates the cost to them would have been $3,768,435, or $3,116,365 less than they actually paid.

DISTRICT OF COLUMBIA

During the year 1942 the people of the District of Columbia used 1,439,442,000 kilowatt-hours of electricity, for which they paid $17,668,900.

Under the T. V. A. rates the cost to them would have been $13,571,378, or $4,097,522 less than they actually paid.

FLORIDA

During the year 1942 the people of the State of Florida used 1,263,010,000 kilowatt-hours of electricity, for which they paid $40,138,900.

Under the T. V. A. rates the cost to them would have been $17,542,349, or $22,596,551 less than they actually paid.

GEORGIA

During the year 1942 the people of the State of Georgia used 2,512,867,000 kilowatt-hours of electricity, for which they paid $42,543,700.

Under the T. V. A. rates the cost to them would have been $25,719,092, or $16,824,608 less than they actually paid.

IDAHO

During the year 1942 the people of the State of Idaho used 781,471,000 kilowatt-hours of electricity for which they paid $11,418,200.

Under the T. V. A. rates the cost to them would have been $6,869,292, or $4,548,908 less than they actually paid.

ILLINOIS

During the year 1942 the people of the State of Illinois used 10,397,217,000 kilowatt-hours of electricity for which they paid $205,524,500.

Under the T. V. A. rates the cost to them would have been $113,204,822, or $92,319,678 less than they actually paid.

INDIANA

During the year 1942 the people of the State of Indiana used 4,286,988,000 kilowatt-hours of electricity, for which they paid $85,064,400.

Under the T. V. A. rates the cost to them would have been $49,061,887, or $36,002,513 less than they actually paid.

IOWA

During the year 1942, the people of the State of Iowa used 2,017,295,000 kilowatt-hours of electricity for which they paid $46,735,900.

Under the T. V. A. rates the cost to them would have been $25,741,659, or $20,994,241 less than they actually paid.

KANSAS

During the year 1942, the people of the State of Kansas used 1,374,621,000 kilowatt-hours of electricity for which they paid $31,893,900.

Under the T. V. A. rates the cost to them would have been $17,588,319, or $14,305,581 less than they actually paid.

KENTUCKY

During the year 1942 the people of the State of Kentucky used 1,677,998,000 kilowatt-hours of electricity, for which they paid $32,803,500.

Under the T. V. A. rates the cost to them would have been $20,016,579, or $12,786,921 less than they actually paid.

LOUISIANA

During the year 1942 the people of the State of Louisiana used 1,645,335,000 kilowatt-hours of electricity, for which they paid $31,148,700.

Under the T. V. A. rates the cost to them would have been $15,781,723, or $15,366,977 less than they actually paid.

MAINE

During the year 1942 the people of the State of Maine used 975,232,000 kilowatt-hours of electricity for which they paid $18,700,900.

Under the T. V. A. rates the cost to them would have been $10,200,161, or $8,500,739 less than they actually paid.

MARYLAND

During the year 1942 the people of the State of Maryland used 2,472,084,000 kilowatt-hours of electricity, for which they paid $45,660,400.

Under the T. V. A. rates the cost to them would have been $26,682,888, or $18,977,512 less than they actually paid.

MASSACHUSETTS

During the year 1942 the people of the State of Massachusetts used 4,322,849,000 kilowatt-hours of electricity, for which they paid $113,448,800.

Under the T. V. A. rates the cost to them would have been $56,818,482, or $56,630,318 less than they actually paid.

MICHIGAN

During the year 1942 the people of the State of Michigan used 7,097,806,000 kilowatt-hours of electricity, for which they paid $134,278,900.

Under the T. V. A. rates the cost to them would have been $76,671,788, or $57,607,112 less than they actually paid.

MINNESOTA

During the year 1942 the people of the State of Minnesota used 2,239,736,000 kilowatt-hours of electricity, for which they paid $55,011,100.

Under the T. V. A. rates the cost to them would have been $30,673,578, or $24,337,522 less than they actually paid.

MISSISSIPPI

During the year 1942 the people of the State of Mississippi used 666,511,000 kilowatt-hours of electricity for which they paid $14,783,300.

Under the T. V. A. rates the cost to them would have been $8,027,803, or $6,755,497 less than they actually paid.

MISSOURI

During the year 1942 the people of the State of Missouri used 3,489,639,000 kilowatt-hours of electricity for which they paid $68,648,800.

Under the T. V. A. rates the cost to them would have been $41,417,857, or $27,230,943 less than they actually paid.

MONTANA

During the year 1942 the people of the State of Montana used 1,736,720,000 kilowatt-hours of electricity, for which they paid $15,671,000.

Under the T. V. A. rates the cost to them would have been $10,681,298, or $4,989,702 less than they actually paid.

NEBRASKA

During the year 1942 the people of the State of Nebraska used 773,693,000 kilowatt-hours of electricity for which they paid $19,973,300.

Under the T. V. A. rates the cost to them would have been $11,458,180, or $8,515,120 less than they actually paid.

NEVADA

During the year 1942 the people of the State of Nevada used 154,729,000 kilowatt-hours of electricity for which they paid $3,277,100.

Under the T. V. A. rates the cost to them would have been $1,711,755, or $1,565,345 less than they actually paid.

NEW HAMPSHIRE

During the year 1942 the people of the State of New Hampshire used 487,904,000 kilowatt-hours of electricity, for which they paid $12,335,600.

Under the T. V. A. rates the cost to them would have been $6,510,473, or $5,825,127 less than they actually paid.

NEW JERSEY

During the year 1942 the people of the State of New Jersey used 5,000,452,000 kilowatt-hours of electricity, for which they paid $119,253,300.

Under the T. V. A. rates the cost to them would have been $57,691,002, or $61,562,298 less than they actually paid.

NEW MEXICO

During the year 1942 the people of the State of New Mexico used 178,147,000 kilowatt-hours of electricity, for which they paid $6,599,200.

Under the T. V. A. rates the cost to them would have been $2,616,419, or $3,982,781 less than they actually paid.

NEW YORK

During the year 1942 the people of the State of New York, used 18,429,737,000 kilowatt-hours of electricity, for which they paid $361,418,600.

Under the T. V. A. rates the cost to them would have been $175,957,975, or $185,460,625 less than they actually paid.

NORTH CAROLINA

During the year 1942, the people of the State of North Carolina used 3,499,721,000 kilowatt-hours of electricity for which they paid $52,173,000.

Under the T. V. A. rates the cost to them would have been $34,808,548, or $17,364,452 less than they actually paid.

NORTH DAKOTA

During the year 1942, the people of the State of North Dakota used 180,278,000 kilowatt-hours of electricity for which they paid $7,008,200.

Under the T. V. A. rates the cost to them would have been $3,235,239, or $3,772,961 less than they actually paid.

OHIO

During the year 1942 the people of the State of Ohio used 11,137,170,000 kilowatt-hours of electricity, for which they paid $183,233,400.

Under the T. V. A. rates the cost to them would have been $113,962,679, or $69,270,721 less than they actually paid.

OKLAHOMA

During the year 1942 the people of the State of Oklahoma used 1,261,583,000 kilowatt-hours of electricity, for which they paid $30,359,900.

Under the T. V. A. rates the cost to them would have been $16,315,747, or $14,044,153 less than they actually paid.

OREGON

During the year 1942, the people of the State of Oregon used 2,016,158,000 kilowatt-hours of electricity, for which they paid $26,471,200.

Under the T. V. A. rates the cost to them would have been $19,343,469, or $7,127,731 less than they actually paid.

PENNSYLVANIA

During the year 1942 the people of the State of Pennsylvania used 15,700,440,000 kilowatt-hours of electricity, for which they paid $249,036,700.

Under the T. V. A. rates the cost to them would have been $153,861,342, or $95,175,358 less than they actually paid.

RHODE ISLAND

During the year 1942, the people of the State of Rhode Island used 807,095,000 kilowatt-hours of electricity, for which they paid $20,006,400.

Under the T. V. A. rates the cost to them would have been $10,352,504, or $9,653,896 less than they actually paid.

SOUTH CAROLINA

During the year 1942, the people of the State of South Carolina used 1,685,051,000 kilowatt-hours of electricity for which they paid $23,770,300.

Under the T. V. A. rates the cost to them would have been $15,944,865, or $7,825,435 less than they actually paid.

SOUTH DAKOTA

During the year 1942 the people of the State of South Dakota used 223,137,000 kilowatt-hours of electricity, for which they paid $7,832,500.

Under the T. V. A. rates the cost to them would have been $3,641,292, or $4,191,208 less than they actually paid.

TENNESSEE

During the year 1942, the people of the State of Tennessee used 4,833,695,000 kilowatt-hours of electricity for which they paid $40,183,000.

Under the T. V. A. rates the cost to them would have been $33,781,545, or $6,401,455 less than they actually paid.

TEXAS

During the year 1942, the people of the State of Texas used 4,716,867,000 kilowatt-hours of electricity for which they paid $95,196,300.

Under the T. V. A. rates the cost to them would have been $52,673,271, or $42,523,029 less than they actually paid.

UTAH

During the year 1942 the people of the State of Utah used 1,117,518,000 kilowatt-hours of electricity, for which they paid $15,351,400.

Under the T. V. A. rates the cost to them would have been $9,432,423, or $5,918,977 less than they actually paid.

VERMONT

During the year 1942 the people of the State of Vermont used 299,933,000 kilowatt-hours of electricity, for which they paid $7,880,700.

Under the T. V. A. rates the cost to them would have been $4,346,035, or $3,534,665 less than they actually paid.

VIRGINIA

During the year 1942 the people of the State of Virginia used 2,203,554,000 kilowatt-hours of electricity, for which they paid $43,664,000.

Under the T. V. A. rates the cost to them would have been $25,109,110, or $18,554,890 less than they actually paid.

WASHINGTON

During the year 1942 the people of the State of Washington used 6,253,201,000 kilowatt-hours of electricity, for which they paid $55,289,100.

Under the T. V. A. rates the cost to them would have been $43,153,856, or $12,135,244 less than they actually paid.

WEST VIRGINIA

During the year 1942 the people of the State of West Virginia used 2,752,822,000 kilowatt-hours of electricity, for which they paid $37,641,700.

Under the T. V. A. rates the cost to them would have been $23,274,974, or $14,366,726 less than they actually paid.

WISCONSIN

During the year 1942 the people of the State of Wisconsin used 3,380,057,000 kilowatt-hours of electricity, for which they paid $69,062,800.

Under the T. V. A. rates the cost to them would have been $39,585,289, or $29,477,511 less than they actually paid.

WYOMING

During the year 1942 the people of the State of Wyoming used 144,633,000 kilowatt-hours of electricity, for which they paid $4,456,300.

Under the T. V. A. rates the cost to them would have been $2,137,658, or $2,318,642 less than they actually paid.

UNITED STATES OF AMERICA

During the year 1942 the people of the whole United States used 158,333,465,000 kilowatt-hours of electricity, for which they paid $2,850,307,400.

Under the T. V. A. rates the cost to them would have been $1,665,073,726, or $1,185,233,674 less than they actually paid.

If every person in America who uses electricity could read and understand what these figures mean to them, there would be such a ground swell of demands for relief from these overcharges that no official or set of officials could resist them.

Home Front Reforms at Top Needed

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, entitled "Home Front Reforms at Top Needed," published in a recent issue of the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOME FRONTS AT TOP NEEDED

(By David Lawrence)

Something fundamental is wrong with the home front. Unless corrected, it can mean a longer and costlier war and an even more painful post-war period.

The main evidence of this trend is to be found in a lack of unity behind the Government, a lack of faith in its administrative set-up, if not in its sincerity. The administrators themselves exhort and plead and try to obtain the people's cooperation in rationing and the many sacrifices that are needed to support a maximum effort on the battlefronts, but such pleas and exhortations are not heeded as they should be.

There is friction where harmony should prevail and there is waste and incompetence where the utmost in conservation and efficiency should be achieved. Irritation has replaced calmness, and clashes of policy and lack of functional coordination particularly in Washington have given the people generally a discouraging picture of their leaders.

It will do no good to start blaming the other fellow—a favorite tendency when one feels his own guilt and does not have the courage to admit it. Neither will do no good to assume that the disease is incurable, because at bottom it has the germs of political ambition, selfish quest for power, or the maintenance of public office.

CRITICAL PERIOD AHEAD

If it were conceded that most of the problems are as perplexing as they are because President Roosevelt, though a man of broad vision in foreign policy and world strategy, is just the opposite in domestic administration, and that there can be no relief until and unless a new President is elected, the fact remains we are faced in the next 18 months with the most critical period of the war, and under our system of government, no other leadership in the executive branch of the Government is available.

Who, then, can help the home front? The responsibility rests primarily on those who have been thick-and-thin supporters of the President and who must have faith in and influence with him. There must be in the ranks of the New Deal men of such strength of character as to recognize that the conflict on the home front can be resolved only by the application by them of some of the basic principles of the Christian philosophy. There can, for instance, be no reconciliation of groups if either or both sides of a controversy insist on the maximum obtainable or if one or the other deals with governmental power on a dictatorial or dogmatic basis.

ROOM FOR REFORM

Faith and confidence are instilled in a nation when the men at the top not only abide by the rules but do not seek to take advantage of wartime to change the fundamental rules without consulting the people. There is, for example, room for considerable reform in the relations between the Supreme Court and the people. It is no exaggeration to report that never in its whole history have lawyers generally so little esteem for the court, believing it political and class-conscious.

There is need, also, for a better handling of the labor problem. Many hard-working, conscientious members of labor unions and their officers are being condemned for the acts of a few. Also, the administration is not playing the game fairly as between employer and employee, but is conducting what appears to be a political game of special privilege. This only sows the seeds of deep ideological conflict.

Just as left-wing extremists were born out of the stupidity and selfishness of the conservatives, so today right-wing extremists are being bred every day and the seeds of an American kind of fascism or state socialism are being sown by the stubbornness and intolerance of power-conscious left-wingers.

OF FIRST IMPORTANCE

To those of us who strive for the middle way and who see in right-wing attitudes as many dangers as in the so-called reforms of the left wing, the task of rebuilding the home front on a new basis looms as of transcendent importance. For, notwithstanding the prevailing optimism about the military situation today, this war may last at least another 2 or possibly 3 years more, and there is no telling how long it is going to take to conquer Japan.

Meanwhile, we shall multiply irritations and sap the vitality of the home front unless we take refuge in the basic principles of self-examination and fair play. For governments are no stronger than the individuals who exercise its powers, and nations are no stronger than the moral fiber of their leaders.

The Flag Speaks for America

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Flag Speaks for America," delivered by Maj. Gen. Edward Martin, Governor of Pennsylvania, at Independence Hall, Philadelphia, Pa., on Flag Day, Monday, June 14, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans: Here in this old city where the flag of America was born and where it was adopted by the American Congress, the celebration of Flag Day is peculiarly appropriate.

On June 14, 1777, we were completing the first year of our independence. We were in the second year of the Revolution.

Lexington, Concord, and Bunker Hill had come and gone. Germantown and Valley Forge were yet to come. The surrender at Yorktown was somewhere in the future.

The flag was born in a time of storm and strain. The united colonies were about to become the United States. It was not a time for the sunshine patriot or the summer soldier. The Nation of the future was being shaped and tempered by the fires of sacrifice and the hammers of war. It was a time that tried men's souls, just as they are being tried again in America today.

And now, after 166 years, the Stars and Stripes is one of the oldest, proudest, and best loved flags in the world. It is hated in Berlin, Tokyo, and Rome, and wherever the spirit of hatred, conquest, and tyranny exists. But it is loved by free men and free women everywhere, and by all unfortunate countries that, having lost their freedom, would be free again.

And, please God, it will wave once more over battered Manila and the blood-stained foxholes of Bataan. It will fly again over Kiska, Guam, and Wake Island.

In its stripes and stars and its field of blue is all that has been, now is, and will be America. Woven into it are the first log cabins of the white men in Virginia and New England, the little homes, the little ships, and the little farms of a lonely seaboard on the rim of a continental wilderness.

It speaks for the old Indian wars, for the forgotten explorers, and for all the nameless dead whose forgotten graves were made in the frontier clearings and along the lost trails.

In its bright colors you can see Bunker Hill and Ticonderoga, Brandywine and Trenton, Saratoga and Yorktown. You can see Morgan's riflemen and the long bayonets of the Continental line. You can see this old statehouse and hear, down through the years of struggle and growth and greatness, the old bell ringing over this Independence Square.

The epic of America and the glory of the American dream are symbolized by these stripes and stars. They stir great memories of the mighty panorama of a Nation on the march. Back along the roads of history the Long Rifles in their buckskin shirts are moving over the endless mountains of Pennsylvania and through the Cumberland Gap. You can hear the creaking wagon wheels rolling on across the plains to the Pacific.

You can hear the guns at Fredericksburg, Shiloh, and Chancellorsville and watch Pickett's charge at Gettysburg, breaking as a gray sea breaks on the immovable rock of human valor. You can hear the guns at Manila and the thundering roar of Pershing's massed batteries in the Argonne.

A little louder, a little nearer, echoing across this Nation today, are the guns at Midway, in the Solomons, and in Tunisia.

The long, sometimes stern, sometimes happy, sometimes bright, and sometimes gray annals of our country are written across that banner in the sky. Great names and great figures out of the past: Washington at Valley Forge, Perry on Lake Erie, Jackson at New Orleans, Taylor at Buena Vista, Webster in the Senate, Lincoln at Gettysburg, and Grant and Lee at Appomattox.

That flag speaks for all America, for the tall forests and tall ships of New England, for the lordly Hudson, for Penn's Woods, for the deep South, the bright Southwest, the great Midland Valley, the mighty Great Lakes, the endless plains, the massive Rockies, the high Sierras, and the imperial Pacific.

Woven into the flag are the immortal Declaration, the enduring Constitution, and the Bill of Rights that safeguard our liberties. It symbolizes every right we have won and every liberty we enjoy. It stands for the work of our hands, the fruit of our dreams, the spires of our churches, the halls of our great universities, our law courts, and our statehouses.

More than anything else it symbolizes the homes of America, our families, our long traditions, and our undying beliefs.

In this global war in which we are so fully and desperately engaged, that flag must fly on two great fronts.

In winning this war or the battle fronts we must be careful that we do not lose that other great conflict at home.

We must not lose the true America, the old and new America, the fine and strong America, the dynamic and free America, built by the hands of our many generations.

It can be lost. It is just as well that we face the facts. In this vast storm of war and change that is now sweeping the world, dark forces have been let loose. They threaten us not only on the battle fronts, but on the home front as well.

Many of the ideals and beliefs symbolized by the flag are in danger. We are fighting regimentation abroad with all the strength we can summon. We can and will win that battle.

We are submitting to regimentation at home so we may destroy regimentation in the world.

We are submitting to regimentation as a war policy and only as a war policy.

We must make sure that in winning this war against the tyranny and regimentation that would be imposed upon us by our enemies we do not find ourselves wearing the yoke of a home-made fascism after the war ends. Remember that American regimentation can be just as hateful and intolerable as Fascist regimentation.

Make no mistake about this: We have here in America our own economic fascists. These powerful groups of politico-social planners sit in the seats of the mighty. They plan to use our wartime economy as the pattern for a peacetime economy.

These economic Fascists are powerful in Washington. They inspired the massive report of the National Resources Planning Board. That 6-pound document proposing a so-called security plan is the holy book of the new American order. It is the system whereby our economic Fascists hope to control every step taken by Americans from their cradles to their graves.

Its purpose is to end the incentive system and discourage or destroy the American initiative that carried the flag from the Atlantic to the Pacific and made this the freest and strongest nation in the world.

It is intended to create a race of faceless, sheltered, docile Americans, willing to give up every right except the right to live, in exchange for a false security.

It promises to set up a caste and a class system whereby the young men and young women of America will be frozen into a politico-economic system. It will sound the death knell to ambition.

It will create a new pyramid of power, a great group of bureaucrats, an army of tax-gathering, tax-eating parasites, and a new breed of self-perpetuating tycoons living upon the substance of the people.

There is a battle coming between those who believe in the doctrines of a Christian civilization and the cynical, godless group who insist that no man should bow to the divine law. These new prophets of the new order hold that we should follow the doctrine of the supremacy of the economic man. They say that man, through science, can and will control his own destiny. They would repeal the laws of God and nature. Their own great god is social planning. They profess to dread the fear of want more than they do the loss of human liberty and freedom of action.

This great conflict of ideas is world-wide and is being fought in America under the smoke-screen of the war. It takes strange political forms. It is being whispered now in Washington that we must change our form of government in order for us to cooperate successfully in the post-war organization of the world.

We hear that America must forget the great past. We are told we must have a more responsible government, a government whose foreign policy need not depend upon the Senate, upon the Congress, upon the representatives of the people, or upon the wishes of the people themselves.

This is the day of the planner who sits down before the map of the world with his drafting board. Our economic Fascists, our politico-social groups, want to do far more than plan the food production of this Nation, far more than control the industrial output, far more than fix its standard of living by peacetime fixing of wages and prices. To thes towering thinkers, our wartime economy and our wartime controls are no more than the preliminary actions.

They wish, in collaboration with similar-minded groups in other countries, to fix the standard of living in every nation. They want to control the food production of every country, to say that wheat farmers of Iowa and the Argentine, the beef growers of Canada and Montana, the sugar planters of Louisiana and of Cuba, shall grow so much and no more. They would control the shipping of the world, the air lanes of the globe, and the lives of billions of the inhabitants of this planet.

They want, in fact, a regimentation of the globe. All of this would mean the surrender of what Benjamin Franklin called "essential liberty." Here in Philadelphia, Franklin wrote:

"They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

Franklin saw deeper into the human heart than these bulging-browed gentlemen of today who hope to make the world over on their planning boards, their charts, and their blueprints of tomorrow. Franklin knew that liberty meant far more than security and far more than freedom from want, or freedom from fear.

Remember, when you look at the flag, that freedom is a great word, but it is more than a great word. Men who have carried that flag by land and by sea, plain men and idealists, have died for it and for the freedom it symbolizes. They did not die that masterminds, seated at mahogany desks, might chart the lives of all mankind on their drafting boards. For nearly 170 years Americans have died under that flag to be free of superminds, supermen, and the Divine right to rule claimed by both kings and tyrants.

Against these doctrines of the superman in government, of rule by men instead of rule by law, we must declare unrelenting war. That is the road down which Hitler Germany and Fascist Italy are marching to their doom. That doctrine denies every stripe in the flag. It would blot out the 48 stars in that field of blue and set in their places a single, sinister star of centralized power. For America, it would mean a covenant with death and a dishonored grave in the cemetery of nations.

America and Russia

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in

the Appendix of the RECORD an editorial by Max Lerner answering Max Eastman.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANSWERING MAX EASTMAN

(Editorial by Max Lerner)

Having written a series of seven pieces on America and Russia a few months ago, I had hoped to keep off the subject for some months more. But the July Reader's Digest is out, with a 14-page article by Max Eastman that is bound to irritate and anger many Americans, confuse more, and confirm millions in their hatred of Russia by giving it plausible reasons to feed on. Eastman gives his attack the title "To Collaborate Successfully—We Must Face the Facts About Russia."

I brush aside the usual amenities with which the article starts, like all attacks on Russia: Admiration, gratitude, etc., for the Russians. I am on a search not for protestations of affection but for the facts about Russia which the title tells us we must face.

But before I can reach them I have to wade through pages of attacks not on Russians—but on Americans. The principal targets are Vice President Wallace, Wendell Willkie, and Joseph E. Davies. They are described as "apologists for communism." It is not quite clear whether Eastman charges them with deliberately misleading their countrymen about Russia, or whether he regards them as bewitched and deluded softies who talk drivel about Russia.

In either case he is wrong. When the history of American foreign relations in this crisis period comes to be written, Wallace and Willkie and Davies will be shining names in it. Two of them are men of the right in politics, as applied to them. Eastman's statement that "many Americans are fooling with communism, just to be on the left," simply makes no sense.

The present line of those who write as Eastman does is that the liberals and conservatives who are working for close relations with Russia in the war and the postwar are soft-headed and sentimental, and that realism is the monopoly of those who attack Russia.

WHO ARE THE REALISTS?

But who are the realists? Are they those who said before the war that Russia is so deeply a dictatorship that there is no difference between it and Germany? Are they those who said that Russia is so rotten internally that the first external attack will cause it to crumble? Are they those who said that the Russian Army was so shattered by the purges that it was incapable of a major war? Are the realists those who say now that the ally fighting on our side is a wicked herd-state and slave-society between whom and us there stretches a flaming gulf as between hell and heaven?

It is Wallace, Willkie, and Davies who are the realists. What they have done represents the triumph of historic events over past prejudices. They know the faults of Stalin and of the Russian system fully as well as Eastman does. Davies and Willkie have seen Russia at first hand during the past year, while Eastman was there from 1922 to 1924, and has not seen it for close to 20 years.

But they are men of action who are thinking of the battles of the future, rather than embittered doctrinaires who are preoccupied with ancient wrongs. And they know that the war cannot be won unless America and Russia win it together. And that the peace cannot be organized unless America and Russia organize it together. That is why they put Russia's strength and its qualities as a going concern in the foreground, and communism's sins in the background.

Why assume that these men, and others like them, are fools, dolts, gulls? Why not conclude rather that they are triumphant proof of a democracy's capacity to save itself from class blindness and national suicide?

But the case of American-Russian accord rests not on anyone's opinion, but on the mutual interests of both nations and on Russia's own record.

RUSSIANS AND NAZIS

But Eastman proposes to wipe all this off the slate at the very start. "Let us remember," he writes, "that the stubborn resistance of the Russian no more justifies communism than the stupendous assault of the German justifies nazi-ism."

This is a curious statement. In the first place, none of the people Eastman attacks have ever said that Russian resistance justifies communism. They have said that it is a basic argument for our cooperation with the Russians.

In the second place, the admiration of the English and the Americans for the Russian achievement was all the greater because they had been led to believe, by men like Eastman, that Russia was rotten to the core, would not fight, and could not resist.

And finally I am appalled by the cynical way in which, in the sentence above, Eastman tricks the reader into concluding that nothing in their war record distinguishes the Nazi system from the Russian. Is there no moral difference between a nation that makes a stupendous assault upon another, and a nation that offers stubborn resistance to it? Is there no political difference between a nation whose life and aim are war and a nation that wants to build its own social system and, to do so, requires to live at peace with the world?

Is there no difference, finally, to a poet and a humanist like Eastman, between the mask of sadism of the attacking Nazi soldiers, and the image of firm and bitter defense by Russian soldiers and civilians?

I thought of the way the Russians were fighting while I was reading the heart of Eastman's article—the facts about Russia. They are basically three. One is that Russia is politically a vast concentration camp. A second is that it is, in economic terms, an impoverished and a slave society. The third is that the Russian leaders hate and despise the democracies, and that they plot international revolution against us.

I don't pretend to know, as Eastman does, the final truth on these issues. But I try to use reason on them.

Take the question of international revolution. Eastman quotes learnedly from the theoretical writings of Lenin and Stalin. Yet we all know that a politician's words, especially for home consumption, are less important than his deeds. By quotation, Eastman in effect makes Stalin out to be a Trotzkyist, with a hunger for permanent world revolution. Yet if you look at the record of Russia's deeds you find that, under Stalin, Russia abandoned the tactics of world revolution and used the Comintern mainly for its own safety. And if you look at the record you know that Russia's so-called Communist plotting has not caused us in a quarter century to add a single soldier to the American armies.

DO SLAVES FIGHT?

On the economic issue, no one has denied the poverty of the Russian people in the last decade when they were arming for a struggle that was to absorb everything but the barest necessities. But what is crucial is that the Russian people know that their total national income is greater than ever, and that when they can live at peace it will mean higher living standards for the people. Lower than ours? Of course. But before you speak contemptuously of the Russian economic achievement, measure the rate of progress in the national income of the two countries in the past quarter century.

As I read Eastman on Russian poverty and the subjection of the people, I kept thinking: If these people are slaves, why do slaves fight so well? Why do starving people form themselves not just into a nation with an army, but a nation in arms? Why do Russian children, as Maurice Hindus described them in Mother Russia, die for their country with a deep joy that would do honor to grown and mature men? Why do Russians have the sense that they are fashioning a new world, with new meanings—a sense that we in America seem sadly to have lost?

If this were all, I should be more enthusiastic about the Russian system than I am. But there is also political suppression, the single-party system, the police state. Eastman quotes enormous figures about people in concentration camps in Russia. Although I don't trust his figures, I am willing to believe that the true ones are large. But the figures are not crucial. What is crucial is that Russians lack freedom of thought. The lesser punishment is absorbed in the greater—the imprisonment of the body in the imprisonment of the mind.

It is because of this lack of freedom in Russia that we on PM have opposed the Russian social system, and opposed all who advocate it for America.

But what follows from Eastman's argument on this score? Does he want us to demand of Russia that she change her social system as the condition of collaboration? Imagine what the Russians could say about our distribution of income, our treatment of Negroes, our class system of education.

Or does he want Roosevelt and Churchill, each time they make speeches, to include denunciations of their Soviet ally?

Or does he want us to break off relations with Russia now, and try to get along without her in the post-war world?

HIS TWO SPECIFIC SUGGESTIONS

He doesn't come out openly for any of these things. His only specific suggestions are two: that America ban the Communist Party; and that we should not "passively allow our schools, newspapers, radios, book and magazine publishing houses, cinema studios, Office of War Information, to be permeated with the agents and apologists of communism."

That is to say, he proposes Stalinist suppression of American political and intellectual freedom. He proposes that we take over from the Russians the one big thing that scars their record, and refashion ourselves in their image.

As for myself, I have more faith in America than that. I have faith in our democratic institutions—so much faith that I believe they can compete in the world with those of a totalitarian socialism--and without our having to resort to suppression.

We need freedom from external attack, and we can get that best by working with Russia. We need internal economic and social justice, and we can get that best by concentrating on our own inadequacies. And we need national stature and moral greatness. But we can get that best not by hating the ways of others but by measuring our strength against our own tasks.

Victories at Home

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "Victories at Home" published in the Cincinnati (Ohio) Enquirer of July 6, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORIES AT HOME

The United States over the Fourth of July week end won several victories which were unheralded in the headlines. Yet they were as important as any victory on any fighting front in their effect on the outcome of the war. All were of the civilian rather than the military forces, yet their contributions, in the last analysis, are to the military rather than the civilian life of the Nation.

First, there was the low accident death rate. We don't know how many lives are lost ordinarily over a Fourth week end, but we know it is several hundred above the figure for last Saturday, Sunday, and Monday. Since every life saved is a life gained for the country we can chalk up a victory which, along a battle front, would have made important news.

The coal strike, in reality, was ended Monday. In spite of a tradition of years which calls for the Fourth of July holiday, miners went trooping back to the pits on that day and the production of coal was returned to normal once more. The losses of the strike cannot be made up and their effect on the war will be unfortunate. But Monday the strike was over and done with. It was a negative victory, but a victory nonetheless.

There was a victory in international relationships marked by the Fourth of July. Great Britain, Russia, Free France, and all the republics of South America joined in paying tribute to the cause of American independence. These gestures of friendship and good will, more than any other single fact, seem to us to point to the spirit of cooperation existing between the nations lined up to bring defeat to the Axis Powers.

There were other victories. Two destroyers and a submarine went splashing into the sea at Kearney, N. J. From a New London, Conn., shipyard another sub was commissioned to take her place in the Allied Fleet. The first freight-laden glider completed a successful trip across the Atlantic. In Cincinnati an Office of Price Administration check-up disclosed the fact that only a minor fraction of local people are attempting to "beat" the gas ration program.

In all, it was a comforting and promising week end. The hopes of millions of gallant fighting men will be raised when they learn of new successes on the civilian front.

United Nations Relief and Rehabilitation Administration

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of the draft agreement for United Nations Relief and Rehabilitation Administration:

The governments or authorities whose duly authorized representatives have subscribed hereto,

Being United Nations or being associated with the United Nations in this war,

Being determined that immediately upon the liberation of any area by the armed forces of the United Nations the population thereof shall receive aid and relief from their sufferings, food, clothing, and shelter, aid in the prevention of pestilence and in the recovery of the health of the people, and that preparation and arrangements shall be made for the return of prisoners and exiles to their homes, for the resumption of agricultural and industrial production and the restoration of essential services, to the end that peoples once freed may be preserved and restored to health and strength for the tasks and opportunities of building anew,

Have agreed as follows:

ARTICLE I

There is hereby established the United Nations Relief and Rehabilitation Administration.

1. The Administration shall have power to acquire, hold, and convey property, to enter into contracts and undertake obligations, to designate or create agencies, and to review the activities of agencies so created, to manage undertakings, and in general to perform any legal act appropriate to its objects and purposes.

2. Subject to the provisions of article VII, the purposes and functions of the Administration shall be as follows:

(a) To plan, coordinate, administer, or arrange for the administration of measures for the relief of victims of war in any area under the control of any of the United Nations through the provision of food, fuel, clothing, and other basic necessities, housing facilities, medical and other essential services; and to facilitate in areas receiving relief the production and transportation of these articles and the furnishing of these services so far as necessary to the adequate provision of relief. The form of activities of the administration within the territory of a member government wherein that government exercises administrative authority and the responsibility to be assumed by the member government for carrying out measures planned by the Administration therein shall be determined after consultation with and with the consent of the member government.

(b) To formulate and recommend measures for individual or joint action by any or all of the member governments for the coordination of purchasing, the use of ships and other procurement activities in the period following the cessation of hostilities; with a view to integrating the plans and activities of the Administration with the total movement of supplies, and for the purpose of achieving an equitable distribution of available supplies. The Administration may administer such coordination measures as the member governments authorize.

(c) To formulate and recommend for individual or joint action by any or all of the member governments measures with respect to such related matters, arising out of its experience in planning and performing the work of relief and rehabilitation, as may be proposed by any of the member governments and approved by unanimous vote of the central committee.

ARTICLE II

Membership

The members of the United Nations Relief and Rehabilitation Administration shall be the governments or authorities signatory hereto and such other governments or authorities as may upon application for membership be admitted thereto by action by the council or between sessions of the council, by the central committee.

Wherever the term "member government" is used in this agreement it shall be construed to embrace such authorities as shall have signed the agreement or shall subsequently become members of the administration.

ARTICLE III

The council

1. Each member government shall name one representative, and such alternates as may be necessary, upon the council of the United Nations Relief and Rehabilitation Administration, which shall be the policy-making body of the administration. The council shall, for each of its sessions, select one of its members to preside at the session.

2. The council shall be convened in normal session not less than twice a year by the central committee. It may be convened in special session whenever the central committee shall deem necessary, and shall be convened within 30 days after request therefor by a majority of the members of the council.

3. The central committee of the council shall consist of the representatives of China, the Union of Soviet Socialist Republics, the United Kingdom, and the United States of America, with the Director General presiding. Between sessions of the council it shall exercise all the powers and functions thereof. It shall invite the participation of the representatives of any member government at those of its meetings at which action of special interest to such government is discussed. It shall invite the participation of the representatives serving as chairman of the committee on supplies of the council at those of its meetings at which policies affecting the provision of supplies are discussed.

4. The committee on supplies of the council shall consist of the members of the council, or their alternates, representing those member governments likely to be principal suppliers of materials for relief and rehabilitation. The members shall be appointed by the central committee, with the approval of the council if it be in session and otherwise subject to its ratification. The committee on supplies shall consider, formulate, and recommend to the central committee and the council policies designed to assure the provision of required supplies. The central committee shall from time to time meet with the committee on supplies to review policy matters affecting supplies.

5. The committee of the council for Europe shall consist of all the members of the council, or their alternates, representing member governments of territories within the European area, and such other members of the council, representing other governments directly concerned with the problems of relief and rehabilitation in the European area, as shall be appointed by the central committee, with the approval of the council if it be in session and otherwise subject to its ratification. The committee of the council for the Far East shall consist of all the members of the council, or their alternates, representing member governments of territories within the far eastern area, and such other members of the council representing other governments directly concerned with the problems of relief and rehabilitation in the far eastern area as shall be appointed by the central committee, with the approval of the council if it be in session and otherwise subject to the council's ratification. The regional committees shall normally meet within their respective areas. They shall consider and recommend to the council and the central committee policies with respect to relief and rehabilitation within their respective areas. The committee of the council for Europe shall replace the inter-allied committee on European post-war relief established in London on September 24, 1941, and the records of the latter shall be made available to the committee for Europe.

6. The council shall establish such other standing regional committees as it shall consider desirable, the functions of such committees and the method of appointing their members being identical to that provided in paragraph 5 of this article with respect to the committees of the council for Europe and for the Far East. The council shall also establish such other standing committees as

it considers desirable to advise it, and, in intervals between sessions of the council, to advise the central committee. For such technical standing committees as may be established, in respect of particular problems such as nutrition, health, agriculture, transport, repatriation, and finance, the members may be members of the council or alternates nominated by them because of special competence in their respective fields of work. The members shall be appointed by the central committee, with the approval of the council if it be in session and otherwise subject to its ratification. Should a regional committee so desire, subcommittees of the technical standing committees shall be established by the technical committees in consultation with the regional committees, to advise the regional committees.

7. The travel and other expenses of members of the council and of members of its committees shall be borne by the governments which they represent.

8. All reports and recommendations of committees of the council shall be transmitted to the Director General for distribution to the council and the central committee by the secretariat of the council established under the provisions of article IV, paragraph 4.

ARTICLE IV

The Director General

1. The executive authority of the United Nations Relief and Rehabilitation Administration shall be in the Director General, who shall be appointed by the council on the nomination by unanimous vote of the central committee. The Director General may be removed by unanimous vote of the central committee.

2. The Director General shall have full power and authority for carrying out relief operations contemplated by article I, paragraph 2 (a), within the limits of available resources and the broad policies determined by the council or its central committee. Immediately upon taking office he shall in conjunction with the military and other appropriate authorities of the United Nations prepare plans for the emergency relief of the civilian population in any area occupied by the armed forces of any of the United Nations, arrange for the procurement and assembly of the necessary supplies, and create or select the emergency organization required for this purpose. In arranging for the procurement, transportation, and distribution of supplies and services, he and his representatives shall consult and collaborate with the appropriate authorities of the United States and shall, wherever practicable, use the facilities made available by such authorities. Foreign voluntary relief agencies may not engage in activity in any area receiving relief from the Administration without the consent and unless subject to the regulation of the Director General. The powers and duties of the Director General are subject to the limitations of article VII.

3. The Director General shall also be responsible for the organization and direction of the functions contemplated by article I, paragraphs 2 (b) and 2 (c).

4. The Director General shall appoint such Deputy Directors General, officers, expert personnel, and staff at his headquarters and elsewhere, including field missions, as he shall find necessary, and he may delegate to them such of his powers as he may deem appropriate. The Director General, or upon his authorization the Deputy Directors General, shall supply such secretariat and other staff and facilities as shall be required by the council and its committees, including the regional committees and subcommittees. Such Deputy Directors General as shall be assigned special functions within a region shall attend meetings of the regional standing committee whenever possible and shall keep it advised on the progress of the relief and rehabilitation program within the region.

5. The Director General shall make periodic reports to the central committee and to the council covering the progress of the Administration's activities. The reports shall be made public except for such portions as the central committee may consider it necessary, in the interest of the United Nations, to keep confidential. The Director General shall also arrange to have prepared periodic reports covering the activities of the Administration within each region and he shall transmit such reports with his comments thereon to the council, the central committee, and the respective regional committees.

ARTICLE V

Supplies and resources

1. Each member government pledges its full support to the Administration, within the limits of its available resources and subject to the requirements of its constitutional procedure, through contributions of funds, materials, equipment, supplies, and services, for use in its own, adjacent, or other areas in need, in order to accomplish the purposes of article I, paragraph 2 (a). All such contributions received by the Administration shall be accounted for.

2. The supplies and resources made available by the member governments shall be kept in review in relation to prospective requirements by the Director General, who shall initiate action with the member governments with a view to assuring such additional supplies and resources as may be required.

3. All purchases by any of the member governments, made outside their own territories during the war for relief or rehabilitation purposes, shall be made only after consultation with the Director General, and shall, so far as practicable, be carried out through the appropriate United Nations agency.

ARTICLE VI

Administrative expenses

The Director General shall submit to the council an annual budget, and from time to time such supplementary budgets as may be required, covering the necessary administrative expenses of the Administration. Upon approval of a budget by the council, the total amount approved shall be allocated to the member governments in proportions to be determined by the council. Each member government pledges itself, subject to the requirements of its constitutional procedure, to contribute to the Administration promptly its share of the administrative expenses so determined.

ARTICLE VII

Notwithstanding any other provision herein contained, while hostilities or other military necessities exist in any area, the Administration and its Director General shall not undertake activities therein without the consent of the military command of that area, and unless subject to such control as the command may find necessary. The determination that such hostilities or military necessities exist in any area shall be made by its military commander.

ARTICLE VIII

Amendment

The provisions of this agreement may be amended by unanimous vote of the central committee and two-thirds vote of the council.

ARTICLE IX

Entry into force

This agreement shall enter into force with respect to each signatory on the date when the agreement is signed by that signatory, unless otherwise specified by such signatory.

Lake Michigan Level Two and One-half Feet Above Normal

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of June 22, 1943:

LAKE ERIE, ONTARIO FLOODS CAUSE WIDESPREAD DAMAGE

Docks, roads, and camps were reported under water yesterday along the shores of Lake Erie, Lake Ontario, and the St. Lawrence River as the waters neared record high levels. Mounting damage was feared as high water in the upper Great Lakes continued to pour eastward as the result of heavy May rains.

Lake Michigan, according to Army engineers in Chicago, is about 2½ feet above normal, but is still 3 feet under the record high of 1917. The Coast Guard and lake cities reported little or no damage.

Lake Ontario was reported to be less than an inch under its highest recorded level, reached in 1870, and 3½ feet above its level in March. Many resort homes on its eastern shore and at Cape Vincent, where the St. Lawrence flows from the lake, were reported under water, with dock supports and ferry landings washed out.

At Sackett Harbor on Lake Ontario and in the Thousand Islands region up the river considerable damage was reported, with docks a foot or two under water, and boathouses, homes, camps, and cottages flooded. Practically all beaches were said to be under water and not usable.

At fashionable Henderson Harbor, near Cape Vincent, and at other exclusive communities up the St. Lawrence on both the United States and Canadian sides of the river, it was feared that strong winds or storms from the west might blow in more water and cause heavy damage to homes and towns.

At Cleveland, on Lake Erie, the water was within a half foot of the high mark set in 1929 and erosion along the east shore of the city was reported as the heaviest in many years. At suburban Villa Beach a brick buliding and a section of walled bank slid into the river. Trees, walks, and drives were washed out. Residents were said to have asked the city council to strengthen the retaining wall along the lake.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. ROWAN. Mr. Speaker, knowing that most veteran beneficiaries are unaware of their rights to benefits, privileges, and exemptions, as extended to them under certain circumstances by the laws of the great State of Illinois, I am pleased to present for your information

an outline of these laws as they affect the veterans, their wives, their children, and their organizations, as compiled by L. J. Zimmer, National Service Officer of the Disabled American Veterans, who has his office in C–119, United States Veterans' Administration, Hines, Ill.

The Disabled American Veterans is a congressionally chartered organization that is composed solely of men who are wounded or disabled as a result of their services to the United States, in a war or campaign. This organization, because of its very nature, has made a special study of the needs of America's defenders, and is thereby rendering a great service to these men and to their country. I heartily recommend the high service standards followed by the Disabled American Veterans in Illinois, through their office at Hines, Ill.

The outline, as prepared by Comrade Zimmer, is as follows:

EDUCATION, CHILDREN OF WAR VETERANS

Educational grants are given to children over the age of 18 and not more than 21, who have resided in the State of Illinois for at least 12 months and whose parents, or parent, served either in the Army, Navy, or the Marine Corps, and who was killed in action or died as a result of either service in the World War between April 6, 1917, and July 2, 1921, or who served on and after July 7, 1941. The purpose of this aid, which will be given so far as moneys appropriated will permit, is to cover the payment for matriculation, tuition, board and room rent, books and supplies at State educational institutions or secondary colleges, business colleges, vocational training schools, etc. The administrative agency for this program is the department of registration and education. Scholarships will be granted on the basis of one honorary scholarship in the State university for each county in the State. However, the board of trustees may from time to time increase the number of honorary scholarships when, in their judgment, such conditions will not embarrass the finances of the university.

EDUCATION OF WAR VETERANS

The State provides for normal school and University of Illinois scholarships to veterans of both World War No. 1 and World War No. 2.

REHABILITATION

The State provides for rehabilitation of its disabled. The purpose of the rehabilitation is to determine what type of work the veteran should be rehabilitated in, and then to provide the funds for the educational program and to supply, if needed, any artificial prosthesis that may be needed to rehabilitate and to assist in the rehabilitation of the veteran, providing these are not furnished by the Federal Government. This is given to both World War No. 1 and World War No. 2 veterans. Benefits are obtained through the Department of Rehabilitation, Springfield, Ill., or the office located in Chicago, Ill.

HOSPITAL BENEFITS TO VETERANS

At the present time, when a veteran is found to be incompetent, being a veteran of World War No. 1 or World War No. 2, he can be committed either to a State institution or directly to the Veterans' Administration, who will have the right to hospitalize this veteran through commitment in any of the Veterans' Administration mental institutions.

Veterans organizations may lease grounds from the forest preserve districts for the purpose of erecting convalescnt camps for the housing of convalescing, sick, and disabled veterans, and as a place upon which to construct rehabilitation quarters.

VETERANS' RELIEF

County aid can and may be given to needy veterans and the families of deceased veterans, through veterans organizations, providing that they qualify under the Bogardus Act.

Relief for widows and children, or deceased war veterans' families can and may be made through the department of public welfare. Applications for relief are to be made direct to the relief office administering the Bogardus Act in each individual county, or to the department of public welfare in the immediate jurisdiction of the family who is in need.

SOLDIERS' HOME

The State of Illinois has a soldiers' home to which veterans of all wars and their wives are admitted upon proper application and approval thereof. The soldiers' home in Illinois is in Quincy and applications for admission are made direct to the manager of the Soldiers' and Sailors' Home, Quincy, Ill. Such applications must be accompanied by proof that the applicant is in need of care and treatment in such form, by submitting certificates from two physicians or other medical evidence as may be required.

SERVICE OFFICERS

The State provides, through the department of public welfare, a veterans' division which is under the direction of the superintendent, Guy E. Bonney, Springfield, Ill. Under the veterans' division there are employed by the State, certain veterans as service officers, who are attached to stations in State mental institutions and State penal institutions, for the purpose of assisting the veterans confined therein, in the proper presentation and prosecution of their claims and to assist them and their families generally in securing their entitlements to the benefits they are entitled to as veterans, and the families of veterans.

DOCUMENTS

A. Recording of discharges: In honorable discharges of veterans from any branch of the armed forces, either World War No. 1 or World War No. 2, as well as certain other wars, veterans are recorded by the county recorders of each county free of charge. Each veteran is urged to record his discharge from service with the county recorder, so that in the event that the original is lost, stolen or destroyed, there shall be available to him and his dependents at all times, an exact copy of the original discharge certificate.

B. Marriage certificates: When needed for governmental purposes, shall be furnished free of charge upon application to the county clerk in which the marriage took place, and be forwarded to the county clerk, along with a proper certification that the document is needed for governmental purposes.

C. Divorce certificates: Certified copies of divorce proceedings may be secured by proper application to the clerk of court having jurisdiction in the county where the divorce took place. These will be furnished free of charge when properly certified that they are needed for governmental purposes.

D. Death certificates: Certified copies of death certificates can be secured from the county clerk in the county in which the death took place. These will be furnished free of charge when properly certified that they are needed for governmental purposes.

E. Birth certificates: Birth certificates may be secured through the Bureau of Federal Statistics, Springfield, Ill., or in the county in which the birth took place. These will be furnished free of charge upon proper certification that they are needed for governmental purposes.

F. Delayed birth certificates: Many of the veterans of World War No. 1 and prior to that date, who were born in the State of Illinois, have been unable to secure birth certificates covering the date of their birth, due to the fact that the State of Illinois did not require compulsory registration until just recent years. These veterans can secure delayed birth certificates by writing to the county clerk in the county in which they were born, requesting an application for delayed birth certificates and then having the application properly certified by either a member of their family or one who knows the date of their birth and the names of their parents. This certificate will then be forwarded to the county clerk with a fee of 50 cents, requesting a certified copy of the delayed birth certificate, which will cover the law on birth registration and supply the necessary missing certificate.

DEATH BENEFITS

A. Indigent veterans, their mothers, fathers, wives, widows, or minor children, may not be buried in a potter's field. Burial allowance shall be provided by each county and a place other than potter's field shall be set aside in certain cemeteries for the burial of this corpse. Relatives of the deceased are permitted to conduct the funerals.

B. Burial grounds: Burial grounds for such classes as mentioned above may be acquired by the counties in such cemeteries as they shall see fit, and shall be set aside for burial of this class only.

C. Cemetery lots, property of veterans' organizations: Where cemetery lots are owned by a veterans' organization and upon dissolution of such organization, the property shall vest in the municipality, and it shall be the duty of the municipality to enforce contracts for care of such a lot, or lots.

D. Grave registration: The State of Illinois establishes and has a Department of Grave Registration. The public is to collect the data concerning the names of the veterans interred in cemeteries in Illinois, together with all the information as to place, location, etc., as well as rank and organization. Veterans' organizations are authorized to aid in collection of data and are entitled to copies of cemetery plots at the expense of the county.

E. Headstones: Headstones are furnished by the Federal Government; however, the State of Illinois allots a certain sum for the erection of headstones in each cemetery. Cemeteries should be contacted to determine the type of headstones that is permitted in each individual cemetery. Counties may provide headstones for the soldiers' graves if they so desire.

F. Decedent's estate: No fees are allowed public administrators for service performed in administering that part of personal estate of war veteran, which consists of compensation, insurance, and other moneys due or payable from the United States.

EXEMPTION FROM EXECUTION

Money received by a war veteran as pension, adjusted or additional compensation, or bonus from the United States or from the State of Illinois on account of military service, is exempt from execution, attachment, and distress for rent, for 1 year following its receipt.

MEMORIAL BUILDING PRIVILEGES

Quarters may be set aside in county memorial buildings for the use of veterans' organizations, without charge to the organization.

PREFERENCES, RIGHTS, AND PRIVILEGES IN PUBLIC EMPLOYMENT

The State law grants preference to veterans in State and municipal civil service. Preference is granted to veterans in the civil service of Cook County. Annuity to Civil War veterans is granted upon retirement from municipal service. Preference is granted to veterans in the employment on public works of State and local units. Preference is granted to veterans, or their widows in appointments to administrative positions

under the veterans' relief commission. Credit for service in the Spanish-American and World Wars is granted in the computing of eligibility for fireman and police pensions, upon payment of the amount such firemen and policemen would have contributed to the pension fund during that period of time.

The Fight of Agriculture for Economic Equality

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. CLARK of Missouri. Mr. President, sometime ago, at the request of the editor of the Missouri Farmer, which is the organ of the Missouri Farmers' Association, one of the great agricultural organizations of the United States, and I believe the largest farm cooperative in the United States, I wrote for that publication an article entitled "The Fight of Agriculture for Economic Equality." I ask that the article be printed in the Appendix of the RECORD and that it be preceded by the editorial note entitled "Let's Get the Record Straight."

There being no objection, the editorial note and the article were ordered to be printed in the RECORD, as follows:

[From the Missouri Farmer]

LET'S GET THE RECORD STRAIGHT

During the past 12 months or so there has been a lot of misinformation disseminated by the daily press, radio and other mediums concerning agriculture, the farm bloc in Congress, the farm organizations, and various farm legislation. It is important that farmers understand what has been done and why. For unless we do understand the situation we become confused, and as an organization we become ineffectual. This is why we asked Senator CLARK to write the accompanying article. From time to time we expect to ask other competent legislators to write on the same subjects.

Senator CLARK, by the way, has been one of agriculture's stanchest friends in the United States Senate during the trying times through which we have been passing. He has steadfastly supported measures which he believed were in the farmer's best interest. On one occasion he stood out until the last with three other Senators on a proposal to definitely fix prices on everything—including farm prices, wages, profits and transportation charges—as was recommended by President Heinkel. Another time he was willing to get up out of a sick bed, against his doctor's orders, to confer with Frank Young, who was sent to Washington to represen' the Missouri Farmers' Association on a price-fixing bill. These instances and others, we feel sure, the Missouri Farmers' Association membership will appreciate.

THE FIGHT OF AGRICULTURE FOR ECONOMIC EQUALITY

(By Senator BENNETT CHAMP CLARK)

Among the strangest phenomena of these tragic times is the persistent and relentless efforts on the part of many great metropolitan newspapers and particularly of newspaper columnists and radio commentators to discredit the farmers of the United States and hammer down the price of agricultural products. In this short-sighted and un-American attitude it is a fact, regrettable but true, that in recent years these efforts have apparently had the connivance and assistance of some of the highest administrative officials of our Government.

These efforts upon the part of the great metropolitan press are the more remarkable in view of the fact that in the passage of the price-fixing and stabilization bills, the newspapers of the Nation sought and obtained for themselves a specific provision exempting newspapers from price limitations. Nearly every large newspaper in the country has freely and properly availed itself of the right to raise its own prices to cover increased cost of production. Yet the right which they have claimed for themselves of raising prices to cover cost of production—including increased labor costs—plus a reasonable profit on their investment and for their efforts, they have been the first and loudest to deny the farmers. The farmers themselves and those of us in Congress who regard agriculture as a fundamental and essential American industry which must at all hazards be not only permitted to survive but encouraged and stimulated to maximum production for the supply of those most vital war necessities of food and clothing, have been assailed and abused in the public press and over the radio, and accused of every crime from callous selfishness to downright treason. No more unfair campaign has ever been waged against any great section of the Nation's population.

No sensible man or woman can have the slightest doubt that one of the most desperate and pressing needs of the United States and its allies in this war emergency is the greatest possible production of agricultural foods and fibers. We must supply our armed forces around the globe with food to eat and clothes to wear. We must supply our own civilian population with sustenance in order to keep production of other essentials at the maximum in order to support and maintain our armed forces at highest efficiency. We must to a large extent supply the needs of our allies and of friendly neutrals in order to prevent a complete break-down in the combined effort so vitally necessary to win the war. Without the very greatest possible production in this country of these vital essentials our war effort must inevitably collapse, and disaster beyond any possible calculation might follow.

FARMERS ARE PATRIOTIC

Yet while all admit these salient facts, many high officials and many editors and commentators apparently have not had the wit to see what is necessary to bring about this maximum production of these essential requirements. Many of them have apparently never realized that the mere writing of a "quota" or an "allotment" on a piece of paper and the noisy trumpeting of "aims for agricultural production" through the press and over the radio does not of itself bring the needful production.

The average American farmer is as patriotic, as industrious, and as self-abnegating as any citizen of any nation in the history of the world. He has been the very bone and sinew of our Nation from the very beginning. But he cannot perform miracles, and he should not be expected to do so. To use a Biblical expression, the farmer "cannot make bricks without straw."

Too many of our professorial and editorial economists—who so often feel themselves entirely competent to speak as the last authorities upon agricultural problems about which they know nothing and care less—have completely overlooked the most rudimentary requirements for adequate agricultural production.

This may be briefly summarized as follows:

1. A price which will enable the farmer to pay his costs of production, including labor, plus the carrying charges on his investment in his land, improvements, and equipment, plus at least a living wage to the farmer and his family for their own labor and efforts. This is absolutely necessary because no matter how patriotic a farmer may be, the vast majority of farmers do not have sufficient resources to continue to produce at a loss even if they were willing to do so. Furthermore, when industry engaged in war work is being awarded cost-plus contracts insuring them cost of production including labor costs in addition to a reasonable profit, and when under the Little Steel formula wages have been stepped up to meet the increased cost of living, there is no reason on earth why the farmer should be asked to operate at a loss.

2. Sufficient farm labor to at least prevent wanton wastage of the agricultural resources of the Nation. It should have been recognized long ago that the man who is engaged in producing the materials for food and clothing for our armed forces is certainly engaged in no less essential an effort than the man engaged in producing munitions and that his occupation, though less hazardous, is no less essential than that of the man who carries a gun. But the farm has been steadily depleted of its manpower for production by drafts of farmers for military service and even more dangerously by high wages offered in munition factories with Government sanction and encouragement.

MORE MACHINERY NEEDED

3. Adequate farm machinery to make up the deficiencies in farm labor due to the foregoing causes. Since it was inevitable that a vast number of young men would leave the farms to enter the military services or be attracted by the disproportionately higher wages of munition plants, some provision should long ago have been made for filling this loss in farm manpower with an adequate supply of farm machinery.

These requirements are so plain and simple that he who runs may read. It is amazing that there should ever have been any dispute about them among men and women who recognize the absolute necessity for the greatest possible production of the vital agricultural products. Yet nearly all of the controversies with regard to agricultural production which have taken place in the last 2 years have revolved around these very points.

When—nearly 2 years ago—a few of us in the Senate and in the House began to point out the danger to agricultural production by the curtailment of manpower on the farm both from the operation of the draft laws and from the steady drain on farm labor by the ruinous competition with the higher wages of munition factories, as well as the imperative need of supplementing the farm labor remaining available by liberal allocation of farm machinery, if necessary financed by the Government, we were voices crying in a wilderness.

THE TYDINGS AMENDMENT

It should have been clear as crystal from the beginning that if maximum production of foods and fibers was to be maintained, the available supply of farm labor must not be unduly depleted either by the draft or by competition of munition factories and that the only way in which any such depletion could be made up was by additional farm machinery. But it was impossible to obtain any action on deferment of essential farm labor until adoption of the Tydings amendment, which was forced on to the last Draft Act by a militant group of Senators last October. Even then the spirit of this amendment was largely flouted by the Selective Service System and its effect largely nullified.

The Senate at last took drastic action and over bitter administration protests passed an

act for the blanket deferment of bona fide essential farm workers. This act has apparently been salted away in the House Committee on Military Affairs with little hope of passage, but its adoption by an overwhelming vote in the Senate has had the effect of forcing the selective service to carry out the spirit of the Tydings amendment. The situation has been thereby much improved, but the improvement came so belatedly that, as I stated in the Senate, it was a good deal like locking the barn after the horse was stolen. The suggestion seriously advanced as a substitute by the War Department of using military units as organizations to work the farms is, of course, ridiculous. It would be interesting to know what possible use such a fine military organization as the old Seventy-seventh Division, exclusively from Greater New York, would be on the farms of Missouri, Kansas, and Iowa.

The situation with regard to farm machinery has been equally slow and difficult in improvement. For a long time the War Production Board stoutly resisted all efforts to obtain an allocation of the necessary material for agricultural implements. Even with the substantial reduction in the critical materials necessary for the use of tanks, and certain allocations were made for farm machinery, a quota system was set up based upon the extent to which the farms of the various States were already mechanized. Thus, States like Iowa, which were already mechanized to the extent of 85 to 90 percent, were given quotas of the available supply on that basis, while States like Missouri and Oklahoma, mechanized to the extent of only 13 or 14 percent, were restricted to that basis despite the fact that their need was undoubtedly greater. This situation has been much improved and is likely to be further improved in the immediate future. Only a few days ago Chester Davis, the new food czar, who really knows something about the the farm situation, notified the War Production Board that the most pressing necessity for agricultural production at the present time is additional farm machinery. This will in all probability bring about great improvement, but too late to be of great effect in this season's crops.

It can scarcely be denied by anyone that taking the 10-year administration of President Roosevelt as a whole it has been notably friendly to agriculture and has brought about a vast improvement in farm prices, farm credits, and farm conditions. One has only to compare conditions at the outbreak of the war with the unforgettable disastrous situation existing when President Roosevelt took office in 1933 to be convinced of that fact.

I was not one of those who favored the plan of the original Agricultural Adjustment Agency bill. I believed with William Hirth and many other distinguished farm leaders that the preferable plan was to determine the amount of agricultural production needed for domestic consumption, guarantee the farmer a fair price for his production and then permit him to produce anything else he pleased to be sold on the markets of the world for whatever he could get for it. But when the theory of the Agricultural Adjustment Agency became the policy of the Government, in company with other friends of agriculture, I accepted this principle and voted for every measure to make it work to the best advantage. Whether or not the Agricultural Adjustment Agency was the best possible plan which could have been adopted at that time, it can scarcely be denied that the over-all results of that measure and its accompanying and succeeding legislation was greatly to the advantage of agriculture until the outbreak of war conditions.

I do believe, however, that since the development of war conditions, the handling of the whole price situation has been unfortunate and has worked unfairly on the farmers of the country in comparison with other great sections of the population. A very strenuous and sincere effort is now being made to correct these inequities.

Everyone recognizes the necessity for stabilization of economic conditions during this war if inflation which would be disastrous to all classes alike is to be prevented. Everyone realizes that all must make sacrifices—desperate sacrifices—if we are to win the war without precipitating calamity at home. But there should be—and should have been from the beginning—insurance for equality of sacrifice and insurance that all should be treated alike in an economic sense. There should have been over-all control from the outset—control of profits, wages, and prices, as well as control of agricultural commodities.

When the first price-fixing bill—largely written by Mr. Leon Henderson—was before the Congress, it was strongly urged by a few of us that the plan would not work unless it did include over-all control. The sponsors of the bill, however, were unwilling to include control of profits or wages. By reason of this refusal, it was necessary to provide that prices of agricultural products should not be fixed at less than 110 percent of parity. Now, no one had any idea that this provision would bring about an over-all price of farm products above parity. The limit of 110 percent of parity was inserted because of the sponsors of the price-fixing bill refusing to deal with profits or wages and on the theory that a general floor of 110 percent of parity would actually in practice permit about 100 percent of parity on the average.

Some of us in the Senate pointed out the dangers of such a system and insisted on an over-all system which would protect agriculture against a repetition of the calamitous experiences of the last war, when with high prices on agricultural products, the farmer was whipsawed as to his actual returns—his real prices—between exorbitant profits and abnormal wages. We were overruled by the majority. I predicted then that the system would not work and that further legislation would speedily be necessary to correct the very evils that we were then creating. As far as I was then advised—or for that matter so far as I am still advised—the farmer was perfectly willing to submit to Government price control so long as it did not upset the essential balance between commodity prices, wages, salaries, profits, and transportation charges, any one of which being out of control might be calculated to throw the whole system askew.

In September of last year, the President made his Labor Day speech. With the substance of this speech I was not in accord. He used the farmer as a whipping boy. He attributed the dangers to the safeguards against riotous inflation to the limit in the previous act to 110 percent of parity. While not denying the possible effects of exorbitant profits and of wage increases, he placed the blame squarely at the door of agriculture. His suggestion was that he would take care of profits and wages by Executive order, but his demand was that unless Congress should act by a day certain to reduce the limit on farm prices, he would proceed by Executive action to exercise powers which few competent lawyers in the United States believed him to have and reduce these limits by Presidential decree.

When the stabilization bill, drafted in accordance with the President's instructions, came before the Senate it followed this outline. I pointed out in the Senate that this really meant that the control of commodity prices would be put in the hands of Mr. Leon Henderson, already notably and publicly hostile to agriculture, while the control of wages would be put under the control of the War Labor Board, openly and notoriously committed to an increase of wages at least to the extent of 15 percent. It seemed to me that such a system could not possibly work in the direction of stabilization because the act itself was setting up contending forces to pull in opposite directions. After consultation with Mr. Heinkel, president of the Missouri Farmers Association, and other farm leaders, I introduced and supported a substitute for the administration bill which eliminated the discretion between contending governmental agencies and definitely fixed prices, wages, and salaries at the highest point reached between January 1 and September 15, 1942.

It is in effect the exact provision recently put into effect by the President's Executive order. Whether he has waited too long for it to be really effective only time will tell. In September 1942 it could have easily been made effective.

During the consideration of the last stabilization bill, an amendment was offered by Senator THOMAS of Oklahoma providing for consideration of the increased costs of farm labor in fixing the prices of farm commodities.

The proposition seems to me so simple that the farmer should be placed in a similar position to every other producers of essentials in the United States that I have never been able to understand the bitter opposition to this proposal. Nevertheless it did meet with bitter opposition and was supplanted by a compromise amendment, which I denounced on the floor of the Senate as a "fake compromise"—which indeed it proved within a week after its enactment. I will always be proud of the fact that I was one of the four Senators—and the only Democratic Senator—who voted against its adoption.

During the consideration of the stabilization bill in the Senate, any suggestion that the powers conferred in the measure could be used to apply benefit payments under soil conservation or other governmental acts was either denied or pushed off. In my opinion, if it had ever been stated that it was the purpose to apply these payments to a reduction of parity prices, the bill would never have been passed. Such intention was specifically denied on the floor of the Senate by Senator Brown, who was in charge of the measure. Everyone recognized that these benefit payments had to do with advantages to the whole people through soil conservation, etc., which had nothing to do with parity. After the passage of the act, there appeared in the daily CONGRESSIONAL RECORD a statement never read or delivered on the Senate floor which put a construction on the provisions of the act to authorize the deduction of these benefits in fixing parity. My information is that this statement was written by Mr. David Ginsburg, at that time General Counsel for the Office of Price Administration. By what chicanery it was introduced into the daily CONGRESSIONAL RECORD as representing words spoken in debate I have never been able to determine. Certainly, the Senate had no intimation that the bill contained such powers. Indeed, it was specifically denied on the floor by those in charge of the measure.

Shortly thereafter, an Executive order proceeded to put into effect the exact provisions foreshadowed by Mr. Ginsburg's memorandum, clandestinely slipped into the RECORD after the passage of the bill. Congress promptly passed the Bankhead bill to correct this situation by an overwhelming majority in both Houses. The bill was vetoed. The Senate referred the question to the Committee on Agriculture with a view to watching subsequent developments as to wages and profits to see whether further action was necessary. The measure providing for the consideration of labor costs in fixing parity is in the Senate Committee on Agriculture and will probably be acted on at an early date.

My conclusion is that it behooves every American farmer and every friend of agri-

culture in Congress to watch every step of the road to insure that the experience of the last war may not be repeated. That is to say, that agriculture should not again be the first to suffer restriction during the war and the first to feel the heavy hand of deflation after the war. That was what had paralyzed agriculture in the United States long before the official date of the depression in 1929. That resulted from unfairness of treatment during the war. It must not be permitted to occur again. Otherwise we will have no effective farming industry in the United States.

Shortage of Teachers

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, July 7 (legislative day of Monday, May 24), 1943

Mr. THOMAS of Utah. Mr. President, the educational system of the United States is in such condition that I feel compelled further to call attention to it by asking that a very instructive and comprehensive article from the New York Times, regarding the shortage of teachers, be printed in the Appendix. In my opinion, we cannot too strongly stress the conditions confronting us in this matter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEACHER SHORTAGE DECLARED A PERIL—NATIONAL EDUCATION ASSOCIATION SPEAKERS SAY 100,000 RECRUITS WILL BE NEEDED IN FALL, WITH FEW TO BE HAD—13,000 ROOMS UNMANNED—MYERS SO REPORTS, WARNING CONVENTION THAT 500,000 PUPILS FACE LOCK-OUT

(By Benjamin Pine)

INDIANAPOLIS, June 28.—A teacher shortage of alarming proportions, with resulting lowered standards, crowded classrooms, and curtailed school services faces this country, educators attending the annual convention of the National Education Association warned today. The 1,500 school leaders present were told that at least 100,000 new teachers would be needed this fall, and that there was little prospect of getting them.

There is particular danger that rural areas will be forced to keep their school doors closed, according to a report submitted by Dr. Alonzo F. Myers, chairman of the National Education Association's commission for the defense of democracy through education. Last year, Dr. Myers said, 13,000 classrooms were vacated because of inability to get teachers, which meant that 390,000 boys and girls could not go to school. He predicted that in September the number might rise to 500,000 or more.

Moreover, by fall 200,000 to 250,000 teachers, or about 25 percent of the total, will be new to their positions in the country at large. On that basis, said Dr. Myers, who is chairman of the New York University Department of Higher Education, 6,000,000 children will be receiving their schooling at the hands of inexperienced instructors, many unfit for their jobs. He estimated that 100,000 of the new teachers would have substandard qualifications.

TEACHERS QUIT FOR MORE PAY

"Many thousands of our best teachers are leaving for jobs that are paying them two and three times what they are getting as teachers," Dr. Myers declared. "Under present conditions it is absolutely impossible to replace them with competent people. There is a grave danger that the public will not realize what has happened until it is too late."

Provision of better salaries for qualified teachers was suggested in the report as the best way to halt the exodus to higher paying jobs in Government and industry.

A minimum salary of $1,500 for qualified beginning teachers was recommended.

"The United States Office of Education has found that more than 100,000 rural teachers left their teaching jobs between May and October last year," Dr. Myers said. "These rural teachers are the lowest paid members of our profession, thousands of them working for less than $600 a year. Who will replace them? Even morons can earn more than twice that amount today.

"Either we must here and now organize our profession for effective action on this matter or we must step aside and let those with sufficient courage and vision do the job.

"To meet the appalling situation, some school systems are employing as teachers persons who do not have even a high school education" Dr. Myers reported. In many communities, he charged, new teachers lacked the rudiments of effective training for their profession and were hired because they were unsuited for any other kind of employment. That would be reflected on teaching standards for many years to come, he warned, as these poorly qualified teachers would be frozen to their jobs, to the detriment of the pupils.

STRAYER CITES LOW SALARIES

Speaking on the same thing, Dr. George D. Strayer, of Teachers College, Columbia University, declared that more than 100,000 teachers had left the profession during the last year, and that another 100,000 could be expected to quit during the coming year. For the most part, he said, they were leaving because of poor salaries.

Dr. Strayer said that for the country as a whole 40 teachers out of every 100 were receiving less than $1,200 annual salary and 8 in every 100 were receiving less than $600 a year.

"We cannot hope to maintain the service of education by staffing our schools with persons less well qualified than those who have left the profession," Dr Strayer said. "We are not pleading for ourselves when we call the attention of the people of the United States to the necessity for immediate action by the Federal Government in support of public education.

"It has been established beyond the possibility of doubt that there are areas within the United States in which the resources available locally and in the State are not sufficient to maintain a standard of education adequate to meet the challenge which the current situation presents. There are children in America today for whom no schools are available. There are hundreds of thousands of boys and girls who have little or no opportunity beyond that provided in a poorly equipped and inadequately staffed elementary school."

Strong support for the $300,000,000 Federal-aid bill came from the National Education Association leaders. A report distributed at the convention declared that the education of our children is in serious danger and that the first signs of educational collapse had appeared as a result of the impending teacher shortage.

Holding that the emergency in education was a Federal responsibility, the National Education Association warned that if the local and State-supported schools were to carry effectively the increased burdens of wartime, they must have financial help from the Federal Government. The schools of all the States, the National Education Association report said, were threatened with lessened efficiency just at the time in our country's history when the school's contribution to the war effort was indispensable.

Support was urged for Senate bill 637, which provides $200,000,000 for emergency salary aid to all States, distributed on the basis of the number of school children, and $100,000,000 for an equalization fund to be distributed among the States according to need.

A report on teacher turn-over, presented by Mrs. D. Edna Chamberlain, State National Education Association Director of Oklahoma, disclosed that many school systems were being disrupted because of the rapid changes among teacher personnel. A survey made in Oklahoma, she said showed that a turnover of 40 percent had taken place during the year in the cities, while in the rural areas it was even greater. In one school system a turn-over of 300 percent had taken place, as more than 45 teachers served in a 15-teacher school during 1 year.

Pleading for higher teacher salaries and more adequate tenure laws for them, Dr. A. C. Flora, president of the National Education Association, asserted that there still were 15 States that had no tenure laws at all, and 7 other States in which the protection of tenure might be granted only on a local basis, confined largely to cities. Many of the retirement laws, he added, were inadequate and offered meager protection for the security of teachers after they have retired from active service.

"Danger lurks wherever there are teachers who are woefully underpaid, wherever teachers do not have sound contractual bases or face retirement age without hope of subsistence," Dr. Flora asserted. "Wherever these conditions maintain, children are being short-changed and the profession of teaching stands indicted for lack of real concern for all of its workers. No one group of teachers, however well organized or seemingly self-sufficient, should be content or satisfied until all of the teachers of the Nation have the necessary income and the welfare safeguards to make them effective and respected members of our profession."

Resolutions looking toward improvement of the teaching profession were presented to the convention. In one of the resolutions the National Education Association said that the stress of war demanded of teachers physical fitness, technical perfection, emotional stability, higher morale, and civic competence.

The association urged that schools, in cooperation with other agencies, develop a constructive program to counteract those forces which were contributing to juvenile delinquency. It advocated also that the United States participate in an international effort to establish peace and order under law, adding that "the importance of education must be recognized in the establishment and maintenance of international justice."

Despite the heat, the delegates engaged in a spirited campaign for the National Education Association presidency. Mrs. Edith B. Joynes, principal of Gatewood Elementary School, Norfolk, Va., and Miss Frances Jelinek, teacher in Milwaukee, were nominated. The elections are to take place tomorrow.

Another question, that of raising the annual National Education Association dues, now $2, also will be threshed out tomorrow. Many association leaders favor higher dues so as to build up a war-and-peace fund. The sessions are to close tomorrow evening, with an address by Dr. John W. Studebaker, United States Commissioner of Education.

Boulder Dam Reaches Peak of War Production of Power

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. MURDOCK. Mr. Speaker, under leave to extend my remarks, I call attention to an event which has great significance in the prosecution of the war and for the permanent development of the Pacific southwest. I refer to the announcement by Secretary of the Interior Harold L. Ickes that Boulder Dam was operated at a capacity of more than a million kilowatts—the first time in history that a single power plant has been capable of turning out that much electric energy.

Arizona shares with Nevada in the location of Boulder Dam on the Colorado River—the boundary between the two States.

I congratulate Secretary Ickes and Acting Commissioner Harry W. Bashore, of the Bureau of Reclamation, on this memorable achievement.

The news release in which Secretary Ickes made the announcement is as follows:

For the first time in history a single power plant has operated at more than a million kilowatt capacity, Secretary of the Interior Harold L. Ickes announced today. The plant is the Boulder Dam installation on the Colorado River in Arizona and Nevada, operated by the Bureau of Reclamation.

News of the record-breaking output, first reached on June 11, was brought to the Secretary by the Bureau's Acting Commissioner Harry W. Bashore. He explained that the previous highest instantaneous peak load occurred on January 7, 1943, when slightly more than 900,000 kilowatts were generated. A million kilowatts is sufficient to meet the power needs of a city the size of Chicago.

"The rated capacity of Boulder power plant is about 950,000 kilowatts but by operating the generators at a 10-percent overload we were able to obtain more than 50,000 additional kilowatts from the machines," Mr. Bashore said.

"This added power is of vital importance, for every additional kilowatt the Bureau of Reclamation can deliver contributes to increased war production in an important area. A large proportion of this huge block of energy goes either directly or indirectly to airplane factories, shipyards, munitions plants, airfields, Army posts, naval stations, mineral developments, and other industries of the southern California and Nevada areas. The largest magnesium plant in the world is operated by Boulder power.

"The extra output of Boulder generators is also significant at this time from the standpoint of conserving vital fuel. Power companies which have contracted for this energy are using all the water power available in order to minimize the operation of their steam plants using coal and oil."

Looking ahead when Pacific Southwest industries will make further demands on the Boulder Dam power plant, the Bureau has ordered another large generator of more than 80,000-kilowatt capacity, which, together with the 12 big machines now in operation, will bring the installation to more than 1,030,000. The ultimate capacity, when all installations are made, will be 1,332,300 kilowatts. The estimated output of the plant in 1943 is 6,000,000,000 kilowatt-hours, more than was produced in all power plants on the Pacific coast in 1921.

At the end of the last fiscal year Boulder Dam, which began operation late in 1936, had returned to the United States Treasury $18,200,000 as repayment of funds advanced for its construction. In addition the States of Arizona and Nevada have been paid $2,400,000, and $2,000,000 has been allotted to the Colorado River development fund for investigations of potential projects in the Colorado River Basin as provided for in the Boulder Canyon Project Adjustment Act of 1940.

Through regulation of the release of water from Lake Mead, the Boulder Dam reservoir, and through facilities downstream, irrigation water is provided for the Imperial Valley in southern California and the Yuma project in Arizona, both highly productive all-year agricultural areas. These projects are important units in the list of 41 irrigation projects being operated by the Bureau, which are serving 4,000,000 acres of land producing large quantities of war foods. Control of the flow of the Colorado River at Boulder Dam provides water, through diversion downstream at Parker Dam, for industrial, military, and domestic needs of 12 cities of the southern California area, where live 3,000,000 people. The regulation also makes possible the operation of the power plant at Parker Dam where the installed capacity, used mainly for war production, is more than 115,000 kilowatts.

The rated capacity of power plants on 19 Bureau of Reclamation projects in 11 States is now more than 1,840,000 kilowatts.

War Law Institute

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following outline of the War Law Institute conducted by National University Law School, which is an exceptionally fine discussion of the various phases of the war effort:

NATIONAL UNIVERSITY, SCHOOL OF LAW, WASHINGTON, D. C., WAR LAW INSTITUTE II, DR. MILTON I. BALDINGER, DIRECTOR

June 14: Legal Controls Over Shipping, Mr. William Radner, War Shipping Administration.

June 16: Soldiers' and Sailors' Civil Relief Act of 1940, as amended; Dr. Baldinger.

June 21: Legal Aspects of Cartels, Mr. Hugh Cox, Department of Justice; Economic Aspects of Cartels, Mr. Joseph Borkin, Department of Justice.

June 23: Labor Under War, Mr. Lee Pressman, Congress of Industrial Organizations; State Regulation of Unions, Mr. Joseph Padway, American Federation of Labor.

June 28: Legal Problems of War Relocation Authority, Mr. Philip Glick, War Relocation Authority; the Work of Office of War Information, Mr. A. H. Feller, Office of War Information.

June 30: Current Tax Payment Act of 1943, Mr. Stanley S. Surrey, Treasury Department; the Work of the Navy Judge Advocate General, Capt. J. R. Wallace, United States Navy.

July 5: Constitutional Basis for War Legislation, Dean Charles Pergler.

July 7: Investigating the Defense Program, Senator Harry S. Truman; Radio in Time of War, Commissioner Ray Wakefield, Federal Communications Commission.

July 12: Rent Control in the District of Columbia, Mr. Ernest F. Henry, Office of Administrator of Rent Control.

July 14: Work of War Labor Board, Mr. Jesse Freidin, War Labor Board; War Manpower Problems, Miss Bernice Lotwin, War Manpower Commission.

July 19: Renegotiation of Contracts, Mr. Robert E. Kline, Jr., House Naval Affairs Investigating Committee.

July 21: Alien Property Custody, Mr. George A. McNulty, Department of Justice.

End of Secrecy in Allotting Newsprint

EXTENSION OF REMARKS
OF
HON. MELVIN J. MAAS
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MAAS. Mr. Speaker, Donald M. Nelson, Director of the War Production Board, got in touch with me today in connection with my charges made on the floor of the House that the Printing and Publishing Division showed evidence of being used for control of the press, including magazine and book publishing.

I am quite convinced that Mr. Nelson not only has never approved of any such policy, but has not known of the trend in this Division toward this objective. I am sure, also, that he did not realize the dangers of the potential abuses that are possible under the procedure that the Printing and Publishing Division operates. I do not think that he has had any realization of the dangers inherent in the secret method of operation indulged in by the Printing and Publishing Division. After disclosing my sources of information, which included an investigation by a highly reputable law firm for a number of months, Mr. Nelson has agreed to my recommendations and has assured me that rules for procedure will be adopted by the Printing and Publishing Division and that all appeals with their disposition and reasons for final decision will be published, probably in the daily Federal Register. This is satisfactory to me as I am sure that there is no danger of a secret control of the press by controlling white paper so long as all of the proceedings are open to public examination.

At Mr. Nelson's request, several officials from the Printing and Publishing Division are to meet with me tomorrow morning to go over the details of this matter.

Double-Seven Day

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. BURDICK. Mr. Speaker, today our noble ally, China, is observing what they call, Double-Seven Day—the anniversary of their 6-year-old fight against Japanese aggression.

In the Shrine of the Sacred Heart Church here in Washington this morning, hundreds of Chinese and Americans gathered to attend a solemn Pontifical Requiem High Mass conducted by His Excellency, Bishop Paul Yu-Pin, Vicar Apostolic of Nanking, celebrated for repose of the souls of all men who today fight with the Allied Nations for the principles of justice.

Following the mass a sermon was preached by Rt. Rev. Msgr. G. Barry O'Toole, former rector of the Fu Jen University of Peking and now professor in the Catholic University here. This mass and sermon, sponsored by the Chinese Catholic Cultural Association, was broadcast to Chungking via short wave and because of its unusual nature, I ask leave that it be included in the RECORD:

"Greater love hath no man than this, that he should lay down his life for his friends" (John xv:13).

Six years ago today the Chinese people undertook to defend the divine order of justice against the lawless violence of men. At Lukouchiao, a point 20 miles west of Peking, the Chinese garrison returned the unprovoked fire of their Japanese assailants, and China's heroic war of resistance began. Poorly armed though they were, but making up in sheer courage for what they lacked in equipment, the Chinese Army, under the splendid leadership of Generalissimo Chiang Kai-shek, pitted their bodies of flesh against the mechanized forces of Japan and, spilling their blood in torrents, eventually stopped the invader dead in his tracks of ruthless carnage and devastation.

But the incident of the Marco Polo Bridge, on July 7, 1937, was not the beginning of Japanese occupation; that had begun 6 years before when Japan, in open violation of the Nine-Power Pact she herself had freely signed at Washington on February 6, 1922, took possession of the four northeastern provinces, known to the West as Manchuria, on September 18, 1931.

Americans will always recall with pride the fact that, through Secretary of State Stimson's note of January 7, 1932, the United States was the first, if not the only nation to protest against the scrapping of a solemn treaty by this wanton act of aggression. Unsupported, however, by concerted action on the part of the other signatory powers, that protest proved too feeble to quench the fatal spark of aggression, destined in time to ignite the conflagration of the Second World War.

The League of Nations inquiry was equally unavailing, and China realizing, at last, that she could not count on support, either moral or physical, from without, drew the sword herself, determined singlehandedly to vindicate the sanctity of treaties as essential to the moral order divinely ordained to regulate international relations.

The issue then at stake was more than China's survival as a nation, it was one of universal import; whether, namely, in a civilized world, any nation may arbitrarily set aside a treaty of its own making, resorting to armed force in order to impose its prepotent will upon another nation.

In his encyclical Summi Pontificatus, dated October 20, 1939, our present Holy Father, Pope Pius XII, expressly condemns all such breaches of international law:

"But to consider treaties on principle as ephemeral and tacitly to assume the authority of rescinding them unilaterally when they are no longer to one's advantage, would be to abolish all mutual trust among states. In this way, the natural order would be destroyed and there would be dug between different peoples and nations trenches of division impossible to refill."

Indeed, the nations of the western world owe an immense debt of gratitude to China's soldiers who for 6 harrowing years have fought this good fight for international justice. Believing in universal human brotherhood and rejecting the race issue raised by Japan, they, with little or no help from us, have kept at bay Japan's formidable armies which, but for them, might even now be ravaging California and our whole Pacific coast.

If the United Nations are deeply indebted to Poland for having been the first country in Europe to resist international lawlessness, they should be no less grateful for what China has done in Asia. The Chinese, in fact, were the very first to sound the tocsin of warning to a sleeping world and, failing to awaken that world to its danger, they took the field alone, resolved to ward off at all costs the evil tide of violence threatening to engulf humanity.

True to that resolution, they have endured—for justice' sake—the torments of hunger and every species of cruelty. Let us never forget their sufferings, for they have borne them for us no less than for themselves. Neither let us forget the sacrifices unstintingly made in our behalf by the brave Filipinos, 20,000 of whom died fighting at Bataan. God willing, Americans will repay those debts by helping both the Chinese and the Filipinos to regain the territory they have lost.

Among the United Nations, none has entered this war with a cleaner conscience or with nobler ideals than the Chinese people. Their war with Japan has been purely defensive, forced upon them after they had exhausted every reasonable means of avoiding recourse to arms. As for ideals, can we conceive of nobler ones than those for which the Chinese soldier fights? Against force he upholds reason, against hatred he upholds brotherhood, against racism he upholds universalism, against despotic stateism he upholds the personal rights and dignity of the human individual. Of these lofty ideals, which the Chinese hold in common with all Christian people, every truly democratic nation must approve, and it is because the United Nations stand committed to these principles that our soldier boys are sincere in their patriotism—ready to die in order that their countries may live.

Patriotism is the sweetest, the noblest, the most unselfish of human ideals. It is the moral virtue which inclines a man to love and serve his country as it deserves to be loved and served. The human individual is not self-sufficient; he has absolute need of the social support of the country in which he lives. From the cradle to the grave, society must wait upon him with every sort of benefit, if he is to survive and develop all his powers. Patriotism, therefore, adds to mere civic loyalty, a sentiment closely akin to family affection, since our country is, in a sense, a father and a mother to us. Our country's traditions, its culture, and civilization, its arts and its sciences, its literature and history constitute a rich heritage, a glorious patrimony handed down to us by our forefathers, that we in our turn may transmit it to posterity. We are but its trustees and, should necessity arise, it is incumbent upon us to give our very lives in order to preserve it for future generations.

Most Rev. Bishop Yu-Pin, from the first days of the war, Your Excellency—like Cardinal Mercier during the last World War—has preached this noble virtue to your countrymen. Nevertheless, you appreciate as few others do the magnitude of the sacrifice that patriotism demands of soldiers.

"There lie many fighting men, dead in their youthful prime,
"Never to laugh or sing again, or taste the summertime."

—*Joyce Kilmer.*

It is because you fully realize the great tragedy of their sacrifice that you have called us here today to pray for the soldier dead of all the United Nations, in union with the holy sacrifice of the mass—eternal continuation of Christ's sacrificial death for mankind upon the altar of the cross. In the language of humanity's universal mother, the church, may their souls and the souls of all who, in imitation of Christ on Calvary, have laid down their lives for their friends, find in our Saviour's love an everlasting "place of refreshment, light, and peace." Eternal rest grant unto them, O Lord, and let perpetual light shine upon them.

Mr. Jesse Jones

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MILLER of Connecticut. Mr. Speaker, with all reverence I say thank the good Lord that we have such a man as the Honorable Jesse Jones in charge of the Reconstruction Finance Corporation.

This organization, built up over a long period of years, has made a great contribution to the war effort. I urge every Member of the House to read the copy of Mr. Jones' letter to Senator CARTER GLASS, chairman of the Senate Committee on Appropriations, along with Mr. Jones' statement in reply to charges made by Vice President WALLACE, a copy of which you doubtless found on your desk this morning, with reference to the purchase abroad of critical and strategic material by the R. F. C. After you read this statement I am sure you will agree with me that, in all fairness to Mr. Jones, Congress should make a full and complete investigation of the charges made recently by the Vice President.

It is exceedingly unfortunate that this information was not available to the Congress before we passed the appropriation bill containing appropriations for B. E. W. If this information had been available, we could have doubtless saved several million dollars of the taxpayers' money.

People Must Understand That They Must Practice Self-Restraint To Help Keep Prices Down

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PATMAN. Mr. Speaker, practicing self-restraint to help keep prices down means foregoing buying things we really do not need—restricting our purchases to what is essential—so as to hold down the pressure of demand for the limited supply of civilian goods. It means that we must make what we have last longer so that we will have to buy less.

It means foregoing the temporary advantage of higher prices for the things we have to sell—foregoing higher wages. It means putting our money to work in winning the war by paying higher taxes and buying and holding all the War bonds we can afford.

It may mean sacrifices for some of us—but these are trivial sacrifices compared to those asked of our fighting men at the front. And these are sacrifices which will pay out in the long run, which will help keep the Nation strong for the fighters who are offering their lives for it.

It may mean that the burden of sacrifice will fall unevenly and that some of us will have to give up more than others. But this is true of the fighting front as well as the home front. All soldiers are not asked to make the same sacrifices. Some die. Some are ordered into posts of great danger. Some are more fortunate. But all are ready to make any sacrifice which is asked of them. We on the home front must be willing to do no less.

We must remember that living standards are now generally high enough to enable the great majority of us to exert a maximum productive effort in winning the war. This is the important thing in wartime. Government will do its best to see to it that everyone will get this much, but it will not encourage any group in its efforts to get more than this. Everyone must help the Government resist such pressures.

The fight to hold down prices is a vital part of the war effort. Like the war, it has a cost, but it is well worth the cost.

It involves the acceptance of controls throughout the war and into the peace. These controls are necessary to make sure that the program is fair to everyone; that no individual or group profits at the expense of anyone else. And that, at the war's end, the Nation is sound and strong—the very things we are fighting for.

It involves the acceptance of sacrifies, minor indeed when compared to the soldier's offer of his life. The program cannot give us our peacetime habits and standard of living.

It can distribute the burden of economic sacrifice equitably, insure a fair distribution of the goods and services available, and protect the economy which is our common concern.

These benefits far outweigh the inconveniences and sacrifice the program requires. Indeed, these inconveniences and sacrifices are not the result of the program—they are the result of war—of a war caused by the enemy, not by you and me. We would be much worse off without a program, with one group pitted against another, with the burdens of war falling unevenly on different groups, with restricted supplies of goods unfairly distributed. Our fight against the enemy, our entire social and economic structure would be jeopardized by the failure of the economic stabilization program. We have an immediate and long-term stake in its success.

Oilmen Must Rely on Congress for Relief, Prevent Shortage

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Tulsa (Okla.) Tribune of July 3, 1943:

OIL MEN MUST RELY ON CONGRESS FOR RELIEF, PREVENT SHORTAGE

(By Andrew M. Rowley)

Reduction in value of gasoline ration coupons in the Middle West, including Oklahoma and Kansas, long predicted by this column, increasingly looms as an almost foregone conclusion. But its inauguration for the territory west of the Mississippi River probably can be postponed if businessmen and Representatives in Congress of the States west of the river get busy quickly and present to proper authorities factual information which should be the basis of any decision affecting the quantity of gasoline which may be purchased by consumers in this territory.

Business organizations, chambers of commerce and all other trade groups, together with individual citizens, should make it entirely clear and conclusive this territory will not willingly submit to any reduction in gasoline rations simply to salve the feelings of easterners rationed drastically solely because of lack of transportation facilities to their area. Also, that Nation-wide reduction of value of gasoline ration coupons should not be imposed until after districts with gasoline supplies available for shipment to the east coast had been called upon to supply what they could to the Atlantic seaboard States and had completed performance of that duty.

In other words, the Illinois-Indiana-Kentucky district should be called upon first to start shipping gasoline to the east coast for two unanswerable reasons. It has a greater supply of gasoline in storage now, in comparison to 1 year ago, than any other area in the United States except California, which does not figure in the shipment of gasoline to the Atlantic coast. Secondly, it is much closer to the east coast than producing centers west of the Mississippi River, thereby eliminating long hauls by railroads from points west of the river and permitting shipments of far greater quantities of gasoline with the same railroad equipment.

Here is the line-up of gasoline stock figures as of June 26 this year and June 27 a year ago: Illinois-Indiana-Kentucky, 16,670,000 barrels now and 16,857,000 barrels a year ago; Oklahoma-Kansas-Missouri district; 6,532,000 barrels as against 8,107,444 barrels; Appalachian district, 2,426,000 barrels as against 3,067,000 barrels; Rocky Mountain, 1,846,000 and 2,415,000; and California, 20,857,000 now as against 16,598,000 barrels a year ago.

Consequently, the Illinois-Indiana-Kentucky district is off only 1.1 percent from its gasoline stocks of a year ago while the Oklahoma-Kansas-Missouri district has approximately 22 percent less gasoline in storage now than a year ago.

When the 24-inch crude-oil line from Longview, Tex., is completed around August 1 from its present eastern terminal at Norris City, Ill., to the New York-Philadelphia refining centers, there will be released something like 10,000 to 12,000 or more railroad tank cars which then will be available for shipment of oils to the east coast and which now are carrying crude oil from the Norris City terminal of the Big-Inch.

Government plans to utilize these tank cars to carry gasoline and, probably, burning oils, to the east coast from the Middle West and, maybe, the Southwest. Such shipments will draw on supplies in storage in the Middle West and Southwest and, undoubtedly, will result in stricter rationing of oils in these areas.

So, reduction in value of gasoline ration coupons depends on where and when the Government authorities call for supplies to make up these shipments and how much oil they will require to be shipped. It is almost certain the quantity demanded will be the limit of capacity of railroad facilities to transport.

Vociferous eastern politicians and consumers will have a strong argument in demanding greater quantities of oil for their area if transportation facilities are available and oils can be procured from other areas. It is a cinch Government authorities will do everything possible to get as much oil from other areas into the Eastern States as is possible with existing transportation facilities.

People in the Midwest and Southwest do not begrudge easterners all the oils they can get and they are willing to share their supplies with those along the Atlantic seaboard. But they don't want any maudlin sentiment or political exigencies to determine the matter of rationing in the Middle West or Southwest. This idea "If one must suffer, all must suffer" so often expressed, is pure poppycock.

And there is no more reason why Government should pay for the higher cost of transportation of oils to the east coast, or a subsidy representing the difference between former transportation costs when ocean tankers were the chief means of transportation and present railroad tank car charges, than there is for it to pay the $100 or so transportation cost of an automobile to Tulsa from Detroit. Transportation costs of oil should be added to price of products sold in the East, just as railroad charges are added to everything else people in this country buy.

By granting a subsidy, covering the additional transportation costs, the Government is simply making all people throughout the United States pay the additional charges of getting oils to Eastern States. It is not the fault of the people in other sections of the United States that ocean tanker shipments to the east coast were stopped. Consequently, easterners should absorb the additional transportation costs through higher prices for oils, just as people in the rest of the country pay for transportation costs on articles they buy.

Government is responsible for the shortage of gasoline impending in this country which will force a reduction in value of gasoline ration coupons throughout the middle west and southwest.

In the first place, refiners cannot make as much gasoline as they could manufacture simply because they cannot get the crude oil with which to make the gasoline. Government has limited crude oil supplies to refineries to 80 percent of the average runs to stills during the last six month of 1941. In addition, it reduced the permitted yield of gasoline from a barrel of crude oil.

Why was it necessary to place this restriction on crude oil allowables? Simply because the Nation is not producing the quantity of crude oil needed. That is due to greatly reduced drilling operations. And the low level of drilling operations is due to refusal of the Office of Price Administration to approve a needed and justified increase in the price of crude oil and to spacing restrictions on drilling operations, difficulties in obtaining needed equipment and shortage of manpower.

There are numerous factors which prevent refiners from making as much motor fuel as they did previously. First, is the fact the government reduced the permitted yield of gasoline from a barrel of crude oil to force greater production of burning oils and fuel oils. The permitted yield some time ago was down to 70 percent of former yields. Since, it has been raised to around 90 percent. Secondly, crude oil supplies are allocated to refiners and the quota for refineries not making 100 octane gasoline or ingredients thereof or other war products, is 80 percent of the average . ins of the last half of 1941. Thirdly, many refineries throughout the country are either making 100 octane gasoline, synthetic rubber, ingredients or products used in making toluol, basic ingredient of high explosives, or products used in making aviation gasoline or synthetic rubber.

Making these products reduces the quantity of ordinary motor fuel a refinery can make. Ordinary gasoline is used as a base stock in many refineries making aviation fuel, hence the output of motor fuel is lessened appreciably. Making other ingredients for 100-octane gasoline cuts down the quantity of high volatile products which go into the making of ordinary motor gasoline.

The vice president and sales manager of one of the largest refineries in the Midwest told the writer his company's output of motor gasoline is 30 percent less than what it was prior to the time that company started making ingredients for 100-octane gasoline and synthetic rubber, and that company does not make finished 100-octane gasoline or synthetic rubber; it makes only ingredients for the finished products.

With reduced production of automobile gasoline, and the output will probably become less before it increases, due to the fact more refineries are getting into the production of ingredients for aviation gasoline and synthetic rubber, an actual shortage of gasoline is imminent because consumption has not been reduced as much as production has fallen.

Stocks of gasoline in the Oklahoma-Kansas-Missouri districts are 22 percent less than they were a year ago, but demand for gasoline in this district is off not more than 10 to 12 percent, and in some areas, notably around Kansas City, where there are numerous war plants, demand now is greater than a year ago.

In addition, a most important factor which must be considered, is the fact that at this time last year, large supplies of gasoline were being shipped out of this territory by railroad tank cars to the east coast. Shipments of gasoline from outside Petroleum Administration for War district 1 (east coast) by tank cars into district 1 were prohibited by the Government on January 21 last.

So, despite the fact these shipments of gasoline were stopped from this territory, stocks have declined 22 percent. What will be the result when shipments of gasoline are resumed to the east coast, as they will be on completion of the big crude-oil line around August 1? It is not hard to figure.

What is the answer to the problem?

Raise crude-oil prices to stimulate drilling, thereby getting more badly needed oil reserves and increasing production, which would permit refineries, with adequate capacity, to run more crude to stills and make more gasoline. When crude-oil prices were advanced in certain California fields, drilling operations increased by something like 52 percent.

Relax Government restrictions on spacing wells. Provide more materials for drilling. Getting needed oil is just as important as building ships and tanks, for without oil they would be useless.

And stop drafting skilled oil-industry workers into military service or permitting them to go into other lines of work. A raise in crude-oil prices would permit producers to pay higher wages to workers, thereby offsetting, to some extent at least, the lure of other more highly paid jobs.

A simple solution of the whole oil industry problem and the tragic possibility of an actual shortage of oil which would prolong the war unnecessarily and result in loss of many lives of boys who, otherwise could have been brought home, is to place entire responsibility and regulations of the oil business in the hands of one Government bureau instead of dividing that responsibility among a number of bureaus as is now the case.

Divided responsibility, with resultant petty jealousies, bickerings, and myriad orders by inexperienced, politically appointed economists, with no business training or background, is hamstringing the oil business and preventing it from going ahead and supplying all the oil this Nation and its allies need.

When things start going badly, that is, when the public finally becomes aware of the mess being made of things by the young, power-drunk, know-little-or-nothing bureaucrats, due to divided responsibility and placing powers over one business in the hands of several bureaus, the New Deal solution is to appoint still another bureau or committee or organization to mess with the trouble, further complicating an already bad situation.

Some time ago Chairman Donald M. Nelson of the War Production Board is quoted as announcing a solution would be announced soon of the problems affecting the oil industry. Late yesterday he announced what supposedly is that solution. It consists of the appointment of two committees, representing various Government agencies having authority on matters relating to oil. Committee members can advise with each other, but the one and only vote of a committee is that of the chairman and the chairmen of the two committees are the same men who now head two important bureaus handling oil matters—Harold L. Ickes, Petroleum Administrator for War, and Prentiss M. Brown, Director of the Office of Price Administration.

As far as the writer can see, there is absolutely no change whatever in the set-up or authority of Ickes or Brown. In fact, Nelson, in the announcement, is quoted as saying, "In general, these and the other interested agencies will continue in their same roles, with the advice of committees which will include representatives of other agencies."

If that is a solution of the oil industry problems, Heaven help the oil business.

But what else can people expect of a bureaucracy? It thrives on increasing personnel, enlarging spheres of activity, grabbing more power, dividing authority so that no one bureau can function efficiently or do a job in itself, and appointing other bureaus, committees, or what not, all of which serves only to further muddy the waters and hinder operations and decisions on matters of vital importance.

It appears more and more that the oil industry must rely solely on Congress for relief and to prevent a shortage of oil.

Every oil man in the country should get busy and contact his representatives in Congress—both Senators and Congressmen—and demand, not request, that immediate action be taken to place oil industry regulation in the hands of one bureau in Washington, with men experienced in oil industry matters to handle the matters relating to the business.

Why should Prentiss Brown have power to set oil prices, the most important factor influencing production, when Ickes, head of another bureau, is charged with the responsibility of seeing that adequate quantities of oil are made available for all military, industrial, and essential civilian needs?

The whole thing just doesn't make sense and never will.

Unless something is done and done quickly, this Nation will face an actual shortage of crude oil. If such a tragedy materializes, watch the bureaucrats start making alibis and blaming other bureaus or the oil industry itself. The Office of Price Administration is primarily responsible for present conditions. Prentiss Brown and his bureau of economists and young lawyers, entirely inexperienced in oil-industry matters, should be shorn of all power and authority relating to the oil industry.

The column reiterates a statement it has made so often. It is our personal belief, New Deal bureaucrats are actually fostering a shortage of oil so they can go to the public and say "The oil industry failed to supply the oils so badly needed in the war effort, so, to save the country, it is necessary for us to take over control of the vitally important oil business."

Let's all get busy and ask Congress to ditch the Office of Price Administration as far as the oil industry is concerned.

It Is Patriotic To Do Everything Which Would Help To Hold Down Prices

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PATMAN. Mr. Speaker, it is patriotic to help hold down prices.

First. To act contrary to the rules of the game is playing into the enemy's hands, is doing what Hitler wants, what Japan wants. When men are dying we are asked to do very little, especially when we benefit in the long run.

Second. Price increases would raise the cost of the war because the prices of things the Government has to buy would be higher. That would increase the burden of taxes which all of us—including our fighting men when they return—would have to pay for many years.

Third. It would cause immediate hardship for many people with fixed incomes—including veterans and veterans' families living on pensions, families of the men in our armed forces, widows living on insurance payments, and so forth.

Fourth. It would create demands for higher wages, foster labor disputes, hurt morale, and impair the war effort.

Fifth. Business would have to face maddening uncertainties in all costs that it would not know how to plan its activities. Business would become reluctant to take risks, slow up, and again the war would be impaired.

Sixth. At some point prices would outstrip wages in the race upward. At this point very little could be required to knock down the house of cards which uncontrolled price rises had reared. When prices come tumbling nearly everyone would suffer, our economic life would stagnate in a depression, and the national well-being would be seriously damaged.

Natural-Gas Situation

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include some remarks setting forth the situation in regard to the natural-gas situation in the Midwest and eastern area of the United States.

I have before me a copy of Opinion No. 93 by the Federal Power Commission, in which, after extensive hearings continuing over a period of 5 months, the Commission has indicated its intention to issue a certificate of public convenience and necessity for the construction of a natural gas pipe line from southern Louisiana to the so-called Appalachian area, which at present is the principal source of natural gas supply for the public eastward from Indiana to the seaboard. This project deserves the support of every Member of the House, not merely because it advances the war effort and the post-war needs of the most populous region of the United States, but principally because it eliminates a grave threat to the present and future operations of industries which now are dependent upon the gas fields of the Southwest for natural gas supply.

During the recess of Congress many of my colleagues may expect to receive from me further information on this subject with a view to obtaining approval by the War Production Board at the earliest possible moment of a release of steel priorities necessary to construct this new pipe line. It averts a disastrous withdrawal of natural gas from the southwestern gas fields now supplying the region from Detroit westward to Denver, by rendering totally unnecessary a project which has been hastily thrown before the Federal Power Commission in recent days by the Hope Natural Gas Co., a subsidiary of Standard Oil Co. of New Jersey. In addition, simple reasoning will convince my colleagues that this project, now approved by the Federal Power Commission, should have their continued interest and support. Let us consider the facts.

First. This new project, namely the piping of natural gas from southern Louisiana to the Ohio River near Ashland, Ky., will require less than 800 miles of main pipe line, as against 1,140 miles required for the proposed Standard Oil line from the Hugoton field in southwest Kansas.

Second. Steel required for this main pipe line would be approximately 60,000 tons less than requirements for the proposed Standard line.

Third: Despite these savings, the ultimate capacity of this approved project would exceed the capacity of the pipe line from southwest Kansas, as proposed, by 10,000,000 cubic feet per day.

Fourth. The approved pipe line will cost substantially less, and the saving will be reflected in a lower price to the ultimate consumer.

These are the obvious advantages which should flow from the Federal Power Commission's decision but, to the Nation at large, construction of this pipe line from southern Louisiana by a wholly independent enterprise will serve to break further the monopolistic grip which now is throttling production, transportation, and sale of natural gas in the Appalachian area by competitive businesses. In contrast, would be the harmful effect of any certificate and steel priority granted for piping gas from southwest Kansas to the Cleveland-Pittsburgh area through a new pipe line. This latter scheme has been so hastily thrown together that, in the application to Federal Power Commission for a certificate, its sponsors admit that they are only now entering upon negotiations for the purchase of gas, and those negotiations are so preliminary that said sponsors are unable to state either their steel requirements for gathering the gas or the entire project's ultimate cost—and believe me, gentlemen, the ultimate gas rate payer will have to bear such cost and is entitled to some advance information.

Present Military Trends of the War

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. BULWINKLE. Mr. Speaker, as our offensive in the southwest Pacific gains momentum and the energies of the Nation are being girded for an even greater venture on the Continent of Europe we have reason for grim confidence in the outcome of the war, but no justification for overconfidence or complacency.

The Nation's military leaders are counting on the spirit and determination of the American citizen to put the needs of our fighting forces ahead of every personal consideration.

We are engaged in the greatest task of production ever undertaken by any nation in history and the job is not finished. As our soldiers and sailors move into the new offensives, our soldiers on the production line must produce a new outburst of energy to keep pace with the accomplishments on the actual battle fronts.

The present trend of the war gives us a magnificent opportunity to demoralize the enemy and bring his surrender closer. If the men and women working at home produce the materials of war to see these offensives through there can be no doubt of our ultimate victory.

And what are these present trends of the war? To understand them in all their vivid reality and their fullness of promise of victory we should go back for a moment to the dark day of the attack on Pearl Harbor.

We know now that the Japanese bombers which sneaked over Hawaii on December 7, 1941, dealt a severely crippling blow to our Pacific Fleet. We remember back to perilous days also on other fronts. In north Africa we were wondering whether the Nazi-Italian drive would break through to Alexandria. We were wondering whether the Russian lines would hold through the winter. Even the fear of a German attempt at invasion of England was fresh in our minds, and we looked forward with dread to the spring. And in the Pacific many of us were alert for a Japanese attack on our mainland, far more extensive than the puny and temporary accomplishments they achieved in the Aleutians before our war machine got into gear.

The world picture for free men was dark indeed in those days. Had the German drive to Alexandria succeeded, the Mediterranean would have been closed, and the day when Hitler and Hirohito would join hands in India might have been near.

And not only was the Mediterranean threatened. The Nazi submarine campaign was threatening our very life lines to the fields of battle.

What is the world picture today? The staggering losses to our fleet at Pearl Harbor have been almost entirely repaired, while our shipyards at home have built newer, more deadly warships at such a rate that our fleet is far stronger both in the Atlantic and the Pacific than it was on December 7, 1941. The Russian lines have held, and the much-heralded Nazi summer offensive on that vast front has failed to develop. The Axis armies have been completely cleared out of Africa, and allied troops hold stepping-stone islands to Europe. The Continent of Europe is being plastered almost daily with bombs, and the talk of invasion in Germany today is not of a Nazi invasion of England but of an allied landing on the impregnable Continent held by Hitler. The Japs have lost one of their two toeholds in the Aleutians. They are on the defensive as our fighting men attack in the Solomons and New Guinea. And the dread submarine is almost as harmless now as a bad dream since the close cooperation be-

tween the British and American Navies and their new weapons have won in May and June the most complete victory over the undersea killers in history.

The day is drawing near when the Axis dogs of war will be fighting their last fights on their own soil, when American boys will be fighting to victory. But the road to this turning point has been long and tortuous, and the remainder of the road will be even more costly in blood and tears and sweat.

The world over, our side is on the offensive. We are not wondering what the enemy is going to do. He is wondering what we are going to do, and most of the time we are doing it.

The biggest and most important front of the war so far has been Russia; in fact, the most gigantic battle line in world history. When Hitler's legions moved against the Russians it was a matter of conjecture by many military experts whether the drive would last a year or 6 weeks.

We all remember how in that first year of the Russian campaign the German Army swept north in a mighty wave, and then how it was stopped at Leningrad and at Moscow. The world can hardly forget how, a year later, the magnificent defense of Stalingrad refused to collapse in the face of almost certain defeat; how by savage, bloody fighting the tables were finally turned and the entire attacking arm wiped out. That was more than a mere tactical victory. It was the explosion of the myth of German military invincibility. From then on the story was different in Russia.

True, by early spring of this year the enemy was able to make a number of offensive moves. The biggest and most important of these moves was the German counterattack in the Ukraine. It had regained considerable territory and freed the German Army north of the Sea of Azof from the danger of encirclement and had brought the Germans back to the outskirts of Kharkof.

But at the same time the Russians were pushing ahead in the north, knocking off one by one the fortified strong points the Germans had held through the winter. And in the south the Germans were gaining their successes only at tremendous cost and by drawing heavily on their resources.

The German leaders realized this, of course. That is why they put over their total mobilization plan, trying to get more soldiers out of Germany and the satellite nations, more workers out of the occupied countries, an undertaking that developed into the greatest manhunt in history. The little nations like Rumania which had gone along with Hitler and paid with the blood of their young men, were pressed for more men. A spirit of rebellion was being fostered by the extreme demands.

By April the Russians had started an offensive on the southern end of their front, across the straits from the Crimea. When the Germans retreated from the Caucasus they held onto some territory there which they might use as a springboard for another drive against the Caucasus this summer. Military experts by this time were expressing doubt that the Nazis ever again could put on a general offensive on the Russian front. But they may draw together enough force this summer for desperate regional attacks. The Caucasus with its oil fields is regarded as one of the most plausible points for such an attack.

By early May the only major change on the Russian front was steady, slow progress in the Soviet drive along the Taman Peninsula. Tension grew along the major fronts through the month of May with both sides sparring for position and much talk of a major offensive coming from both sides. By mid-June, military authorities were saying that Hitler would have to get started with his much-promised summer campaign in Russia if he wanted to get anywhere before winter. But as the month ended he had not started such an offensive.

Perhaps the terrific drain of manpower exacted by the Russians, and developments in other theaters of war, had caused the famous Hitler military "intuition" to change its mind.

And other developments there were aplenty. The Russian campaign is the biggest of this war—or any other war; in area covered and in men and materials engaged, the greatest campaign of all history. But the campaign of the Americans, British, and French in Tunisia was very important too.

It has not been so very long, as global wars go, since we woke up one day to learn with tremendous pride and excitement that our fighting men had crossed from America and England in the world's biggest and best protected convoys and landed in French-held north Africa. We remember how Rommel had "high-tailed" it across north Africa from the position where he had been threatening Alexandria. By early March of this year he was beginning to feel his fate closing in on him from all sides. He was making little sorties in force, at one point, then another. But all his successes were minor and short lived. The rainy season delayed his end, and the end of the Italian Empire in Africa, for a time.

By March 20 the United Nations began the final drive to push Rommel and his men out of north Africa. The British Eighth Army broke through the Mareth line. Rommel left for Europe. The British, French, and Americans began to demonstrate a teamwork that boded no good for the defense of Europe. While the British Eighth Army was attacking Rommel on the coast, the American Second Corps attacked his flank, forcing him to detach a sizable force. This weakened his army so that the British broke through. By the middle of April the campaign in Tunisia had reached its final phase. Rommel's unbeatables had retreated farther than any other army in history before a pursuing force. But they had no other place to go. Airplanes and submarines shut out any possibility of a German retreat across the Mediterranean.

The United Nations achieved a blasting superiority in the air over Tunisia. By the end of April the final squeeze was on. But the Germans were still fighting with great skill and tenacity. We began to feel the solemn, sobering effect of more heavy casualties. Then, early in May, Bizerte and Tunis fell in one day.

This sudden victory apparently was due chiefly to the victories of American troops in the hills west of Bizerte. The whole campaign had been a matter of constant pressure from all allies on all sides. The Germans in the Bizerte hills held strong positions. But suddenly the American Army appeared out of nowhere, after a brilliant forced march. The Americans who took those hills against strong opposition proved themselves worthy descendants of the men who fought on both sides at Gettysburg and Chickamauga.

It was all over in an amazingly short time. The Germans were completely wiped off the face of Africa. The last remaining troops gave up by the thousands, despite the Nazi boasts of fighting to the last bullet. There were ample stores of ammunition. But the cause had been rendered hopeless by our superior fighting, superior air power, and superior weapons.

By mid-June the Italian island of Pantelleria and its two little neighbors had surrendered to an attack conducted almost entirely by air. The surrender has a strategic effect that will be felt all the way to Delhi and Chungking and a moral effect that was felt most keenly in Berlin, Rome, and Tokyo. The Italian Gibraltar had fallen and the Mediterranean was open to United Nations shipping, cutting off months from the time of convoys and thus in effect doubling the tonnage of our merchant ships.

But our assaults did not slacken. During the month of June the weight of our bombs has been felt not only on Sicily and Italy but on airports and docks in Greece. A new technique of bombing was set up. British bombers employed a shuttle system between England and north Africa, flying from home with heavy loads of bombs, dropping them on Germany, flying on to Africa. There they refuel and reload and on the return trip drop their destruction upon Italy.

German reinforcements were moving into the Balkans and Greece to strengthen the garrisons of these countries against possible United Nations attack. But the Germans cannot tell where we are going to attack. It may be in Greece and the Balkans and it may be in Sicily, Sardinia, and Italy. It may be in southern France.

And, of course, while wondering whether to concentrate defense forces in Norway, Denmark, Belgium, Holland, France, Italy, or the Balkans, the "master race" is under constantly increasing attacks from the very air over their heads. We all know of the mounting devastation the American and British bombers are dropping on Germany and its occupied countries. The day of doom does not seem so far away as it did on that fateful day of Pearl Harbor.

And the day of reckoning will not come alone in the Occident. With the spectacular victories of the Coral Sea, Midway, and the Solomons behind us, with the Jap Fleet diminished while ours is growing, with Australia transformed

from a continent fearful of invasion to the base for mighty offensive action, with air superiority on our side we are striking the opening blows of a drive to Tokyo and the final liberation of the Philippines.

The Solomons action of last year was a defensive offensive. Our action today in the Pacific is purely offensive and military observers predict it will give us bases from which to carry the war against Japan into its final stage.

Meanwhile hard fighting is going on in China. A Jap drive up the Yangtze River was thrown back with disastrous losses. American airplanes flown by American and Chinese flyers played a major role in that fighting.

While we strike in the southwest Pacific, the Chinese with our help strike from the other side. Fate is as surely closing in on Hirohito as it crowds ever closer to Hitler.

In order that the men and women serving in the armed forces may be provided with all necessary equipment, materials of war, food, and clothing, it is absolutely necessary that each and every one of us continues to do our part to win this war. If we do give to our armies and the armies of our allies what they need the triumphant end of the war is as inevitable as fate itself. It is a big job. There is plenty of work for us. I know that there are those who gripe about this, that, and the other thing. I know that in spite of those few who are so selfish that they put their own interests first that we are going to do the job. We are not going to let our men down by a failure on our part.

The Kerr Committee

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 6, 1943.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR MR. CANNON: The subcommittee of the Committee on Appropriations of the House of Representatives which was set up in compliance with H. R. 105, this committee being generally known as the Kerr committee, has decided to suspend activities until November 15.

Prior to recessing the committee heard the cases of Marcus Goldman, Nathaniel Weyl, and Davis Wahl. In the opinion of the committee, there is now not before its sufficient evidence to conclude that any of these men are unfit to continue in the Government employment by reason of their present association or membership, or past association or membership in or with organizations whose aims or purposes are or have been subversive to the Government of the United States.

With great respect, I remain,

Yours sincerely,

JOHN H. KERR,
Chairman, Special Subcommittee.

Sabotage on the Home Front

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. POULSON. Mr. Speaker, I received a very interesting statement from a responsible constituent of mine concerning the mishandling of fruits and vegetables in the wholesale produce markets in Los Angeles. I have previously taken this subject up with the O. P. A. in Los Angeles and San Francisco, but to date have received no answer. I think this statement worthy of consideration:

My wife frequently goes to the wholesale produce market at Seventh and Central Streets, in Los Angeles, to buy oranges by the crate in order to share with neighbors who also have children. Saturday, June 26, my wife, accompanied by a neighbor's 11-year-old twins and our little daughter, went to this wholesale market for oranges. The youngsters had never seen a produce market of such proportions, so she took them for a walk through and about the premises. Imagine her surprise when, rounding a corner, she saw a man dumping crate after crate of beautifully fresh summer squash into a big pile on the ground. She asked, "What are you doing with all the squash; throwing it away?" He answered, "Yes. Would you like some?"

Filling her shopping bags with squash, she thought about the many victory-garden blistered hands and children working to harvest crops. Getting madder and madder, she told the man and others within hearing what she thought about such criminal destruction of good food.

Walking to her car with some of the squash, she noticed a man behind her with a hand truck stacked high with crates of nice tomatoes. Coming alongside her, he said, "Lady, I hate to do this as badly as you hate to see me do it. Do you mind if I put these tomatoes in your car? If you can't use so many, you can give them to plenty of people who can't afford to buy them." Six crates of them, and tomatoes selling at 30 cents a pound in the Safeway and other chain retail markets.

My wife, thinking of our large refrigerator and our vegetable-starved neighbors, said that she could use them, but what a shame to be dumping better looking tomatoes than any she had recently found in the neighborhood markets at sky-high prices. "This is nothing," said the man. "These are culls. The really fine ones are stacked behind the building, waiting to go to the hog farms in Fontana." As they finished loading the car to the gills with cabbage, lettuce, parsnips, turnips, and so forth, he added, "If you will come back around 1:30 this afternoon I'll have about 60 crates of apples to be dumped."

Mrs. Wilson took the vegetables home, filled our refrigerator, and distributed the remainder among the neighbors. She went back for the apples at 1:30 but was too late—trucking space had been found to deliver them to the Fontana hog farms. Retail markets sold their lowest grade apples at 13 cents a pound that day. However, in place of the apples she found more vegetables, including huge piles of corn, and away went another carload of fresh food for the citizens of Echo Park district—snatched from the jaws of the enemy. Corn was only 10 cents an ear in the retail markets that day.

Puzzled by this appalling waste of food, Mrs. Wilson spoke to a policeman, telling him that she used to pass this market daily, when doing social-service work several years ago, and had not observed any such tremendous dumping of food. His reply was that he had been on this beat for some time, and the extravagant waste had not been noticeable until high prices came into vogue. He further said that he and his friends had spent no money at all for vegetables since this season's crop came in.

We cannot make sense of it. Newspaper headlines, radio howls about food shortage. Victory gardens, people's money spent for bill boards exhorting high-school students, women and vacationers to join the land army. Save, save. Food is ammunition. Eat fresh vegetables and keep up civilian morale.

Now I am not a man to complain, but I think that I express the sentiment of the majority of defense workers in being the least bit resentful of being discriminated against in favor of a hog farm. In the first place, hogs can eat food that defense workers cannot. It might be said that the defense workers can eat the hogs, but in the second place, a defense workers' wages will no more meet the price of pork than the price of fresh vegetables. In the third place, I like to think of America as a whole, and thousands of working people in Los Angeles are receiving less wages than defense workers.

Rolling Back the Red Tape Would Help

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. HORAN. Mr. Speaker, perhaps our good people who have to work for the bureaus rolling up the red tape should be given some consideration, too. Here is a good example of the backlash of too much of too much.

Under leave to extend my remarks, I include the following letter:

BAIRD NAUNDORF LUMBER CO.,
Spokane, Wash.

GENTLEMEN: I am going out of the sawmill business.

It is impossible to keep up with all the new Government regulations and scarcity of help.

I have to put in more time bookkeeping and studying all the new trash they send me than I have time to log and sawmill.

So I am going to sell my equipment and go out and work and let someone else do the bookkeeping and the worrying.

Thanking you kindly for the orders you have sent me which I am compelled to turn down.

Very truly yours,

H. F. NEWELL,
Addy, Wash.

Use of Silver for War Purposes

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 7, 1943

Mr. REED of New York. Mr. Speaker, the House yesterday passed by unanimous consent the bill S. 35, to authorize the use for war purposes of silver held or owned by the United States.

I was a member of the subcommittee of the Ways and Means Committee which considered the measure and recommended its adoption. We were advised by the War Production Board that silver was urgently needed in connection with the war program as a substitute for critical metals of which there is a shortage. Hence the bill S. 35 may properly be described as a war measure.

It is well known, of course, why silver has to be taken from the Treasury to take the place of copper. Our copper was suffered and permitted to be sent to Japan. There was exported from the United States to Japan during the period from 1936 to 1940, inclusive, 717,277,918 pounds of refined copper, enough to meet the combined copper requirements of building 179 cruisers, 179 destroyers, 110,805 Flying Fortresses, 10,680 field guns, and 10,000 howitzers. Not only this, there was also exported from the United States to Japan during this same period—1936 to 1940, inclusive—scrap copper amounting to 36,695,740 pounds; hence, all told some 3,500,000 tons of copper was exported from the United States to Japan during the period mentioned, which has made this Nation distressingly short of this essential war material.

It may be asked why tin cannot be substituted for silver, but here again the United States is short of tin because this imported metal was also exported to Japan in such quantities that none is available for our own war purposes.

I mention this because in a time of war the choice as between a perfect piece of legislation and the lives of our men cannot be debated on its merits.

While I supported S. 35 because of its emergency character, I am frank to say that I have some misgivings about the measure, particularly the requirement that the Treasury shall not sell any of its silver hoard for less than the inflated subsidy price of 71.11 cents per fine troy ounce.

The Treasury Department strongly recommended that the price be fixed at not less than 50 cents, which is about the average cost of the silver to the Treasury, but the silver bloc in the other body refused to permit the enactment of the measure unless the price was fixed at 71.11 cents.

Silver has been called the "slacker metal," due to the fact that the New Deal silver subsidy legislation now on the statute books makes impossible its use in war industries. Although the proponents of the silver subsidy legislation are willing that some of the Treasury silver be used for war purposes, they insist that the silver subsidy be maintained, even at the expense of the war effort.

The War Production Board is in the position of needing the silver so desperately that it is willing to pay the subsidy price for the Treasury silver if that is the only way legislation permitting its use for war purposes can be secured. The following extract from the letter of War Production Board Chairman Donald Nelson to the Senate Banking and Currency Committee touching on this point is significant:

> I would much prefer to have silver released at the lowest price possible, as this will mean that it will be available to a far larger group of manufacturers. Therefore, I believe that the higher price will restrict the substitution of silver in war equipment. However, it is vital that the Treasury silver be released and if, in the judgment of the committee, the price should be 71.11 cents rather than the 50 cents indicated in S. 35, I would not interpose an objection thereto.
>
> I am so anxious at this time to get legislation through, as the shortage of silver is becoming increasingly acute, that any steps which you can take to expedite the passage of legislation along the lines of S. 35 would, I assure you, be excedingly helpful to the war effort.

Here we have the statement of the official in charge of war production that the 71-cent subsidy price for silver provided in the bill as passed by the Senate will restrict its use for essential war purposes, yet the silver bloc insists that this artificially high price be maintained as a condition for permitting this war measure to become law.

To my mind, this action on their part is just another example of the rottenness of the whole silver subsidy program. For some time, I have had a bill pending which would repeal the Silver Purchase Act of 1934 and related legislation, and I am in hopes that after the Congressional recess the Ways and Means Committee will initiate legislation toward that end. The Secretary of the Treasury has time and time again urged its repeal, but the law still remains on the statute books.

Under the terms of the Silver Purchase Act, the Secretary of the Treasury must continue to buy silver until the ratio of silver monetary stocks to gold monetary stocks is one in four. In view of the fact that the Government now controls over $22,000,000,000 of gold, it would appear that this goal will never be reached.

The present subsidy price of domestic silver is 71.11 cents, which is considerably above the world price. The Government now owns and controls something like 2½ million ounces of silver, about half of which is maintained as a backing for outstanding silver certificates. The balance is so-called free silver. Under existing law, this free silver cannot be sold by the Treasury except at the prohibitive monetary price of $1.29 per ounce.

The silver subcommittee gave consideration to amending the bill so as to permit the sale of the Treasury stock of "free" silver at a price not less than 50 cents, as recommended by the Treasury Department, but we faced the practical difficulty, as recognized by the Chairman of the War Production Board, that in view of the emergency and the necessity for congressional action before the contemplated recess it would be hopeless to secure the adoption of such an amendment over the opposition of the silver bloc.

The subcommittee also gave consideration to limiting the authority conferrred under S. 35 to December 31 of this year so that the matter could be gone into more fully after the congressional recess, but because of the fact that the Ways and Means Committee will take up the general tax bill after the recess it was felt that this would prevent action on the silver question this year. Moreover, it was obvious that any change made in the Senate bill might jeopardize its passage. Hence it should be understood that the bill has been considered and passed under extreme duress. The subject matter should be given more careful study at the earliest opportunity.

A Florida Citizen Speaks on the Florida Barge Canal

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 7, 1943

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein a letter in regard to the attempt on the part of the proponents of the Florida barge canal to force it through regardless of the action of the committees of Congress to the contrary:

MIAMI, FLA., *July 6, 1943.*
Representative GEORGE A. DONDERO,
Washington, D. C.

DEAR SIR: According to a news story, a spokesman for the Army engineers admits that plans and specifications are now being prepared at Ocala by Army engineers for the north Florida Canal.

Do these engineers, and the President, desire to admit that the first five millions was spent without prepared plans and specifications? For that is the direct implication, if the plans are just now being made.

Do they realize, that according to the President, this is a total war and that to divert to unnecessary pursuits trained engineers is at this time directly hampering the war effort—if there is need for the large army that we are told is essential.

And that to withdraw essential men from the pursuit of the total war to do nonessential work is helping Hitler just as much as though these same men were killed in battle?

I wonder just how obtaining funds by trickery, to devote to nonessential work and taking men away from essential work, can be con trued as patriotic, when at one and the same time we are told that it will be essential to draft labor?

Mr. DONDERO, I do not enjoy freedom of speech on the floor of the House or Senate, but I do not like hypocrisy and deception—and that is what is being used in the matter of this canal. Sabotage is not too strong a word, and—were I granted the privilege of the floor of the House—I would use it.

This letter is on the record, to use as you see fit.

Cordially,

EDWARD DOANE.

Gen. Wladyslaw Sikorski

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. POWERS. Mr. Speaker, the untimely death of Gen. Wladyslaw Sikorski in an airplane accident near Gibraltar is one of the most serious losses the cause of the United Nations has suffered.

General Sikorski was not only the Premier of the Polish Government-in-exile, he was also one of the ranking military strategists of the world. His death came when his immediate mission—a mission to which he had devoted a great deal of his time and energy, had been completed. That mission was to put into the field Polish armies fighting for the side of liberty and right—Polish armies that were battling to restore freedom to their country, a freedom which is the heart and soul of every Polish patriot.

There is no doubt but that the passing of the esteemed and able General Sikorski will leave a great void in the councils of the United Nations. There is also no doubt that a worthy successor will be found from among the patriot Poles in exile. But there is and can be only one General Sikorski. Someone will replace him, but no one can take the place of affection and respect which he holds in the hearts and minds of all of us who are united to crush a mutual enemy.

I wish to pay homage to this great statesman, patriot, and military genius. I also wish to pay homage to those of his staff who died with him, and especially to his lovely daughter, Mrs. Sophia Lesniowska, who was traveling with him, and who perished with him.

The restoration of a free Poland was the lifeblood of General Sikorski. It still is the primary motivating factor of all those patriots who serve under the white eagle of Poland. Since the origin of the Second World War was the preservation of the territorial rights of Poland, the complete restoration of those territorial rights should be one of the principal purposes of the peace. Unless we are all dedicated to that restoration, unless we pledge ourselves completely to it, General Sikorski and all other Polish citizens who shed their blood for their country have shed it in vain.

We have lost General Sikorski, but we will not lose the cause for which he fought and died. We will crush our common enemies on all fronts, and we will restore Poland to the peace and freedom it enjoyed before its ravishment at the hands of Hitler's hangmen. In all reverence we ask that God hasten the day when the white eagle of Poland will fly again over its own territory, smiling upon its own happy and industrious citizens, and proudly takes its place among the councils of the nations who have won the peace.

The Role of Subsidies

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 5, 1943:

THE ROLE OF SUBSIDIES

The President's veto message on Friday raised two grave problems: First, what policy Congress and the administration should now adopt with regard to subsidies; and second, what the relationship of the President and Congress will be in dealing with the whole domestic economic problem.

Neither in its arguments nor in its tone was the President's veto message reassuring. whatever the defects may have been in the bill the President vetoed (and it was altogether proper that he should have drawn attention to these and asked for their correction), it is clear that Congress has been more nearly right on the whole subsidy issue than the President. In the present crisis, it is true, Congress should not attempt to forbid subsidies altogether. Even if there were no such thing as a good subsidy, there would still be such a thing as a subsidy that is the lesser of two evils in a specific situation. Whether a subsidy is more desirable than its alternative is a question that can be answered only for a specific commodity under specific circumstances.

It would not be difficult to show that the specific subsidies that have been most in dispute—the roll-back subsidies on meat, butter, and coffee, and even some subsidies that Congress has quietly accepted, such as that on petroleum—have been either wrong in principle, inconsistent with other policies of the Government, or calculated to do more harm than good in the method of their administration. It was for these reasons, among others, that Chester C. Davis felt obliged to resign as Food Administrator. His letter to the President did not contain any blanket condemnation of subsidies but pointed out that the "broad general subsidies" announced by the President would be ineffective 'in controlling inflation unless they are accompanied here, as they are in England, by current tax and savings programs that drain off excess buying power, and by tight control and management of the food supply."

Certain general principles should be clear. Subsidies cannot be considered a primary weapon against inflation. They do not in the least deal with its basic causes. The best they can do is temporarily to mitigate certain of its symptoms—always at the risk, which must never be lost to sight, of building up far worse evils in the future. They are at best, therefore, a secondary and minor weapon in the battle against inflation. They play something like the role of dynamite in building a road, and, like dynamite, should be handled only by experts. In no case should they be used as a substitute for genuinely basic measures, but only as a supplement to them. The harm of using subsidies too cautiously would be minute compared with the harm of using them too recklessly.

Yet the President talked in his veto message not only as if he considered subsidies a major weapon in the battle against inflation but almost as if it were the most important single weapon against it. Of Congress' action against subsidies he declared: "This is an inflation bill, a high cost of living bill, a food shortage bill. * * * It will have a devastating effect upon our economy and our war effort. * * * This measure will make it virtually impossible to institute any additional measures to reduce the cost of living or even to hold the line."

One reason that Congress has been profoundly suspicious of the whole subsidy program is that it has no confidence that the administration will administer it with care and skill and within strictly defined limits. The President's veto message is hardly reassuring in this regard. It is true that the President declared at one point that subsidies "should be applied only in strictly limited and clearly defined circumstances." But he went on to say that Congress must leave with the executive branch "the means of seeing to it that further increases in producers' prices do not increase the cost of living." When one considers that the roll-back of meat and butter prices, according to the calculation of the Office of Price Administration itself, will reduce the cost of living only 1 percent, though this subsidy alone will cost hundreds of millions of dollars a year, one can only imagine the dimensions of a subsidy designed to prevent any further increases in living costs—especially with the administration policy of continuing to boost industrial wages, which have already raced far ahead of increases in living costs.

It was gratifying to find the President suggesting, at the end of his message, that "in this task of saving our free economy, Congress and the Executive must work together as a team." But, with the exception of one or two such lines, the implication of the whole message was that the chief duty of the congressional member of the team was to nod approval, and that if Congress failed to approve the President's subsidy program in its entirety he would place upon it the full blame for any failure in th whole anti-inflation program. Surely a more conciliatory spirit and a more extensive use of consultation and compromise are essential to the conception of working together as a team.

Distribution of Fuel Oil and Gasoline

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following resolution of the city council of the city of Worcester, Mass.:

Whereas the States on the eastern seaboard of the United States are contributing greatly to the war effort; and

Whereas the proper maintenance of such contribution and the economic stability of such States requires a sufficient supply of gasoline and fuel oil; and

Whereas equal facilities for the distribution of such fuel is not afforded to such States: Now, therefore, be it

Resolved, That the communities in such States be urged to circularize their representatives in Congress, to do all other acts, take all steps and exhaust all means to achieve a more equitable and equable distribution of such fuels; be it further

Ordered, That a copy of this resolution be sent to each Member in the Congress from the Commonwealth of Massachusetts.

Jesse Jones, Business Stabilizer

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. WHITE. Mr. Speaker, when banking and business lost control of the credit and finance of this country and our national economy was threatened with destruction, and banking and business was headed for disaster, our Government came to the rescue by establishing the Reconstruction Finance Corporation, placed in charge of the best financier and administrator that this country could produce, to cope with all the frailties of human nature and the uncertainties of business affairs in an effort to stabilize banking and business and place our national economy on a firm financial basis.

How well that institution has succeeded and how firm business confidence has been restored by the leadership of the man in charge of its administration, can best be judged by the stability of banking and business today, in meeting the greatest emergency of all time.

American business confidence is personified in the head of the Reconstruction Finance Corporation, Mr. Jesse Jones, who has given so freely of his time and his talents that American business might succeed. Now, when the motive of this great financial leader and public servant is under an unfair attack, it is my privilege to present his statement to my colleagues for their consideration:

SECRETARY OF COMMERCE,
Washington, July 5, 1943.

Jesse Jones, Secretary of Commerce, today made public the following letter:

DEAR MR. CHAIRMAN: June 29, Vice President WALLACE, in his capacity as Chairman of the Board of Economic Warfare, released to the press a statement prepared for the Senate Committee on Appropriations containing grave charges against me and my associates in the Reconstruction Finance Corporation.

In my 11 years as a Government official, I have consistently refrained from any public criticism of other Government departments, and reluctant as I am to burden the Congress and the public with a detailed reply to Mr. WALLACE, his tirade is so filled with malace, innuendo, half-truths, and no truths at all, that considerations of self-respect and of common justice to my associates force me to expose his unscrupulous tactics.

Mr. WALLACE offers as an excuse for his charges that in my testimony before the Byrd committee I gave it certain misinformation about the Board of Economic Warfare. This is a falsehood out of whole cloth. The truth is that in answer to questions as to the connection between Board of Economic Warfare and Reconstruction Finance Corporation I merely testified that, by Executive Order 9128, issued April 13, 1942, Board of Economic Warfare was given authority to issue directives to Reconstruction Finance Corporation agencies with respect to the purchase of critical and strategic materials from abroad.

Mr. WALLACE implied that I testified before the Byrd committee that Reconstruction Finance Corporation had received a directive to pay employees of the Board of Economic Warware. There is no truth in this. Both Mr. WALLACE and Milo Perkins, who undoubtedly assisted him in the preparation of his amazing statement, must know this, because Mr. Perkins asked me by letter, June 7, if I had so testified. June 8, I replied by letter that I had not, and gave Mr. Perkins a copy of what I had said about Board of Economic Warfare in my appearance before the Byrd committee.

Mr. WALLACE'S statement that I have harassed administrative employees of Board of Economic Warfare in "their single-minded effort to help shorten this war by securing adequate stocks of strategic materials" is as silly and ridiculous as it is false. It is completely refuted by the record, which reveals that of Reconstruction Finance Corporation foreign purchases and commitments totaling $3,500,000,000 made since the middle of 1940, not more than 10 percent has been acquired under programs initiated since Board of Economic Warfare entered the field, April 13, 1942, and that of $1,600,000,000 in foreign materials already paid for by Reconstruction Finance Corporation, less than 5 percent has come from such programs; and this after 15 months during which time Board of Economic Warfare has frantically sent at great expense many "missions" composed mostly of inexperienced men to all parts of the world. Furthermore, the 10 percent initiated since Board of Economic Warfare entered the field would have been undertaken anyway by Reconstruction Finance Corporation under recommendations of the War Production Board, which is the planning and policy-making agency of the Government for war production, and the procurement of strategic materials, and from which agency Board of Economic Warfare gets recommendations for which it gives Reconstruction Finance Corporation directives.

In the war effort, Reconstruction Finance Corporation functions as a service agency, and not as a war policy-making agency. Reconstruction Finance Corporation acts on recommendations of the President, War Production Board, and its predecessor agencies, the State, War, and Navy Departments, the Rubber Director, the Maritime Commission, the Petroleum Coordinator for War, and the Board of Economic Warfare.

A very significant thing in this controversy is the fact that not one of these agencies has had reason to complain, nor has any except Board of Economic Warfare ever complained, of Reconstruction Finance Corporation's performance in the war effort, which has involved the authorization of expenditures of more than $20,000,000,000.

The Reconstruction Finance Corporation began foreign purchases in the summer of 1940, and has complied efficiently and speedily with every request made of it by the President or any war policy-making agency.

Because of the nature of some of the directives from the Board of Economic Warfare, some of the trades they make and contracts they prepare for execution by the Reconstruction Finance Corporation agencies without consulting the Reconstruction Finance Corporation, it has been necessary to call their attention to errors and poor practices in some of the contracts. Their reluctance to admit anything but infallibility has sometimes required a few days to make the necessary corrections, and sometimes they refuse, but no delay in any important material has been occasioned by Reconstruction Finance Corporation agencies.

The Reconstruction Finance Corporation has always believed, and after years of experience now believes more strongly than ever, that the maximum production and procurement of materials can be obtained, in a minimum of time and at a minimum of expense, without resorting to methods bordering on the hysterical.

The foreign purchase program of the Reconstruction Finance Corporation has been conducted under the personal direction of W. L. Clayton, who has had wide experience in the field of foreign trade for many years. He has been assisted by a number of competent men, among them G. Temple Bridgman, executive vice president of Metals Reserve Company, who has been a leading figure for many years in the metals trade, both in this country and abroad.

The Reconstruction Finance Corporation has felt, and it has learned, that production is best brought out and handled through established and experienced agencies, and not by sending great groups of inexperienced men to overrun foreign countries. A few well-selected men, under proper leadership, can accomplish much more in foreign countries, utilizing the citizens of such countries as much as possible, than scores of our own people hastily brought together and sent abroad with little knowledge of what they are to do or of the country to which they are sent.

While generous prices are desirable and often necessary in the war effort, lavish prices do not always increase production. Our immediate efforts in the foreign field should be concentrated on war procurement needs, and not on past-war ideologies. Furthermore, it is the unspectacular rather than the spectacular methods, and the quiet rather than the noisy approach, which accomplish the most.

Mr. WALLACE speaks of sending a hundred men to Brazil alone, on a single program. It is our belief that those hundred men, hastily recruited as they were, and with little or no familiarity with the work they were to do, have done little more than get in each other's way, and substitute confusion for order. That program would be in better shape today if most of those hundred men had stayed at home.

If the policy of the Reconstruction Finance Corporation in dealing with private business at home and abroad, when possible, subjects me to Mr. WALLACE'S criticism, that cannot be helped. It is my belief that Government should seek to preserve private business, use it wherever possible in the war effort, and operate directly only when necessary.

The statements made by Mr. WALLACE and Mr. Perkins before the Senate Banking and Currency Committee in December 1942, and to which the former again refers, were at that time shown to be unjustified and some of them untrue. My answer is contained in the hearings of that committee. My detailed reply to his present accusations is attached.

The President's Executive Order 9128 gave the Board of Economic Warfare authority to issue directives to the Reconstruction Finance Corporation with respect to foreign purchases. That Mr. WALLACE'S own order No. 5, issued while the President was in Casablanca, has equal force, is open to serious question.

Under Mr. WALLACE'S Order No. 5, officials of the Reconstruction Finance Corporation are allegedly given no choice but to sign, without question or inquiry, any contract or make any commitment which the Board of Economic Warfare negotiates and prepares and gives a directive for, regardless of the

terms and conditions of the contract or the extent of the Government obligation assumed.

The Reconstruction Finance Corporation and its operations are well known to Congress. It is bipartisan by law and in its administration. Its directors are men of character, experience, and ability. They are appointed by the President, and confirmed by the Senate. Their duties and responsibilities cannot be properly discharged by signing blank checks or executing, without careful examination, contracts that commit the Government for hundreds of millions of dollars.

The directives the Reconstruction Finance Corporation receives from the Board of Economic Warfare are signed by Milo Perkins, Morris Rosenthal, or Arthur Paul. At the pleasure of Mr. WALLACE, they may be signed by any employee of the Board of Economic Warfare whom Mr. WALLACE designates.

These directives are not considered or approved by the members of the Board of Economic Warfare. The members know very little of Board of Economic Warfare operations. To my knowledge, and I am a member of the Board, few, if any, purchase or development contracts have been considered at Board meetings, much less formally approved by the Board.

As for the charge which Mr. WALLACE appears to regard as a major crime, that I have attempted to safeguard the taxpayers' money, I must plead guilty. Squandering the people's money, even in wartime, is no proof of patriotism. The Reconstruction Finance Corporation does not pay $2 for something it can buy for $1. Maybe no one does, but the point is that some men know when you can buy it for $1, some don't know, and some don't care as long as they are spending other people's money.

It takes a long time and a lot of hard work to build an organization of men who are competent to trade and to handle vast sums of money properly—particularly public money. The Reconstruction Finance Corporation has such an organization, and I am proud of it.

I will appreciate your placing this letter and my accompanying statement in the official record.

Sincerely yours,

JESSE H. JONES,
Secretary of Commerce.

Hon. CARTER GLASS,
Chairman, Senate Committee on Appropriations, Washington, D. C.

The Rising Torrent

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Chicago Daily Tribune of Tuesday, July 6, 1943:

THE RISING TORRENT

The turn of the Government's fiscal year on July 1 has furnished the occasion for summarizing the outlay of money by the people of this country for the New Deal and the war.

In a little more than 10 years, Mr. Roosevelt has had the spending of more than $196,000,000,000, half again as much as was spent by all his predecessors together. In the year just closed the Government spent $78,000,000,000, a sum so large that it exceeds the total outlay from the adoption of the Constitution until after the end of the first World War.

We mention these figures not for the thrill of standing aghast before them, but only to emphasize that it is these vast expenditures which menace the Nation with an inflation. In the year just closed we spent seventy-eight billions and collected only twenty-two billions in taxes. We added more than $55,000,000,000 to the national debt and a very large portion of the bonds have gone to the banks. If the purpose had been to devise a method of financing the national debt that would create an inflationary menace, the Treasury could not have found a more suitable one.

It is important to bear these facts in mind because of the false clamor from Washington to the effect that the prevention of inflation depends upon a few thousand more snoopers in the employ of the Office of Price Administration and upon the use of subsidies to give more money to producers without increasing the price of food proportionately. The subsidy plan is itself inflationary, because it places aditional spending power in the hands of the people. If the present disparity between the income and outgo of the Treasury is allowed to continue, a million snoopers cannot keep prices from rising.

What is at stake is the existence of the middle classes and all that they mean for political sanity and stability, and for economic progress to the Nation.

The people who believe that subsidies and snoopers can prevent an inflation are trying to dam a torrent with a couple of pebbles.

Avoid Creating Fear About Prices

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PATMAN. Mr. Speaker, to avoid creating fear about prices is of the utmost importance, because such fear in itself can cause prices to get out of control. If people expect prices to rise wildly, they will bid against each other, thus causing the very condition they are trying to avoid.

For the same reason parallels between our present problem and past uncontrolled price rises must be made with the greatest care.

For instance, public-opinion studies show that people generally have no real fear that we will have the German type of inflation at the close of the last war. They probably tend to be right in this. The German Government printed paper money recklessly. In this country we have an effectively controlled banking system which could be made a mechanism for inflation, but which can also be used to restrain inflation.

The fundamental difference, however, is that defeated Germany with its industrial plants run down, its manpower reduced, and its export trade completely disrupted had to meet reparation and other demands that strained her economy past the breaking point. The desperate government knew only one way to take resources from a demoralized people—hyperinflation. This will not happen here because we will not be defeated. Our economic machine will not break down and our productive capacity will continue to be adequate to meet the demands that will be made upon it. Moreover, because the nature of inflation is better understood than it was 25 years ago, we know what we must do to prevent it.

Nazi Extermination of Jews and Other Minorities

EXTENSION OF REMARKS
OF
HON. THOMAS ROLPH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. ROLPH. Mr. Speaker, on Thursday evening, June 17, 1943, a historic meeting was held in San Francisco's civic auditorium. All sections of the northern part of California were represented. More than 11,000 citizens were in attendance. Unanimously they petition the United States Government to use its good offices in aiding millions of Jews and other minorities in Axis-dominated Europe. Succor those who are daily being ground under by ruthless dictators. This plea should strike a responsive chord in Washington. The Nation's Capital is the heart of democracy.

State Senator Jack Shelley submitted the resolution, moving its adoption.

So all Americans may read this poignant appeal, I attach Senator Shelley's remarks, together with his resolution:

MOTION FOR ADOPTION OF RESOLUTION

I have seldom been so deeply stirred as I have been here this evening. I think that I have not felt completely until now the enormity of the tragedy that has befallen the persecuted peoples of Europe and the urgent necessity that we, who are still free, begin without delay the work of rescue. Rabbi Heller and Mr. Cantor have just stated to you simply and forcefully the purpose and the spirit of this great gathering. I know that the labor groups of this city and of the Nation would join me in endorsing the resolutions proposed by these gentlemc and in recommending that these resolutions be here adopted by us as the basis of a positive constructive program to bring hope to the stricken victims of Nazi barbarism.

Let us make it known to the officials of our State(our Nation, and our allies that we are not content to sit idly by while millions of our fellow human beings suffer torture, starvation, and death. Let it be known that we demand action.

Mr. Chairman,-I move that these resolutions be unanimously adopted by this assemblage. (Senator Jack Shelley, president, San Francisco Labor Council.)

UNITED JEWISH COMMITTEE OF SAN FRANCISCO AGAINST NAZI EXTERMINATION OF JEWS AND OTHER MINORITIES

Resolution at mass meeting, Civic Auditorium, Thursday evening, June 17, 1943

This assembly, representing a great cross-section of citizens of northern California, convened in the Civic Auditorium of San Francisco on June 17, 1943, voices its sympathy and encouragement to the persecuted peoples under the yoke of Nazi oppression.

We honor the memory of the dead; we honor the memory of the innocent and helpless martyrs of all peoples and the millions of Jews who fell victims to a madness unparalleled in history.

Whereas silence and inaction on our part in the face of such monstrous conditions would betray the sacred obligations of brotherhood, as well as the humanitarian ideals to which the United Nations are dedicated; and

Whereas the holocaust of mass murder of civilian populations, especially Jews, continues unabated: Now, therefore, be it

Resolved, That—

1. The United Nations should approach neutral governments with a view to having them intercede for the release of Jewish and other minority victims; and

2. The United Nations should, without delay, take steps to designate and establish a number of sanctuaries in Allied and neutral countries to accommodate substantial numbers of Hitler's victims and to serve as havens of refuge for those whose release from captivity may be arranged, or who may find their way to freedom through efforts of their own.

3. We urge that the doors of Palestine be opened to Jewish immigration.

4. The administration of immigration laws to the United States be liberalized to permit the filing of the established quotas.

That copies of this resolution be directed to the President of the United States, the Department of State, and the Representatives of the State of California in the Senate and House of Representatives.

Florida Barge Canal

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the President of the United States to Hon. JOSEPH J. MANSFIELD, chairman of the House Committee on Rivers and Harbors:

THE WHITE HOUSE,
Washington, July 1, 1943.

Hon. JOSEPH J. MANSFIELD,
Chairman, Committee on Rivers and Harbors, House of Representatives, Washington, D. C.

MY DEAR JUDGE MANSFIELD: I have received your letter of May 25 1943, regarding the need for improvement of the Atlantic-Gulf Intracoastal Waterway, and, in particular, the need for construction of the Florida barge canal.

I have always realized the importance of an adequate and continuous inland waterway for barge traffic along our Atlantic seaboard and Gulf coast Upon authorization of such a waterway by Congress steps were taken promptly to initiate the improvement, and work has been carried on as fast as possible without interfering with the war effort. This work has consisted of large-scale dredging operations along the existing sections of the waterway, which, without improvement, could not be used to full capacity. It is my intention to continue these dredging improvements during the next fiscal year.

As yet, it has not been feasible to undertake work on sections of the waterway not now in existence, primarily because of shortages of manpower, materials, and equipment. Detailed plans and specifications for the Florida barge canal will be prepared so that its construction can proceed without delay as soon as these shortages are overcome. While I cannot foretell how soon that will be, it is possible that the situation with respect to these shortages will change sufficiently to permit an early dredging of the sea-level sections of the canal, and I am, accordingly, asking the Director of the Bureau of the Budget and the Chief of Engineers to keep me advised of any changes of conditions which would justify the inauguration of this work.

I appreciate the further expression in your letter of May 25, of your continued concern with the improvement of our waterway system, to the development of which you have contributed so much.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

Harry Lane Englebright

MEMORIAL ADDRESS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 26, 1943

On the life, character, and public service of Hon. HARRY LANE ENGLEBRIGHT, late a Representative from the State of California

Mr. WOODRUFF of Michigan. Mr. Speaker, I wish to pay my personal tribute to a colleague whom I loved as a friend of long years of association, and for whom I had a profound respect because of his high integrity and marked ability as a Member of this body.

HARRY LANE ENGLEBRIGHT was a man who loved his country and served it well. He loved his native State of California, and he was a fine type of Representative in the best American tradition.

HARRY ENGLEBRIGHT won the respect and the love of his colleagues when he came to Washington in the Sixty-ninth Congress, because he was a western man of the outdoors. He was a mining engineer. He was a builder, a doer, a man whose whole outlook was constructive. He had the breezy friendliness of the western man of the great open spaces. He was frank, courteous, and honest in his dealings with his colleagues and his fellow men at all times. HARRY ENGLEBRIGHT was the type of legislator who took his oath of office as a sacred duty and who was always ready to stand by that oath regardless of the consequences to himself.

The high esteem in which his Republican colleagues held him was expressed by the fact that he was chosen and served for many years as the Republican whip.

Without respect to party or to section, Mr. Speaker, the Members of this Congress were deeply shocked by the sudden death of this able California Representative. Those of us who knew him best felt the greatest shock at his passing. It is our consolation, as well as that of his relatives, that throughout his career as a public official he served his Nation and his constituency faithfully and with high honor to himself. His memory will ever be bright in the hearts of his colleagues in the Congress.

Some of the Things You Can Do To Help Hold Down Prices

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. PATMAN. Mr. Speaker, put your money to work helping to win the war—all that you can afford. Keep on doing it. No matter how much higher taxes go, they still cannot pay for all of the war. When you buy War bonds instead of goods you also are helping in the vital fight to hold down prices and the price of the war.

You are helping to hold down prices because the dollars which you put into War bonds are not dangerous dollars bidding in the market for scarce goods, forcing up prices that in turn force up wages, creating higher prices and wages, which increase business costs and generate a pressure for even higher prices, starting a rising flood of higher prices and wages that can lengthen the war and endanger the peace to come.

Equally important, when you buy War bonds you help insure your future economic stability and the economic stability of your country. You are laying aside a nest egg for after the war, for the home you want when civilian building resumes, for the education of your children. Save now. Spend when you can get your money's worth. In holding down prices you are making easier your task and your country's task in getting back to a peacetime basis. The lower we keep prices now, the easier it will be for all of us to buy the new peacetime goods, the easier to keep our factories working and all of us employed, the easier to build a strong, prosperous Nation.

PAY WILLINGLY ANY TAXES, HIGHER TAXES, YOUR COUNTRY NEEDS

They are the cheapest way of paying for the war—of buying victory and protection for the American way of life. They are the cheapest way because there is no interest to be paid; because there is no problem of retirement as there is with bonds—retirement for which funds must come from further taxes.

Taxes also help keep down the cost of living by removing dangerous dollars from the market where they only bid up prices by competing for the purchase of scarce goods and services.

PAY OFF YOUR OLD DEBTS AND AVOID MAKING NEW ONES

It is a much better way to use your money than to employ it to bid up prices.

If you pay off your debts you achieve independence. You are in a better position to take advantage of our return to peace.

PAY NO MORE THAN CEILING PRICES

Ceiling prices are your protection against serious and unwarranted price increases—one of your important guarantees of economic stability. However, they will work only if you make them work—if you will observe them in your buying, if you will help in enforcing them.

SUPPORT RATIONING

Rationing not only ensures you a fair share of scarce commodities. It also helps hold down prices by stabilizing supply and demand.

BUY ONLY WHAT YOU NEED

Dollars you spend for unnecessary things are dangerous dollars. They compete with other dollars for the fewer things available because of the war. Hence they are the dollars that bid up prices. So before you buy, carefully look over what you have. Eat it all, wear it out; make it do, or do without. If you still think you need to buy, compare the slight sacrifice you would make in not buying with the unlimited sacrifice our fighting men must make without having a choice.

DO NOT ASK MORE FOR WHAT YOU HAVE TO SELL, MORE IN PRICES FOR GOODS, MORE IN WAGES AND SALARIES

Any additional amount you ask for either goods or wages will only be passed on to others and will eventually have to be paid right out of your own pocket. This is inevitable because the war's demands on our productive facilities and our labor supply make it impossible for others to produce more or do more. No one can produce any more. No one can get any more. But all have to pay more for the same goods, the same work that formerly cost less. Before you charge more for your work or for what you have to sell do this: Compare what you would sacrifice by foregoing a rise in your price with the many sacrifices our fighting men must make without even having a choice.

Food and Gas Shortage

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. REED of New York. Mr. Speaker, this war is a long way from being won. The reports of the heroism of our boys on the front lines are of a most inspiring character and should put to shame those who are responsible for the confusion and lack of leadership in the Executive department relating to the home front.

The Chief Executive seems to take particular delight in forcing every person in the executive branch of the Government to yield to his opinion, whether it be on a question of food supply, gasoline rationing, stock and poultry feed or any other problem now confronting the public. The President has failed ignominiously to give heed to the knowledge of those who could and would, if permitted to do so, bring order out of chaos with reference to the future food supply for our soldiers, our allies, and our civilian population.

I can imagine no greater calamity than to have millions of our men, fighting on fronts thousands of miles from home, deprived of the necessary food to enable them to win the war.

Every person of experience and sound judgment knows that there should be a central food administrator, clothed with adequate powers to meet and solve the food problem. This farming season is so far advanced that irreparable injury has already been done because of failure to meet the issue, but a national calamity of starvation is in the making for next year and the years to follow unless action is taken now. The appointment of a person capable of solving the food situation should not be longer delayed if this country is to escape a famine at home and the danger of a lack of food supply for our soldiers abroad.

Mr. Speaker, one of the great industries vital to the life and health of the present and the coming generation is the dairy industry. Already this source of indispensable food is on the verge of destruction because of the inability of the dairymen to get feed for their cattle. It has always been necessary for the dairymen of the east to purchase grain from the west. A situation now exists which, if suffered and permited to continue, will ruin the dairy farmer of the east. The price of corn is so low that it is more profitable for the western farmer to feed corn to his hogs than it is for him to ship it east. This is something that the administration has been in a position to correct but it has failed to do so, until the dairymen in the east face a most critical situation.

Furthermore, the poultrymen in the East constitute one of the greatest food producing segments in the field of agriculture. I say without fear of successful contradiction, that the farmers, in spite of the fact that their sons have been taken in the draft, have tightened their belts, lengthened their long working hours, invested their meager capital in the poultry industry in a sincere and patriotic effort to meet the appeal of the Government that they produce not only enough food for their own use, but a sufficient quantity to insure an adequate supply for our Army, the needs of our allies, and the requirements of our civilian population. Whenever they have asked for the cooperation of the Government to help them in their almost superhuman task of war production they have been insulted by the bureaucrats and, moreover, they have been charged by the President with encouraging inflation. What I have said with reference to the patriotism of the dairymen and the poultrymen applies equally to all other branches of agriculture.

I have said repeatedly that the only way to stop the inflationary rise in the price of food is to produce more food. This the farmers cannot do against the bureaucratic resistance in Washington with which they have to contend. The indifference displayed by the President of the United States to this vital problem is difficult to understand. I stated months ago that every farm ought to be considered a war industry. No matter how many millions of guns and tanks and planes may be manufactured, the one thing that the Army and the civilian population must have is food.

I noticed yesterday a large advertisement in a newspaper offering a girl trainee $214 per month to learn welding. Is it possible for any dairyman, poultryman, or other type of farmer to obtain help in the face of these attractive and irresistible offers of high wages in war plants? Such inducements to young people to leave the farm could be multiplied thousands of times. The administration has, from the first, obstructed the efforts of the farmers to meet the demands for greater food production.

I deplore the effort on the part of the administration and its bureaucrats to attempt now to create ill feeling and even hatred as between the city dwellers, who are having difficulty in obtaining food, and the farm population, which has suffered from every discrimination the bureaucrats could devise to hinder food production. If we are going to win this war this fomenting of class hatred will have to be stopped. There can be no teamwork when such a feeling of bitterness exists between the city consumers and the farm producers. The clever, tricky New Deal politicians, now filling many of the posts of the alphabetical set-ups, have approached this war program from a political angle, always counting the votes that will result from every move they make. They are endeavoring now to make political capital out of the fact that there are more consumers than there are producers of food. Consequently regulations and wages are manipulated with only one thought in view, and that is to corral the most votes in the coming election. Subsidies are part of the same program of political control, notwithstanding the fact that this system is admittedly inflationary.

The administration's political scheme is to coddle one class and create ill-feeling between it and another group in order to obtain some political advantage. One of the difficulties in the oil situation is that although the index number of crude oil is 70, and the index number of labor 170, the administration is perfectly willing to see stripper oil wells in western New York and Pennsylvania dismantled and the oil lost forever rather than to increase the price sufficiently to assure to the operator the cost of production. This production, as the administration knows, would help supply the need for fuel oil and gasoline to the East. Where does this opposition stem from? It goes back to the days when the oil men almost solidly backed Mr. Landon for President, and every day since then the oil producers have been the victims of the vindictiveness of President Roosevelt, but the real victims of this peevishness are the people of the Northeast who have suffered from a lack of fuel oil and are being harrassed with an unfair gasoline rationing program.

It will be recalled that the Petroleum Administrator for War, Secretary Harold Ickes, twice recommended an increase in the price of crude oil to meet the cost of production, but when this recommendation was communicated to a higher power, it was turned down under the catchy phrase, "Hold the line."

There never has been any justification for the discriminatory coupon gasoline rationing system as between certain States. Why 4 gallons in 1 State and 2½ in a contiguous State? Political pressure from the South results in pleasure riding without restriction, and in the food-producing districts of the North restrictions are imposed that prevent the use of gas to operate cars, tractors, and trucks essential to food production.

Congress should force immediate action on the part of the Executive to protect the producers and consumers of this country from the effects of the many political hindrances to an all-out program of farm production. Every day that action is delayed on these important questions, the morale of the American people is weakened and millions of men abroad have cause to wonder whether their country is really behind them in the glorious effort they are making to win this war and to win it quickly.

Outline of Policies and Objectives of the D. A. V.

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MARTIN of Iowa. Mr. Speaker, as a former Regular World War No. 1 Army officer, retired by reason of disability, I am eligible for, and I am pleased to state, a life member of the Disabled American Veterans, which, by the way, is the only congressionally chartered organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled while serving actively in the armed forces of the United States, or of some country allied with it, during time of war.

As a D. A. V. member, I receive its official publication, the Disabled American Veterans Semimonthly newspaper, in the last issue of which I noted an outline of the policies and objectives of the D. A. V.

This outline emphasizes and is divided into four points:

First, preserve America's freedoms; second, equalize burdens and profits of war; third, promote welfare of America's disabled defenders; and fourth, extend adequate provisions for dependents of service disabled. All of these points—with which all of us can certainly agree—are interrelated, and all are of vital importance to the future welfare of America.

As slightly amended, I here insert such outline, as follows:

I. PRESERVE AMERICA'S FREEDOMS

A. Protect America.

1. Expand our specialized armed forces. (Numerous laws and appropriations and pending bills.)

2. Produce needed war matériel quickly. (Policy.)

3. Mobilize America's manpower efficiently. (Policy, H. J. Res. 2, by Hon. CLINTON P. ANDERSON of New Mexico, and now before the Committee on Labor.)

B. Perpetuate Americanism.

1. Protect Americanism by promoting Americanism. (Educational publicity.)

2. Promote active workable representative democracy. (Educational publicity. Numerous bills.)

3. Protect democratic institutions against subversive forces.

(a) Have all persons fingerprinted, registered, and identified. (H. R. 1032, by Hon. RAYMOND J. SPRINGER, of Indiana. Now before Committee on the Judiciary.)

(b) Issue certificates to all citizens. (H. R. 812, by Hon. CHARLES R. CLASON, of Massachusetts. Reported favorably by Committee on Immigration and Naturalization, on March 2, 1943, Rept. No. 201. Now on Union Calendar of House.)

II. EQUALIZE BURDENS AND PROFITS OF WAR

A. Provide adequately for America's defenders and their dependents.

1. Maintain adequate pay during service and for 6 months after discharge or death in service. (H. R. 823, by Hon. JAMES E. VAN ZANDT, of Pennsylvania. Now before House Committee on Military Affairs. Also sec. 55 of Disabled American Veterans' omnibus bill, H. R. 912.)

2. Extend protection against permanent and total disability in insurance policies. (S. 231, by Senator BENNETT CHAMP CLARK, of Missouri, chairman of the Senate Finance Subcommittee on Veterans' Legislation. Now before his committee. Also, H. R. 883, by Mr. VAN ZANDT, now before House Committee on World War Veterans' Legislation. Also sec. 42 of H. R. 912.)

3. Establish Army, Navy, and Marine Corps Boards of Appeals and Reviews, with authority to revise discharge certificates (H. R. 1105 as to Army, by Hon. OVERTON BROOKS, of Louisiana. Now before House Committee on Military Affairs. H. R. 1110, as to Navy and Marine Corps, by Hon. ED. V. IZAC, of California; now before House Committee on Naval Affairs. Also, secs. 55–56 of H. R. 912.)

4. Emphasize desirability to complete medical records during service. (Policy.)

B. Eliminate excess profits from all-out war for freedom.

1. Control purchasing power of United States money. (Policy.)

2. Impose taxes according to ability to pay. (Policy.)

3. Regulate men, money, material, machines, toward war victory. (Policy.)

III. PROMOTE WELFARE OF AMERICA'S DISABLED DEFENDERS

(H. R. 912. Disabled American Veterans' omnibus bill, by Hon. JOHN E. RANKIN, of Mississippi, chairman of the House Committee on World War Veterans' Legislation. Referred to his committee.)

A. Extend Disabled American Veterans' services to all of America's disabled defenders. (Policy.)

1. Through national and local service officers. (Policy.)

2. By extensive educational publicity. (Policy.)

B. Secure actual liberalization of policies as to service connections.

1. Reinstate direct service connections granted by the President's review boards. (H. R. 985, by Hon. JOE B. BATES, of Kentucky. Now before House Committee on World War Veterans' Legislation. Also, sec. 8 of H. R. 912.)

2. Decentralize authority to review and readjudicate all previously denied claims. (H. R. 706, by Hon. JERRY VOORHIS, of California. Now before House Committee on World War Veterans' Legislation. Also, sec. 31 of H. R. 912.)

3. Insist upon recorded résumé of all pertinent facts and evidence in claims filed prior to certificate of appeal. (H. R. 706 by Mr VOORHIS, of California. Now before World War Veterans' Committee. Also, sec. 32 of H. R. 912.)

4. Liberalized eligibility as to disability retirement benefits. (H. R. 1036, by Mr. BROOKS, of Louisiana. Now before Military Affairs Committee. Also secs. 44–45 of H. R. 912.)

C. Extend increased monetary benefits to disabled defenders.

1. Increase compensation and pension payment by 10 percent for every 10-percent increase in cost of living over 1940 figures. (H. R. 1111, by Hon. J. HARDIN PETERSON of Florida. Now before World War Veterans' Committee. Also sec. 1–2 of H. R. 912.)

2. Provide minimum 10-percent rating for wounded or gassed veterans. (H. R. 738, by Mr. VOORHIS. Now before World War Veterans' Committee. Also sec. 4 of H. R. 912.)

3. Increase basic ratings by 20 percent for each 5 years after age of 40. (H. R. 754, by Mr. VOORHIS. Now before World War Veterans' Committee. Also sec. 3 of H. R. 912.)

4. Restore full compensation to the so-called presumptives. (H. R. 1000, by Hon. GEORGE M. GRANT of Alabama. Now before World War Veterans' Committee. Also sec. 5 of H. R. 912.)

5 Rate war veterans as totally disabled while hospitalized for service-connected disabilities. (H. R. 1862, by Hon. A. LEONARD ALLEN of Louisiana. Now before World War Veterans' Committee. Also sec. 7 of H. R. 912.)

6. Increase pensions to war veterans with permanent total non-service-connected disabilities to $60 per month. (H. R. 1370, by Mr. VOORHIS. Now before World War Veterans' Committee. Also sec. 11 of H. R. 912.)

7. Authorize payment of compensation for partial service-connected disability, plus the percentage of pension for permanent total disability (nonservice) equal to the difference between 100 percent and his degree of service-connected disability. (H. R. 918, by Mr. RANKIN. Now before his committee. Also sec. 13 of H. R. 912.)

D. Liberalize Veterans' Administration determinations.

1. Determine permanent total disability on individual ability to follow any substantially gainful occupation. (H. R. 1118, as to service-connected disabilities, by Mr. PETERSON. Now before the World War Veterans' Committee. H. R. 683, by the Honorable VICTOR WICKERSHAM of Oklahoma, as to non-service-connected disabilities. Now before World War Veterans' Committee. Also secs. 9–10 of H. R. 912.)

2. Eliminate statutory limitations as to applications for benefits. (H. R. 707, as to bonus, by Hon. FRANK CARLSON of Kansas. Now before Committee on Ways and Means. H. R. 1036, by Mr. BROOKS, as to E. O. R. benefits. Now before Military Affairs Committee. H. R. 318, as to World War decorations, by Hon. JAMES M. FITZPATRICK, of New York. Now before Military Affairs Committee. Also secs. 16, 37, 40, 45, 46, 48, 51, 52 of H. R. 912.)

3. Limit misconduct bar to willful or felonious misconduct. (S. 227, by Senator CLARK

of Missouri. Favorably reported by Senate Finance Subcommittee on Veterans' Legislation July 7, 1943. Also H. R. 986, by Mr. BATES of Kentucky. Reported by Committee on World War Veterans' Legislation May 18, 1943, Rept. No. 462. Passed by House on June 8, 1943, and favorably reported by Senate Finance Subcommittee on Veterans' Legislation on July 7, 1943. Also sec. 15 of H. R. 912.)

4. Adjudicate claims retroactively according to facts. (H. R. 796, by Mr. RANKIN, and now before his committee. Also sec. 17 of H. R. 912.)

5. Adjudicate pending claims after death of veteran. (H. R. 793 and H. R. 2703, by Mr. RANKIN, and now before his committee. Also sec. 18 of H. R. 912.)

6. Forfeit benefits only where evidence is clearly not sufficient. (H. R. 644, by Hon. JOHN L. MCMILLAN, of South Carolina. Now before World War Veterans' Committee. Also secs. 49–50 of H. R. 912.)

7. Veterans guilty of fraud to be subject to fine or imprisonment. (Same as III–D–6.)

8. Extend time within which to make appeal from decisions of rating agencies. (H. R. 855, by Hon. JOSEPH R. BRYSON. Now before Word War Veterans' Committee. Also sec. 16 of H. R. 912.)

9. Provide minimum rating of 1 percent for veterans noted as having some disability at time of discharge. (H. R. 641, by Mr. ALLEN, of Louisiana. Now before World War Veterans' Committee. Also sec. 12 of H. R. 912.)

10. Schedule no examinations for those on permanent ratings. (H. R. 980, by Mr. BATES, of Kentucky. Now before World War Veterans' Committee. Also sec. 14 of H. R. 912.)

11. Permit suit on any claims after final denial. (H. R. 706, by Mr. VOORHIS of California, and H. R. 980, by Mr. BATES, of Kentucky. Both now before World War Veterans' Committee. Also sec. 33 of H. R. 912.)

E. Liberalize insurance benefits.

1. Reduce interest on Government insurance policy loans to 3½ percent. (H. R. 682, by Mr. WICKERSHAM. Now before World War Veterans' Committee. Also sec. 36 of H. R. 912.)

2. Permit suit on any Government life insurance policy at any time. (H. R. 1120, by Mr. PETERSON, of Florida. Now before World War Veterans' Committee. Also sec. 40 of H. R. 912.)

(a) Insurance judgments to be binding upon Veterans' Administration until modified by court order. (H. R. 803, by Hon. JOHN S. GIBSON. Now before World War Veterans' Committee. Also sec. 41 of H. R. 912.)

3. Make Government life-insurance policies incontestable after 1 year. (H. R. 749, by HON. ALBERT J. ENGEL. Now before World War Veterans' Committee. Also sec. 39 of H. R. 912.)

4. Return premiums on canceled Government life-insurance policies. (Same as III–E–3.)

5. Continue permanent total-disability insurance protection to veterans who have received 240 or more monthly installments of insurance benefits. (H. R. 794, by Mr. RANKIN, and now before his committee. Also sec. 37 of H. R. 912.)

6. Veterans receiving insurance benefits on permanent and total disability not to be reexamined more than once each 5 years. (H. R. 981, by Mr. BATES of Kentucky. Now before World War Veterans' Committee. H. R. 799, after 10 years, by Mr. RANKIN. Favorably reported on February 10, 1943. Rept. No. 113. Now on Union Calendar of House. Also sec. 38 of H. R. 912.)

F. Provide miscellaneous benefits.

1. Extend effective preferences for veterans, their wives, and widows, for all Government employment for which qualified. (H. R. 822 by Hon. JOE STARNES, of Alabama. Now before House Committee on the Civil Service. Also sec. 58 of H. R. 912.)

(a) Permit exemption of civil-service retirement law as to disabled persons deemed to be risk to Retirement Act, and then cover them into the social-security retirement provisions. (H. R. 1016 by Mr. MCMILLAN. Now before Civil Service Committee. Also sec. 59 of H. R. 912.)

2. Extend vocational training and suitable employment to all handicapped veterans. (Now Public Law 36, 78th Cong., as to service-connected disabled veterans of World War No. 2. H. R. 2950 by Mr. RANKIN as to all service-connected disabled veterans, now before Committee on World War Veterans' Legislation. Also secs. 51, 52, and 53 of H. R. 912.)

3. Extend preferences of appointment to West Point and Annapolis Academy to sons of service-connected disabled veterans. (Now Public Law 778, 77th Cong.)

4. Provide adjusted compensation for provisional officers. (H. R. 1547 by Mr. CARLSON. Now before Ways and Means Committee. Also sec. 48 of H. R. 912.)

5. National cemetery in every State. (H. R. 1109 by Hon. PAUL J. KILDAY, of Texas. Now before Military Affairs Committee. Also sec. 61 of H. R. 912.)

6. Urge consideration of a national war memorial auditorium in the Nation's capital. (H. R. 1245, by Hon. HARRY R. SHEPPARD, of California. Now before Public Buildings and Grounds Committee. Also sec. 60 of H. R. 912.)

7. Liberalize State laws and appropriations affecting veterans, their dependents, and their organizations. (Policy, Educational Publicity.)

G. Eliminate existing inequalities and inequities as among various similar groups of disabled veterans and their dependents.

1. Uniformize administrative provisions of all Veterans' Administration laws. (H. R. 2703, to effect numerous uniformizing administrative provisions and liberalizations as to all war veterans and their dependents, by Mr. RANKIN. Favorably reported by Committee on World War Veterans' Legislation May 18, 1943. Report No. 463. Passed by House on June 21, 1943. Favorably reported by Senate Finance Subcommittee on Veterans' Legislation on July 6, 1943. Passed by Senate with amendments on July 6, 1943, and immediately concurred in by House. Scheduled to be approved by President. H. R. 1774 by Hon. HARRY P. JEFFREY, deleting limitation as to number of dependent children. Now before Committee on World War Veterans' Legislation. H. R. 1445 by Mr. CARLSON of Kansas, to replace destroyed or withheld bonus certificates. Now before Committee on Ways and Means. Also secs. 6, 21, 22, 24, 25, 27, 29, and 47 of H. R. 912.)

H. Extend needed hospitalization and domiciliary care in following orders: (1) For service-connected disabilities; (2) for nonservice-connected disabilities. (Now Public Law 10, approved March 17, 1943. Also secs. 34, 35, of H. R. 912.)

I. Urge construction of Veterans' Administration facilities in accordance with veteran-population needs. (H. R. 981, by Mr. BATES of Kentucky. Now before World War Veterans' Committee. Also sec. 54 of H. R. 912.)

J. Liberalize adjunct treatments. (H. R. 658, by Mrs. ROGERS of Massachusetts. Now before World War Veterans' Committee. (Policy.)

IV. EXTEND ADEQUATE PROVISIONS FOR DEPENDENTS OF SERVICE DISABLED

A. Provide pension of $60 per month to widows of war veterans who have died by reason of service-connected disability, or who have suffered permanent total, combat disability. (H. R. 841, by Mrs. ROGERS of Massachusetts, to increase widows' pensions to $60. H. R. 888, by Mr. VAN ZANDT, to include widows of total combat-disabled veterans with widows of veterans who died by reason of combat disabilities. Now before World War Veterans' Committee. Also secs. 19, 20 of H. R. 912.)

B. Provide pension of $50 per month to widows of deceased war veterans who were suffering from service-connected disability. (H. R. 915, by Mr. RANKIN. Now before his committee. Also sec. 23 of H. R. 912.)

1. Eliminate "needs" test. (H. R. 979, by Mr. ALLEN of Louisiana. Now before World War Veterans' Committee. Also sec. 26 of H. R. 912.)

C. Extend pensions to dependents of veterans who have suffered disabilities traceable to examination, or hospital treatment, or vocational training. (H. R. 842, by Mrs. ROGERS of Massachusetts. Now before World War Veterans' Committee. Also sec. 28 of H. R. 912.)

D. Widows otherwise eligible for pension to be eligible if married to and living with the veteran for 2 years immediately preceding his death, or if being married, she gave birth to a child by the veteran. (H. R. 846, by Hon. JOHN LESINSKI, chairman of the House Committee on Invalid Pensions, and now before his committee. Also sec. 30 of H. R. 912.)

E. Provide pensions to dependent parents of deceased service-connected disabled war veterans. (H. R. 915, by Mr. RANKIN. Now before his committee. Also secs. 22, 24, 25, 27, of H. R. 912.)

Mr. Speaker, the many various objectives under the last two principal points above are, it will be noted, embodied in the D. A. V. omnibus bill, H. R. 912, introduced by my friend from Mississippi, the Honorable JOHN E. RANKIN, chairman of the Committee on World War Veterans' Legislation. Separate objectives, however, are also covered by separate legislative bills as indicated.

This extensive program of the D. A. V. is certainly well integrated, looking to the welfare of our country, our communities, and our comrades. It is predicated on the principle that by promoting and providing for the welfare of America's disabled defenders and their dependents we thereby help to promote, protect, and preserve America and its democratic institutions.

America will be able to continue to provide adequately for its disabled defenders and their dependents, however, only if democratic America is preserved. The protection, preservation, and promotion of America is inevitably linked up with adequate provisions for America's disabled defenders and their dependents.

To see to it that worthy disabled veterans, of all of America's wars, and their dependents, are enabled technically to establish their equitable claims for various types of benefits provided by existing legislation, the D. A. V. maintains the largest staff of nationally paid National Service Officers—one or more in nearly every regional office of the Veterans' Administration—of any veteran organization.

Every American war veteran who has been wounded, gassed, injured, or disabled by reason of his active military or naval service is eligible for membership in this exclusive service-giving outfit, and ought to support its legislative and service activities by becoming a paid-up life member of the D. A. V., which, if he was born prior to January 1, 1902, he can do by payment of $50 or, if born thereafter, by payment of $100 in cash, or by a down

payment of $5, plus installments until fully paid.

Application and payment for D. A. V. life membership should be sent to my long-time friend, Vivian D. Corbly, National Adjutant, Disabled American Veterans, 2840 Melrose Avenue, Cincinnati, Ohio.

Tribute to China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Century of July 7, 1943:

TRIBUTE TO CHINA

Today China enters its seventh year of war. It was on July 7, 1937, that a Japanese force maneuvering outside Peiping attacked a Chinese post at the Marco Polo Bridge and thus deliberately brought on the conflict of which the second World War may well be regarded as a projection. As this anniversary rolls round the free world will unite in tribute to the heroism with which the Chinese people have borne the trials of these bitter years. All the peoples who have resisted invasion in these war years have shown great heroism. The Russians, the Norwegians, the British, the Yugoslavs, the Filipinos—who can adequately celebrate their courage? But there has been something about the heroism of the Chinese, standing almost with bare hands to defy a completely armed invader, which compels a praise that is beyond words.

There was a time when westerners were tempted to minimize this achievement of the Chinese because they sadly underrated the strength of China's enemy. The length and determination of China's resistance was credited to Japan's weakness rather than to China's resolution. We know better now. No invader who could drive the British, the French, the Dutch, and the Americans out of their Oriental empires in less than 6 months can longer be discounted. Yet China has taken the heaviest blows this invader could strike, stood up under them, and come back for more. The bombing inflicted on her cities has equaled in destructiveness that rained upon London or the cities of the Ruhr, since China has, until now, had no means of defense against low-level, leisurely bombing. The atrocities committed against her people have resurrected a pattern of horror which had been thought buried with Attila and Genghis Kahn. By all the rules of warfare China should have surrendered years ago. She has been shattered as few nations have been shattered. But she has not been broken. She has not surrendered. She has not been defeated because she would not be defeated.

It has not been only on the field of battle, or in the calm courage of her people undergoing terrible air bombing behind the lines, that China has shown the quality of her soul. Equally in the field of statesmanship she has displayed a moral stature with which the world must reckon. No national leader has risen beyond the height on which Chiang Kai-shek took his stand when he said:

"There has recently been some talk of China emerging as the leader of Asia, as if China wished the mantle of an unworthy Japan to fall on her shoulders. Having herself been a victim of exploitation, China has infinite sympathy for the submerged nations of Asia, and toward them China feels she has only responsibilities—not rights. We repudiate the idea of leadership of Asia because the 'fuehrer principle' has been synonymous with domination and exploitation. * * * China has no desire to replace western imperialism in Asia with an oriental imperialism or isolationism of its own or of anyone else. We hold that we must advance from the narrow idea of exclusive alliances and regional blocs which in the end make for bigger and better wars, to effective organization of world unity. Unless real world cooperation replaces both isolationism and imperialism of whatever form in the new interdependent world of free nations, there will be no lasting security for you or us."

During these 6 years, and particularly during the year just closing, China has suffered some terrific blows. The entrance of the United States into the war, which she had been assured would quickly free her, instead immensely complicated her military difficulties. When she sent her military mission to Washington to consult on the problems of far eastern warfare they received so contemptuous a welcome that, in very self-respect, she was forced to call them home again. And most recently, she has seen the expeditionary force which invaded Burma with the avowed purpose of reopening a supply line to Chungking, driven back in disaster to the protection of the Indian border. These have all been military disappointments. They have been hard to bear. They must have left their mark on the morale of the Chinese people. But they are disappointments which those people know will pass, and they fight on.

Yet as this anniversary day returns there is a question, not military at all, which these same Chinese people ask of us, the common people of America. Will we inflict another, and a lasting, blow upon them by refusing to erase the racial and national insult against them which we have written into our immigration and naturalization laws? For 6 desperate years they have held back the forces of tyranny, and are we not yet ready to do them this belated act of justice? We praise them. We render tribute to their heroism. We know that if they were to weary of the fight our war in the Pacific would be lengthened for years, or perhaps even made impossible of winning. So we hold before them bright visions of the role which they are to fill after the war, as the Asiatic partner in a quadrilateral of powers to control the earth. They hear our praise; they see the visions. But they return to one inescapable and decisive question: Will we continue to treat them as human inferiors?

A Threat to Our Security?

EXTENSION OF REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. McGEHEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop, from today's Washington Times-Herald:

A THREAT TO OUR SECURITY?

(By Frank C. Waldrop)

A ferocious undercover struggle is going on between the Federal Communications Commission on the one side and the Army and Navy on the other, as to which shall have control over wartime spying and counterspying by radio.

A brief glimpse of the fight was given July 2, at the opening of the investigation into the Federal Communications Commission by a special investigating committee of the House, but that was really nothing, compared to the real thing.

Here is the background: The Federal Communications Commission has set up an elaborate and expensive section called the "Radio Intelligence Division," which undertakes to locate enemy fighting units at sea and abroad; to intercept enemy army, navy, and diplomatic messages; to spot secret broadcasting and receiving stations; to give directional bearings to lost planes; to keep watch on "distress" radio channels on which ships in danger would send out SOS signals; and to check up on military radio circuit users.

The Federal Communications Commission listens in on enemy radio programs of all kinds, translates, reports, and interprets them for our Government's use.

It is, therefore, in a position to know diplomatic, political, and military secrets of enormous importance, and its employees would have to be thoroughly reliable and intelligent for those secrets to be secure.

Well, do they meet these critically important specifications? Consider in answer to that a letter written to President Roosevelt on February 8, 1943, by Secretary of War Stimson and Secretary of the Navy Knox, asking him to take this military radio intelligence work away from the Federal Communications Commission.

Their recommendation was based upon a study of the Federal Communications Commission and its personnel by the Joint Chiefs of Staff of the United States.

These are Admiral William D. Leahy, chief of staff to President Roosevelt; Gen. George C. Marshall, Chief of Staff of the Army; Admiral Ernest J. King, Chief of Naval Operations and commander in chief of the fleet; and Gen. Henry H. Arnold, chief of the Army Air Forces.

They add up to a serious-minded and responsible body of men, and if their composite judgment on this matter cannot be trusted, then we had better all throw in our chips and head for the high ground.

Here is what Knox and Stimson told the President the joint chiefs of staff had to say about the Federal Communications Commission and its reliability as a handler of radio intelligence:

"They, as well as the responsible military commanders in the field (that is generals such as MacArthur, Eisenhower, and Kenney, and admirals such as Halsey and Nimitz), are of the belief that radio intelligence, the location of clandestine stations, the supervision of military communications security, and related activity must, in their very nature, be under the sole control of the military forces."

That ought to be an answer to all questions, but the fact is that Mr. Roosevelt has not yet acted on the recommendation above mentioned, though it was laid on his desk 6 months ago, lacking 1 day.

Not only that—an absolute gag has been put upon the Army and Navy.

Officers have been ordered to ignore subpenas for testimony or evidence, served upon them by the House committee investigating the Federal Communications Commission. And Federal Communications Commission Chairman Fly has even been so bold as to denounce the congressional investigation as a conspiracy between Wall Street, the radio monopoly, and the military to wipe out the Federal Communications Commission.

Wall Street and the radio monopoly can look out for themselves, but the Army and Navy, being gagged, cannot set the record

straight as to their part in this "conspiracy." Maybe a few facts will.

The Secretary of the Navy ordered to survey of the Federal Communication Commission's intelligence work and the security thereof September 11, 1942. This present Congress was not then even in existence.

On January 19, 1943, the House of Representatives in the new Congress adopted the resolution authorizing this present inquiry into the Federal Communications Commission, and Representative EUGENE COX, of Georgia, was made chairman of the investigating committee.

On February 8, 1943, the Secretaries of War and Navy sent their recommendations and reports to the President asking that radio intelligence be taken from Federal Communications Commission.

The congressional investigating committee didn't even have a staff then—in fact, didn't appoint its counsel and head of investigation until 11 days later.

Some conspiracy!

The evidence put in the record of the Federal Communications Commission investigation so far has been a terrible jolt to the Federal Communications Commission and to Chairman Fly. It calls for refutation not by generalized charges but specific testimony. Why aren't the Army and Navy officers allowed to testify?

If they were ready to repudiate the recommendation of February 8 and to tell why the Federal Communications Commission is to be trusted, surely Chairman Fly would want that as vindication.

And if they have another story to tell, surely the country's interest ranks above protection of Fly and company.

Let's have the facts, for a change, regardless of whose toes are mashed.

The Unimagined America

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. KENNEDY. Mr. Speaker, because, amid a welter of indifference and timidity, this address, The Unimagined America, delivered by the Librarian of Congress before the University of California on their Charter Day, last March 22, and published in the June issue of the Atlantic Monthly, rises up hard and sharp and challenging as a mountain, I commend it to the earnest attention of this House.

It is, in the best sense, practical and proud and provocative American thinking, as American as the courage and the vision and the labor which created a new world. It is a stirring summons to us, as Americans, to re-create our American future, on our own terms, according to our native resources of imagination and hope and passion and power; to be, in fact, the pioneers of our own world tomorrow, the architects of our own confident and tremendous destiny.

The address by Mr. Archibald MacLeish follows:

1

The proposition can be put as follows: that the American future is in issue in our time as it has been in issue only twice before; that insofar as the determination of the American future depends upon the American people, it depends upon their power to imagine such a future as they want and can believe in; that they have not imagined such a future, but seem rather to be unable or unwilling to consider what they wish their lives to be; that this failure of imagination will affect our victory in this war and may, indeed, lose us our victory.

I think it will not be questioned that the American future is in issue. There are some, I know, who do not wish to think so. There are some who would like to suppress the future for the duration of the war and to forbid the people to discuss it. They are noisy but not numerous. The great majority of the American people understand very well that this war is not a war only, but an end and a beginning—an end to things known and a beginning of things unknown. We have smelled the wind in the streets that changes weather. We know that whatever the world will be when the war ends, the world will be different.

There is hardly a meeting of three men in earnestness that does not say so. The talk about war aims, about peace aims, about post-war plans, is talk, at bottom, about nothing else but this. It is not the formal negotiation of a treaty of peace which concerns us, but the human negotiation of our personal lives: not the determination of the frontiers or the ratification of the international agreements, but the actual and present world that men will live in when the war ends.

It will not be too seriously questioned either, I believe, that the determination of the American future in this time of change depends, insofar as it depends upon ourselves, upon our power to imagine such a future as we can believe in. There is, it is true, a theory that the future of any society depends very little on the purposes of men themselves—that their systems of industry and economics determine what they must become.

That theory has not appealed to Americans. We remember that a hundred and sixty-seven years ago, at another moment of decision in our history, our predecessors did imagine such a future as they could believe in, and that the image they conceived had consequences. We remember also that after another war, a war that many living men took part in, we left the future to the laws of economics to construct. And we recall that future: it is now our past. We recall a future that should have been peace and freedom and became the radio, the automobile, and the depression of 1929.

There may be some who would like to repeat that future with cheap planes in the place of the automobile, and plastics succeeding refrigerators. There may be some, but not many. Most of us have learned the lesson once for all. Most of us know now that you do not fight a war for the privilege of buying things and then not buying them—for the privilege of becoming the world's most numerous consumers and thereafter the world's most numerous unemployed. Most of us know now that if you leave your future to the markets and the manufacturers to plan, you will get the future that the markets and the manufacturers can think of. And we know that future. Planes instead of cars, plastics instead of radios—we know it all. We know it and have lived it, and we don't propose, I think, to live it through again.

Nevertheless, and this is the strange and contradictory heart of our dilemma, nevertheless, we are apparently not willing to propose our future for ourselves. We are unwilling or we are unable to commit the act of the imagination for ourselves—to say for ourselves what we mean our lives to be. We know, if we know anything, that the disaster of 1929 was a failure not of wealth but of will, and not of will so much as of the purpose of the will. Starvation in the midst of plenty is not a paradox. It is a declaration of moral and intellectual bankruptcy. For if the means to cure the ill exist and are not used, the failure is a failure of decision, an inability to choose. And yet, in all our present talk of change, there is no talk of choice, no talk of affirmative purpose—none, to be blunt, of a people's dream of its future, a people's vision of the future it proposes to create.

There is, it is true, a deep, unreasoning conviction in the minds of people here, as in the minds of people elsewhere, that this war, whatever was true of wars before, *must* have consequences—that anything that costs in life and suffering what this war is costing *must* purchase, not merely an end to itself, but something else, something admirable, something of human worth and human significance. It is a profoundly held conviction and one that neither the superior wisdom of wise men nor the cheapening cynicism of cynical men can dispose of. Those indeed who try to silence that conviction, or to laugh it off, or trick it, will end certainly where the cynical and the wise who fool with the terrible sincerity of the people have always ended. The people of the world *believe* that all the anguish of this generation cannot go for nothing. They believe it in spite of the lessons of history. They believe it in spite of the last war and the war before that and the war before that one.

But their belief is the passive belief of powerful hope, not the active belief of determined purpose. All our talk is of the world we should avoid and of the ways we should avoid it—how to police our enemies, how to disarm the aggressors, how to avoid unemployment, how to escape the errors of the peace we made before. At the worst we talk like fortune-tellers of the dangers we foresee. At the best we talk like lawyers of devices—ways and means.

We debate bitterly whether business should do it or government should do it, but what it is that government should do, or that private business should do, we do not even ask. We argue whether to do it by air, and, if so, on what conditions; we consider the question whether to do it at home or to do it abroad, but what we propose to do by the use of the air or at home or wherever, we have not said—what we propose to do in terms of men, of men's lives, of human realities. Never at any point or by any mouth have we talked as a virile and creative people talks in its moments of decision—as men, for example, talked in Philadelphia in a certain summer when they pledged their sacred honor, and their lives.

Our silence on these things, moreover, is not merely silence. We are not all of us mute and dumb. We have words to say. But the words are contemptuous words. We are shamefaced and self-conscious when we hear the talk of purposes—of our purpose as a nation, of our purpose to construct the greatness of this Nation. The word itself and the whole conception of "planning" distress us. We think of ourselves—some of us anyway think of ourselves—as a practical hard-headed people who aren't taken in by utopias, who can't be fooled by the talk about better worlds, who know too much for talk like that—a people famous for salt, ironical, practical, hard good-sense who can't be bamboozled with talk about dreams and visions.

2

It is a strange and curious picture of Americans. If ever a people had behind them a tradition of great purposes, tremendous dreams, the people of America have that tradition. There is not one of us, there is not a child in this Republic, who does not know the story. The whole history of our continent is a history of the imagination. Men imagined land beyond the sea and found it. Men imagined the forests, the great plains, the rivers, the mountains—and found these

plains, these mountains. No force of terror, no pressure of population, drove our ancestors across this continent. They came, as the great explorers crossed the Atlantic, because of the imagination of their minds—because they imagined a better, a more beautiful, a freer, happier world; because they were men not only of courage, not only of strength and hardiness, but of warm and vivid desire; because they desired; because they had the power to desire.

And what was true of the continent was true of the Republic we created. Because our forefathers were able to conceive a freeman's government, they were able to create it. Because those who lived before us in this Nation were able to imagine a new thing, a thing unheard of in the world before, a thing the skeptical and tired men who did not trust in dreams had not been able to imagine, they erected on this continent the first free Nation—the first society in which mankind was to be free at last.

The courage of the Declaration of Independence is a far greater courage than the bravery of those who risked their necks to sign it. The courage of the Declaration of Independence is the courage of the act of the imagination. Jefferson's document is not a call to revolution only. Jefferson's document is an image of a life, a plan of life, a dream—indeed a dream. And yet there were men as careful of their own respect, as hardheaded, as practical, as eager to be thought so, as any now in public life, who signed that Declaration for the world to look at.

The truth is that the tradition of imagination is behind us as behind no people in the history of the world. But our right to live as we imagine men should live is not a right drawn from tradition only. There are nations of the earth in which the act of the imagination would be an act in the imagination only—an action of escape. But not with us.

We have, and we know we have, the abundant means to bring our boldest dreams to pass—to create for ourselves whatever world we have the courage to desire. We have the metal and the men to take this country down, if we please to take it down, and to build it again as we please to build it. We have the tools and the skill and the intelligence to take our cities apart and to put them together, to lead our roads and rivers where we please to lead them, to build our houses where we want our houses, to brighten the air, to clean the wind, to live as men in this Republic—free men—should be living. We have the power and the courage and the resources of good-will and decency and common understanding—a long experience of decency and common understanding—to enable us to live, not in this continent alone but in the world, as citizens in common of the world, with many others.

We have the power and the courage and the resources of experience to create a nation such as men have never seen. And, more than that, we have the moment of creation in our hands. Our forefathers, when they came to the New England valleys or the Appalachian meadows, girdled the trees and dragged the roots into fences and built themselves shelters, and, so roughly sheltered, farmed the land for their necessities. Then, later, when there were means to do it, when there was time, when the occasion offered, they burned the tangled roots and rebuilt their fences and their houses—but rebuilt them with a difference: rebuilt them as villages, as neighborhoods; rebuilt them with those lovely streets, those schools, those churches which still speak of their conception of the world they wanted. When the means offered, when the time offered, men created, on the clearings of the early useful farms, the towns that made New England and the Alleghenies.

Now is the time for the re-creation, the rebuilding, not of the villages and towns but of a nation. Now is the time to consider that the trees are down, that the land has been broken, that the means are available and the continent itself must be rebuilt. Our necessities have been accomplished as men have always accomplished their necessities—with wastefulness, with ugliness, with cruelty, as well as with the food of harvests. Our necessities have been accomplished with the roots of the broken trees along the fences, the rough shelters, the lonely lives. Now is the time to build the continent itself—to take down and to rebuild; and not the houses and the cities only, but the life itself, raising upon the ready land the brotherhood that can employ it and delight in it and use it as a people such as ours should use it.

We stand at the moment of the building of great lives, for the war's end and our victory in the war will throw that moment and the means before us. But to seize the moment and the means we must agree, as men in those New England valleys were agreed, upon the world we mean to bring about. We must agree upon the image of that world.

3

And this precisely is the thing we have not done and seem incapable of doing. Neither in these years of war nor in the years before them; never since America became a land of wealth, a country of abundance, a nation which could bring its dreams to pass; never since the industrialization of the continent and the opening of its vast American resources of men and ore and grain and cloth and cattle—never have we considered as a people what we meant to be, what we desired.

When we speak of our ideal conception of ourselves, we speak still in terms of the agricultural and sparsely settled nation Thomas Jefferson and his contemporaries had in mind. The ideal landscape of America which Jefferson painted hangs unaltered in the American imagination—a clean, small landscape with its isolated figures, its pleasant barns, its self-reliant rooftrees, its horizons clear of the smoke and the fumes of cities, its air still, its frontiers protected by month-wide oceans, year-wide wildernesses. No later hand has touched it, except Lincoln's maybe, deepening the shadow, widening the sky, broadening the acreage of the name of freedom, giving the parts a wholeness that in brighter, sharper light they lacked. For fifty years and longer it has been a landscape of a world that no man living could expect to see except behind him, a landscape no Americans could bring to being, a dream—but of the past, and not the future.

And yet we keep this image in our minds. This, and not the world beyond us, is the world we turn to: the lost, nostalgic image of a world that was the future to a generation dead a hundred years. No other image has been made to take its place. No one has dreamed a new American dream of the new America—the industrial nation of the huge machines, the limitless earth, the vast and skillful population, the mountains of copper and iron, the mile-long plants, the delicate laboratories, the tremendous dams. No one has imagined this America—what its life should be; what life it should lead with its great wealth and the tools in its hands and the men to employ them.

The plants and the factories and their products have been celebrated often enough—perhaps too often. The statistics have been added up. The camera has held its mirror to the great machines. But the central question we have never asked. What are they *for*, these plants and products, the statistics? *What are they for in terms of a nation of men*—in Jefferson's terms? What is the ideal landscape of this new America? What are we trying to become, to bring about? What is our dream of ourselves as a great people? What would we be if we could: what would our lives be? And how will we use this skill, this wealth, this power to create those lives?

What is demanded of us in this time of change, what our whole history and our present need demand of us, is that we find the answers to these questions—that we consider what we wish this new America to be. For what we wish to be we can become.

And if we cannot wish—we shall become that also.

4

There are men, it is true, who believe there are no answers. There are men, and among the wisest of our time, who do not believe that an image of this new America can be conceived—who do not believe in a world of plenty; do not believe in it with their hearts whatever their senses tell them; do not believe that the lives of men can be good lives in the industrialized society which alone makes plenty possible.

Judge Learned Hand spoke not for Mr. Justice Brandeis alone, but for many others, when he summarized the Justice's position as resting on the strong belief that "most of our positive ills have directly resulted from great size. With it has indeed come the magic of modern communication and quick transport; but out of these has come the sinister apparatus of mass suggestion and mass production. . . . The herd is regaining its ancient and evil primacy. . . . These many inventions are a step backward . . . our security has actually diminished as our demands have become more exacting; our comforts we purchase at the cost of a softer fiber, a feebler will, and an infantile suggestibility."

And in the concluding sentences of his noble tribute to the great justice, Judge Hand used words which many of the best of his contemporaries would speak after him without the alteration of a syllable: "You may build your Towers of Babel to the clouds; you may contrive ingeniously to circumvent Nature by devices beyond even the understanding of all but a handful; you may provide endless distractions to escape the tedium of your barren lives; you may rummage the whole planet for your ease and comfort. It shall avail you nothing; the more you struggle the more deeply you will be enmeshed."

They are eloquent words and noble words. They respond to a strong strain in the American character. But are they necessarily and inevitably true? Is it inevitable that men who contrive ingeniously to circumvent Nature should live tedious and barren lives and fall into the fatness of the spirit we, as well as Justice Brandeis, have seen and hated? Is it inconceivable that men should achieve a life with the machines as disciplined and honorable and as free as the life that Jefferson believed they could achieve with mules and oxen? Is it certain that the human spirit can survive and flourish only in a world where need and hardship drive with stinging whips?

Is the fault with the machines or with ourselves? Is it because we have automobiles to ride in, because we can purchase certain commodities easily, because our presses can turn out tons of printed paper in a day, that our fiber is soft, our will feeble, our suggestibility infantile? Or is it because we do not use these things as we should use them—because we have not made them serve our moral purpose as a people, but only contribute to our private comfort as their owners?

Is the whole question indeed not a question of ourselves instead of our devices? Is

it not for us to *say* how these devices, these inventions, should be used? Does their use not rest upon the purpose of their use? And does the purpose not depend upon our power to conceive the purpose—our power as a people to conceive the purpose of the tools we use; our power as a people to conceive and to imagine?

A hundred and fifty years ago de Crèvecoeur asked a famous question which has echoes now: "What then is the American, this new man?" But what then is he? What then is he now? A man incapable of the act of the imagination or a man to whom it is native and natural? A man to dare the dream of plenty with all its risks and dangers, or a man to hold to the old nostalgic landscape with the simple virtues safely forced upon him by the necessary self-denial?

A man who has the courage—or the foolishness perhaps—to think a nation may have physical abundance and still retain, or still not lose, its soul? Or a man to accept the shamefaced verdict of the twenty years just past and return to the discipline of want and hunger?

A man who has the hardihood or the courage to believe that the machines which have enslaved his fathers will make his children free—free as no human beings in the world have yet known freedom; free of the twisting miseries and hungers; free to become themselves? Or a man to reject the hope of that enfranchised freedom and to seek his independence in the ancient narrow circle of his old dependence on himself?

Which of these two men is the American? We should have said awhile ago we knew. We should have said the American character was self-evident: A restless man. A great builder and maker and shaper, a man delighting in size and height and dimensions: the world's tallest; the town's biggest. A man never satisfied—never—with anything: his house or the town where his grandfather settled or his father's profession or even his own, for that matter. An inveterate voyager and changer and finder. A man naturally hopeful; a believing man, believing that things progress, that things get forwarder. A skillful man with contraptions of one kind and another—machines, engines, various devices: familiar with all of them. A man of certain unquestioned convictions—of a strong, natural attachment to certain ideas and to certain ideals. But first of all and foremost of all a restless man and a believing man, a builder and changer of things and of nations.

We should have said, a generation back, there was no possible doubt or question of the will and power of this nation to propose the kind of future for itself which would employ the means of plenty for a human purpose. We should have said the principal characteristic of the American people was a confidence in the future and themselves—confidence that the future was the thing they'd make it. I cannot think, for myself, we have so changed that we do not believe this now. I cannot believe we are so changed that we'll let ourselves go with the drag and the current of history—that we'll let the future happen to us as the future happens to chips on a river or sheep in a blizzard; that we'll let the peace make us: not us the peace. I cannot believe we have so changed that we do not believe in ourselves and the future.

And yet we have not done what must be done if we believe the future is the thing we'll make it. We have not named that future.

And the time is short.

It is many years since Matthew Arnold saw his generation standing between two worlds, one dead, the other waiting to be born. Our time is still the time between these worlds; and the wars we suffer, the disasters, the uneasiness, are natural to the time we live in like the continuing and violent storms that drive the days between the seasons. We shall not have peace in truth, peace for our lives, peace for the purposes of our lives, until the world we wait for has been born. But it will not be born until we recognize it, until we shape it with our expectation and our hope. The new worlds do not bring themselves to being. Men's minds, when they are ready for them, find them. The labor and the longing must be ours.

They must be ours as men and also—and this is the truth our generation in this country must accept—as Americans. For the future is America's to make. It is not our future, as a few Americans have asked us to believe, to master or exploit. It is not an American future for some vast imperial enterprise, some huge dominion of the earth or sky. And yet it is our future. It is ours to shape. It is ours to shape, not because we have many planes or great numbers of ships or rich industrial resources but for a different reason: because we have the power as a people to conceive so great a future as mankind must now conceive—because we have behind us a tradition of imagination in the people.

But because we have the power we have also a responsibility to use the power. While there still is time.

The Negro Lawyer and the War

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. LUDLOW. Mr. Speaker, Frank R. Beckwith, an attorney of Indianapolis and a member of the bar of the Supreme Court of the United States, delivered a radio address at Indianapolis on March 18 which was timely and full of sound patriotism, and which I think is worthy of general perusal. The House of Representatives has unanimously approved my request for its publication in the CONGRESSIONAL RECORD.

Mr. Beckwith is chairman of the Committee on Legislative and Civic Affairs of the Federation of Associated Clubs, Inc., of Indianapolis, of which Mr. Starling W. James is president. The address of Mr. Beckwith was the feature of the "home front" program sponsored by the Committee on Public Information Service of the American Bar Association.

Mr. Beckwith spoke as follows:

THE NEGRO LAWYER AND THE WAR

In the course of events leading up to the birth of our Republic, one distinguished American lawyer uttered these words, "I know not what course others may take, but, as for me, give me liberty or give me death." That same distinguished lawyer and statesman also said, "Taxation without representation is tyranny." If we should undertake to reduce, to merely a few simple expressions, the principles constituting the fundamental precepts upon which our entire national structure rests, I am of the opinion that we could find no words anywhere in the archives of our country's history which would stand out so singularly as those two utterances. At this very hour the entire civilized world is embroiled in a violent struggle between the forces of liberty and the forces of oppression. The greatest factor among those seeking to maintain the cause of liberty is the fact that on the side of liberty are to be found the entire physical, mental, and military resources of the United States of America. The essence of the real might of our Nation lies not alone in our financial power, nor our so-called aristocracy of brains, nor our natural resources, because, underlying every phase of our strength is the fact that we are a liberty-loving Nation—a people who have made liberty the watchword of our entire national structure.

Our enemy within the gates would have some of our irrational citizens to believe that because they have not yet reached the point that they experience and enjoy certain advantages of a financial or social nature enjoyed by others of our fellow Americans, that they have nothing to fight for, nothing to sacrifice for. In fact, Axis propaganda agents, either those definitely commissioned as such or those inadvertently lulled into becoming such, have advocated, among various minority groups, who, perhaps, are subject to some degree of exploitation, that they have nothing at stake in the great conflict which is now raging and that it is merely a battle between the economic powers of the world. At a glance, such idle talk sounds alluring to some of our complacent fellow citizens, but, the Negro lawyer has had the courage and the foresight to say to such propagandists and to their victims as well, that regardless of the things that they do or do not enjoy the humblest among our fellow citizens can proudly view his accomplishments.

He can proudly appraise his possibilities and his accomplishments.

He can proudly appraise his possibilities and his potential success, and in the language of one song writer he can conclude, and rightly so, "This is worth fighting for." Throughout the recent era of depression in our country, some propaganda schemes found fertile soil in the minds of some of our persons who were unemployed and who were otherwise depressed, and consequently, it became necessary for those among them who did have a clear conception to put those people straight and to instill into their hearts a ray of hope in the future of our great country. That situation was a challenge to the lawyers of our country, the traditional leaders of thought and opinion in the community, and the American Negro lawyers, numbering approximately 1,000, carried a substantial share of that responsibility.

The formula for the dispensation of liberty is the Constitution of the United States. The lawyers, who avail our citizens of their rights under that Constitution, might well be considered, for the sake of discussion, the guardians of liberty. The due process clause of our Constitution, alone, is sufficient to warrant the undivided, unhyphenated loyalty and support of every American. Under that clause which provides, as it does, "that no State shall make or enforce any law which shall deprive any citizen of life, liberty, or property without due process of law," every American whether he be rich or poor, high or low, is placed upon an equal footing with every other American. In fact, that portion of the Constitution might well be called the common denominator of all Americans. Just the same as it protects the person of much means from confiscatory legislation and practices which would amount to confiscation, it also enables countless thousands of unfortunate, humble citizens to preserve for themselves and for their families the blessings of human liberty. It entitles them to their day in court, thus bringing to them the benefit of every scintilla of constitutional protection. Hence, the lawyer who earnestly and faithfully represents his client in small matters, be they of either a civil or a criminal nature, is actually the guardian of liberty in the truest sense. It is the masses of the people in

our great country, who carry, directly or indirectly, the burden of taxation, which, without representation, would be tyranny, and it is those same masses who carry the burden of selecting those duly chosen representatives who stand between the taxpayers and probable tyranny. It is those same masses who frequently find themselves in the courts of justice where small matters are litigated, more precious to those individuals of the common herd than are the matters involving thousands, yes, even millions of dollars, to those who are involved in matters of greater intrinsic value.

The clientele of the Negro lawyer numbers among its fold a high per capita number of the relatively obscure individuals of the masses who have minor matters in the courts, but matters which are precious and dear to them—matters pertaining to their personal liberty without which ours could not be a great country. Without constitutional government and a definition of liberty, such as we know it, ours, doubtless, would be a country where concentration camps, kangaroo courts, prisons without rules, and other institutions of the Dark Ages of the past and of the dark areas of the present, in dictator-ridden lands, would be the order of the day. I have seen some of the humblest, some of the most illiterate citizens living in our country ask, in substance, the question and seek the answer, "Is not this thing or that thing which has been proposed against me a violation of my constitutional rights?" Consequently, the Negro lawyer, notwithstanding the frequent inadequacy of compensation for his time and his efforts, continues to devote them, day after day, without any feeling of discontent or any expression of dissatisfaction. This he does because he knows first of all that in doing so he is safeguarding the rights and liberties of those who come to him for protection and redress and he knows also that in so doing he is underwriting the perpetuity of a great country—a country founded upon and interwoven with that fundamental idea of liberty and all the blessings which it bestows upon humankind. The task of the Negro lawyer is a tact-requiring one. His is the task of presenting in the courts and elsewhere, without antagonistic overemphasis, however, the unsolved problems of a weak, yet loyal, minority.

When the lights of liberty go on again all over the world, yes, that light called Greece, that light called France, and similar ones, which we have seen flickered into extinguishment by the oppressors and the aggressors, it will be only because one of the other lights of liberty, the greatest of all of them, has continued to shine through the ages. That light of liberty which shines between the Atlantic and the Pacific, and which is called the United States of America, must ever shine illuminating the pathway of liberty for all liberty-loving and liberty-longing peoples throughout the world.

U. S. S. "Helena"

REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, the newspapers today carry the story of the sinking of the American light cruiser *Helena* in the battle of Kula Gulf.

I recall the old *Helena*, a gunboat, on which I served on the Yangtze patrol over 20 years ago. It did its job in Chinese waters well. The U. S. S. *Helena*, its modern successor, which was sunk yesterday, did its job splendidly and courageously.

The battle of Kula Gulf was a magnificent and striking victory and one very much in line with the precepts of Admiral William F. Halsey, Jr., who presides over the south Pacific Fleet Command, "Bull" Halsey, as he is known to officers and men alike, has one doctrine.

It is: "Blast the hell out of them."

In line with Admiral Halsey's motto I am happy to inform the Congress that the State of Montana is going to blast hell out of the Japanese with bonds to replace the *Helena* just as the American Navy in the Pacific is going to do likewise with bombs.

The 9,700-ton cruiser *Helena*, which was sunk in the battle of Kula Gulf in the Central Solomon Islands early yesterday, was one of the ships which the Japanese damaged at Pearl Harbor on December 7, 1941. Subsequently she was repaired and returned to sea service and reportedly had an active career in the Pacific, although details of her accomplishments have not been made public.

The light cruiser named for the city of Helena, Mont., was commissioned at the New York Navy Yard September 18, 1939. She was equipped to carry four aircraft and her armament included fifteen 6-inch guns and eight 5-inch antiaircraft guns.

The skipper, Capt. Charles Purcell Cecil, of Louisville, Ky., was a veteran of naval service. He was graduated from the Naval Academy in 1916 and saw escort duty during the World War.

Before the present conflict started, he was serving as executive officer of the naval training station at Great Lakes, Ill., but was detached from that duty in June 1941, to take command of a destroyer division at Honolulu. In March 1942 he was given command of a destroyer squadron.

Captain Cecil won the Navy Cross for heroism as leader of a destroyer group assigned to a task force during the battle of the Santa Cruz Islands last October.

He maneuvered his ships into a defensive screen around an American carrier and his brilliant tactics and performance of duty were credited with inflicting heavy losses on the enemy and protecting American vessels.

Captain Cecil assumed command of the *Helena* in November 1942.

Encouragement

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. VOORHIS of California. Mr. Speaker, the following column, by Raymond Clapper, brings basic encouragement as to the success of our production and delivery lines in actually getting equipment to the fighting forces. Almost every person in this whole Nation has made some contribution to this accomplishment. The one note of warning that should be struck is that the job is far from done, the war far from won, and there can be no slackening of our efforts.

DELIVERING THE GOODS

(By Raymond Clapper)

ALLIED HEADQUARTERS, NORTH AFRICA, July 3 (by wireless).—Not so long ago I used to wonder where all the planes, ships, tanks, and men that we talked about in such gigantic numbers actually were. Now I am at the other end of the line, or rather at the end of several lines, and the results of America's production program are bountifully evident.

Flying across north Africa, I have landed at or passed over numerous air fields, all servicing planes in enormous numbers. From the air some of these fields looked as if flocks of enormous birds were roosting on them. Here we are 4,000 miles from the American shipping ports, yet material and men for the invasion of the continent of Europe are flowing regularly and smoothly into the concentration ports of north Africa as well as those of Britain. In Britain I saw acres of supplies in huge depots serviced by specially constructed depot railroads. In north Africa, from the west coast across more than 1,000 miles of coastline, are more such depots. Harbors are busy with shipping, which is now freely using the Mediterranean.

What I have seen both in England and here proves to me beyond question that the submarine, if not licked, is in no serious degree hindering the shipping of supplies to concentration points around the perimeter of Axis Europe.

Figures on sinkings of material bound for north Africa are unbelievably low. Allied ships loaded with supplies are now seen far inside the Mediterranean in large numbers. For the time being the submarines have ceased to be a serious problem.

These facts indicate a spectacular change in the Allied war position since I went across Africa a year ago. That trip had to be made through central Africa, because the Axis had the north. We were trying to send urgent supplies by air because the shipping route was so slow. The central African route was then an important artery, but now in a year's time it has become secondary. The Allied line has moved a thousand miles north to the coast and the Mediterranean.

A year ago production figures were in the thousands, yet MacArthur in the Pacific and Stilwell in India talked in hundreds, and that was sometimes exaggeration. As far away as China I heard pitiful stories. Perhaps it has taken a long time for the flow of material to "fill up the pipe" so that the equipment coming out at the end bears some proportion to the amount rolled off the production lines.

Whatever our shortcomings in management on the home front, American production of material and movement of it and of enormous number of troops over long and dangerous supply lines is clearly a historical achievement unapproached in the last war, and probably far beyond anything Hitler ever calculated as possible.

Success in modern war depends 90 percent on organization of a superior mass of material and men beforehand. The Tunisia campaign was delayed many months. But after a sufficient force had been assembled to achieve dominance, the actual campaign was over quickly in a joint victory for our forces in the field and the factories at home.

Warning From the Past

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I present for the RECORD a quotation from Aristotle which might be of interest at this time:

"The insolence of demagogs is generally the cause of ruin in democracies. First, they calumniate the wealthy, and rouse them against the government, thus causing opposite parties to unite against a common danger. Next, they produce the same result by stirring up the populace and creating a sense of insecurity. Nearly all the tyrants of old began with being demagogs. In well-balanced commonwealths, besides strict observance of established laws, it is especially necessary to keep close watch upon little matters. For a great change in the laws may creep on gradually, just as a small expense often incurred ruins a large fortune. Next let men be on their guard against those who flatter and mislead the multitude; their actions prove what sort of men they are. Of the tyrant, spies and informers are the principal instruments War is his favorite occupation, for the sake of engrossing the attention of the people, and making himself necessary to them as their leader. An unbridled democracy is exactly similar to a tyranny. Its objects and instruments are the worst, and both are equally served by the tamest of mankind. It is always anxious to lord it as a sovereign; it therefore has its flatterers in the shape of demagogs. Ancient customs must be done away with, ancient ties, civil and sacred, must be broken; everything must be changed according to new and false theories; and the result is an assimilation of democratic to tyrannical government, in its habits and modes of action."—Aristotle.

Contributions of Organized Labor to the War Effort

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ROWAN Mr. Speaker, terrific tirades have been directed against organized labor recently throughout the land because of the act of one man who is affiliated with neither of the two dominant labor federations of the United States. In some instances the patriotism of organized labor has been impugned by its critics and very little stress has been placed upon the magnificent contribution that the union men of this Nation have made to the all-out war effort before and since Pearl Harbor. In a common analysis of the situation it is doubtful if any other single group, outside the actual fighting forces of the United States, has made a contribution that will parallel that of the American Federation of Labor or the Congress of Industrial Organizations.

Some reference has been made to the record-breaking production of materials of war and the fact that our output of airplanes this year would approximate 75,000, with a greatly stepped-up production for 1944. The manner in which the American workman has turned out all the equipment and all of the ammunition, guns, tanks, planes, and ships has astounded the world and has bewildered our enemies.

This, however, is but one portion of the efforts of labor. Have you ever stopped to consider the enormous purchase of War bonds by the men who are making the guns, and weapons, and the vehicles that our soldiers and our allies are using so effectively to turn the tide of this titanic struggle? Labor has given gladly of the most precious things in its possession. The sons, brothers, fathers, and husbands of the union workers have gone into the armed forces by the tens of thousands. In addition, the wage earners have gone to the very limit of their financial resources to purchase bonds. Labor has not been found wanting, and without the patriotic service of organized labor America, our country, and our allies would not be so far advanced on the road to victory as at the present time. Long before Pearl Harbor organized labor recognized its obligation and responded with alacrity. After Pearl Harbor, however, their efforts were redoubled. Before Pearl Harbor the union workers bought Defense bonds; today they are buying War bonds, and they are willing to set their record against any other group in the country or in the world.

Secretary of the Treasury Henry Morgenthau, Jr., who, incidentally, has the reputation of being one of the Cabinet members most friendly to labor, called in the councils and insisted that labor be given every opportunity to participate in every War-bond drive held throughout the country. Secretary Morgenthau talked with President Green, of the American Federation of Labor, and President Murray, of the Congress of Industrial Organizations.

Both Mr. Green and Mr. Murray readily responded and offered not only their personal help but the help of the entire membership of both organizations, totaling over 13,000,000 people. President Green, in addition, turned over to the Treasury Department the entire organization staff of the American Federation of Labor, consisting of approximately 1,300 men and women, gratis, in addition to establishing four district offices in conjunction with the Treasury Department so that every organization, regardless of size, would be able to participate in this most worthy cause. Mr. Green further pledged the American Federation of Labor and its affiliated organizations to buy one billion in War bonds and it is needless to say the A. F. of L. went over the top in 1942, and they have again pledged themselves to purchase a minimum of $1,000,000,000 in War bonds for 1943.

Secretary Morgenthau called in Mr. Gilbert E. Hyatt, known to practically every union man from the Atlantic to the Pacific, and from the Dominion to the Gulf by virtue of his long affiliation with the American Federation of Labor. Few, if any, men in the labor field have as many personal and intimate friends as Mr. Hyatt, who today is Chief of the Labor Section of the War Savings Staff. If memory serves correctly, Mr. Hyatt was a member of the Brotherhood of Locomotive Firemen and Enginemen for 40 years, and also served in various capacities—among them that of president of the National Federation of Post Office Clerks—so no better choice could have been made.

Immediately after assuming his office, that of dealing with organized labor entirely, Mr. Hyatt wrote Mr. James C. Orr, secretary-treasurer of the International Printing Pressmen and Assistants Union of North America. Mr. Orr responded at once and offered all the facilities of his organization and all the resources that the international and local unions could provide. The ultimate result is that the International Printing Pressmen and Assistants Union of North America, an affiliate of the American Federation of Labor, has purchased up to date in bonds and stamps $3,464,879. In addition, the organization is buying in excess of $125,000 each month or an average of $1,500,000 each year.

Mr. Hyatt next wrote Mr. Louis Krouse, general secretary of the International Alliance of Theatrical Stage Employees and Motion Picture Machine Operators. Mr. Krouse is one of the most widely known and highly esteemed music leaders, which is attested to by the fact that he has been elected and reelected to his position many times. Through his efforts this organization, with less than 50,000 members, has purchased to date $1,213,600 in bonds. In the percentage of aggregate pay-roll deductions they are No. 1. They are No. 1 in the average monthly salary, also in the average deductions of employee participation. This is cited to show how readily labor in all walks of life has responded. The Chicago Motion Picture Operators, Local 110, of this union, bought $80,000 worth of bonds through their own treasury. The New York Motion Picture Operators, Local 306, bought $50.000; the Philadelphia Motion Picture Operators, Local 307, bought $40,000; the Los Angeles Motion Picture Operators, Local 150, bought $42,500. This is, without question, one of the smallest organizations in the A. F. of L., and practically all of its members are today participating in the pay-roll deduction plan.

The International Brotherhood of Teamsters, Chauffeurs, and Warehouse Helpers of America is a shining example of labor's participation in financing the war. You have heard this organization roundly condemned on the floor of this House and elsewhere. What is the actual record of the Teamsters' International Union? This union, as an international union, through its president,

Dan Tobin, has purchased over $25,000,000 worth of bonds in addition to building and paying for recreation centers, and furnishing and maintaining them. Take, for instance, the recreation center located at Fort Lawton in the State of Washington. This organization, located there, in addition to buying bonds, jeeps, and iron lungs, is sending to the soldiers in Alaska and the Aleutians 200,000 packages of Raleigh cigarettes each month. Most of us have read in the newspapers just recently that over 4,000 members of the milk wagon drivers located in New York City donated a pint of blood each. Two thousand members of the joint council in and around Los Angeles, in turn, were blood donors. In my own city of Chicago they have erected a Victory Plaza at the entrance to the city hall to be known as the war memorial to the more than 6,500 members of the teamsters' union of Chicago who are now serving in the armed forces as another forceful gesture of labor to create further war consciousness and further the sale of War bonds and stamps. This project will attract the attention of millions of Chicagoans as well as the tens of thousands of visitors to the city because of its location. Every Chicagoan is proud of the fact that over 80,000 Chicagoans, who are members of the teamsters' union, have purchased to date over $10,000,000 worth of War bonds through pay-roll savings and through their local union treasuries.

The Air Line Pilot Association, of which Mr. David L. Behncke is president, has purchased $150,000 worth of bonds. This union has very few members, but in spite of that fact has cooperated magnificently. The Union Cement, Lime, and Gypsum Allied Workers, whose general secretary-treasurer is Tony Gallo, has purchased $189,274 in bonds. And now, closer to Washington, is the city of Baltimore, Md. The Central Labor Union, affiliated with the A. F. of L., pledged and purchased $156,225 worth of War bonds. Here are a few of many locals that participated:

Steamfitters Local 438	$25,000
Plumbers Local 48	20,000
Painters District Council	20,000

Then there is that stanch union leader, Mr. C. W. Sickles, secretary-treasurer of the Asbestos Workers International Union, which is a comparatively small union in the American Federation of Labor. On November 28, 1942, the Building and Construction Trades Council of Buffalo sponsored a Victory dance, floor show, and bond sale for the purpose of obtaining sufficient funds to purchase and donate to the Government a bombing plane. Mr. Jack Farrell, business agent of Local 4 of the asbestos workers, in a letter to Mr. Sickles advised that over $700,000 in War bonds and stamps were sold in that one night in the city of Buffalo, over $40,000 of which were purchased by asbestos workers and their friends.

Mr. Edward J. Volz, president of the International Photo Engravers Union, with 90 locals scattered throughout the United States and a membership of 10,834, sends word that his organization has purchased $369,240 worth of bonds and, let me call this to the particular attention of the House, individual members of 25 locals purchased $750,000 worth of bonds.

Has anyone any criticism to offer on this?

And now, just one more of the many accomplishments of organized labor in this connection, in my own home State. In 1942 Mr. Patrick F. Sullivan was appointed a vice chairman of a committee organized for the purpose of stimulating the sale of War bonds and stamps, and was in charge of all building tradesmen in the State of Illinois. In a local drive in Cook County approximately 125,000 members of the construction industry purchased $30,000,000 in bonds. Mr. George Meyers, a member of Mr. Sullivan's committee, and a representative of the glaziers union of Chicago, conceived the idea of raising funds for the purchase of a bomber plane to be presented to the Army Air Corps. Mr. Thomas Murray, also a member of Mr. Sullivan's committee, and a representative of the electrical workers union, cooperating with the Treasury Department, the Union Station Co. of Chicago, and the Society of Typographic Arts and the Chicago Building Trades Council, arranged to finance and construct a gigantic war exhibit now on display in the Union Station in Chicago. This project was erected at a cost of over $25,000 and was a gift from the Building Trades Council. At the dedication ceremonies of the Union Station project, Mr. Meyers presented General Krogstadt, representing President Roosevelt, with a check for $100,000 toward the purchase of a bomber plane on behalf of all members of the American Federation of Labor of the State of Illinois.

On November 1, at the Municipal Airport in Chicago, the bomber plane was christened and presented to General Krogstadt of the Army Air Corps.

In the second war loan drive $1,250,000 in War bonds were sold to the treasuries of the local unions through the medium of approximately 200,000 letters to the union membership. At a business agents' luncheon by the Chicago Building Trades Council, admission was by presentation of War bonds and $106,000 of bonds were purchased by 117 business agents. In this connection it might be well to remind you that the quota for the metropolitan area in Chicago was oversubscribed by approximately 50 percent in the Second War Loan drive.

Time does not permit one to go into detail on the virtues of all of the organizations that are affiliated with the American Federation of Labor. There are 102 national and international unions, 762 city central unions and local trade and Federal unions numbering 1,540. There are over 36,000 local unions affiliated with these today. You can see how utterly useless it would be to attempt to enumerate all of them. However, the Nation can rest assured that organized labor stands ready and willing to do its share at any time to help win this war. The records definitely show what it has done. When you stop and consider that the labor staff of the Treasury Department is composed of only 4 field men, certainly this is a most remarkable showing and think what could be done if more direct contact were to be made with the 36,000 locals.

The figures cited herein relate only to the organizations affiliated with the American Federation of Labor. A similar compilation is being prepared covering Congress of Industrial Organizations affiliates and should be ready within the next few weeks.

It is indeed a privilege to pay tribute to the patriotism of organized labor in this crucial period in our history and in world civilization.

Labor will do its full share in this emergency and is, indeed, proud of its contribution to the fighting forces on land, on sea, and in the air, and will help set the pace for others to follow on the road to victory and to peace.

FEBRUARY 13, 1943.

Mr. C. W. SICKLES,
Secretary-Treasurer, International Association of Heat and Frost Insulators and Asbestos Workers, Washington, D. C.

DEAR BROTHER SICKLES: Our mutual guide, philosopher, and friend, James F. Barrett, in charge of the southern office of the Labor Section, War Savings Staff, has stolen one right from under our noses. This consists of extracts from the January issue of the Asbestos Worker, giving in detail the amount of bonds purchased by your different locals.

As Brother Barrett points out, you are one of the smallest of the unions in the American Federation of Labor and therefore this information has been received with gratification.

With such enthusiasm it goes without saying that your members are, in addition to the amount purchased from the treasuries of local unions, undoubtedly participating in pay-roll savings plans in the various institutions by which they are employed. Experience has demonstrated that in unionized establishments pay-roll savings plans do not reach success without the sponsorship and continued support of the union.

Should any information be available as to the number of these locals which have achieved not less than 90 percent of participation in pay-roll savings plans with an average investment of not less than 10 percent of income, we should be glad to receive it. In the meantime accept the congratulations of the War Savings Staff for the good work already performed.

Sincerely and fraternally,

GILBERT E. HYATT,
Chief, Labor Section, War Savings Staff.

TREASURY DEPARTMENT,
Atlanta, Ga., January 26, 1943.

Mr. GILBERT E. HYATT,
Chief, Labor Section, War Savings Staff, Washington, D. C.

DEAR GIL: Here is a great story of the asbestos workers, which is one of our smallest international unions.

Thought perhaps you might be able to use this to good advantage.

Fraternally yours,

JAMES F. BARRETT,
Staff Assistant, War Savings Staff.

War bonds purchased by international and affiliated local unions of the asbestos workers, January 1943

NOTE.—Figures appearing in parentheses in each column indicate rank of industry for detail at head of column. (Industries are ranked in order of highest monthly salary per employee.)

Home Fronts Held Weak

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of July 4, 1943:

HOME FRONT HELD WEAK—BAN ON PLANNING BOARD CASTS OUT AUTHORITATIVE BODY

To the EDITOR OF THE NEW YORK TIMES:

Regardless of the failures and achievements of the National Resources Planning Board, its dissolution by Congress leaves the country without an authoritative agency qualified to deal with post-war domestic problems in a comprehensive manner.

To be sure, there are scores of public and private agencies in the United States today that are studying and discussing post-war problems. Many of them are doing very competent work within their special areas of interest. But no single government or private agency is sufficiently broad in the scope of its activities or disinterested enough in its viewpoint to plan for the variety of problems sure to arise when peace "breaks out."

OTHER PROBLEMS

Several Members of Congress have recognized the need for an independent official post-war reconstruction commission with legislative authority and executive support, and have introduced resolutions to create one. All of these resolutions have been lost in the shuffle except that of Senator GEORGE, which was approved by the Senate last March. A strong committee of six Democrats and four Republicans wes appointed under authority of this resolution, but the Senate Post-War Committee has not yet begun to function actively, presumably because its members have perforce been preoccupied with more immediate and pressing problems.

Meanwhile V-day is approaching. It may come sooner than we think. There is widespread public interest in post-war problems and a growing demand that governments be prepared to assist industry and labor in the difficult transition from a wartime to a peacetime economy. But, just as after World War No. 1, as the United States Bureau of Labor Statistics points out in a recent study by Stella Stewart, "there is no unified plan, no common agreement, no centralized agency, no evidence of teamwork among the groups which will be most affected by a planless demobilization."

WORK NOT FINISHED

The recent statement of policy jointly issued by the business, labor, and agricultural committees of the National Planning Association is an apparent exception to this lack of teamwork.

Under these circumstances, there is real danger lest we again lose the peace on the domestic front unless some authoritative agency is promptly established to carry on the coordinating work left unfinished by the National Resources Planning Board.

Such an agency, I suggest, might well be composed of representatives of both Houses of Congress. It ought to be representative of both political parties, and it should include representatives of the administrative branch, as the temporary National Economic Committee did. We can learn something here from the successful use of mixed or royal commissions in Great Britain and Sweden.

A post-war reconstruction commission so constituted would avoid the otherwise inevitable rivalry between the legislative and executive branches over control of the transition from war to peace.

Furthermore, it would also avoid duplication of the same testimony by busy administrators and business and labor leaders. A joint investigation would also be less expensive.

In composing the post-war reconstruction commission provision should also be made for the representation of professional groups, of functional economic or occupational interests, as well as State and local governments. Professional groups—lawyers, economists, engineers—presumably would be represented on the technical staff of the commission, which would assemble the basic data and do the requisite research work.

Functional groups, the so-called blocs, might well be represented on an advisory council to the commission, while State and local governments, which have a natural interest in the administrative decentralization of post-war programs, could be represented on the commission itself.

In view of the apparent demise of the National Resources Planning Board and the inactivity of Congress with reference to post-war planning, I submit that the time is ripe for the creation of a truly representative post-war reconstruction commission. Otherwise history may repeat itself, and we may again find ourselves without well-developed and coordinated programs of practical action on the home front when demobilization day comes.

GEORGE B. GALLOWAY.

WASHINGTON, *June 29, 1943.*

O. P. A. Personnel

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. WORLEY. Mr. Speaker, last week when the House was considering the appropriation bill for the Office of Price Administration an amendment aimed at the O. P. A. policy makers was offered which would have required 5 years' business experience from all the personnel of that department. This amendment was hurriedly and rather poorly drawn and would not have accomplished the desired results. Proof of this statement can be found in the fact that later on the House and Senate conferees abandoned this provision.

However, I am of the opinion the principle of such an amendment is sound. In light of many of the rules and regulations which have been issued by the O. P. A., I am constrained to believe that those who formulate these regulations do not seem to have sufficient information as to how such regulations would affect the people to whom they are supposed to apply.

I have therefore prepared and introduced a bill which, briefly, provides that the officials of the O. P. A. who formulate and who participate in formulating the policies of any rule, regulation, order, or directive with respect to any industry, trade, or business shall be persons who have had at least 5 years' experience in such industry, trade, or business.

It seems to me that a man who issues an order regulating retail drygoods stores should certainly be familiar with their problems. Likewise one who attempts to control the actions of druggists ought to be aware of matters peculiar to that line of business. And those who assist in regulating meat markets and grocery stores should have sufficient experience to know what the problems of those merchants are. The same thing holds true of the hardware merchants, newspapers, automobile dealers, farmers, ranchers, laboring men, and what not.

Theories and ideologies might be fine things in peacetime but what we need today on the home front is more good common horse sense. We need those who are familiar with the common problems which are facing every merchant in the country today.

I believe that if the services of experienced men, rather than theorists, are secured, then the rules and regulations issued will be sounder, will involve less red tape, and will be simpler and more satisfactory to the merchants and to the consuming public.

Another Accomplishment of the World War Veterans Legislation Committee

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BENNETT of Missouri. Mr. Speaker, the Committee on World War Veterans' Legislation, of which I have the honor to be a member, has secured approval by Congress of another important and far-reaching piece of legislation, H. R. 2703. This law was finally approved by this House on July 7, 1943.

The act in question is designed to correct inequalities arising under existing law with a view to simplifying adjudicative practices and administrative procedure by establishing uniform provisions wherever possible. This measure has the approval of all veterans' organizations and of the Veterans' Administration. I am glad to have had a part in making it law. It is a law of extreme importance to veterans of the World War No. 2 and their dependents.

Briefly the law provides, first, that in case of an incompetent veteran having no guardian, any compensation, pension, or retirement pay may be made to his wife at the discretion of the Veterans' Administration and without the expense and red tape of securing appointment of a guardian. As a lawyer who has had experience in handling these estates, I know that this is a wise provision, because the expense of usual court costs to handle the small sum paid by the Government to these veterans just about eats up the money which the widow and children should get and will get from now on.

The new law provides in the second section also that when death benefits are payable to the widow of a veteran or to the child, it will be paid to the widow for herself and child even though the widow is a minor. Many cases have arisen where the wife of a deceased veteran was not of age and money rightfully belonging to her and the children has gone for court costs.

The third section of this law provides that any person entitled to veterans' benefits may reject his rights to them for any reason and later apply for them again without in any way having the rights in the second application altered or changed, except that on the second application it must start from the date of application and will not be retroactive.

Section 4 provides that any person found guilty of mutiny, treason, sabotage, or aiding our enemies shall forfeit all veterans' benefits. However, the Administrator of Veterans' Affairs may, in his discretion, pay benefits that otherwise would be due the soldier or veteran to members of his family upon his death.

Section 5 deals with persons entitled to compensation who are located in an enemy country. If such a person happens

not to be a citizen of the United States his compensation stops. These benefits, however, may be paid in the discretion of the Veterans' Administrator to his dependents if they are not in a place occupied or controlled by enemies of the United States.

Section 6 refers to widows of World War No. 2 veterans who marry such veterans more than 10 years after the end of the war. The purpose of this provision is designed to prevent a common racket under which marriages are sometimes made with a view to getting Government benefits of a soldier who is about to die.

Sections 7 and 8 define a child, parent, father and mother for the purposes of the act.

Section 9 extends the benfits of the present veterans' hospital facilities just the same to veterans of World War No. 2 as to veterans of World War No. 1. Section 9 also provides that every person in the armed services shall be assumed to have been in sound condition when accepted for service except as to defects noted at the time of examination for enrollment or where clear evidence demonstrates that the injury or disease existed prior to enrollment and was not aggravated by military or naval service.

Section 10 provides that cadets at the United States Military Academy, Coast Guard Academy, and midshipmen at the United States Naval Academy, during World War No. 2, are considered as in active military or naval service for the purpose of extending to them veterans' benefits.

Section 11 provides compensation shall not be paid to any widow without child or to a child whose annual income exceeds $1,000, or to a widow with a child whose annual income exceeds $2,500.

Section 12 provides the order in which compensation shall be paid to dependents of a deceased veteran.

Section 13 provides that a disabled veteran, without dependents, being taken care of by a Government institution, will receive compensation at the rate not to exceed $20 per month instead of $15 per month as at present. Such a veteran entitled to pension for non-service-connected disability will get $8 per month instead of $6 as at present.

Section 14 simplifies and adjusts the rates of wartime service-connected death compensation or pension by elimination of the differentiation in rates to the widow or children based upon age, adopting the higher rates for all ages. These adjustments result in increased rates. The increase of the widow's rate from $45 to $50 per month and the payment of that rate regardless of age—now $38 if under 50 years of age—is believed to be a conservative and more appropriate recognition of the Federal obligation in these cases. It is expected this additional cost will be largely offset by the savings that will ensue from the simplification of procedures as provided by this law. Extra compensation is provided for each child the widow has, $15 for the first child and $13 for each additional one. The total amount payable cannot exceed $100 per month. Slightly lower rates are paid in case of peacetime service-connected death.

Section 15 governs receipt of concurrent payments, removing certain inequalities in existing law. Section 16 makes this law effective from the date it became law and provides no payments can be authorized for any period prior to enactment of the law. Section 17 provides that pensions payable for disability shall be payable from the date of discharge if claim therefor is filed within 1 year from discharge.

Enactment of this law is another of the steps taken by Congress on what I hope will be a path of continued justice to those called upon to wear the uniform of their country.

The Wallace-Jones Affair

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann:

TODAY AND TOMORROW—THE WALLACE-JONES AFFAIR

(By Walter Lippmann)

It would be useless for Congress to investigate the brawl between the Vice President of the United States and the Secretary of Commerce, and it would be quite beside the point for the general public to attempt to judge the merits of the dispute. The real question is why such an unseemly affair has exploded in our faces.

When we can answer that question we shall know what is wrong on the home front, and we shall begin to know what ought to be done about it.

In looking for the answer we may begin by asking ourselves what a strong executive in a well-conducted government would do if two leading members of his official family got into such a public row. The answer is clear and obvious: Before paying the slightest attention to their allegations, he would instantly remove both men—Mr. WALLACE as Chairman of the Board of Economic Warfare and Mr. Jones as Chairman of the Reconstruction Finance Corporation.

This would be done because, without discipline within a government, it is impossible to conduct a government. The President has a rule that his officials must not quarrel publicly. The way to enforce that rule is to remove instantly officials who do quarrel publicly. For when a man takes office in an administration, there are two and only two choices open to him: To remain a member of the team by composing his differences with the other members, or to resign from the team and, then, as a private citizen to exercise his right to speak his mind.

But this rule so essential to good government is unworkable in Washington today because it presupposes an effective method of composing differences within the team. The quarrel between the Board of Economic Warfare and the Reconstruction Finance Corporation has smoldered for months. It burst into flame because, as things are set up, the President alone could compose it, or could judge it and decide it. But he wouldn't. He wouldn't because he was too busy with other things, because it bored him, because he never studied it, because he did not wish to offend either Mr. Jones' friends or Mr. WALLACE'S friends.

Because Mr. Roosevelt conducts government personally and by improvisation rather than by relying on institutions, like the Cabinet, and an established procedure, the task of settling the issues of the dispute was a painful personal duty from which he shrank. If he had had a war cabinet, they could have settled it in the early stages before the argument became a personal feud.

For the knowledge that the argument could be settled, and the rule that a man must play ball or retire to the bleachers if he does not agree, would create a team in Washington.

If there were a team, the administration would not have one-tenth the trouble it is having with Congress. For one thing, if the administration were united and disciplined within itself, it would not make so many mistakes. Nor would it have one frustrated agency lobbying against another frustrated agency in Congress and in the press.

If at one end of Pennsylvania Avenue there really were one coherent, agreed, thoughtfully considered program for dealing, let us say, with inflation—a program backed by the Treasury, Agriculture, Office of Price Administration, and all the others concerned—then Congress would have to make the momentous, responsible decision of supporting it or rejecting it. That would be orderly government. But when Congress is invited to vote on one incidental feature—subsidies—before anyone knows what the whole inflation program is to be, need anyone be surprised that Congress is confused and obstructionist?

It is generally supposed that the trouble is on the home front alone, and that our foreign relations at least are well conducted. Unfortunately that is not the case, and the same indiscipline, the same lack of coherence and considered action, the same personalism and improvisation exist there, and will, if not corrected, have long, deep, and very serious consequences. The discerning are already aware of them, and the portents of trouble—not in one place but in many—are already visible.

They arise from the fact that our foreign relations, which ought to be firmly in the hands of the State Department, are carried on through a large number of amorphous and discordant agencies—Board of Economic Warfare, Reconstruction Finance Corporation, Treasury, Office of War Information, some generals, and some admirals. Our foreign relations are not controlled by the State Department because that Department is not adequately manned and it has no real head. It contains within itself several headstrong factions. It is said that the President is his own Secretary of State. But if he is, he needs a State Department nonetheless in order to be Secretary of State. In fact he has been handling the greatest and most difficult affairs by intuition, improvisation, and personal feeling.

For this there will be, unless there is a decided change soon, a reckoning in foreign relations as there is now a reckoning on the home front. For he is blind indeed to the handwriting on the wall who does not see the accumulating evidence.

Government Finances

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CANNON of Missouri. Mr. Speaker, under authority to extend my remarks, I include herewith a letter from the Under Secretary of the Treasury transmitting to me a set of statements relative to receipts, expenditures, the public debt, status of the general fund of the Treasury, and a preliminary statement of amounts made available for war activities during the fiscal years 1941, 1942, 1943, and an estimate of the amounts for the fiscal year 1944 as of their status on June 30 last. I believe this material will be useful and helpful to the Members of the House in their study of Government finances generally.

TREASURY DEPARTMENT,
Washington, July 7, 1943.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives, Washington, D. C.

MY DEAR MR. CANNON: By direction of the Secretary and pursuant to your letter of September 25, 1941, I am enclosing herewith the following financial statements for June 30, 1943, covering the finances of the Federal Government:

Statement No. I. General Budget summary—receipts and expenditures.

Statement No. II. Effect on the public debt of financing cash requirements.

Statement No. III. Statutory debt limitation.

Statement No. IV. General fund balance.

Statement No. V. Borrowing power and outstanding obligations of corporations and credit agencies which issue obligations guaranteed by the United States.

Statement No. VI. Combined statement of assets and liabilities of Government corporations and credit agencies for the period ended May 31, 1943.

Statement No. VII. War activities program (exclusive of Reconstruction Finance Corporation and its subsidiaries) appropriations, contract authorizations, and expenditures, July 1, 1940, through June 30, 1943.

Attention is called to the fact that the Budget estimates of receipts, expenditures, and net deficit used in statements I, II, and IV are the President's latest estimates reflected in the Budget for the fiscal year 1944.

Sincerely yours,

D. W. BELL,
Under Secretary of the Treasury.

TABLE I.—*General Budget summary—Receipts and expenditures*

[On basis of the daily statement of the U. S. Treasury, i. e., checks paid by the Treasurer of the United States. In millions of dollars]

Classification	Budget estimates, fiscal year 1944 [1]	Actual	
		Fiscal year 1943	Fiscal year 1942
Receipts:			
Income tax	27,645	16,094	7,960
Miscellaneous internal revenue	4,936	4,553	3,847
Social security taxes	1,726	1,289	1,016
Taxes upon carriers and their employees	245	209	170
Customs	204	324	389
Other	651	916	286
Total receipts [2]	35,407	23,385	13,668

See footnotes at end of table.

Tennessee Valley Authority	[5] 62	57	57		
United States Maritime Commission	[6] 200				
Total	32,935	11,635	7,535	4,092	8

[1] Funds have been deposited with the Treasurer of the United States for payment of all obligations guaranteed by the United States, representing outstanding matured principal of $8,300,000 and interest of $3,100,000.
[2] Less than $500,000.
[3] Limit of authority to insure mortgages. This amount may be increased by $1,000,000,000 upon approval by the President. Debentures may be issued and tendered only in exchange for insured property acquired through foreclosure.
[4] This amount may be increased only by the amount of issues for refunding purposes.
[5] Exclusive of $8,300,000 issued on the credit of the United States and held by the Reconstruction Finance Corporation.
[6] Limit which may be outstanding at any one time with respect to the insuring of mortgages and the issuance of debentures. This authority transferred to War Shipping Administration by Executive Order No. 9054 dated Feb. 7, 1942.

NOTE.—Figures are rounded to nearest million and will not necessarily add to totals.

TABLE VI.—*Combined statement of assets and liabilities of Government corporations and credit agencies, as of May 31, 1943*

[In millions of dollars]

	Assets		Liabilities				Net worth	
	Exclusive of amounts due from Government corporations and agencies	Due from Government corporations and agencies [1]	Obligations guaranteed by the United States [2]	Due to Government corporations and agencies [2]		All other (including reserves)	Proprietary interest of the United States	Other
				Treasury	Other			
Commodity Credit Corporation	1,676		487	701		393	[4] 96

Subtotal	25,312	12,455	4,110	6,367	5,455	7,575	13,820	440
Less: Interagency interest shown above		12,455		6,367	5,455		633	
Total	25,312		4,110			7,575	13,188	440

[1] Includes capital stock and paid-in surplus of Government corporations and agencies.
[2] Includes principal and accrued interest.
[3] Less than $500,000.
[4] This is exclusive of the amount of the Government's financial interest in these agencies on account of obligations held by the Treasury and included as liabilities under the caption "Due to Government corporations and agencies—Treasury."
[5] Includes claims for debentures authorized and pending in amount of $905,750.
[6] Does not include $12,000,000 in transit for redemption.
[7] War Shipping Administration created under Executive Order 9054 dated Feb. 7, 1942, was included in figures of U. S. Maritime Commission through June 30, 1942.
[8] Includes amounts due to Treasury Department, and other Government departments not listed in this statement, from Government corporations and credit agencies.
[9] Includes items referred to in note 3.

NOTE.—The foregoing figures are compiled from latest reports received by the Treasury Department from the respective corporations and agencies. The amounts covering obligations guaranteed by the United States differ from those shown in table V for the reason that they are stated in this table as of May 31, 1943, instead of June 30, 1943, and include accrued interest. Figures are rounded to nearest million and will not necessarily add to totals.

TABLE VII.—*War activities program (exclusive of Reconstruction Finance Corporation and its subsidiaries) appropriations, contract authorizations, and expenditures, July 1, 1940, through June 30, 1943*

[In millions of dollars]

	Total War activities program	War Department	Navy Department	Agriculture Department	Federal Security Agency	Federal Works Agency	National Housing Agency	Treasury Department	U. S. Maritime Commission	War Shipping Administration	Selective Service	Aid to China	Other

[1] In many instances, funds appropriated during any fiscal year are also available for the succeeding fiscal year. In this statement, immediately available funds are shown in the fiscal year for which the appropriation was made. This statement excludes unexpended balances of appropriations on June 30, 1940 which were available for expenditure in the fiscal year 1941.

[2] Includes allocations in fiscal year 1943 which reduced unallocated balances of the President's lend-lease funds appropriated and reflected in this statement in fiscal years 1941 and 1942 The allocations made in the fiscal year 1943 are shown under the respective departments or agencies to which allocated.

[3] Includes unallocated balances of the President's emergency funds amounting to to $68,386,694.02 and lend-lease balances amounting to $5,424,704,484.60.

[4] Contract authorizations have been reduced by later appropriations which were earmarked in authorizing acts for this purpose.

[5] Includes $7,103,522,201 in estimated requirements of the naval expansion program as provided in Public Law No. 763, approved Oct. 26, 1942, and $3,489,000,000 as provided in Public Law No. 92, approved June 26, 1943.

[6] Pending appropriations, as used herein, represent war legislation reported from the Committee on Appropriations to the floor of the House.

[7] On basis of daily Treasury statements.

[8] Includes expenditures for Selective Service (administrative expenses) for the month of June 1943.

[9] Expenditures for month of June 1943 included with War Department.

NOTE.—This statement includes appropriations and net contract authorizations provided for in the 76th Cong. (3d sess.), 77th and 78th Congs. Figures are rounded to the nearest million and will not necessarily add to totals.

More Meat—More Copper

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MANSFIELD of Montana. Mr. Speaker, as the Congress draws toward a recess I want to once again renew my plea in behalf of more meat for the miners of Butte, Mont. For over 3 months now I have been fighting in behalf of a greater allowance for these soldiers of production. They have been and are continuing to do a magnificent job in getting out that most precious of all metals—copper. Under the unusual conditions of their trade it is necessary that they receive additional rations of meat. This is a matter of vital importance to the furtherance of the war effort.

To date, I have received 15,143 letters and post cards from Butte asking me to do what I could to alleviate this difficult situation. I have contacted Prentiss Brown, George Burke, John Madigan, and numerous others here in Washington, but to date have received no concrete satisfaction. Yesterday, I was able to arrange for representatives of the O. P. A., W. P. B., and F. D. A. to go to Butte to meet with the miners on Tuesday next. It is my sincere hope that out of this conference will evolve a solution to the meat problem so that the miners of Butte can continue to produce the copper for the tanks, guns, planes, and ammunition which will bring us eventual victory. They have a job to do; let us help them by giving to them the necessary sustenance to carry on. I ask in their behalf not favors, but only a square deal.

New Healing Facilities at Hot Springs, Ark.

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks, I include a letter addressed to me under date of July 5, 1943, from Miss Regina H. Kaplan, administrator of the Leo N. Levi Memorial Hospital, of Hot Springs National Park, Ark., regarding the dedication of an annex to the hospital:

The radioactive waters of Hot Springs National Park, Ark., are about to be put to a new and humanitarian use. A Federal Works Agency project has made that possible. A grant from the Federal Government to Leo N. Levi Memorial Hospital Association, a charitable institution sponsored by B'nai B'rith but serving the sick poor citizens of the Nation regardless of their religion, at the governmentally owned spa. Through this grant, made possible by the Lanham Act, an annex has been built which includes a physiotherapeutic pool 34 feet by 18 feet, supplied with the thermal waters of Hot Springs, Ark., and equipped with all devices recommended for the reeducation of muscles feared atrophied. Only indigents are eligible for admission to the hospital.

The selection of Hot Springs National Park for such a project is particularly fortunate. The healing quality of the waters there was a tradition with the Indians hundreds of years before the arrival of the white man. Even before De Soto visited Arkansas-to-be, the red men of rival tribes bathed together in peace in the hot springs, their quarrels forgotten at the spot they felt to be a sacred boon, given by the Great Father to all his children.

After the coming of the white man, scientific research demonstrated the truth of the findings of the unlettered Indians. One of the first acts of Thomas Jefferson, following the Louisiana Purchase, was the delegation of a party of scientists to visit the hot springs about which so much had been heard. Their instructions were to map the water routes leading to the springs and to carefully analyze their contents. The result of that expedition caused the setting aside of the springs, denying them forever to private ownerships and dedicating them in perpetuity to the United States Government. The purpose, obviously, was to prevent exploitation by the selfish of the radioactive, healing, thermal waters and to guarantee that they would be forever available to all citizens of the Nation.

Scientifically administered tub baths have been the basis of therapeutics at Hot Springs, Ark., for many generations. The concept of deep-water treatments for the reeducation

of muscles, seemingly atrophied is comparatively new. But since it has been found that stiffened muscles which cannot even be flexed in the lighter medium of air, can frequently be definitely moved in the buoyancy of water, a new era in the treatment of crippling conditions has been entered. Immediately a broader base for the concept of balneotherapy as a rejuvenating agent came into being. Through a combination of passive exercises (administered to the afflicted by a trained physiotherapist) and active movements of the patient (directed by that same physiotherapist) the program of human rehabilitation progresses. All treatments are carried on in deep-water pools. Thus the stimulating effects of the hot water is augmented by the ministrations of those scientifically educated to the task of revivifying muscular activity, and the hopelessly handicapped may once more become self-reliant.

Physiotherapists and physicians in allied fields almost universally agree that deep-water pool treatments, properly administered in increasingly warm water are highly beneficial in a large majority of cases. Many of them state emphatically that waters, naturally hot, and possessing radium emanations are by far the most efficacious. The waters of Hot Springs National Park, Ark., rank among the finest waters of all spas, which possess undeniable radium emanations.

All these forces combine to make Hot Springs National Park, Ark., an ideal spot for the location of a therapeutic pool. But until now, unfortunately, it was impossible to furnish the services of such a therapeutic agent to those unable to pay. The installation of such a pool is in itself expensive. Equipment designed for the special stimulation of specific muscles is in great demand and consequently costly to produce. Physiotherapeutic experts must be in constant attendance. Frequently the period of treatment is prolonged. Therefore, the creation of a pool devoted exclusively to the benefit of those who could not bear the cost themselves is a humanitarian program of unusual merit.

Levi Hospital is a humanitarian institution and has for many years been operated with a high degree of efficiency to the benefit of the ailing indigents of the entire Nation. The quality of the untiring service maintained there is unquestioned. It is served with the thermal waters. Those hot springs, by good fortune, have radium emanations outstandingly beneficial to victims of certain crippling conditions.

June 27 marked the dedication of the pool. Ceremonies drew together interested notables, not only from Hot Springs and the State of Arkansas, but from New York City; Dayton, Ohio; Chicago, Ill.; St. Louis, Mo.; New Orleans, La., and elsewhere. The high peak of the program was the dedication of the new pool to Congressman W. F. NORRELL, who has proved himself at all times a true friend to the Levi Hospital and loyal in his cooperation in furthering its humanitarian service.

America: Yesterday, Today, and Tomorrow

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a newspaper article appearing on the editorial page of the Index-Journal, Greenwood, S. C., July 3, 1943, by Dr. R. O. Lawton. The article is as follows:

SERMONETTE

(By Dr. R. O. Lawton)

AMERICA: YESTERDAY, TODAY, AND TOMORROW

He hath not dealt so with any nation.

Psalm 147: 20.

The Fourth of July is at hand.

It is a good time to think of our founding fathers, of the great and good men who, under God, have led our Nation in peace and in peril to this hour; to examine and analyze ourselves at the present crisis; and to glance a moment at the future.

1. America—yesterday.

One of the most amazing facts of history is found in the character, patriotism, courage, and genius of the coterie of immortal men who banded themselves together in a poor, struggling, small country for the high purpose of founding a nation under God, which would hold so high the burning torch of liberty that the whole world would look upon the experience with admiration and awe.

The daring valor and passion for freedom is fittingly and eloquently expressed in the flaming words of their greatest orator—Patrick Henry: "The next gale that sweeps from the North will bring to our ears the clash of resounding cries! Our brethren are already in the field. Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take, but as for me, give me liberty, or give me death!"

And Patrick Henry's immortal words may be properly used by our Nation once more at this grave crisis, when liberty is in peril and freedom is challenged.

Another member of that famous group, the great Franklin, exclaimed, "Where liberty dwells there is my country."

Fired with the pure passion of patriotism, Nathan Hale uttered these inspiring words: "I only regret that I have but one life to lose for my country."

Thomas Paine truly observed that, "It is the object only of war that makes it honorable. And if there was ever a just war since the world began, it is this in which America is now engaged. We fight not to enslave, but to set a country free, and to make room upon the earth for honest men to live in."

Can we today, in our present conflict of arms, adopt those words as our slogan? We can.

Is not Hitler trying to enslave men, to banish justice from the earth, to dethrone God, to drive Christ out of His world, to close the doors of the church of God, to undermine the Christian home, and to violate the sacredness of personality?

Our cause is just.

We fight for freedom, for home, for justice, and for God.

The greatest of all of them, George Washington, said: "The reservation of the sacred fire of liberty, and the destiny of the republican model of government, are justly considered as deeply, perhaps as finally staked, on the experiment entrusted to the hands of the American people."

This body of immortal men regarded themselves as divinely commissioned to set up in this Nation a government "by the people, of the people, for the people," which would guarantee to all men the right to "life, liberty, and the pursuit of happiness," and to found a nation whose God is the Lord, whose crown of glory is freedom, whose scepter is justice, whose symbol is righteousness.

Washington, Jefferson, Hamilton, Franklin, Adams, Henry, Rutledge, Jay, Pinckney, and a host of others. What a galaxy in such a poor, weak, struggling, uninformed Nation.

They are masterpieces of God, and their followers were equally imbued with the spirit of liberty and the passion for patriotism.

2. America—today.

What of today?

Once more danger confronts us. Once more we have heard the call to arms.

Once more we are called upon to sacrifice our sons, our resources, our luxuries, even some of our rights, for a season, that liberty may be preserved, that freedom may not depart from our Nation.

How well are we performing the great task?

Our boys are magnificent.

Our armies are in grand array on many fronts, fighting as becomes the sons of a great tradition.

Our war effort has been wonderful.

Since Pearl Harbor we have worked miracles in raising and training a great army and navy, in producing vast numbers of ships, planes, guns, tanks, etc.

But all is not well with us at home.

Certain great corporations, in order to make money fast, have deliberately turned out inferior material, which has actually endangered the lives of some of our boys.

This is yellow, shoddy, rotten business.

On the whole labor has wrought well, else we could not have worked miracles of production in so short a time.

But in some spots labor has injured itself and hampered the progress of the war by unnecessary strikes, an evident lack of patriotism, an obvious jockying for position at a time when every American should be at his post of duty.

This is crass, stupid, unseemingly, unbecoming a nation which has a rendezvous with destiny.

John Lewis is not the friend of labor; he is doing infinite harm to the cause of labor.

What of the average American citizen? How are we behaving in this great crisis?

Not so hot.

In plain unvarnished, blunt words, there is too much bellyaching among us.

We are complaining about too many things.

We are knocking everything in sight.

We sound like crybabies.

We are afraid somebody will take our little toy.

We seem not to care to give up any rights, to make any sacrifice. What's the matter with us Americans, anyway?

Selfishness, greed for gain, money-mad, pleasure-mad, fault-finding, buck-passing, unpatriotic—that is what is the matter with most of us. Thank God, all are not like that.

It is time for us to get into this war with our sons and husbands and brothers.

3. America—Tomorrow.

What about tomorrow?

First, win the war.

It won't be long now.

Second, prepare for peace.

Third, let God in.

Fourth, punish the instigators and traitors against the human race.

Fifth, fix it so that this sort of thing won't happen again before breakfast.

Sixth, make a just and righteous peace.

Seventh, get back to work and pay off the enormous debt.

Eighth, work and pray for a great revival of religion.

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee,
And crown thy good with brotherhood
From sea to shining sea!

Wartime Problems of Salaried Employees

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the wartime problems of salaried employees presented to Congress by the New York City delegation of white-collar workers July 8, sponsored by the United Office and Professional Workers of America, C. I. O.:

Our delegation, representing both organized and unorganized white-collar workers, and sponsored by the United Office and Professional Workers of America, Congress of Industrial Organizations, represents that great segment of the national population to which the President referred in his recent message to Congress as "the millions of salaried, white-collar workers whose salaries have remained low, but whose living standards are being cruelly and inequitably slashed by higher food prices."

There is great economic distress today among the roughly 8,000,000 employees in administrative and service fields who are generally referred to as "white-collar workers." The continued neglect of our wartime problems is already creating large areas of social discontent which are fertile fields for those who seek to open up a second front of domestic strife and disunity within our Nation. The same groups who today attempt to provoke strikes and to promote conflict between all different groups of Americans, Negroes and white, soldiers and workers, are today urging the white-collar worker to blame his problems on organized labor, or the administration, or the farmers, and to weaken his support for the war effort.

America's white-collar workers have no interests that run counter to those of any other group of Americans. For us, as for all Americans, the main issue today is the survival of our Nation, and we believe that the immediate issue before the entire Nation is the stabilizing and strengthening of the home front to guarantee full unity and full production for the military offensives. We bring forward our special problems at this time because the correction of these problems is an inseparable part of the total economic problems of the Nation.

WHOM WE REPRESENT

The United Office and Professional Workers of America, Congress of Industrial Organizations, which sponsors this delegation, represents 50,000 white-collar workers employed in private industry in 38 States and in every metropolitan center of the Nation. Its jurisdiction includes general office workers, financial, bank and brokerage employees, industrial insurance agents and clerks, screen office workers, screen readers and publicists, publishing, advertising, and periodical distribution employees, professional welfare workers, and many others in allied fields.

Their work is vital in maintaining essential administrative, professional, and morale-building services, and gearing them to the needs of the war effort.

The union holds contracts with hundreds of employers of office and professional workers, including the Prudential, John Hancock, and Metropolitan Insurance Cos., the home offices of Columbia Pictures, Paramount, Twentieth-Century Fox, Loew's-MGM, and United Artists, the Young Women's Christian Association, the Union News Co., the Mail Advertising Sales Association of New York City, and many others.

The record of the union is one of consistent and wholehearted support to the war effort, of strict observance of labor's no-strike pledge, and of cooperation with all agencies and community groups concerned with mobilization of any phase of our national life behind the war effort.

Its first objective has been to mobilize salaried employees for fuller participation in the war effort both on the job and in the life of the community and the Nation. It has consistently supported President Roosevelt as our Commander in Chief and has backed his economic stabilization program as an indivisible program designed to secure the welfare and unity of all groups. It has vigorously condemned the disruptive activity of John L. Lewis and supports fully the constructive win-the-war program of the Congress of Industrial Organizations.

The delegation coming here today represents not only the 20,000 organized members of the New York locals of the United Office and Professional Workers of America but many organized and supervisory employees who not only share our problems but our patriotic desire to correct them so that we can better serve our country.

Because through our friends, our families, our daily contracts in our office buildings and through our community activities we have talked with many white-collar workers and studied their problems objectively, the facts and the program we present here represent the broad experience and interests of this vast group of workers which has been so long inarticulate in the affairs of the Nation.

THE SPECIAL PROBLEMS OF WHITE-COLLAR WORKERS

The problems which concern us particularly as white-collar workers and salaried employees are due largely to (1) our constantly declining living standards in the last two decades before the war, and (2) the serious aggravation of our economic plight because of rising prices, "one sided" stabilization, and the failure of Congress to help the executive branch of our Government hold the line against inflation.

DECLINING LIVING STANDARDS BEFORE THE WAR

In a memorandum submitted to the National War Labor Board over a year ago by President Lewis Merrill of the United Office and Professional Workers of America, Congress of Industrial Organizations, the position of the white-collar worker was described as follows:

"The white-collar worker is in an anomalous position. In terms of economics, he is very much a part of the working class, but in terms of social habits he is generally considered to enjoy privileges and securities which are not part of the normal experience of the average American worker. This confusion between the ostensible superior social status of white collar workers and their inferior economic status is reflected in much of our social legislation. * * *

"Between 1870 and 1930, the percentage increase of white-collar workers was 2,067.5 percent of the gainfully employed population. In Great Britain for the same period the rise was 2.9 to 16.7 percent of the gainfully employed population. The vast increase in the growth of the white-collar class over this period paralleled the needs of business, which was actively exploiting a rich internal market. In this process administrative costs in the broad sense became a secondary question. However, with the advent of the economic changes which were ushered in by the 1929 collapse, business has been forced to secure some moderation in the cost of operations by ruthlessly reducing the amounts expended for white-collar labor.

"Therefore unemployment has been on the increase and salary trends have been downward. The United States Department of Labor for the period 1935–36 discloses that 47.3 percent of white-collar workers earned less than $1,000 per year, and 9.3 percent earned less than $2,000 per year.

"In addition to these permanent trends which have been manifest over the past 13 years, the effect on the white-collar workers of even a partial war economy has been most drastic. During the last war, purchasing power of white-collar workers was reduced 24 percent. There is even likelihood that the strain on them in this war will be even greater than during the last war, when the disparity of sacrifice was apparent to all. In this situation, the white-collar unions, even where they have not been able to represent the workers directly, have nevertheless served (in an economic sense) as a cushioning and moderating influence. * * *

"If it is borne in mind that the standard of living of this group has been on the constant decline since the last war, that they received further punishing blows in the past 1929 period, and that they did not, in any major way, share the wage increases secured either in 1937 or 1941, then it is easy to understand the urgency of the question and the great effect in morale in dozens of communities throughout our Nation."

The background of the economic problems confronting the white-collar workers today was likewise commented upon in a recommendation handed down by War Labor Board Referee Max Meyer and recently approved by the National War Labor Board in a case involving 1,200 workers in 4 New York title companies. In recommending cost-of-living increases for these workers, the referee said:

"We are dealing here with a fragment of a large picture—a picture of that stratum of society known as white-collar workers. This group's contribution to our national prosperity has consistently been far greater than its share of that prosperity. * * *

"We seem to have been content to let the office worker struggle along. Too often has the white-collar worker been regarded as just another item of overhead, or as an unproductive, albeit necessary member of our industrial society.

"The truth is that the office worker constitutes one of the most essential cogs in the production wheel of a factory. In an industry such as the one we are dealing with, production and success depend almost entirely on the competence of white-collar personnel.

"The Bureau of Labor Statistics index of weekly earnings for workers in manufacturing industries shows an increase of 68 percent for October 1942 over the average for 1939; on the other hand, in two typical white-collar fields, insurance and retail trades, the same index has declined about 0.7 percent and increased about 1.9 percent, respectively.

"On October 2, 1942, the New York Herald Tribune commented on this state of affairs as follows: 'If there were an index depicting what has happened to the Wall Street worker, the contrast would be without doubt sharper, for in that area the history of the last few years has been one of wage cuts and discharges.'

"It is the referee's conviction that this is not too strong a statement of the facts, and the referee has stressed this unfavorable position of the white-collar class in order to point out the urgency of the War Labor Board's removing whatever undue handicaps, in the form of war-born wage maladjustments, inequities or substandards, may confront any specific group of these employees."

INCREASING WAR HARDSHIPS OF WHITE-COLLAR WORKERS

When in addition to the facts brought out here, it is also borne in mind that few white-collar workers have received the full 15 percent cost-of-living increase permitted under the Little Steel formula, that the purchasing power of the white-collar worker has been cut from 20 to 28 percent in respect to food prices which constitute anywhere from a third to one-half of his living expenses, and that approximately $1,000,000,000 in new taxes has been levied on incomes between $1,500 and $3,000 by the new Revenue Act of 1942, it becomes clear that the white-collar group as a whole is being put in an increasingly adverse economic position.

From our own personal experience we can cite many cases of personal hardships in white-collar families.

Although we do not have access to figures showing the proportion of the armed forces drawn from this group, it is certain that the induction of many of its young married men has left thousands of young women office workers, formerly able to maintain decent living standards through incomes shared with their husbands, struggling along at serious disadvantage.

An examination of savings-bank withdrawals in 1943 will certainly show that many white-collar workers were forced to draw out much or all of their small savings to pay the new taxes which they could not possibly save for out of current income.

Although thousands of white-collar workers are voluntarily investing in War Savings regularly, the Secretary of the Treasury himself in a recent statement recognized that it would be impossible to press this group further for additional investments. Thus it can be seen that not only are the white-collar workers being penalized economically today but their inability to keep up with other sections of the population in War Savings will leave them in a further unfavorable economic position in the postwar period.

ADVERSE EFFECT ON WHITE-COLLAR OCCUPATIONS

Along with the individual hardship being suffered by white-collar workers, the present situation is having a serious effect upon the businesses and industries in which they are employed. Economic worries are taking a serious toll of morale and health and threatening break-downs in efficiency in vital civilian services. Many trained workers are leaving positions where they are needed in the best interests of the war effort to take higher-paid positions elsewhere. Haphazard and chaotic job changes are taking place within all white-collar fields as workers leave one office to take an identical position with another employer willing to pay a few dollars more. In one office in the New York area it is estimated that the turn-over has been 90 percent in the last 6 months, while figures in four New York title companies and five motion-picture offices show a 60 and 30 percent turn-over, respectively.

Since this is a total war in which all industries are in a sense war industries and all workers are in a very real sense war workers, it is easy to see that the lowering and breaking down of morale and efficiency in this section of our war economy is bound to have serious repercussions on the entire national war effort. The slowing down of commercial and welfare services eventually will slow down production in war industries.

CONGRESSIONAL ACTION NECESSARY

Although we cannot believe that our Representatives in Congress are totally unaware of these facts, we can only judge by the record that they are not fully aware of their significance and of the threat to our national unity and our war effort if the present situation is not corrected.

We have watched with growing alarm the increasing tendency in Congress to put politics as usual above the needs of the people and the war. At a time when our American boys are putting up their very lives as guaranties of our free democracy, Congress can do no less than put aside all partisan interests and inclinations and unite around legislation that will aid our entire Nation fulfill its historic role in this global war for freedom.

We believe that such legislation will take our problems and interests as white-collar workers into consideration along with those of all other sections of the population.

We welcome as a first step in this direction the formation of the nonpartisan committee to protect the consumer in the House of Representatives. We urge all Congressmen to join this committee, and we urge our Senators to form a similar committee in the upper House.

Specifically, we urge Congress to fulfill its responsibility in stabilizing and strengthening the home front and in helping us, the white-collar workers, to overcome the economic obstacles that are today preventing our fullest participation in the war effort by—

1. Remaining in session until the subsidy program is approved by both Houses so that prices can immediately be rolled back to September 1942 levels.

2. Restoring the full appropriation to the Office of Price Administration and granting additional funds and passing all legislation necessary to enable it to maintain and enforce dollars-and-cents price ceilings on all commodities and to grade-label all products.

3. Levy additional tax revenue by increased taxation on excess corporation taxes and high incomes; exempting all incomes under $2,000 from further taxation; rejecting any form of sales tax and the so-called excess income tax which penalizes workers who were unemployed or living at bare subsistence level before the war.

4. Supporting and enacting legislation that will strengthen democracy and national unity, including the anti-poll-tax bill and the anti-lynching bill.

5. Repealing the Smith-Connally bill, which is an undemocratic assault on the rights of millions of American workers who have loyally observed labor's no-strike pledge.

Swapping Horses

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of July 6, 1943:

SWAPPING HORSES

If the Republican Party should offer the American people an able, dependable, and forceful candidate next year they will change horses while crossing the stream. They will do this in spite of the fact that the organized labor vote of some 8,000,000 and the 3,000,000 persons on the Federal pay roll are likely to support Roosevelt.

Industry in the face of distressing difficulties has done a marvelous war job. So have our Army and Navy. But strikes, waste, extravagance, taxes, governmental strife and confusion are wearing out the patience of the American people. They know a new leaf can be turned without risking victory in the war, but they want to be sure they are picking the right man to turn it. They now realize the frightful cost of picking the wrong one.

There is not a State in the North, East, or West that is safely Democratic any more. There is a party rebellion in the hitherto solid South. Moreover, the southern Democrats are now realizing how they were sold out in 1936 when the Democratic National Convention of that year revoked the rule which made it necessary for two-thirds of the delegates to nominate a candidate for the Presidency.

This was a safe rule, long cherished by the South. The South might not have been able to name the party's standard bearer, but representing more than one-third of the delegates it could prevent any nomination not to its liking. The two-thirds rule would block any danger of a third or fourth term.

So long as Mr. Roosevelt is President the country will stand behind him in the conduct of the war. Indeed, the country would stand behind any President in any war emergency. The people of this country are ready to make any sacrifice to win the war and it will be won in spite of Mr. Roosevelt or anybody else. But they have had enough of the New Deal. They see now what grave dangers lie in political partnership with corrupt and selfish pressure groups. They are sick of social and economic dreaming. They are appalled at the use of the United States Treasury to further any man's passion for power.

The people of America are for any and all alliances which will defeat the Axis and Japan. They like Churchill and Stalin and Chiang Kai-shek as war partners, but not as political partners. They are fearful of global, social, and economic planning that would reduce American standards to European or Asiatic levels, and they do not want to see free enterprise throttled in America.

However, we do not think the American people will change horses next year unless they have absolute assurance that they can replace Mr. Roosevelt with a man capable of the mighty job of handling the Government and cleaning up the New Deal mess. They want all the force put into this war that our industrial production can provide. They want a leader in whom Congress and the people can have confidence. They want a man of ripe experience in matters of government. They want to see the White House ring smashed. And they know our Army and Navy will win this war no matter who holds the empty title of Commander in Chief.

Let the Republican Party nominate such a man and the American people will take him—and how glad they will be to get him.

Address of Hon. Hugh D. Scott, Jr., of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith a commencement address delivered by my distinguished colleague, Representative HUGH D. SCOTT, of Philadelphia, at Randolph-Macon College. Representative SCOTT gives his views on some of the probable developments in the post-war world and I feel sure that everyone will be interested in his ideas and suggestions and

will find the study enlightening and profitable.

The address follows:

It is hard, indeed, to realize that it is now full 27 years since, on a mild September day, I first arrived at Randolph-Macon College, to be welcomed shortly after my arrival by the customary vendors of left-handed radiator keys, gym books, and tickets to the Young Men's Christian Association reception.

The beloved Dr. Hatcher looked over the season's catch soon after our arrival. As he recently confessed to me, he was about to throw me back—I was that scrawny and wholly unprepossessing—but he took another look at his books of original entry, decided he had not caught his legal limit anyway, and I was permitted to stay. To stay, free to wander through the groves of Academe en route to Dr. Hughes' drug store, or to pursue elusive knowledge in the cloistered quiet of the new dorm, the silence broken only by the more or less continuous shouts of its exuberant and uninhibited occupants or by persistent repetition on somebody's guitar of the songs of the day—My Little Girl You Know I Love You, or Yaka Hula Hiki Dula. Verily, "upon knowledge is a house builded, and with wisdom shall its chambers be filled with all beauteous and pleasant riches."

And, despite one distraction and another, we builded our house of knowledge, and if we did not fill the chambers wholly with wisdom, we did find in time the beauteous and pleasant riches of recollection.

When our president, Dr. Moreland, asked me to speak on this commencement day, he specified no subject, and I confess to you I have been long in coming upon a topic to conform to the specifications of an address of this kind: One of current interest, one as to which the speaker may have some qualifications warranting his discussion of it, and one which can be compressed within the limits of attention—which, I take it, is merely another way of saying which won't permit you to sleep peacefully through it.

I have been thinking of talking to you about certain stresses and strains in our national and international life. I am quite sure that so large a topic falls well outside the rules I have set for myself and my "vaulting ambition" in tackling it may well "o'erleap itself and fall exhausted on t'other side." (And if, in quoting Shakespeare here, I have erred in accuracy of phrase, you can blame it on my early education.)

Nevertheless, I am going to try to paint with a large brush the outlines of certain problems with which as citizens we shall have to deal and which will touch every one of us very personally, indeed, and more and more, in the years to come.

By stresses and strains I intend no reference to the existence of any real effective divisive force among us as regards the prosecution of the war. On the contrary, in recognition of the necessity of sacrifice, we are reacting as would men of good will everywhere. In a good deal of traveling about the country I have found, generally speaking, full willingness to assume any burden or to suffer any deprivation willingly and in good spirit if it will help to win the war.

It is true that there is a feeling that not enough is being asked of the people on the home front; it is true that one finds impatience with such evidences as there are of unfairness or stupidity in the administration of emergency laws and regulations. I think you will agree with me that these are healthy omens, that the republic is still a republic.

But when the lights come on again from Singapore to Reykjavik, and the last parade has passed the last reviewing stand, what then?

The underlying tensions will still be there, but lacking then, so it will begin to seem, the unifying purpose which during our common crisis, had compelled postponement of their solution.

For the present, you, who leave the colleges this June, for the blazing world outside, will have little time and perhaps little inclination for these matters. First things first; and there are wars you must win, because the pre-1914 generation and the "lost generation" between the wars never understood what it should have held, imprimis: That peace is indivisible.

But you will run this world when you come back, just as the veterans of the last war must take care of the home sector this time. Will you profit from our error? Having seen what happens to nations and peoples who refuse to think things through at the cost of comfort and complacency, will you not wish to be doing some thinking about the strategy and tactics of peace?

When this war is won the country will face the greatest internal domestic problem since the War between the States. For millions the change-over from a war economy will mean, for the fortunate, an opportunity to apply newly learned skills in peacetime industrial pursuits. But for the less fortunate there will surely come a reduction of opportunity and a lowered standard of living unless we can find ways to step up the process of production and consumption far beyond the pre-1939 figures. To these millions on the move from one form of industrial pursuit to another must be added the millions more who will return from our myriad battle fronts, deserving well of the Republic. We shall not prove to be such ingrates as to leave them alone with the problem of finding their places in the American economy.

We cannot solve our problem merely by voting bigger and bigger bonuses, because bonuses in themselves are no substitute for jobs and the Government cannot supply employment for all or even for a substantial number of those returning. Certainly we want no bonus marches or bloody battles of Anacostia Flats.

There is time now, if we take thought for the redistribution in industry and upon the farms of those to whom we will owe a primary obligation. As one example, suggested by the President of the United States to a small group, of which I was one, industry will probably be expected to employ a certain percentage of returning soldiers according to the size of the industry and the number of its employees who went into the service. Among these, it was also suggested, some partially disabled veterans should be employed in order that these men should be given an early opportunity to secure a self-respecting place among the Nation's workers.

In parallel columns in a magazine this week, I was interested to note that one item set forth the magnitude of the problem we shall face. Its neighbor told how one group proposes to solve a fraction of it, without demands on Government paternalism.

This item illustrates what we face:

"How many jobs must a free United States industry provide in the post-war world if it is to save itself?

"Studebaker's able, handsome president, Paul G. Hoffman, who is also chairman of industry's committee for economic development, tried valiantly to answer this question at the National Industrial Conference Board session at New York.

"Said he: Industry will have to supply 'something like 58,000,000' full-time jobs, a jolting 12,000,000 more than in the good year of 1940. That means a United States output of goods and services of some $145,000,000,000.

"But industry must be ready to perform fantastic tasks. Warned Automan Hoffman: 'The very toughness of the assignment makes clear the necessity of starting to plan now. When the fighting is over ex-soldiers on street corners selling apples * * * people starving in one part of the country while food surpluses rot in another would be death rattles for private business. * * *'

"As a start for any planning, Hoffman listed: (1) Revision of tax laws to restore rewards for risk taking (those who risk create the jobs); (2) restoration of competition to the fullest possible extent; (3) a solution for the special problems of small businesses which have found it 'too tough to be born, even tougher to stay alive'; (4) recognition that 'those who persist in thinking as isolationists are headed down a blind alley.'"

And the following article illustrates an approach to a small part of the problem:

"The 34-year-old International Ladies Garment Workers' Union last week pulled off another 'first' in the labor movement. International Ladies Garment Workers' Union's 35,000 cloak and suit workers (one-eighth of its total membership) signed a new 5-year contract in which the only major change was a provision for their employers to put $2,000,000 a year into an old-age-insurance fund. Under the new agreement, each cloakmaker, at 65, will receive $600 a year—a good deal more than most of them can expect from Federal old-age benefits."

The unprecedented vastness of the post-war dilemma provides the greatest challenge ever to American industry. As the Iron Age gave way to the Steel Age, so the Age of Steel (covering a span but little greater than that between two wars) appears to be about to give way to the Age of Light Metals and of Chemistry.

I am neither engineer nor prophet by profession, but he who runs may read, and I am sure all of you will agree that in such broad fields as housing, especially prefabricated housing, air and surface transportation, plastics, air conditioning, refrigeration, dehydration, medical technology, and innumerable other fields, we are on the threshhold of the great venture into a better material life for all mankind.

It may not be amiss here to remark that the achievement of these things material can, however, only be made available to the whole mass of the people if our spiritual foundations are firmly set. And I mean by this that unless we warmly sympathize with and deeply understand the aspirations of the individual, we will fail to extend the material benefits which are possible because without understanding of what we owe to each other, greed will again assume its ancient dominion and too much will be sluiced off in the form of profits to the few to permit filtering down to the many their just returns.

There are other stresses and strains which we are going to have to face head-on sometime after the end of this war. Time does not permit analysis of them, but their nature grows more apparent daily. For example, we will have to reorient ourselves on matters of immigration (which suggests the Oriental Exclusion Act as it affects our great friend and ally, China, as an illustration of this problem); we shall have to confront old controversies revived, new problems given added acuteness by the character of their sponsorship, in the areas of race, of religion, of social obligations which will clamor for honest and courageous solution. To meet them I suspect that we, as a Nation, will need even more courage and forbearance, and even greater willingness to sacrifice than has been or will be required of us in order to achieve the basic rights for which we now give battle.

Internationally we see through a glass darkly, and there are as many opinions as there are speakers. Admitting that our sole immediate task is to prosecute the war to complete and absolute victory, I cannot agree that American public opinion should be precluded from considering any and every plan for the post-war world. Surely it is only by free and open discussion that we can hope to arrive at some crystallization, if not of a

common viewpoint, at least of a choice between viewpoints, the nature of which has been clarified by public debate.

For myself, I hesitate to prophesy (although I hope you will permit me some pride in pointing out that on this same platform in 1938 at a time when 93 percent of the American people had indicated in polls their firm intention to stay out of war, I expressed my conviction we would inevitably be drawn into a coming war and suggested 1943 as a possible date); nevertheless one good guess deserves another, and one who states that he hesitates to prophesy usually ends up by prophesying, so I will venture a prediction.

In my view, we are heading for a world organized, at first informally, but later more and more firmly, on a regional basis. Recent events in South America rather strongly illustrate the effect of pressures toward regional solidarity when faced by compulsion to make a choice between ideologies.

I believe that the day of England as the layer of weights upon the continental scale is past. I doubt if the way in which the old game of balance of power has been played will work in quite the same way in the future. Great Britain, in a shrinking world, must look beyond the continent and beyond the seas for her regional ties instead of being the deus ex machina in a position to set right the tangled situation on the world stage. Great Britain is likely to find herself between a continent largely overshadowed by Russia and a world whose seas are not hers alone.

I believe that these regional groups will roughly divide as follows:

1. Europe, seeking a modus vivendi with Russia.

2. The British Commonwealth of Nations, seeking its most workable way of life with the natural allies and customers of the Commonwealth, developing most of Africa and sharing the seas with the United States and perhaps with other growing maritime powers, including the Scandinavian.

3. An Orient, in which the situation will remain dynamic for generations, with ultimate hegemony, either in a modernized, advancing, Christian China or possibly—but, I think, less probably—in an India, which has shaken itself down into a solution of its ancient conflict between Mohammedanism and Hinduism, having also cast aside the shackles of caste. Japan, let us hope, will be reduced to a small group of unobjectionable little islands occupied by a chastened people. The chastening must come from outside, however, and is coming.

4. The Western Hemisphere in which, let us hope, the United States will play the part of partner rather than of patron.

You will note that some of the pieces do not fit in the jigsaw puzzle and some of the other pieces overlap. For example, what of Australia with its leanings toward the United States, sentimentally and economically, and New Zealand, a true and loyal British colony? What about the status of Turkey and the Middle East?

Rather than a world state, I look for regional consultative bodies, charged not alone with political concerns, but seeking economic, social, and religious formulas for the easing of irritants and frictions, the promotion of world betterment, and the maintenance of peace. As Churchill said of the bombing of Germany, "it is worth trying," and if it shall save us from bombing each other again 25 years from now, I hold that we are challenged to test out this and other post-war plans, whether from motives of pragmatism or of simple faith.

Well, the dreams of a professing prophet are never finished and never complete. And perhaps I had better leave the subject here, knowing that man has but charted the fringes of the vast terra incognita of tomorrow's world.

I close with this word: Back of your first job lies another, and the second is greater than the first. "Where there is no vision, the people perish." In you and in those like you must the vision be found. If you are not possessed of greater will and stronger purpose and broader dreams than those who went before, then the future of man upon this earth is dark indeed. There is light beyond the horizon. Is it the light of vision or is it but an afterglow? The future will tell. We have need of our faith.

Scofield Dam, Utah

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I include a news release by the Bureau of Reclamation containing an announcement by Secretary of the Interior Harold L. Ickes that President Roosevelt had approved the construction of the new Scofield Dam in Carbon County, Utah. Following the President's request to Chairman Donald L. Nelson, the War Production Board granted priorities for the critical material required for the job.

The importance of a permanent new dam to replace the old Scofield Dam on the Price River was recognized by all agencies concerned which joined in the recommendation to the President.

I hope that the water users, landowners, and others interested will cooperate earnestly with the Bureau of Reclamation in clearing away the legal difficulties so that construction may begin promptly. The news release is as follows:

President Roosevelt has authorized the Bureau of Reclamation to construct the Scofield project in Carbon County, Utah, for irrigation and flood-control purposes, Secretary of the Interior Harold L. Ickes announced today.

The approval permits the Bureau to replace the existing Scofield Dam, built by private interests in 1925–26, to avert a total failure of the badly deteriorated structure during a sudden flood, Mr. Ickes said. Vital parts of the old dam have collapsed and it is a constant threat to the safety of farms, industries, and lives below it.

In notifying Secretary Ickes that he had approved construction of the project, President Roosevelt said, "I have also addressed a letter to Mr. Donald L. Nelson, Chairman of the War Production Board, requesting his cooperation relating to preference ratings for the necessary materials and supplies in order to expedite construction during the short working season of this location."

When the necessary critical materials are released and funds are provided, the Bureau will start construction at once, Acting Commissioner Harry W. Bashore, of the Bureau of Reclamation, announced.

In addition to alleviating a critical condition, the new Scofield Dam will provide about 73,000 acre-feet of storage. This storage will stabilize the water supply of 12,500 acres of irrigated lands of the Price River Valley, now faced with shortages, and form the basis for providing supplemental water to the nearby Gooseberry project of 30,000 acres when that project is authorized. The latter has been investigated by the Bureau of Reclamation, and a recommendation for its construction is under consideration. Opportunities for permanent settlement in addition to the rehabilitation of existing families will be offered to farm families in both areas, Mr. Bashore observed.

"Failure of the dam would release 30,000 acre-feet or 10,000,000,000 gallons of water," Mr. Bashore said. "This volume of water would flood vital coal mines serving the large Columbia steel mill in Utah, the Kaiser steel mill in California, and war plants in the Pacific Northwest. It would also wash out the main line of the Denver and Rio Grande Western Railroad, carrying heavy war traffic, cut off all irrigation water for 12,500 acres of rich agricultural land producing essential food crops, and endanger the lives of hundreds of people.

"While potential damages are conservatively estimated at $5,000,000, the loss to the Nation would be far greater. The disruption, during the war, of the vital services of the railroads, highways, coal mines, and communications systems would probably amount to an additional $12,500,000, making a total of $17,500,000."

The War Food Administration, as a wartime program contributing to the food-for-victory effort, proposes to assist water users of the Price River Valley in rehabilitating the present irrigation distribution system. Currently waterlogged and submarginal lands would be exchanged for new lands, and the War Food Administration would sponsor refinancing, improvement of tillage and irrigation practices, and other measures essential to meeting established production goals.

The new Scofield Dam will be an earth-fill structure, 56 feet above the stream channel, 420 feet long, with a crest width of 30 feet, and will be constructed just below the existing unsafe dam. In addition to Bureau forces, alien, civilian public service, or similar labor may be used if available, or the dam may be constructed by contract. The total estimated construction cost of the project is $640,000.

General Sikorski's Death

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HAYS. Mr. Speaker, the American people are saddened by the news of General Sikorski's death. He was a brave leader known and honored, not only by the people of Poland, but by those of all the United Nations. We in America are bound by many ties to Poland. In the struggle for our own independence the skill and valor and brilliant leadership of many Polish patriots were dedicated to our cause. The names of Pulaski and Kosciusko are reverenced by us, and the record of their heroic service will always be preserved.

The county which has been my home for many years, one of the eight which it is my honor to represent in the Congress, bears the name of Pulaski. Many years ago a group of Polish immigrants seeking a new home in America established themselves in Pulaski County. With their traditional love of the soil and an industrious spirit, they have succeeded in their farm pursuits and have retained their splendid rural culture. Their young people eagerly

took advantage of educational opportunities and many of them assumed positions of leadership in the civic life of Pulaski County. The patriotism of the community is of a high order. It is today the location of an important munitions plant, and many of its citizens are engaged in its activities.

The pride which the members of this community feel in Polish achievements is not incompatible with their devotion to American institutions. Their neighbors share their appreciation of the part that Polish soldiers have played in fighting to put down tyranny. Poland will live again. Its capital will be restored and its borders made secure once more. Until then the people of Poland can be sure of our admiration and support in their noble fight for freedom.

National Radio Forum

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio addresses over the National Radio Forum, WMAL and the Blue Network, July 7, 1943:

Mr. MCKELWAY. When the United States was plunged into war with the Axis, we made good use of lessons learned in the First World War. For one thing, we discovered that you couldn't win a war without labor with which to operate the industrial machine and that with men being drafted a slowing down of war production was inevitable. It was then that industry began to draw upon womanpower and constantly increasing numbers of jobs that had been exclusively men's were taken over by women.

With the increased use of women workers came new industrial problems. Working standards had to be adjusted to the new labor force. Women themselves had to be shown how to make a maximum contribution to expanding war production. The need for some agency to study factory conditions and to recommend adjustments for women workers became apparent. Women's organizations throughout the country expressed a demand for such an agency of government. The result of the demand was the creation, within the Department of Labor, of the Woman in Industry Service, which later became, by act of Congress, the Women's Bureau.

That Bureau came into being a quarter of a century ago tomorrow. For almost all that time it has been directed by Mary Anderson, dean of women administrators in Washington.

Tonight Miss Anderson will tell the National Radio Forum audience what contribution the Bureau is making to the war effort. With her is Frances Perkins, Secretary of Labor, and two outstanding Members of the Congress, the Honorable Hattie W. Caraway, Senator from Arkansas, and the Honorable Edith Nourse Rogers, Congresswoman from Massachusetts. These women are authorities on the subject of womanpower. What they have to say on the eve of the Women's Bureau anniversary will be informative to all of us. First, Frances Perkins, Secretary of Labor.

Secretary PERKINS. Tomorrow—July 8—the Women's Bureau of the United States Department of Labor will have completed 25 years of service to the working woman of America. Born out of the needs of the First World War, this agency of the Labor Department has worked for the maintenance—in war and in peace—of the principle of fair labor standards for women. In equal measure it has sought to bring about a more effective contribution to industry by women workers.

Today, with millions of women replacing men on the production front, and with millions more to take their places in industry—by the end of 1943 the responsibilities of the Women's Bureau will have increased tremendously. This challenge of new and greater responsibility has been met. Those who will speak to you tonight will tell you in a more concrete way about the increasing share that women are taking in the operation of our war plants and in our essential civilian industries.

From the President of the United States I received today a letter referring to this twenty-fifth anniversary of the Women's Bureau. It expresses what all of us feel about the work the Bureau is doing. It reflects great credit upon the Bureau and upon Mary Anderson, who has been its director almost since its inception in 1918. I should like to read the President's letter to you.

THE WHITE HOUSE,
Washington, July 7, 1943.

DEAR MADAM SECRETARY: The Women's Bureau of the Department of Labor will be 25 years old tomorrow, and it is altogether fitting that its many accomplishments over the years be told tonight. The Bureau is to be congratulated on the work it did in the First World War and on the work it is doing now in the interest of women workers all over the United States.

I am informed that approximately 16,000,000 American women are now working, more than 2,000,000 of them being engaged in producing the munitions with which the United Nations are steadily beating down the Axis. More and more of our women, in the months to come, will go into munition plants, into aircraft factories, into shipyards, and into the other industries making actual equipment for our soldiers, sailors, and marines, or into plants servicing our armed forces.

They are doing a grand job, all of them. Working under what are new conditions for most of them, they are showing the skill and efficiency which make for high production. We owe them and their sisters who are taking the places of men in many drudging civilian jobs, a great debt, and I join with Americans here and those on fighting fronts all over the world in acknowledging it upon an occasion such as the anniversary of the Government agency which is so much concerned with their welfare.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

The activities of the Bureau are not focused alone upon the current need for womanpower in industry. Its program encompasses the post-war period, when women will play a vital role in the adjustment that will come with peace. We are determined that the difficulties which followed the First World War shall not recur. All of us who are charged with guarding the well-being of future Americans are planning now against the period of reconstruction.

If no other purpose is accomplished by this war, we shall make sure that a better standard of living is placed within reach of the millions of the depressed populations of the world. We shall make available reasonable and expanding standards of living for those who already have subsistence. There will be a free opportunity for every man and woman to achieve a fully satisfying standard by work and intelligent foresight. We shall accomplish these objectives in a practical way. When the war ends, because we plan now, individuals and families will be protected against loss of income suffered for any reason. Through contributions by workers, their employers and the National Treasury, these benefits will be made available to all: Support for the temporarily unemployed; larger annuities to aged workers who, though they might have retired in 1940, remained at work until the end of the war; care for the permanently disabled, crippled, chronically sick, injured, and those too young to be eligible for old-age benefits; payments for hospitalization to ease the burden of cost; and, finally, some measure of support to widows, orphans, and other survivors of workers who die. That system of social security will be a part of the better world, just as the post-war program of the Women's Bureau will assure better working conditions for women and a more effective contribution on their part to the building of a greater America.

ANNOUNCER. Our second speaker is the Honorable EDITH NOURSE ROGERS, Congresswoman from Massachusetts.

Mrs. ROGERS of Massachusetts. The women of America have always supplied a major part of the labor force of certain important segments of our industry. We are inclined to give greater consideration to women workers today because the realization has come that without them we cannot continue to produce in the volume needed for victory. For that reason we have learned to adjust working conditions so that we may make most efficient use of this emergency labor supply. We are now willing to admit that the woman worker is quite as efficient and quite as productive as the man whom she replaced.

Civilians are giving up a great many things these days and yet we must still be clothed, kept clean, and cared for when sick. Because we are scraping the bottom of the normal manpower barrel, it is now up to women not only to carry on their traditional work as makers of consumer goods, as saleswomen, laundry, hotel, and restaurant employees, as teachers, nurses, and domestic employees. They must in increasing numbers take the places of men leaving civilian jobs. They have already stepped in for essential operations in banks, businesses, as drivers of busses and trolleys, radio announcers and engineers and in many other occupations new to them.

I think it is important for us to remember, however, that women have for many years composed a sizable part of the labor force in such industries as apparel, textiles, shoes, electrical equipment, food, leather and leather products, rubber products, chemicals, and many others. And they are continuing to perform Trojan services in these industries, producing not only for war but for civilian use.

My own State of Massachusetts is typical. In the manufacture of cotton and wool textiles, women made up 37 percent of the labor force as long ago as 1940. At that time, in the boot-and-shoe industry of Massachusetts, over 42 percent of the workers were women, and in the apparel industry over 70 percent of the labor supply was female.

Women's work in this field goes back to the days when Lucy Larcom of Lowell, Mass., back in 1834, was a leader in the crusade for better working conditions for women. This was the day when, at the signal of a waved poke bonnet, 2,000 cotton mill women struck in protest against a wage cut.

Today throughout the country there is an urgent need for women on farms, and we have been engaged in the enlistment of 60,000 such workers from the cities and towns. It is clearly evident that more womanpower must be turned to essential civilian industries and services. There is a vast reservoir

from which to draw, of which the most important group includes 12,000,000 nonfarm housewives with no children under 16 years of age. The majority of these women are under 45, and we shall draw upon them increasingly, not only for the production of needed civilian goods, but for the materials of war as well. Other sources of labor which will be tapped will include girls coming out of high schools and colleges, unemployed women, and those who lost jobs because the industry in which they were engaged was curtailed.

One thing we must keep uppermost in our minds. If we are to benefit from the productive capacity of these women workers, we must jealously guard the standards under which they are employed. For one thing, we must avoid long hours of work. I'm rather proud of the fact that my State of Massachusetts enacted the first enforceable hour law for women, and, incidentally, the first minimum wage legislation. But coming back to the present, we can well follow the recommendation of the eight agencies of Government most directly concerned with the war effort, including the War, Navy, and Labor Departments. For both men and women, the workday ought not to exceed 8 hours. A 48-hour week will provide one day of rest in seven. There should be a meal period of at least 30 minutes in a work shift. If we follow the recommendation we shall keep the efficiency of our womanpower at its peak and we shall continue to maintain the production that is so essential today.

The production of essential civilian goods will continue. It will continue because the women workers who have always contributed their labor and skill to civilian production will stay on the job and because many more women will come into industry to replace those men who are drawn off either for employment in war industries or for the armed forces. When the Women's Bureau came into existence in July 1918 women were beginning to play an important part in war production. They are contributing a far greater share to the production for victory program of this war. We can be thankful that the Women's Bureau is now, as it did in 1918, protecting standards of employment, working for a more efficient contribution by women, educating employers and workers in safety and health, asking for community cooperation in providing housing and recreation facilities, and encouraging women of all ages and stations to lend their energy and their skill to the war effort.

We can also be thankful that Mary Anderson is still carrying on as the Director of the Women's Bureau. She has devoted her life to the bettering of conditions for women workers. Today with her many years of experience and her unfailing vision she is still leading the way toward greater gains for women workers.

Miss ANDERSON. Thank you very much, Mrs. ROGERS. No one will deny that the women of America have responded wholeheartedly to the need for labor with which to keep our wartime industrial machine in operation. Some 16,000,000 women are employed today.

There is, I am glad to say, an increasing acceptance of the principle of equal pay for women for comparable work. This has not always been so. Moreover, it is not yet generally accepted throughout the country. Yet I believe that it is as necessary to the successful prosecution of the war as is the labor supply itself. I should like to tell you why I believe this is so.

The Women's Bureau pioneered in the establishment of the policy of equal pay for women. When the bureau was created 25 years ago, one of its first acts was to urge that wages should be based on occupation and not on sex or race. Progress was made when the National War Labor Board of World War No. 1 applied the equal wage standard in many of its decisions. Yet in the years that followed that war, the double wage standard persisted, with one set of rates for men and a lower set for women. Although the Women's Bureau continued to press for a balanced wage standard, its acceptance was slow in coming.

When the National Recovery Act became a part of our national economy in 1933, we had a part in eliminating from many codes wage differentials based on sex. With the enactment of the Fair Labor Standards Act in 1938 the principle of equal pay, as it related to minimum wage rates, became the national policy. When America became the arsenal of democracy in 1942, the Women's Bureau intensified its campaign, urging the establishment in plants having war contracts of the same wage standards for women as for men. In a statement of policies, the War, Navy, and Labor Departments recommended that "wage rates for women shall be the same as for men, including the entrance rate."

Acceptance of the principle of equal pay became more general. The War Manpower Commission supported it. The War Production Board, the Maritime Commission, and the Office of Defense Transportation recommended to State labor commissioners "the same wage rates for women as for men." Then came the all-important decision of the National War Labor Board, implemented by its General Order No. 16. Under that order, employers were authorized to equalize the wages of women with those of men without the prior approval of the Board.

Why, you may ask, has the Women's Bureau for a quarter of a century steadfastly insisted upon equal pay for women for comparable work? Why is this principle so important a part of our victory effort? Because underpayment of women is not only undemocratic but economically unsound. It is obviously unfair to ask the woman who is taking the place of a man called to the front to do the same job for lesser pay. It would be unfair to men returning from the war to have to compete with lower-paid woman labor. Men going into the armed forces must not be allowed to feel that the women who are carrying on at home are being forced to cut established wage standards.

Employers today know—and the studies of the Women's Bureau confirm—that the industrial efficiency and the output of women workers are as satisfactory as those of men—in some cases more so.

We must not overlook the fact that more and more we are drawing into industry women with dependents. In the past some employers who wanted an excuse for not paying women the rate for the job fell back on the statement that men workers have to support dependents. But today that is often as true of women. Their responsibility in this respect will increase as more and more men are drawn into the armed forces.

Those agencies most directly concerned with winning this war are on record in support of the principle of equal pay. More and more the great labor organizations are incorporating that principle in labor contracts. There is also a growing trend among employers to pay equal rates. We can be grateful for the ready loyalty of the millions of American women workers and their willingness to leave the comparative comfort of home for the wearing grind of the mill, the factory, and the shipyard. The least we can do to reward that loyalty, as well as to protect the interests of the men who are away, is to see that every woman worker receives equal pay for equal work. It is a pleasure now to present Hon. HATTIE W. CARAWAY, Senator from Arkansas.

Mrs. CARAWAY. Without womanpower it would have been impossible for us to gain and hold the tremendous war production rate we have achieved. I wonder how many of us realize just how much womanpower we are depending upon. We are told that over 2,500,000 women are at work in munitions industries today, with more coming into industry every week. By the end of 1943 the total will be about 3,500,000.

Unless you are a war-plant worker, or have investigated the field of wartime labor use, I think you will be amazed at the things women are doing today. Women normally employed in civilian-goods industries have turned their skills to war production. In my own State, Arkansas, women who used to make work clothes are now loading fuzes; in Detroit they have turned from making spark plugs to machine guns; in Maryland, furniture upholstering has become production of sleeping bags; in New England the building of toy locomotives has been changed to parachute flare casings. The production of nail polish has been abandoned in favor of bomber fittings; time fuzes have replaced loose-leaf notebook binders; clothing factories are now producing uniforms and military work clothing. And women are doing these jobs and countless others like them.

Yet this is only a fraction of the story. The operations I have described are conversions from civilian goods production, in which employment of women is normal peacetime procedure. The amazing thing is the kind of work women new to industry are doing. It took Pearl Harbor to show this country how essential and extensive a part our women have to take in waging and winning a war. The aircraft industry is an example. A week before Pearl Harbor, there were only 4,000 women in aircraft production. Today there are 300,000. Railroading is a ne wfield for women, but someone had to do the job—so they're doing it. And they aren't all office workers, either. They are operating steam hammers, turntables, and rivet heaters. They're handling bolt-cutting machines, drill presses, paint sprayers, and lubricating appliances. They are tractor drivers, crossing watchmen, locomotive wipers, yard and crew clerks, stationary firemen.

In the shipyards today women in increasing numbers are doing all sorts of jobs, in many cases the difficult and even dangerous operations. They are helping to keep steel mills and lumber mills in operation. You find them taking responsible places in ordnance plants, in quartermaster depots, rubber plants, in communications and air transport, in the production of electrical and radio equipment.

Almost without exception, where there is a war job to do, women are doing it. Like the unsung heroines of the home front in earlier wars, the great majority of American women today are proving themselves worthy of the tradition of the pioneer women of another day. Their good sense recognizes the dignity and the urgency of any job that contributes to the maintenance of the democratic way of life.

Women are doing a superb job in war production today. Surveys of the Women's Bureau show that to be true. They also reveal that women workers are efficient, productive, and loyal, and that employers—even those who resented the need for hiring women at first—have come to recognize and appreciate those qualities.

Women are on the war-production front two and one-half million strong. Their numbers will be increased within the year. We shall have to ask housewives to become industrial soldiers. And they will respond to the need.

Secretary PERKINS. Thank you, Senator Caraway, Congresswoman Rogers, and Mary Anderson for your part in this wartime observance of the twenty-fifth anniversary of the Women's Bureau. It is apparent to employers and now increasingly to the public generally that we shall have to depend upon womanpower for maximum production.

In the years to come women will continue to be an important segment of our national labor force. I believe that the principle of equal pay for equal work will become firmly

established because of the very contribution that women are making today. I further believe that in the post-war period we shall no longer think of our labor force in terms of "manpower" or "womanpower." Rather, we shall think of both men and women in terms of equality as workers, each earning and receiving equal consideration. I cannot but think that 25 years of activity on the part of the Women's Bureau has helped immeasurably to bring that democratic condition into existence.

Army-Navy E Award to Hamilton Watch Co. at Lancaster, Pa.

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KINZER. Mr. Speaker, the Hamilton Watch Co., located in my home city of Lancaster, Pa., has enhanced its long record of achievements in peace and war, of which we in Pennsylvania who know its contributions to our Nation's welfare and security are very proud.

On May 22, 1943, Hon. James Forrestal, Under Secretary of the Navy, addressed a letter to Mr. Calvin M. Kendig, president of the Hamilton Watch Co., informing him that the Army and Navy were conferring upon the Hamilton plant the Army-Navy E award for outstanding production of war materials.

Mr. Speaker, I include herewith the letter of notification from Mr. Forrestal:

DEPARTMENT OF THE NAVY,
OFFICE OF THE UNDER SECRETARY,
Washington, May 22, 1943.

Mr. C. M. KENDIG,
President, Hamilton Watch Co.,
Lancaster, Pa.

DEAR MR. KENDIG: This is to inform you and all employees of the Hamilton Watch Co. that the Army and Navy are conferring upon your plant the Army-Navy E award for outstanding production of war materials.

This award consists of a flag to be flown above your plant, and a lapel pin, symbolic of distinguished service to America, for every individual in your plant.

You men and women of the Hamilton Watch Co. are making an outstanding contribution to victory. You have every reason to be proud of the record you have set, and your accomplishment stands as an example to all Americans.

Sincerely yours,

JAMES FORRESTAL.

The Hamilton Watch Co. was incorporated December 14, 1892, and has been in continuous operation since that date. It was named for James Hamilton, the original owner of the site of Lancaster under grant from William Penn. It is located on a beautiful parked site and because of its charm and appeal to the esthetic nature of man has become the center of the finest residential section of Lancaster.

In its apportionments and the manner of its management and operation, the Hamilton Watch Co. has achieved ideals that forward-looking industrialists strive to match.

For more than 50 years the Hamilton Watch Co., makers of "the watch of railroad accuracy," now making accurate war timepieces, has led in the evolution of fine watchmaking.

Mr. Speaker, our air, sea, and land forces and those of our allies require a vast number of various precision timing instruments. In the past, we have depended solely on foreign sources for many of these, some never having been produced in the United States prior to this war.

Precision timing instruments for all branches of our armed forces, designed, developed, and produced by Hamilton technicians, include time fuzes, marine chronometers, chronometer watches, chronographs, navigation master watches, comparing watches, hack watches, deck watches, fire-control wrist watches, map measurers, a vital war instrument employing the principle of electronics and accurately measuring time intervals down to thousandths of a second, and numerous other precision instruments, as well as parts supplied to other war industries on subcontract, and also timing instruments for the British, Canadian, and Russian military establishments. Many articles being produced by Hamilton cannot properly be discussed in detail but it is notable that, without the articles being supplied by the Hamilton Watch Co., victory in this war would be more difficult, if not impossible.

In this connection, it is not generally known that prior to our entry into this war marine chronometers never had been produced in the United States. The Hamilton Watch Co. now is producing this vital instrument for our Navy and merchant marine in unprecedented quantity and in minimum time. This instrument was designed and developed in the Hamilton plant by Hamilton technicians and is produced on the assembly line with parts completely interchangeable. The Hamilton chronometers successfully meet the high standards and the severe tests required by our Navy. Indeed, it is acclaimed the finest marine chronometer produced anywhere in the world. Heretofore, marine chronometers have been produced by hand work and never before on an assembly line. I believe, sir, that this is one of the major achievements of American industry during this war. Certainly, no American company has undertaken any task presenting greater difficulties, and the full story of this achievement, when it can be told in detail, will be a recital of one of our Nation's greatest victories on the production line.

Mr. Speaker, the Hamilton Watch Co., and, indeed, the entire American jeweled watch industry, has suffered almost a total eclipse of its production of standard commercial watches during this war. It is wholeheartedly devoting all of its skill, energy, and resources in the behalf of victory for our armed services.

Other industries are also exerting maximum effort in the behalf of victory, but I think it is an indisputable fact that the American jeweled watch industry has been called upon by our Government for a heavier contribution to victory than any American industry.

I say this because the normal commercial production of this industry is in practical eclipse while our Government has aided and abetted the importation of Swiss watches in greater number than ever before in the history of our Nation—indeed, in such vast quantity that Swiss watches glut the market and there must inevitably be vast numbers of unsold Swiss watches on the American market at the close of the war to impede the recovery of this essential American industry.

No other American industry has had its home market completely usurped by a foreign competitor with the assistance of the United States Government while it was engaged in loyal service to the armed forces of the Nation. Not only is its commercial market lost, which it is willing to sacrifice as a national necessity, but it has been kidnaped with the aid of the Government it serves for the benefit of a foreign industry which very materially serves the Axis Nations by supplying them with vital instruments of war.

When this war is brought to a victorious conclusion the American jeweled watch industry will face the necessity of regaining an American market that has been completely absorbed, with the assistance of our Government, by the Swiss watch industry.

The American jeweled watch industry thus will enter the post-war period faced with the seemingly hopeless task of regaining their home markets. Yet they must win this victory or perish. They must win it to provide work for the American men and women of this skilled industry, who have given so much on the production line to victory for our arms, and to provide work for the men and women of the industry who will be returning in large numbers from service in the armed forces. They must win it to again provide the American people with the high quality American watch to which the American people have been accustomed in the past and which they have the right to be able to obtain. They must win it, and the Congress of the United States has a solemn duty to see that they win it, with the aid of the Congress, because it has been amply demonstrated that without a highly competent jeweled watch industry a successful war could not be fought. It is, therefore, essential to the future security of our country that the American jeweled watch industry be fostered and developed.

No one has suggested how a navy, a merchant ship, a military airplane, or an army could hope to operate successfully without the precision timing instruments supplied to our armed services in this war only by the American jeweled-watch industry and obtainable from no other source.

It has been customary to obtain these articles from abroad, mainly from Switzerland, but when war came to the United States this source of supply was

cut off. The American jeweled-watch industry, our only possible source of supply, was then called upon by our Government to save this situation. They are doing so and the men and women of this industry are rendering unprecedented service to the success of our armed forces with inconceivable efficiency and expedition.

For the welfare and security of our Nation, quite aside from the debt of gratitude we owe to the men and women of this industry, it is our duty to foster the reestablishment of the American jeweled watch industry commercially certainly not later than immediately after the close of this war and to assist them in reestablishing themselves sooner if the exigencies of the war permit.

Mr. Speaker, the Army-Navy E award was formally conferred upon the Hamilton Watch Co. at ceremonies conducted at the Hamilton plant, at Lancaster, Pa., on June 16, 1943. I include herewith an illuminating letter concerning the work and condition of the industry addressed to me on that day by Mr. C. M. Kendig, president of the Hamilton Watch Co., and president of the American Jeweled Watch Association:

HAMILTON WATCH CO.,
Lancaster, Pa., June 16, 1943.

Hon. J. ROLAND KINZER,
United States House of Representatives, Washington, D. C.

DEAR CONGRESSMAN KINZER: It has been very gratifying to the management and our employee group to be told today by representatives of the Army and Navy that the work that they have been doing in the past few years has been of a most essential nature.

As I have told you before, the American jeweled-watch industry is having a very unique experience in the war period, with which I would like you to be familiar.

On December 17, 1934, we pointed out to the Committee for Reciprocity Information that, entirely from a national emergency point of view, nothing should be done to jeopardize this small industry whose facilities were found indispensable in time of war. We warned the committee against depending on Switzerland as a source of supply, because of the possibility of the import facilities from Switzerland being discontinued. Now Switzerland is prohibited by the Nazi Powers from supplying anything having a military significance.

On December 2, 1940, the members of the American Jeweled Watch Association were called to Washington to consult with the Office of Production Management and to advise with them on the production of jewel bearings. This is an article that has always been imported from Switzerland, in volume from fifty to ninety millions per year, and they were looking ahead to the possibility of warfare, and wanted to plan for the production of jewel bearings in the United States, in the event that our supply from Switzerland should be cut off. The watch manufacturers today are manufacturing jewel bearings.

In this connection, we need only to reflect that a ship of war could not operate, a military plane could not function, and not one of the many and varied precision instruments of war could be made to operate efficiently without jewel bearings. This is one service to the Nation of which the American Jeweled Watch Association is justifiably proud.

On May 21, 1942, the members of the American Jeweled Watch Association were again called to a meeting on this occasion by the War Production Board, in connection with the conversion of the jeweled-watch industry to full war production. Because of delay on the part of the armed services in specifying exactly what they would need, and when, consideration was being given to occupying the facilities of the jeweled-watch industry on such things as airplane instruments, time fuzes, etc. At that time, we familiarized the group with what had occurred in World War No. 1, so far as our industry was concerned, and impressed upon them the fact that it would be a serious mistake to convert the watch factories for making other articles of defense, because past experience demonstrated that there would be requirements for watches and timekeeping mechanisms that would tax the watch industry to produce even on a 24-hour day. Now the orders have come through for watches and timekeeping mechanisms in large volume, so that our plants are operating two and three shifts.

The following is a summary of the vital war activities of the American Jeweled Watch Association during World War No. 2: Chronographs for Army and Navy, chronometers for the Navy and merchant marine, chronometric tachometers for Air Corps, clocks for Army tanks, deck watches for the Navy, hang-fire recorders for small-arms munition testing, jewel-making machinery for war plant corporations, jewel-making plants for war instruments, machine-gun camera watches for Navy flyers, map measurers for Army Engineer Corps, military camera and radio parts, navigational master watches for bombers and long-range flights, stop watches for naval gun turrets, time and impact fuzes for Army ordnance, waterproof watches for Marine Corps.

Also aviation watches and clocks, escape wheels for ships' clocks, fine gages, instrument parts for tanks and trucks, jewels for watches and other precision instruments, military and naval watches, parts for aviation instruments, parts for arsenals, Navy yards, and high-priority war instrument-makers, stop timers for Army and Navy.

Also vital are the following: Railroad watches to keep transportation rolling; watches to coordinate civilian air-raid defense; watches for doctors, Red Cross, Army, Navy, and civilian nurses; watches for enlisted personnel of armed forces; watches for workers in industry and distribution; watches for commercial air-line pilots and personnel; watches for laboratory and scientific research; watches for Government employees and other office workers.

Ninety-five percent of the work that has been assigned to our industry for the war program are articles which we were not tooled to make. Many of these articles were formerly imported from Europe, principally Switzerland, and more than a few of them had never previously been manufactured in the United States.

The armed services tell us it would be impossible to conduct a successful war, global in scope and covering all the oceans of the world, without the many timekeeping mechanisms indicated above.

The experience of the American Jeweled Watch Association is unique. We are entirely converted to wartime production and have lost our commercial market completely. Simultaneous with this experience, arrangements were made, presumably by the Board of Economic Warfare, to import larger quantities of Swiss commercial watches than have ever been imported into the United States. These import figures have been withheld by Executive order.

The award of the Army-Navy E for outstanding production of war material is the best evidence that the watch industry, instead of being considered by some a luxury business, is a most essential industry, and in view of these facts we feel that this industry should be protected and nurtured in the reconversion period to safeguard its important place in the national economy—thereby assuring its continued availability in any future emergencies.

Respectfully yours,

C. M. KENDIG,
President, Hamilton Watch Co., and President, The American Jeweled Watch Association.

That Good Ol' Sausage and Ham

EXTENSION OF REMARKS
OF
HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 8, 1943

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Westmoreland Observer under date of July 1, 1943:

The farmers of America have had their retail market destroyed, at least for the time being.

It will be recalled that Federal and State departments of agriculture spent millions of dollars to induce our farmers to market as much of their produce direct to consumers as possible. Many farmers who were favorably situated to centers of large population had developed quite a business, and many were able to survive the depression only by this means of marketing their produce.

Up until the notorious alien-staffed Office of Price Administration, it had always been conceded as a fundamental right of our American farmers to sell anything and everything they raised. Farmers were always exempted from mercantile and other taxes and license fees which were levied against dealers and retailers. The practical theory back of these exemptions was that when a man produced anything on his own land by his own labor it was his to dispose of as he pleased without any governmental interference, and this was particularly applicable to the producers of food.

Of course, there have been some restrictions and prohibitions of this rule, notably the prohibitions against farmers distilling liquors. Such exceptions have been rare and only invoked by the revenue laws or the growing of narcotic-producing plants. Never before the present Hitleresque regime was the right of farmers to sell their products direct to consumers challenged.

How much of the Nation's food has been bought direct from producers on the ground and from farmer-hucksters cannot possibly be estimated, but from time immemorial farmers have been selling their offal at butchering time, their one or two surplus cured hams to their friends in town, and those who have regular customers in neighboring towns and cities to whom they sell their entire produce in regular weekly trips. Then, too, there are the city-market stalls and the farmers' curb markets. All this has been abolished by the Office of Price Administration.

This farmer-to-consumer marketing of food has been a considerable item in the country's food distribution system, and when it is completely eliminated, as the New Deal officialdom seems bent on doing, it is going to make the family marketing a lot more difficult for city dwellers than it has ever been, to say nothing of freshness and flavor of vegetables, butter, eggs, and meats bought direct from farmers.

The Office of Price Administration says that farmers may sell not more than they

sold in 1941 providing they take ration stamps and keep records and comply with all the red tape and bull. To which we hear the farmer say, "To hell with all you crooks and shysters, we'll quit first."

Congress should lose no time in amending the price-fixing laws to exempt farmers from all restrictions of such laws. The age-old fundamental right of farmers to sell what they raise by their own labor without governmental hindrance should be restored. This right of a free people is as basic as any in the Bill of Rights.

The Food Situation in the War

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BULWINKLE. Mr. Speaker, this is the kernel of the food situation: Although we are producing food at the most tremendous rate in history, our need for food has increased even more tremendously.

Therefore, the whole war-food program aims at boosting production as high as possible, gearing it to the things needed most in wartime, and using all the food produced to best advantage.

First, there is the production side. Nineteen hundred and forty-two was the sixth successive record year, with output nearly a third bigger than the average of the 5 pre-war—1935–39—years. Good weather was the biggest contributor, and early 1943 weather has not been as good. But American farms could not be producing at their present high level if certain things had not been done in the war food program. For instance:

Farmers, with the Government, set production goals for every farm and for every important commodity needed in the war program. Price supports and other long-term guaranties enable farmers to go ahead without fear of going broke on a market slump. Credit to expand production can be obtained from Government agencies if it is not available from banks. Machinery has been scarce, but following the report of the Truman committee, the War Production Board and the Department of Agriculture worked out allocations for next year which will provide 80 percent of the big 1940 machinery production, with much higher allowances of repairs and replacements. Gasoline, too, has been scarce, but farmers have been given high priority. Under a farm-labor program, changes in draft regulations have brought back to farms many workers who had left, and kept others there. About 3,000,000 men will be deferred this year by reason of agricultural occupation. Local labor is being recruited, trained, and placed by the Extension Service with funds provided in the Farm Labor Appropriation Act. Also, with funds provided in this act, Mexican, Bahamian, and Jamaican laborers have been brought in for special crop areas. Finally, we had a head start on big wartime food production through the productivity stored in the soil by 10 years of conservation programs and through the feed grains stored in the ever-normal granary.

This is how the food is distributed and used in the war food program.

There are many claimants for a share of the food. American food must fortify the bone and sinew of 128,000,000 civilians on our production front, and 11,000,000 men in our armed services. It must give an extra fighting edge to Russian armies, and to British armed forces and civilian population. We have food commitments to meet in liberated north Africa, and in other areas to be liberated. Part of the war food program is to make a fair division of food among all those who need it.

All these food needs are set down in a trial balance sheet, measured against the supply. If the claims are too big, they are adjusted where it can best be done until the balance is struck. The needs of our civilians are fully considered. Sometimes it is our armed forces which adjust their claim, sometimes lend-lease, sometimes civilians. When the allocations are made, steps are taken to see that the division carries through. Actions that restrict civilian consumption of certain kinds of food are necessary to assure supplies for our armed forces and to keep our allies in fighting trim. Actions that affect distribution of food are necessary for efficiency and economy and to assure the best use of available supplies. The chief purpose of the War Food Administration bread order, for example, was to eliminate the wasteful practice of delivering more bread to a retail store than would be sold and returning left-over loaves.

The rationing- and price-ceiling programs authorized by Congress in the Price Control Act make sure our civilians each get fair shares, by dividing scarce foods, and by keeping all food within reach of those who have less money to spend. Despite high taxes and bond buying, our people have in total a good deal more to spend for food than usual. In 1941 and 1942, we had record amounts of food available and ate up record amounts—about 10 percent more than the average of 1935–39.

Military and lend-lease requirements took 4 percent of the 1941 food output and 12 percent of the 1942 output. In 1943, these two uses will take about 25 percent of the output. In England, north Africa, and the South Pacific, reverse lend-lease helps to feed, house, and clothe our fighting men.

On the basis of prospective 1943 output, civilians this year will have about 10 percent less meat than in 1942; 21 percent less canned and shell fish; 17 percent less butter; 25 percent less cheese; 21 percent less canned milk; 37 percent less canned fruits and juices; from 3 percent to 25 percent less of various fresh vegetables; 22 percent less canned vegetables; 8 percent less dry beans; about 25 percent less sugar; 25 percent less rice; 22 percent less coffee; 36 percent less tea; 14 percent less cocoa; 9 percent less fresh and frozen fish; 3 percent less eggs; 13 percent less frozen fruits; 5 percent less tomatoes.

Civilians will have about the same amount of turkeys, fluid milk and cream, lard and other cooking fats, potatoes and sweetpotatoes, wheat, corn, rye, oats, and barley for human consumption.

Civilians will have 27 percent more chicken; 53 percent more margarine; 7 percent more apples; 17 percent more dried fruits, slightly more citrus fruits.

It must be remembered, however, that these are comparisons with 1942, a year of history-making production. A better view of our actual food situation is revealed by a comparison with the 1935–39 average, the period before the wartime production boom began. Compared with those peace years, civilians in 1943 will get about the same amount of meat—2 percent less—per person, 56 percent more chicken, 5 percent more eggs, 17 percent more fresh citrus fruits, 7 percent less dairy products, 10 percent less commercial fresh vegetables, and all the cereals we can eat.

Farm prices have been climbing steadily—116 percent since the war began. By June 15, prices of goods farmers sell were 190 percent of the level of 1909–14, the base period for the parity formula. Prices of goods farmers buy on June 15 were 164 percent of the 1909–14 level. This means farm prices now average about 16 percent above parity.

Average consumer incomes, however, have risen more rapidly than retail food prices. As a result, consumers are able to fill their market baskets with a smaller share of their income than ever before.

While it means that every one of us will have to sacrifice or do without some portion of food that we have been used to, yet, we must remember that this is necessary in order to feed our Army, and the armies of our allies, and other people in the world. All of it is necessary in order that we can obtain final victory.

"Coal Dust on the Fiddle"

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. WEISS. Mr. Speaker, the bituminous industry is in full production again. The mine workers are back in the pits, producing the coal so essential to the winning of the war. They have gone back into the bowels of the earth without achieving any of their major demands either from the operators or the Government. It was a bitter dose for them to swallow, but this is war. It is a great sacrifice.

While they were out and their coal tipples were silent, they took a terrific beating on this floor, and in the press, and over the radio. With our country engaged in the greatest war in its history, interference with production necessary to victory cannot be condoned, even when justice is on the strikers' side. While public bitterness directed against

the miners and their leaders was understandable, there might have been less of it, I think, if the full story of the miners' side had come out.

Lately I have been reading a new book, entitled "Coal Dust on the Fiddle," by George Korson, and published by the University of Pennsylvania Press in Philadelphia. This book has nothing to say about the recent controversy. The author is not a political writer, nor even an economist, but a folklorist, and Coal Dust on the Fiddle is not a political work nor an economic tract. It is a collection of the folklore and folk music which a century of soft-coal miners have created.

Yet, I commend this book to my colleagues in Congress and to the public who would know the background of the bituminous industry and the cause of the perennial unrest in the coal regions. This folklore collection concerns itself with the mine workers as human beings, and with their peculiar way of life. Through their songs they tell their own story, and while much of it is tragic, it is not altogether so. Even in the depths of sorrow, the miners could sing and laugh. In painting a setting for these songs, Mr. Korson, formerly a newspaperman in my State of Pennsylvania, has contrived to capture a rich slice of the miners' history on paper.

Much of what he has written is not new to me, for I represent a bituminous district in Congress and many of my constitutents are mine workers. But through diligent research Mr. Korson has managed to gather many interesting facts about the industry, the coal mines, and the mine workers which is new to the public.

I know well the coal camps in which so many of my constituents live. I know what it means to live in a company house, though I have never had the misfortune of having to live in one myself. I know all about the company store and the discipline of the coal operators. I know all about the coal dust which withers and disfigures everything it touches. I know about unemployment in the coal camps, and the hardships that come from poverty. I know about mine disasters and the tragedies they cause.

I know all these things because mine workers are my friends and neighbors, and I have seen these things, and many more with my own eyes. These people, honest, hard-working and patriotic, deserve the public's understanding and sympathy.

Antistrike Bill Threatens Rift Between Labor and Government

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. ANGELL. Mr. Speaker, in accordance with leave heretofore granted, I include as a part of my remarks an article appearing in the Evening Star of June 30 by Dorothy Thompson entitled: "On the Record—Writer Views Action of Congress on Antistrike Bill as Threatening Rift Between Labor and Government." Following is the text of the article:

ON THE RECORD—WRITER VIEWS ACTION OF CONGRESS ON ANTISTRIKE BILL AS THREATENING RIFT BETWEEN LABOR AND GOVERNMENT

(By Dorothy Thompson)

Congress has not, I think, acted in a statesmanlike manner in passing its antistrike bill over the President's veto, and disregarding the President's criticism.

The country would have welcomed an antistrike bill incorporating into law for the duration of the war the existing administrative strictures on trade-union action. But this bill is more than an antistrike bill. It restricts the political activities of labor, which is certainly beside the point, and in this sense it is antilabor and anti-Roosevelt, not antistrike.

The President's criticisms of section 8 are reasonable. And inasmuch as the whole bill is conceived as a war measure, the opinion of the Secretaries of War and Navy should certainly have been considered. The armed forces are the last people in the world to feel soft toward strikes in war-production plants. But they agree with the President that the provision for a 30 days' notice of a pending strike, with a secret ballot, is an odd provision in a bill which is designed to prohibit strikes altogether.

LEADERSHIP RELIEVED

The theory behind this provision is, obviously, that discontent in the ranks of labor is fomented by the leadership, and does not arise from the rank and file. But actually, in the most important case, and the one which precipitated the whole question—the coal strike—this is obviously not true. The rank and file want better conditions of work and pay, and Mr. Lewis has truly represented them—truly, though not wisely.

The leadership has given antistrike pledges, and is interested in preserving its leadership and discipline. This bill relieves them of both the opportunity and the necessity. It makes possible strikes that have majority support, taken by secret ballot, and destroys the authority of the leadership.

The Congress, in disregarding the President's advice and maintaining an unamended and inadequately deliberated bill, was obviously asserting its own prestige over the President. But the Congress, though it has the legislative responsibility, does not have the executive responsibility to see that the country is administered and the war won.

NO AID TO WAR EFFORT

If, as a result of this law, there is an increasing conflict between the administration, which must carry it out, and the working people of America, Congress will legally have no responsibility. Partisan Members may be pleased by this state of affairs, but it will not contribute to winning the war.

The blindness of the Congress to the larger issues of the war is also revealed in this bill. In the social alinements in all nations, engaged in this war as active belligerents or as victims, the reactionary forces are our enemies and the liberal and prolabor forces are our friends. Fascism in the realm of ideas—ideas which are an inextricable part of the war itself—can only be defeated by progressive and liberal ideas, and by a program which promises freedom and status to working men and women. If the workers of the world once get the idea that this is merely a power struggle, in the course of which their rights may be abrogated, no matter who wins, there will not be an atmosphere in our factories favorable to the most consummate effort.

The Congress does not do much careful thinking. It might have considered that the dissolution of the Comintern gives liberal, progressive democracy a chance to overcome the class struggle and, by integrating the workers fully and equally into society, to reconcile the chaotic differences between classes. If, on the other hand, the rifts are deepened, while the rank and file of the workers are cut loose from their leadership and driven into general opposition—to the administration, the Congress, the economic system, and society as a whole—our industrial age will be threatened as it never has been before.

Our industrial effort does not depend merely on antistrike legislation, but on the morale of the workers. Mere indifference can do more damage than a strike.

WHAT IS AGITATION?

Furthermore, the bill is coupled with a rejection of the food subsidy program. This can only mean that there will be a rise in the cost of living, felt most keenly by the industrial workers. This, to say the least, is an unfortunate coincidence. Can we set up an American Gestapo to arrest every grumbler? What constitutes agitation?

Ill-considered measures always have unforeseen results. I greatly fear—and fervently pray that I may be proved wrong—that the result of this bill will be to deflect the discontent of workers against their employers, to a discontent against the state. And that, in time of war, can be much more dangerous.

It is obvious that Congress wanted a showdown with the President. But such showdowns, under our system, only result in immobilization of government. In a European parliamentary system, such fundamental showndowns result in the creation of a new government, with new authorities and a new accord with the legislative body. But serious rifts between Executive and Congress, in our system, cannot be breached or resolved. They create a vacuum in responsibility that in a time of great emergency can be disastrous for the Nation.

The Costs of War

EXTENSION OF REMARKS

OF

HON. RICHARD P. GALE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. R. Champion from the St. Paul (Minn.) Pioneer Press of June 27, 1943:

NEW BRIGHTON EMPLOYEES VIEW THE COSTS OF WAR AS A PROBLEM HITTING THEIR OWN POCKETBOOKS

(By E. R. Champion)

"Remember—it's your money," is the admonition which greets workers at the Twin Cities ordnance plant as they go about their jobs of making small arms ammunition for the Army and the Navy.

"Remember—it's your money," is the slogan of a group of unique employees' organizations fostered by R. B. Ehlen, general manager of the ordnance plant near New Brighton. These organizations are known as the taxpayers' committees. Their function is to remind employees of the plant that it is their money, paid out in the form of taxes, that is used to pay the expenses in-

curred in the manufacture of .30- and .50-caliber bullets, and that when they waste money at the plant they are wasting their own money.

Formed in July 1942, at a time when it was apparent that the taxpaying population would soon be greatly multiplied, the taxpayers' committees are rounding out their first year of an aggressive cost-conservation campaign that has resulted in the saving of many thousands of dollars.

Taxpayers' committees have been organized in each of the many units of the New Brighton plant, and recommendations for paring down the costs of operation are passed along from these committees to a management board known as the taxpayers' executive committee.

Taxpayers' committees meet in each production unit periodically to discuss ways to cut costs. Members of the committees come to meetings primed to deal intelligently with various proposals, and when recommendations are made, they are turned over to the management for administration and follow-up.

USE POSTERS, LEAFLETS

A continuing educational campaign is carried on, using posters, signs, leaflets, and plant newspaper articles, which dramatize to employees the ways they may help save their own money by saving the plant money.

Appeals to the workers go beyond those of requests to "turn out the lights," "turn off the faucets," and "save supplies." Employees are urged to maintain good attendance records, because absenteeism costs the taxpayer money. Efforts also are made to build employee respect for Government property which has been provided the plant operator for the manufacture of ammunition.

The plant also maintains a well-patronized suggestion-box system, and already more than 1,000 have been adopted out of a total of more than 7,000 ideas which have been turned in, most of which have dealt directly with improvements in the manufacturing process that result in saving the taxpayer money.

There is evidence that the taxpayers' committee program has been successful in reducing the cost of operation at the Twin Cities ordnance plant but employee committee members and management representatives declared emphatically that "we've really just got started on this big job. There still is a great deal to be done."

Increased emphasis is being given the economy program at the New Brighton war plant with the taxpayers' committees taking the leading role in seeking other means by which materials and production time can be conserved without reducing the quality of the product.

THREE THOUSAND DOLLARS A MONTH

One report shows that employees' efforts have resulted in saving the plant $3,000 a month on electric power alone, simply by constant attention to lights that can be turned off, plus the provision of a switch for each light, rather than master switch, making it necessary to turn all of a series of lights on when only a few are needed. Machinery is quickly shut down when not in use, offices have been painted white to conserve candlepower, and the life of hard-to-get fixtures has been lengthened by proper use.

Taxpayers' committees asked that water fountains be turned off "between drinks," and this has saved the plant many thousands of gallons of water—all of which must be pumped three times before being used. Heated water, costing 32 cents per thousand gallons, has been conserved to the extent of 175,000 gallons a day.

A machine adjuster suggested a method for saving soap solution used as a type of lubricant, and this idea is now saving 100 gallons of the solution per machine every day. Hundreds of similar ideas have been adopted, saving thousands of dollars every month.

While the taxpayers' committees are essentially a "grass roots" proposition, in which rank and file employees take the leading roles, corresponding taxpayers' committees have been organized among technical and engineering experts. A committee on the recovery of waste process materials has recently been formed, and already the committee reports that it has found ways to save hundreds of dollars' worth of copper and soapy fats each week. These economy programs are continuing.

In reviewing the achievements of the committees which he "fathered" nearly a year ago, Ehlen says, "We have felt that it is our responsibility to exercise the same care and judgment in the use of utilities and equipment purchased with the taxpayers' money as if it were our own.

"This is our employees' own movement, and it is saving thousands of dollars daily which they won't have to pay back to the Government in the form of taxes.

"Through the educational and promotional campaign of our taxpayers' committee organization of employees, most of the people working at the Twin Cities Ordnance Plant have developed a different viewpoint than most workers on a Government-owned project ordinarily have.

"Unfortunately, despite the fact that the average American sets up a howl about Government spending, when he comes in personal contact with such expenditures himself as an employee of the Government or a worker on a Government-owned project, he forgets that the wages or salary paid him and the equipment and building facilities which he may use come out of the pockets of the taxpayers—out of his own pockets. Our workers are learning not to forget this fact."

The Twin Cities Ordnance Plant scheme of achieving manufacturing economies by constant reminders to workers they are the ones who pay the bills for war production is thought to be the first of its kind in war plants of the Nation.

"We have been pleased to find that a number of other war plants in the country have taken a strong interest in our taxpayers' committee work, and have asked us for the details of the program," Ehlen said.

The activity recently drew comment in Congress when Representative WESLEY E. DISNEY, of Oklahoma, declared that it "deserves the attention and approbation of every citizen of the United States."

And Senator HARRY E. BYRD, of Virginia, chairman of the Joint Congressional Committee on the Reduction of Nonessential Expenditures, in a letter to Charles L. Horn, president of the Federal Cartridge Corporation, Minneapolis, operator of the New Brighton plant, stated that "as far as I know, this introduces a new and most effective economy program within Government-owned war plants. * * * I feel sure that not only will production be advanced, but at a greatly reduced cost to the general public."

PERSONAL CONTACT

The conservation program at the Twin Cities Ordnance Plant is headed by Ehlen as chairman of the executive committee, which directs the promotion of the campaign to educate employees and encourage suggestions. This is done through the use of posters, pamphlets, literature, bulletins, reminder signs, and similar media. The advisory committee composed of one or more members from each department in the various production buildings in the plant area, provide a personal contact for all workers.

Don't Beat Poland to Her Knees

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nowy Swiat of New York, N. Y.:

DON'T BEAT POLAND TO HER KNEES

It seems that political emergencies have among other things caused the truth to be rationed. Substitutes are plentiful on the market. The price is cheap, the quality low, and the result more than doubtful.

This is what you hear these days:

Poland's territorial claims against Russia.

That's what has happened. One day Poland stood up and made demands and claims against poor Russia.

Stalin knew nothing about it until Poland presented claims against Russia.

Our ally means Russia.

You may listen to Hans Jacob and Johannes Steel, you may read the Daily Worker, and PM, and the Post, and learn that the Polish Government only since Stalin broke diplomatic relations with Poland—only since that time—is composed of landowners, Fascists, tycoons, antisemites, reactionaries, etc.

They were all right before.

Our ally means only Russia. The rest does not count.

You may call Vice President Sosnkowski a pro-Nazi, Wyszynski may accuse the Polish Government and the Poles of cooperating with Hitler, one is free to slander and libel, to poison anybody's mind against Poland—because Russia is our holy and only ally.

You may also hear that Poland disrupted the unity among the United Nations. True—it was Stalin who chased the Ambassador of Poland from Moscow, but—

Poland disrupted the unity.

Under your own eyes the Russian War Relief has turned into a Russian Propaganda Relief.

You are being indoctrinated with new axioms—"We must," "America must."

Or else!

Unconditional surrender. You are not to care what Russia will do in China, or in Europe, it is immaterial what Russia has to contribute, it's you who must.

A dreadful picture is painted of a world without Russia shaping it.

You must—or else.

You read and hear loud demands that Poland and the Poles must change their attitude toward Russia.

How about Russia changing some?

Her's is the final, irrevocable, accepted, ballyhooed decision.

Russia is right—she may demand things, she is entitled to dictate to decide without approval or even consultation.

No change asked of Russia.

What is this attitude of Poland and the Poles toward Russia?

The Poles know Russia from age-long contact and bitter experience. They know what Russian oppression means, they are familiar with Russian gallows and prisons, with nahajkas and Siberia, with concentration camps and Russian methods.

They had refused to join Germany in a campaign against Russia, were stabbed in the back by Stalin in the darkest hour of their

history, suffered unspeakably while Stalin and Hitler were allies, yet when Germany attacked Russia the Poles were the first to stretch out their hands in a gesture of sympathy, expressing strongly their will to fight on the side of Russia against the Nazis.

The Poles forgot and forgave, spoiling to get into the fight again, to beat the Nazi beasts.

Just then Stalin told them that half of their country will be grabbed by Russia.

After liberating Lwow and Wilno from the German yoke the Polish soldier, hailing from Wilno or Lwow was to agree to hoist the Communist flag and to become a Russian and a Communist.

Just then—when he was ready to forget the cruel treatment in prison or concentration camp the Bolsheviks told him that he will be given a chance to fight and expel the Germans from his village or town and turn it over to Russia.

Yes—and the Steels and Jacobs and others want the Poles to change their attitude, to love Stalin and to hand over half of their country—to the * * * Russian preachers of democracy.

You hear the overloud clamor:

"The Poles must change their attitude."

You will now bear witness to a tragic campaign of pressure on the Polish government to be formed.

Puppets are wanted.

"Patriots" who should sign a partition of their country, unconditionally surrendering to Stalin.

Here is a Red logic:

The Polish Government has authority to say "yes" to Russian demands. It would be voicing the will of Poland and of the Polish nation.

But it has no authority to say "No."

In that case it is composed of landowners (what a crime to own land), tycoons, reactionaries, and, of course, disrupting the unity of the Allies.

Pressure and threats are being used now to browbeat and stifle the true will, the free and only will of the Poles to get back to Poland and not to Russia after this war has been won.

America's voice is needed now.

Now is the time for the United States to make it clear to the Poles that America does not join in any pressure and that America will permit the President of Poland to form a government that will have the authority of the constitution of Poland and the moral and legal power to speak in the name of Poland.

It seems to us that a political crime is in the making by this strong, unjust, and harmful pressure.

It is a distortion of history before its birth.

It can only breed tragedy as did other such acts before.

Poland is a valiant ally and has won her right as an equal among equals in the family of nations.

Hers was the greatest contribution. It was given at a time when treachery and appeasement were virtues and wisdom.

Let us not beat Poland to her knees before the Russian dictator while many hundreds of thousands of soldiers, marines, and fliers are dying and ready to die for the common cause, when millions of Poles are engaged in their tortured country in the most cruel war against the Nazis.

America should not take part in a foul game that is pregnant with tragedy.

We want no share in the responsibility for what may be the outcome of using threats to dictate now what kind of government the Poles should have.

Stalin will recognize no one, except a puppet of his own choice.

The Atlantic Charter specifically brands such interference as against the aims of this war.

The spirit of America does not tolerate such diplomacy—the diplomacy of a political hold-up.

PETER P. YOLLES.

Foreign Policy for Post-War United States

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Policy for Post-War United States," published in the Washington Times-Herald for June 6, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY FOR POST-WAR UNITED STATES

There are moments when we feel highly optimistic about the war—that Germany may be licked this year and Japan next—and there are moments when we feel pessimistic about it. We suppose all of us have these alternating currents of optimism and pessimism; and maybe they are controlled by the amount of calcium, vitamin B, or whatnot in one's system at any given moment.

Whatever the cause, this is one of our more pessimistic moments. At this time it looks like a long war to us, despite recent cheering news. We have a feeling that the boys won't be coming home for good for maybe 2, 3, or 4 years; that many of them won't be coming home at all; and that many more will arrive home minus arms, legs, or other useful parts of their anatomies.

Those that do eventually come home, though, will be men—tough men, grim men, with first-hand knowledge of how fine a place the United States as they knew it was in comparison with the places they will have seen.

When they come home, the United States will be in effect theirs, and rightfully so, because they will have saved it from conquest and slavery and brought it to victory over a horde of barbaric enemies. These men will be entitled to run this country, not we who stayed at home and cheered them on with eloquent words while cussing the wartime deprivations on the home front.

There will be some ten or twelve million of them—which means that if they form a fairly well-integrated bloc with intelligent leadership they can hold the balance of political power throughout the Nation, and can hold all Government policies that amount to anything.

If they react to this war experience as their fathers reacted to the 1917-18 thing, these men will have two prime desires when they get back: That they themselves will never have to go to war again, and that their children will not be dragged into another war 20 or 25 years hence.

They can't make certain of either of these things, any more than their fathers could. But they can force this country, over the objections of the pacifists and the warweary, to adopt a standing policy of adequate national defense and stick to that policy.

Such a policy would call for the world's finest air force, for plenty of submarines manned with trained crews at all times, and for such surface warships as we may need. It would also call for an army capable of being expanded to war strength almost overnight, because based on universal compulsory military training.

Even the most aggressive nations think a long time before they attack a nation which they know to be well armed and ready to fight. We spent $76,000,000,000 on the war in the fiscal year ended July 1; expect to spend around $100,000,000,000 this fiscal year. Had we spent $5,000,000,000 a year on our defense set-up ever since World War No. 1, we could in all probability have stayed out of the present war or gone into it, as we preferred.

WHERE DO WE GO FROM HERE?

Representative CLARE BOOTHE LUCE (Republican), of Connecticut, remarked in a recent speech that the United States has no foreign policy. There is a great deal of truth in Representative LUCE's statement.

We used to have a foreign policy; namely, stay out of Europe's eternal wars.

We abandoned that policy under Woodrow Wilson, and again under Franklin D. Roosevelt. In World Wars Nos. 1 and 2, our foreign policy has been nothing but Great Britain's foreign policy.

If we team up after this war in some world state run mainly by Great Britain and ourselves, we shall be hooked inescapably into the orbit of European politics. Every time Great Britain feels concerned enough over some European upset to go to war about it, we shall have to follow Britain into that war, as we have now done twice in a quarter century. And knowing that we are behind them with our great resources and manufacturing abilities, British statesmen will be the more encouraged to risk European wars.

We hope that the returning soldiers will insist on a return to our former foreign policy of staying out of Europe's eternal wars, minding our own business, and keeping our powder dry.

We realize that these sentiments are what are nowadays called isolationism, American firstism, treachery to the human race, etc. Nevertheless, we expect that a large majority of our boys will be found to entertain precisely these sentiments when at long last they come home from this global war.

The Issue in 1944—Americanism Versus "Globaloney"

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

THE ISSUE IN 1944—AMERICANISM VERSUS GLOBALONEY

The Washington battle between Vice President HENRY A. WALLACE and Secretary of Commerce Jesse H. Jones is not just a quarrel between two high Government officials who happen to dislike each other personally.

It is a clash between two points of view, two philosophies, which are now struggling for supremacy in this country.

Mr. Jones expresses his point of view—that of American individualism, under which this country swiftly became very rich and very comfortable—in his July 5 letter to Senator CARTER GLASS, Democrat of Virginia, about Mr. WALLACE'S attack on Jones and his associates in the Reconstruction Finance Corporation:

"If the policy of the Reconstruction Finance Corporation in dealing with private business at home and abroad, when possible, subjects me to Mr. WALLACE'S criticism, that cannot be helped. It is my belief that Government should seek to preserve private business, use it wherever possible in the war effort, and operate directly only when necessary. * * *

"As for the charge which Mr. WALLACE appears to regard as a major crime, that I have attempted to safeguard the taxpayers' money, I must plead guilty. Squandering the people's money even in wartime is no proof of patriotism. The Reconstruction Finance Corporation does not pay $2 for something it can buy for $1. Maybe no one does, but the point is that some men know when you can buy it for $1, some don't know, and some don't care as long as they are spending other people's money."

In thus stating his own views, Mr. Jones also broadly outlines Mr. WALLACE'S views. Mr. WALLACE is a leader of what can be called the "globaloney" school of thought. He summed up his philosophy in his remark some months ago that the outcome of this war ought to be to enable everybody in the world to have a quart of milk a day.

The "globaloney" program for this war and afterward is (1) to spend ourselves into national bankruptcy while the war goes on, and (2) to put the world on a glorified W. P. A. after the war, the American taxpayer, of course, to foot the bill. We can bet that no other nation is going to offer to pay any part of it.

And the "globaloney" school of thought is strongly entrenched in the New Deal administration. One of Felix Frankfurter's major activities as a leading professor in the Harvard Law School was to place bright young lawyers who thought as he did in key Government positions. Nowadays, Washington is full of these persons, and they wield great power; and their hope is to use this war as a means of bringing some kind of socialism or communism to the United States.

1944 ISSUE

This conflict between the Jones type of individualists and the Wallace globaloney slicers is sure, we think, to boil into the 1944 Presidential election.

By that time the war should be over or an Allied victory should be in sight. If the war is going badly for the Allies by that time, it will be because of mismanagement by our leaders of the huge resources, the tremendous productive apparatus, and the fresh manpower with which the United States entered the war after most of the other belligerents had been fighting for 27 months.

The New Dealers will insist that the only election issue is the winning of the war or of the peace, as the case may be.

The majority of Americans by that time, we hope, will realize that there is another issue; namely, Americanism versus "Globaloney." They will, if there is sufficient airing between now and November 1944, of such fundamental and far-reaching conflicts as the one between Jones and Wallace.

We think, too, that the more thoroughly the American people come to grasp the plans and intentions of the "Globaloneyites," the less they will like them and the more earnestly they will long to repudiate them at the polls.

Americans are accustomed to thinking and acting for themselves. That habit made us the powerful and wealthy Nation we are today. The "Globaloney" crowd wants to fasten on us a system under which all the thinking and deciding will be done for us by a great central brain at Washington—and under which we shall attempt to buy the presidency of the world by means of a world-wide WPA for the President of the United States.

The great majority of us, we believe, are opposed to any such overthrow of the American system, and will vote it down if given a fair chance.

Opportunity for Peaceful Cooperation Among All Races

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. DAVIS. Mr. President, the recent racial disturbances which have taken place in Detroit and in a number of other centers in various parts of the country have brought to light the need for a peaceful cooperation among all races, colors, and creeds within America, for the disturbances have shown us how great productive centers can be tied up and rendered virtually inactive whenever racial strife flares up.

Mr. President, the problem of racial security is one which must be solved, both in the interests of the war effort and in the interests of the future welfare and progress of the American people. It is a problem which the leaders of all races must undertake to solve in a just and reasonable manner, if the destinies of this Nation and the races represented therein are to be secure. For that reason, any constructive steps which can be taken by the Government to prevent racial strife and to promote the necessary unity and cooperation among all the American people will be steps well and wisely taken.

In this connection, Mr. President, I was pleased to read an editorial which appeared in the July 10 issue of the Pittsburgh Courier. The Courier is a Negro publication. The editorial, entitled "Opportunity Beckons to Us," represents a type of constructive thinking which cannot but help reduce the causes for race friction in America. The editorial deals largely with the post-war world, and it urges the American Negro to conduct his affairs in such a way as to equip himself for productive activity in the years which lie ahead.

Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD the editorial to which I have referred. A reading of the editorial by any impartial person will serve to make clear that the outstanding Negroes of America are sincerely trying to lead their people to a more effective participation in the Government and to a more productive participation in the various economic enterprises of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows.

OPPORTUNITY BECKONS US

After the war, America, the United States, must be remade. Everything we have now is being worn out. In a large, public way, we are going to need new housing, new schools, new roads, new bridges, new rolling stock for our vast transportation system, new communications. But in a more personal way, it is hardly necessary to remind that our automobiles are wearing out, our refrigerators, our radios, our rugs, our chairs, our tables, our knives and forks, many items of clothing irreplaceable now, our furnaces, our bathtubs, our garden tools. And the factories which used to make all these things are now wearing out their tools producing articles for war.

When peace comes, there must be new industries and new factories, for it is no secret that the wizards of American industry have already fashioned new aids to living and comfort that will provoke amazement from post-war Americans, such as that felt by the barbarous hordes of feudal Europe when they were first confronted by the dazzling civilization of the Saracens. There will be new automobiles, new radios, new devices for ease and enjoyment in the home. Recording has already been changed from discs to thin wires, enabling an individual to carry around in his pocket the recording of an entire musical library. Industries already converted to war, will have to be reconverted to peace.

These new industries and reconverted industries will require money, white money and black money. The industrial securities committee of the Investment Bankers Association has recently predicted new capital demands for the first 3 post-war years "should not be less than $5,000,000,000 for each year." The American Negro should not regard this prediction as prognostication for white folk only. This prediction has not only to do with the remaking of America, but also with the creation of jobs for some fifty-five or sixty million Americans, at least six millions of whom should be Negroes. Unless expert planning is done now, there are fears in responsible quarters that at least 20,000,000 Americans will be without jobs in the post-war period. That compares frightfully with the peak depression number of unemployed—13,000,000.

The Negro has a chance now to save his money to help himself when the new America is being made. Purchase and retention of Victory and War bonds gives him this chance. He can literally pile up a reserve of billions of dollars in capital through organized saving of Victory and War bonds. He can help to preserve some of the economic gains made during this war by using his saved-up resources to create enterprises that will provide him with new jobs as both employer and worker. The war is giving him a chance to acquire new skills that will qualify him for a superior position in industry in the future.

The American Negro has never been an integral, functioning part of American financial and economic life. His first opportunity to become such a part presents itself in this war emergency. This is the concrete silver lining behind the dark clouds of racial strife which beset us. There is hope. We can build for a brighter, more secure future. But the responsibility for doing so belong to us. We can't forget, nor ignore, the evils which plague us. But we must reserve some of our energy and some of our vision to exploit the opportunity which beckons. If we plan and save now, black money and white money, unemotional and unprejudiced, can help to blaze a trail after the war, a trail that will lead to greater economic security and the fuller life for all American Negroes.

Address by J. Clifford McManaway at Unveiling of Plaque to Inductees From Harrison County, W. Va.

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered on Independence Day by J. Clifford McManaway, at Clarksburg, W. Va., on the occasion of the unveiling of a plaque commemorating the men from Harrison County, W. Va., who have been inducted into the armed services.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Citizens of Harrison County, on this the one hundred and sixty-seventh anniversary of our independence, we are again engaged in a war in which our national existence is challenged.

We are met today to dedicate a memorial plaque, upon which it is our intention to inscribe the name of every soldier and sailor from this county who dies in line of duty in this war. There are now 27 names on the plaque. Reports of the death of six more men from this county have been received.

This memorial of our dead and the purpose to erect it in the most conspicuous place in Harrison County while we are at war is a project of La Societe des Quarante Hommes et Huit Chevaux, a branch of the American Legion. With the consent of the county court of Harrison County and with the cooperation of all the patriotic organizations of the county, this plaque has been placed here in the lobby of the courthouse, where it will be seen by every person who comes into the courthouse.

The plaque is carved from American walnut. It was designed by Aubrey Crawford, of Weston, and was executed by our fellow citizen, Rollin A. Frederich. It shows the Cross of Christ, the Hope of the World, arising from an earth in mourning, symbolized by a globe entwined with a broken wreath. The inscription is—

"Men of Harrison County. They died that we might live."

It is not my intention to recount the exploits, the heroism, or the virtues, of any of these men. In fact, we know very little about the manner of their deaths. In most instances, we have only the official message to the next of kin; your husband, son, or brother died in line of duty as a result of enemy action. These young men went forth, willingly, to fight, and if necessary, to die, that we, whom they left behind, might live in safety, in liberty, and be free to pursue our happiness in the enjoyment of those inalienable rights with which all Americans believe our Creator has endowed all men.

We cannot honor these men who have given their lives for their country. They have honored us, the members of their families and their fellow citizens. And we did not presume, when we caused this plaque to be raised with the names of these men on it, to honor these men. It has been raised in their memory that we, and every citizen of this county, when we pass this place and see these names, will remember the duty that we owe to these men. It was put here in the most conspicuous place in this county to remind us of an unpaid debt that we owe these men. This debt is plain. This debt is going to be hard to pay. But we, and every one of us, will be forever dishonored if we do not pay it willingly, and pay it in full.

Every member of the committee responsible for this memorial, and responsible for placing it here now while the war is still in its early stages, served in battle in the last war. Every one of them has offered his services to his country in this war but, due to age or disability, has been rejected for active service.

When we returned from Europe in the summer of 1919, we found that the people of the United States who had not been directly touched by the war, had already forgotten it. It was pretty much a breach of etiquette to discuss battle and death, and men physically and mentally broken forever, and, when those few of us who had been in Germany; had talked to German officers and leaders; had carefully scrutinized their attitude after the war and had taken the trouble to familiarize ourselves with their ideals; had read and heard their declarations that they would take their revenge and would yet rule Europe, and then the world, were rather less than politely laughed at. We were called warmongers, militarists, who wanted to strut in uniforms, or wanted a job.

The war was over. To American public opinion, and especially our pseudo intellectuals, there would never be another war. We, behind our two oceans, were safe from any aggression, and besides, training our young men for war, burdening our industry and economy with the preparation for modern war, interfered with everything that made life pleasant and agreeable. Compared to our population, our casualties in the last war were small. Few of our citizens were directly touched. And those who were not directly touched did not like to be reminded of the debt they owed to those who had suffered and died for them.

We, as a nation, failed in our duty to the men who died in 1918. We abandoned our allies. We disbanded our Army. We destroyed our Navy. And we entered four-power pacts and nine-power pacts with enemies who laughed at our imbecility as we left ourselves defenseless while demanding that all the world observe our declarations of policy, which we had no power to enforce. Our public followed the leaders who promised them something for nothing, and sneered at and scorned those few leaders who told them the truth. As a result of our failure to pay the debt we owed the men who died in the last war, the murderous and obscene Prussian empire was permitted to reconstitute itself. Of the men who were responsible for the death and havoc of the last war, not one was punished. Seeing that there was no real penalty on failure, the Prussian and Japanese war lords were encouraged to go forward again with their long-cherished plans of conquest. As a result of our neglect of our national duty, our friends and neighbors—whose names are on that plaque—have been murdered. Their homes are desolate. Millions of people in Europe have died, and many more millions in Europe, and all over the world, have been reduced to a degree of misery and degradation worse than death. And today, it is only due to the strategical errors of our enemies that we have had an opportunity to prepare to defend ourselves and to remedy the mistakes of the past 20 years. Had England been invaded after Dunkerque; had the Japanese attacked Pearl Harbor with an army of occupation, the United States would now be the battleground.

And the reason for this plaque—and the reason for its being where it is—is that those of us who are responsible for it have determined that if the citizens of this county this time forget their obligation to these men who have died that they might live, they will do it deliberately. Their obligation will be before their eyes every day. I hope and trust that a similar plaque will be placed in every county in the United States, in every big factory, in every church, in every great business establishment, so that every citizen, as he goes about his ordinary affairs, cannot miss seeing the names of his own dead and realize that to them he owes his life, his liberty, and his privileges as an American citizen.

This plaque is not a monument to these men whose names are now on it, or to those whose names are to go on it. Their monument is an unravaged coast; undestroyed cities; women and children and old men living in decency and peace and freedom. This memorial is directed to us—to the citizens of Harrison County—to remind us that we owe these men a debt, and that that debt is: This must not happen again. The victory must be won—victory absolute and complete. And we must make and keep ourselves, our own Nation, strong enough to maintain the peace that we will have won.

We come here in holy righteous anger, resolved that the men who are responsible for this war must be punished personally. Their punishment must be dire and terrible. It has been said that you cannot indict a nation. That is right. A nation cannot commit a crime. Crime is committed by man. The names of the men who have committed this crime are known. They must be sought out, hunted down, wherever they take refuge, tried, and, when found guilty, punished.

The whole Prussian Junker class responsible for this war have lived on, and for, war since 1660. That class must be destroyed. This Prussian, so-called German, Empire is an artificial monstrosity, created by "blood and iron," forced on an unwilling population that has been turned into an instrument for making war by a group who glorify war as an end in itself, who have made war a substitute for religion, and worship brute force as we Christians worship charity and the love of God and our neighbor. That Empire must be destroyed.

Japan is a pagan nation, with a deified ruler, governed absolutely by hereditary clans of warriors who, in their hearts, believe that they are appointed by their god to rule and govern, not only the Japanese, but the world. They believe this as revealed religious dogma and they believe that war is their only honorable occupation.

If we are going to realize what we are fighting we must realize that the Prussian Junker and the Japanese Samurai are absolutely sincere that what we are fighting are not wicked men doing something they know to be wicked and bad, but honest fanatics, sincerely believing that they are doing the will of God. What we are fighting is heresy, and that heresy is the denial of the freedom of the human will. These deliberate Japanese atrocities, such as the organized mass rape of English nurses and the execution of the American flyers who bombed Tokyo, are calculated to make it impossible for any group of Japanese to eliminate the Samurai from power and make peace. The same is true of the Nazi atrocities in Poland, in Greece; the deportation of the youth of France as hostages; the deliberate extermination of the natural leaders of the people of Norway, Holland, and Belgium.

There is no possibility of our making peace with our present enemies. There is no common ground upon which we can meet. Our differences are fundamental. Either we have to turn our whole civilization into an instrument for making war for conquest, or we have to destroy these enemies, so that peace can be established on this star we call earth.

I make no pretense of being a military expert, but for a moment let us consider

the strategical situation as it is today. Our only effective help is the British Empire and the Soviet. France is prostrate, but we may create an effective ally in the French Empire. Hitler today has possession of every part of Europe that he needs, or will need, for the next 25 years, with an armed zone of defense from three to five hundred miles deep around what his writers have called the heart of Europe. Within his boundaries he has everything he needs for making war—provided he is permitted to develop it. The same is true of Japan and her conquests in the South Pacific. Either one of them would be happy to have a year's truce, or a 5-year's truce, or a peace that might last for a generation, with conditions remaining exactly as they are.

It is true that we have driven the Axis Powers out of north Africa, a campaign our military leaders had confidently expected to complete—as Mr. Churchill told our Congress—before the first of January. Now, we are taking the offensive. Let us consider whether we have won the offensive, or whether the offensive has been thrust upon us, and always remember that our capacity for waging war in Europe does not depend upon ringing statements from Casablanca, but does depend upon the amount of shipping space available for the transportation of troops and materials of war to the scene of war. Except from the air, we are not yet in contact with the German armies. And, so far as I know, there is no military opinion to the effect that the Russians can wage a successful offensive against the German armies. At best it is hoped that they can hold them. In the East the situation is the same. We have to dislodge the Japanese. We have to search out their fleet and their armies, and destroy them. For God's sake, don't let anyone deceive us into thinking that this is going to be done easily, or rapidly, and without terrible cost in blood and treasure.

We were forced into this war because it was and is the apparent fixed resolution of our people, our politicians, and our so-called intelligentsia, not to see things as they are; to deal in names instead of realities. Every German and Japanese writer for the past 20 years has told us that their strategy calls for a long war. That the virtue, the manliness, of the people of the United States has been sapped by ease and luxury. That its public opinion is effeminate, and that the United States cannot, and will not, take the losses and privations that a long hard war necessarily entails. This low opinion of our national war morale is based on evidence. In the last war our allies and our enemies say that we went from absolute indifference to hysteria in 8 months. They are acute students of public opinion. They are convinced that mass emotions come in waves, and that action and reaction are equal and opposite in direction, and they feel that after our first enthusiasms after privations become universal, when the casualty lists start to come in by thousands, our civilian population will become revolted and will force our Government to make a peace that will apparently leave us entirely unimpaired, but will leave our enemies in a position to develop and consolidate their conquests, and to so tremendously increase their power that when they are ready for the next phase they can and will destroy us.

It is our duty and our debt to the men whose names are on this plaque, and other similar memorials throughout the country, to see that no peace is made until victory is complete. And when victory is won we have the further and imperative duty to see that after the peace our Nation is secure—our own Nation. These men did not die for democracy. They died for the United States of America, its people, its principles, and its institutions. Of course, we will cooperate with our allies to insure peace. Of course, our allies will agree to cooperate with us to insure peace. But let us hope that we will never again rely on treaties to secure our peace. We cannot possibly depend on the guaranties of others. Where are the democracies of Europe that relied on the strength, the promises, the guaranties of others? As General Johnson said in 1940, "There are 10 of them, from Czechoslovakia to France, hanging like the slaughtered corpses of Bluebeard's wives in Hitler's bloody closet." We have no right to depend upon the strength of any nation for our national existence. We must rely on our own strength and the courage, patriotism, and loyalty of our own people.

Assuming that the victory has been won and we are making the peace, who, with us, are going to determine the fate of the world? Remember that Russia ceased to exist in 1918. The Union of Soviet Socialist Republics is not Russia, just as the United States is not Texas. And the Union of Soviet Socialist Republics is not at war with Japan. The British Empire is not a democracy. For example, General Montgomery owes no allegiance to the British Empire. He is not an Englishman—he is a citizen of Northern Ireland. His oath of allegiance does not run to England, Northern Ireland, or the British Empire. He swears loyalty and allegiance to his King. So runs the oath of every officer in the British Imperial Army. France, Poland, and Czechoslovakia and the Baltic states were republics. They have ceased to exsit. China is a republic, but China is not a nation. It is an empire, like Germany, consisting of a number of nations. And it would indeed be a daring man who would try to count on what will come out of the chaos we now call China.

Our fuzzy-minded intellectuals who talk about a supernational government—to which we will trust our destinies—cannot be permitted to prevail. These men whose names are on this plaque died to defend the American way of life. And our duty to them is to preserve these United States—true to the principles upon which it was founded—because they and we believe these principles are right.

We will do well to occasionally stop and think why we are in this war. We did not declare war on Japan, Germany, or Italy. In a crusade to save democracy to the world we definitely refused the crusader role. We were attacked without warning by Japan. Our men at Pearl Harbor were brutally murdered—not killed in war. And Germany and Italy declared war on us. The Union of Soviet Socialist Republics entered on no crusade for democracy. Stalin's treaty with Hitler gave Hitler a free hand to attack Poland. Without that treaty he would not have dared attack Poland.

And, as consideration for this free hand, Stalin was to get the part of Poland that he occupied. Stalin's treaty with Japan gave Japan a free hand in the South Pacific, and, without this treaty with Stalin, Japan would not have dared attack Pearl Harbor, because if we had Siberian bases for our planes, Japan could not wage war. Now, Stalin's existence depends upon us. Would not now be the time to get the bases we need in the Soviet Socialist Republics of eastern Asia?

If we have one settled principle of foreign policy it is that the United States will not recognize the title of the conqueror to territory acquired by force. Unless we abandon this principle, Poland and the Baltic republics occupied by the Soviet, must be restored.

How can we enter into a superstate where no two partners agree upon the fundamental principles upon which all just government is based? The Soviet Union acknowledges the validity of no principle enunciated in our Declaration of Independence. As said by President Roosevelt on February 11, 1940, "The Soviet Union, as everybody knows that has the courage to face the fact, is a dictatorship as absolute as any dictatorship in the world."

But we can do business with the Soviet Union, who, like us, is engaged in war against Hitler. And we can do business with our allies, and with them we can make peace, but only if we deal with them as they are. Then let us have the truth, not nauseating propaganda like the picture Mission to Moscow. We are not children. We are men. And if we are permitted to know things as they are, and deal with realities honestly, trading consideration for consideration, the public will support the Government, and, as a Nation, we can preserve the peace of the world, but only if as a Nation we are resolved to allow to other nations those privileges which we demand for ourselves That is, to determine for themselves their own form of government.

And we can do our part toward peace, and we can pay our debt to the men who died in 1917 and 1918, and to the men whose names are on this plaque and to the men who are dying for us today, if we will prosecute this war to a final and complete victory, and, when peace comes, accept the sacrifices and the hardships necessary to maintain ourselves strong enough to defend ourselves and our liberties against any combination of enemies, and to that end, make alliances with our allies, depending ever not on our allies, but on our own strength and resolution and the loyalty and patriotism of our own people.

Bond Rally Address by Maj. Gen. James A. Ulio

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able, interesting, informative, and patriotic address delivered by Maj. Gen. James A. Ulio, The Adjutant General of the United States Army, at a bond rally held at Somerset, Pa., on July 5, 1943.

At this time I wish to take advantage of the opportunity to say that, in my opinion, General Ulio has made a very efficient, and a very fine Adjutant General of the Army. No man more competent could have been selected, and no better man has ever filled the position of The Adjutant General of the United States Army.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ordinarily this would be a difficult assignment for me to undertake, for I am neither an orator nor a salesman.

However, in taking part in these ceremonies incident to this War-bond rally, I feel that neither of these qualifications are of particular importance.

As free Americans I know full well that you are more than willing to do your individual share in the matter of assisting your Government finance its war program, a program in which we all share such a vital stake.

From that 1st day of May in 1941, when our Commander in Chief purchased the first War bond, then known as Defense bonds, the people of this Nation have responded to successive War bond and stamp drives in a most generous and patriotic manner.

Quota after quota has been met through the united efforts of a free and independent people who have been only too willing to underwrite their own and their Nation's future through the purchase of these bonds and stamps.

But we cannot, we must not be satisfied with the goals that have been attained in the past. Our sights must constantly be raised to meet increased demands of the armed forces for vast new quantities of munitions and equipment.

I sometimes wonder if our people, in buying their full share of bonds and stamps, fully comprehend the vital necessity of their purchases in direct relation to the prosecution of the war. Only when such a realization is had, can one feel that he or she is contributing directly to the downfall of the enemy.

Speaking as The Adjutant General of the Army, I want to tell you frankly, yet briefly, some of the reasons why your individual bond and stamp purchases are so important.

Today we are fighting a new type war, a war in which the balance of power is held—not by men alone, but by machines and weapons of modern warfare. In every campaign, in every battle in which American soldiers have taken part the outcome has been decided, in the final analysis, by the quality and quantity of our weapons and equipment.

We are engaging the enemy not on one continent, not on one hemisphere but in battle areas throughout the world. We have in the field today the largest Army in the history of this Nation; we have the largest Navy ever to fly the Stars and Stripes on the high seas, and, in the air—we have the world's most powerful air force.

Today, in the Army, we have whole divisions which are completely mechanized. We have the finest and best equipment had by any army in the world. It is hardly necessary for me to tell you that the cost of equipping and maintaining an army the size of ours is stupendous. The sum of money required to run the Army for a single year runs into figures which stagger the imagination.

Statistics are seldom interesting, and it is not my purpose to bore you with them today. There are, however, a few figures—relative to the cost of Army equipment—which I should like to recite as a means of giving you some insight into the tremendous amount of money required to equip the Army alone. Large sums are, of course, also necessary for the maintenance of the Navy, the marines, and the Coast Guard.

A single heavy bomber costs $300,000; a medium bomber, $175,000; a small fighter plane, $75,000; a 60-ton tank, $145,000; a medium tank, $90,000; a light tank, $45,000; a 75-millimeter antitank gun, $10,000; a 90-millimeter antiaircraft mobile gun, $43,800; a 25-ton pontoon bridge, $130,000; a Garand rifle, $80; a 155-millimeter howitzer, $32,700; a .50 caliber machine gun, $740; a scout car, $7,500.

These are but a few, but they are nonetheless typical of modern Army costs. Multiply them thousands, yes, hundreds of thousands of times, and you can have some slight conception of Army costs in World War No. 2.

Consider the cost of a single bomber in relation to the great fleets of bombers of the Army Air Forces, fleets which the commanding general of the Air Forces stated a few days ago would be augmented by 115,000 new planes during the coming year. Consider the cost of a tank in relation to the great numbers of these mechanized giants which are now possessed by the Army Ground Forces.

Only when we have some idea of the cost of maintaining our armed forces can we have a clear understanding of how important is the purchase of every bond and stamp, regardless of its denomination.

Every single 10-cent stamp helps. An idea of what can be accomplished in the aggregate through their sale may be had by the results attained in the selling of stamps by the Nation's newsboys. I am informed that sales conducted by the newsboys thus far have totalled some $75,000,000, a most remarkable achievement on the part of these energetic youths.

I like to look upon the purchase of a bond or stamp, not as a personal investment on the part of the purchaser, but rather as a very definite investment in America. For today, we are engaged in a war of survival against the forces of tyranny and oppression. We are passing through the most critical period of our national history. You good people on the home front, through such efforts as bond and stamp purchases, are just as important to the successful prosecution of the war as any man in the Army, the Navy, the Coast Guard, or the Marine Corps. For this is a people's war which will tax every energy and resource at our command.

The importance of bond and stamp purchases has been strikingly evidenced by our soldiers themselves, particularly those on the fighting fronts. Our reports in the War Department indicate that a large percentage of American soldiers overseas are regularly buying bonds, for they know only too well, from actual experience, the part their money, along with yours and mine, is playing in providing them with the sinews of victory.

Well over half of all American soldiers in the European theater of operations are now participating in the Army's bond reservation pay-roll plan. What greater incentive could we ask than that provided by these soldiers (officers and enlisted men alike) who, in addition to actually waging the war against the enemy, are also investing heavily in bonds and stamps.

Despite the great numbers of men now in the Army, there are many thousands of our citizens (men and women alike) who are not privileged to serve in their country's armed forces for one or several reasons. They are, nevertheless, patriotic citizens with a high sense of devotion and duty to their country. These folks at home have and will continue to form the great backbone of the bond- and stamp-buying public.

Our soldiers in the Army throughout the world are depending on you for more and better equipment. I know you will not let them down.

The dividends you will receive from them in the form of American and United Nations triumphs on the field of battle will make your financial sacrifice seem small in comparison.

Your bond and stamp investments now will insure for you and for them a future in an America whose twentieth-century destiny is at this very moment being forged on battle fronts in Europe and in Asia.

The Food Program

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address by former President Herbert Hoover, delivered before the American Farm Bureau Federation, in New York City, on June 8, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I propose tonight to make a checkup on where we have got to on the food front.

I propose to explore what happened during the 1942 food year.

I shall then examine the prospects before us for the 1943 food year.

I shall from this experience and the world need state our problem.

And I will make some recommendations for the future.

The strategy of the food front is second only to the military front in winning total war. It is of more importance than the military front in establishing peace. Total wars can be lost on the food front. Failure to recognize the importance of the food front has lost wars before now.

Through the glorious courage and ability of our Army and Navy we are making progress against a most cruel and mighty enemy. We grow stronger on the military front. We must now build up the food front. It should be reorganized again. Our job is not destructive criticism. It is to contribute constructive suggestions. The only thing that counts now is to win victory and secure the peace.

To those who are not familiar with food problems, let me say that our food year is approximately from July, when the harvest starts, to the next July, when it begins again.

THE FOOD YEAR 1942–43

We are still eating mostly on the 1942 production.

Newspaper headlines of official statements from Washington as to our present food year read:

"The most abundant harvest in 41 years."

"Harvest per acre 12 percent above all records."

"There are abundant food supplies."

"The ever-normal granary assures no shortages of food."

"Greatest food production in our history."

"We have more beef cattle, dairy cows and hogs than ever before."

"Food Administrator says food outlook is good."

This happiness and exultation in Washington did not seem to be reflected in the realistic land of housewives. A few quotations from many thousands of city press headlines over the last 4 months carry less enthusiasm.

New York City: "City facing first famine in our history." "Less than 20 percent of normal meat supplies for 8 weeks." "Shops cannot supply the Government ration." "Prices above ceilings." "One thousand and fifty-five black-market convictions."

"Mayor comes to the rescue and imports 600,000 pounds of potatoes."

Thus the mayor was lighting up the dark scene with 1 potato for every third person among the 7,000,000 people in New York. The headlines blazed for days over the mayor's having "secured 1,000,000 pounds of meat." That nourished each person with a gorge of meat equal to the weight of 2 silver dollars for just 1 meal. The mayor, however, was doing his best to keep up good cheer.

Boston: "A desperate food shortage." "Meat and vegetables nonexistent to thousands of families." "Arrivals lowest in history." "Hundred indicted in black markets."

San Francisco: "Shortage of meat and vegetables critical all along the coast." And even in the food belt we hear:

Chicago: "Shortage of meat, vegetables; black markets all about." "Housewives cannot find meat promised on ration cards."

CITES CITIES' PLIGHT

In Philadelphia, Baltimore, Cleveland, Seattle, Omaho, St. Louis, and a dozen other cities,

are headlines of the same import: "Scarcity," "Famine," "Black markets," "Shops closing; Cannot get the ration in meats, fats, vegetables."

Somehow all this leads me to the notion that the situation is bewildering.

The statistics are also perplexing. The Department of Agriculture states that the extraordinarily favorable weather at last harvest gave us a 12-percent greater yield an acre than ever before in our history. It shows a greater production of meats and fats than ever before in our history. Lend-Lease says we are shipping under 10 percent of our total meats and fats abroad. Office of Price Administration says it has rationed down meat consumption by 30 percent. Seaboard city marketing officials say not half of the meat and fat ration is available in the markets. Perhaps some statisticians can tie these figures together. They might also try to tie up the potato figures. I am aware of all the explanations. But one thing is certain. If the statistics are correct, and I do not challenge them, then some bureaucracy is strangling the flow of food from the farmer to the housewife.

RECALLS CROP LIMITATIONS

But underlying all this turmoil there is a fundamental disorder. It may surprise some people to know that in the 7 years between the harvests of 1932 and 1939, through Government restrictions, the acreage in 17 leading crops harvested was reduced by 47,000,000 acres. These 17 crops are about 95 percent of our whole harvested area.

When lend-lease was passed in March 1941, we undertook thereby a vast increased burden of food production. Yet payments to farmers to restrict production were not all removed for the two plantings of 1941 and 1942. By 1942 we had recovered only 9,000,000 of these 47,000,000 lost acres in the 17 leading crops.

During the last year we were saved, and our allies were saved, from disaster by the superbumper crop. It is not likely to be repeated soon.

1943 PROSPECTS

However, we have eaten our way to the end of that superbumper crop. We may, therefore, explore the prospects for the next food year that is now just coming on the horizon.

Two years ago, 1 year ago, 6 months ago, you and I warned that failure to place food production on an equality with munitions would bring disaster. Last winter the Midwest Governors, Congress, your organization, all of us, demanded drastic reforms in food control, increased manpower for the farms, and more farm machinery. We wanted to recover more of the 47,000,000 lost acres.

Following this, the Department of Agriculture issued a report on farmers' intentions to plant, indicating an increase of 4 percent in the acreage the coming year over that of last summer. The implication of that figure to the public was a probable increase of 4 percent of food over the superbumper harvest of last year. We vitally needed an increased production over last year. But to assure this with normal yields we should have had, not a 4-percent increase, but a 15-percent increase in planting. However, the use of this comforting 4-percent figure led the country into a statistical paradise. And such is the power of statistics that the demands for reform were flattened out. We were told we were alarmsits and something worse.

SOME REFORMS WON

We did secure part reforms. They were not accepted with the speed of light. But finally the War Department, after unkind remarks, gave concessions by deferring some farm boys from draft. The War Production Board authorized a modest increase in farm machinery. One more agency was added to the eight separate and conflicting agencies dealing with food. It was all too little and too late.

Now let us examine what has become of this statistical paradise of increasing food supply. To present to you an independent view, I have canvassed the agricultural authorities in several leading farm States. These reports indicate that the 4-percent increase is likely to vanish. And the indication is that we shall have a normal, not an extraordinary, yield like that of last year. If so, we will have a decrease in the national grain crops of anything from 10 to 15 percent from that of last year. The outlook for wheat and rye is certainly a decrease of 260,000,000 bushels less than 1942, or at least 26 percent.

We have increased our flocks and herds beyond our ability to feed them without the lost 47,000,000 acres. The agricultural experts are estimating a shortage of 10 percent to 15 percent in full supply of feed for our animals during the next year. We can get some feed from Canada. But it appears that we will have about exhausted the surplus of feed of the whole North American continent during the next 12 months. Already we are feeding large amounts of wheat to our livestock, and we are using it for industrial alcohol. By this time next year we will have a little surplus of bread grains beyond our own needs.

WHERE BLAME RESTS

Thus our supply of food is declining while at the same time the demand is dangerously rising. And these decreases cannot be blamed upon floods which have destroyed less than one-half of 1 percent, nor upon the weather, for that promises about normal crops. Nor can they be laid upon the farmer.

The American farm folks are the most skilled farmers in the world. They produce more per person than any agricultural people on earth. They have done a heroic job in planting this crop with but little help. In January last they were promised an agricultural army of 3,500,000 city folks. But it has not arrived at the food front yet. They must be there before the harvest.

The blunt conclusion from all this is: (a) Our cities will have less food supply during the next winter and spring even than they had in the last few months; (b) we will not starve; (c) we can, by better organization, and by tightening our belts, continue to feed our allies; (d) if the war in Europe should come to an end within the next 12 months, we should have no consequential food supplies with which to meet three or four hundred millions of starving people.

PREPAREDNESS FOR THE HARVEST OF 1944

Remedy for the 1943 harvest year is now too late, as the planting is mostly done. We must begin to build up the harvest of a year from now. That is in 1944.

We still have time to redeem the situation. If it is to be redeemed, we must have far wider vision. We must have drastic changes in national policies.

We simply must take seriously certain elemental facts. We must realize that the major burden of the world's food front falls on the North American farmer and the American consumer. We must realize that in peacetime on balance, we are a food importing country and today we are blockaded against many imports. We must furnish extra food to our military forces. We must ship large amounts of food to our Allies to support them in the war. We must realize that there is a minimum level in food for our 130,000,000 civilians without impairing their physical and moral resistance.

And we have also pledged ourselves to hundreds of millions of people in the world that they will be rescued from the terrible famine which has been brought upon them by a monstrous enemy. Without this action there will be no peace.

We must realize that this food shortage will last for a minimum of 4 and possibly 6 years. These are stupendous burdens.

THE ANSWER TO HITLER

But we have an answer to Hitler.

We can ration down our own consumption further with good management. And we can make sure that we do not lose the war on the food front if we stop the degeneration in agriculture and bring in a far greater production in 1944. We must do it. Otherwise we are headed for a world trouble. We have the resources to do it.

As a foundation for 1944 we must get all that lost 47,000,000 acres back into cultivation. To do that our authorities must decide whether they will spare the manpower and farm-machinery manufacture from other activities. And we must begin now or again it will be too late and too little.

REFORM IN FOOD CONTROL

Organizing the food front means far more than just increasing acreage, manpower, and farm machinery. It also requires wise coordination of prices, of processors, of distributors, and rationing.

A month ago the press reported a spokesman of the Office of Price Administration as saying, "Food prices and food distribution are out of control." It was denied by another spokesman next day. But the second spokesman had not discussed it with the housewives nor with the farmers. However, when we are fighting a war grief over spilled milk does not make more milk. Our question must be, Where do we go from here?

There is only one course which will clear up this muddle of uncontrolled food prices, local famines, profiteering, black markets, and stifled farm production. That is to abandon the obsolete methods now in use which were proved a failure in other nations in the last war or are copied from the British whose situation is wholly different from ours. We should start with the system which proved a success under the Americans in the last war and improve it.

And let me say this about food control while we were in the last war:

LESSONS OF LAST WAR

We steadily increased our food production. We shipped more food to our allies monthly than is being shipped today. We had no local famines in the United States as we are having now. We had no black markets. We had a people zealous in a moral crusade to help win the war with food, instead of lots of people trying to beat the game. Including the Department of Agriculture, we had only 23,000 paid Federal employees connected with food. Today we have over 120,000. Moreover, food prices rose only 17.9 percent in the 17 months after we declared war in 1917. Washington statisticians admit a rise of 24.3 percent in the 17 months since Pearl Harbor. The housewives will admit a rise of at least 35 percent.

I do not pretend that our methods were perfect in that war. We had to pioneer an unknown field. Results ought to be better in this war and not worse.

A PROGRAM

But what should we do now?

First. The first necessity is to consolidate all authority over food production and distribution under one single responsible administrator. There are too many cooks for too little food. Control of food is now divided nine ways over the Department of Agriculture, the Office of Price Administration, the Lend-Lease, the Board of Economic Wel-

fare, the Army, the Navy, the Manpower Commission, and the War Production Board.

The recent addition of the ninth wheel, even though so able a man as Mr. Chester Davis as Food Administrator, does not make a food administration. The food functions of all these agencies must be moved into his office. He must have the right to hire and fire. The Food Administrator must today be Secretary of Agriculture, and the importance of food in the outcome of the war and peace should be recognized by his appointment to the new Office of War Mobilization.

Second. Decentralize the work under State, municipal, and county administrators. In no other way can farmers' and consumers' needs be adjusted to our varied local conditions.

Third. Increase the manpower on the farms to a higher level than before the war and plant 40,000,000 or 50,000,000 acres more in 1944 than in this year. On this question of manpower I offer a suggestion because we must have more skilled labor on the farms.

Public pressure upon our farm boys to join the forces is very great. They are not slackers and do not want to be called slackers. They do not want their gates painted yellow. They are doing a great and indispensable service. If we are to save this situation, I believe farm boys should be called to the Army from the farms immediately after this harvest; that the farm boys should be called up from industry; that they should be given some military training. Then as many of them as are necessary should from time to time be ordered back to the farms with their uniforms. They should receive their pay from the farms, and not the Army. They should be subject to call in national danger. That would give dignity to their service. They could constitute a great national reserve both for production of food and the direct military effort.

Fourth. Agricultural machinery on an average lasts about 12 years. Theoretically about 1 years' supply or one-twelfth of our machinery has been used up through suppression of manufacture. It will also require great additions to handle this extra 40,000,000 or 50,000,000 acres in 1944.

Fifth. Abolish the system of retail and wholesale price ceilings. It begins at the wrong end. Price fixing in a great food-producing country must begin as near as possible to the farmer and controls proceed from there on by regulation of the trades against profiteering. Prices rose less when this system was applied in the last war than they have under the present retail ceilings. We must regulate the flow of water at the nozzle instead of chasing the drops from the shower.

This present price system is stifling farm production. It is not stopping inflation.

Sixth. Ask the farmers to appoint their own war committee on prices and do a little collective bargaining with them in fixing prices. The so-called parities should be abandoned for the war. Prices to the farmer must include floors as well as ceilings. Prices should be fixed that will take into account labor and other costs, and above all that will stimulate production.

Such a revolution in the price system would save a few tens of thousands of policemen. It is difficult to catch an economic force with a policeman anyway.

Seventh. Rations should be set to balance consumption to production. It only adds muddle to put the ration higher than the available supplies. And it brings great injustice, for some people get the ration and some don't. We should simplify the whole rationing business by over 50 or 60 percent. It can be done by decreasing the number and variety of articles rationed and by excluding all absolutely nonessential food from rationing.

WAY TO CHECK INFLATION

It would certainly give a mighty lift of spirit to the housewife and to the grocer. Also it would save some of their time for other war duties. Also a good way to check inflation is to let food luxuries go to the highest bidder. That would spigot off spare money and get it into channels where the 90-percent-profit taxes can bite into it.

Eighth. We should recognize that processing and distributing foods are righteous and necessary callings. Thousands of small firms are being driven out of business. It would help win the war if left-wing reforms in our food economy were suspended for the duration. We should establish war committees in all the processing and distributing trades. They should be given major responsibilities in keeping the flow of food moving to the right spots. They could greatly assist State and local officials in policing the trades. They, too, have sons in the war. They are just as patriotic men as lawyers and economists. They are the only people who know how. Their interest is to stamp out black markets. And their profits can be absolutely controlled.

CURB ON BLACK MARKETS

Enforce the condition of dealers' licenses so that they may deal only with another licensed dealer and then direct the railways and trucks to transport only for licensed dealers. This would stop most of the black markets.

Ninth. Such a system will avoid subsidies either to farmers or the trades or the consumers. Subsidies will not stop inflation. Subsidies are a delayed aggravation.

The New York Times properly says they "do not in the least deal with primary causes. They are like cleaning a room by sweeping the dirt under the bed."

And who is supposed to benefit by subsidies? It is supposed to be the worker, but the worker is also the taxpayer. So is the farmer. And taxes are, sooner or later, increased by just the same amount as the subsidy. Subsidies consist of taking money out of one pocket and putting it into another with an illusion attached that the cost of living has been reduced. It is both more painful and more costly to take money out of the tax pocket than it is to get it out of the price pocket. A wage based on subsidy foundations will break down sooner or later. Moreover, subsidy money increases Government borrowing and debt to the banks and that adds to inflation pressure. Far more serious, however, is the result to the farmer and the consumer. Price fixing based on any such concept will strangle production. Its operation in the distribution trades will clog the flow of commodities and will in the end increase prices and black markets. Likewise, subsidies can become a weapon of favoritism or of punishment in the hands of the huge bureaucracy. They will sooner or later lead to scandal.

If these broad lines, policies, and organization be adopted, then food will flow naturally from farm to processor, to wholesaler, to retailer, and to the consumer. Prices will be better restrained. They will be lower, for the black markets can be blacked out. The housewives will have less trouble and worry. And above all, farm production will be stimulated, not stifled.

But over and beyond better methods of food control, we must absolutely assure the maximum production of America.

Let me say again that that is the only road that leads to the defeat of inflation, to decreased hardship in our homes, to assured support of our allies and to peace for mankind.

If those in power and those not in power shall have wisdom, implacable resolve, a spirit of sacrifice, the field of America will blossom with an abundant life that will save vast human life in a world given to human destruction.

Congress and the President

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, an article taken from the Fact and Fancy column of the Gazette and Daily, York, Pa., issue of June 28, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACT AND FANCY

The United States is on the brink of chaos. Only two things can save us. One is the statesmanship of President Roosevelt. The other is the good common sense of the American people.

Congress has gone berserk and the Democratic leadership of Congress is in utter confusion and is following the hate-drunken orgy of the Republicans.

In commenting on the actions of Congress Saturday the chairman of the Republican National Committee, Harrison Spangler, declared: "It is a manifestation of the President's increasing weakness in the country. I wouldn't think it would help his fourth-term chances."

Following Chairman Harrison Spangler came Senator BUTLER, Republican, from Nebraska. He said: "You would think that now Mr. Roosevelt would be willing to let somebody else have the job. I look upon the vote (overriding the veto of the Smith-Connally bill) as an indication that Congress has reclaimed some of its powers and intends to reclaim more."

Note well, good people, that neither Harrison Spangler nor Senator BUTLER gave any consideration whatever to the effect upon the United States at war. They were concerned only with what effect a Congress, running mad, frothing at the mouth, waving its arms in hysterical delirium might have upon Roosevelt's chances of securing a fourth term. And they themselves were deliriously happy in the thought that what they themselves had done might be turned against Roosevelt. This time they telegraphed their punch. They openly avow that they propose to blame Roosevelt for whatever wreckage might have been accomplished by their actions.

Spangler cries, "They (Congress) believe this home-front business is in a bog, that it is breaking down, and there is confusion in many ways." He strikes a triumphant note.

Well, good people, are you glad the home front is breaking down? Are you happy that the coalition of Republicans with a bunch of hookworm statesmen from the South has brought about the break-down of the home front? Do you imagine your son and your brother in the armed forces will be happy to learn that the Republicans and the reactionary Democrats have broken the home front and therefore his chances of not having the ammunition to protect himself, or even the food to keep him nourished have been greatly increased?

Do the armed forces want the home front broken, or do they want the home front solid behind them?

Let's review the acts of Congress which make Harrison Spangler and Senator BUTLER so deliriously happy.

This coalition revolt against the home front started several months ago with the rescind-

ing of the President's order controlling salaries over $25,000. Its peak of frenzy was overruling the President's veto of the Smith-Connally bill. It reached an all-time low in depravity Saturday when the Senate joined the House in scuttling subsidies to keep prices down.

In between times it voted a $6,000,000,000 tax evasion for a handful of rich people. It threw out social-security planning for the post-war period. It wrecked the Office of Price Administration by refusing to give it sufficient funds with which to operate. It virtually destroyed price ceilings by refusing to permit grade labeling. Now you pay the top price for inferior goods.

Moreover, it virtually assures that the Office of Price Administration will be staffed by men who have an economic interest in seeing price enforcement nullified. It refuses to permit the Office of Price Administration, except for Administrator Brown, to employ any price policy officials who have not had at least 5 consecutive years of experience in the field of business in which they are helping to shape price policies.

That is the equivalent of calling in representatives of various processing firms and telling them to go ahead with the sky the limit.

Subsidies will not be permitted for keeping prices of food down, but subsidies will be encouraged to increase profits. The oil companies will continue to get subsidies for increased transportation costs. The copper, lead, and zinc mine owners will receive subsidies to increase production of these metals. The processors of vegetable oils, chiefly cotton and corn, both in the hands of big corporations, will be subsidized to produce more. Only the food grower will not be subsidized. He will get his from hiking the prices of foodstuffs which our workers must buy in order to eat. But our workers have been frozen at the level of last August. They are fast reaching the point where they won't be buying. If they strike for wages high enough to buy food, their leaders will be clapped in jail under the Smith-Connally act.

Inflation is upon us, and Congress has brought about chaos. It has been done, not to help the war, but to beat Roosevelt in 1944.

Good people, isn't it true that the war is with us now, and we should be in a position to win it, whereas the next presidential election is in 1944, and the war could be over before November of 1944 if we were really fighting it?

Which do you want to fight—Roosevelt or Hitler?

The Republican party leaders and the Republican bloc in Congress have elected to fight Roosevelt. The cost of their fighting Roosevelt you will have to pay along with the cost of the war against Hitler.

A Redeclaration of Independence, Adopted by the National Economic Council

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a declaration known as "A Redeclaration of Independence," adopted at a meeting last week of the National Economic Council at Chicago.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

A REDECLARATION OF INDEPENDENCE

We, the undersigned, citizens of our respective States and of the United States, bound together by an unalterable determination to fight this war to a victorious conclusion, do make this declaration:

On July 4, 1776, our fathers met in Philadelphia and declared America's independence.

As sovereigns they erected in each colony a republican government of limited powers, reserving to themselves their natural and inalienable rights.

They fought an exhausting war and made good their declaration.

Then, in order to form a more perfect union, they adopted a Constitution to secure the blessings of liberty to themselves and their posterity.

Under the Constitution the people of this country have enjoyed more freedom and greater opportunities and a higher general level of well-being than men have gained under any other system of society.

The principles of liberty and free government thus established are now being violated and destroyed by public servants whom we have entrusted with high national office, and by their appointees.

They have erected a multitude of new offices and have sent among us a swarm of officers and Federal employees who harass the people and eat out their substance.

They exercise legislative powers so that today many of the laws controlling our business and domestic lives are made, interpreted, and enforced by bureaucrats who are neither known nor responsible to the people they govern.

They have gained power over the public purse so that billions of dollars of the people's money have been wastefully expended for purposes unauthorized by, and unknown to, the people's representatives.

The courts have been rendered subservient to the Executive and have become subordinate agencies of that branch of government, instead of being the impartial tribunals to which we rightfully look for protection against executive or legislative tyranny.

The press is harassed, its freedom threatened, and the radio controlled.

The wage-earner is being forced into associations not of his own choosing.

The farmer is being deprived of his right to manage his land and dispose of his crops.

The employer is being deprived of authority so to manage his business as to provide goods and services to the extent necessary for the armed forces and the civilian population.

The autonomy of our respective States, guaranteed by the tenth amendment of the Federal Constitution, has been curtailed by Federal authority without warrant of law, so that State officials are no longer able to protect our domestic interests.

Thus, the form of government which our fathers founded to insure liberty to the individual is being changed into one in which, under the guise of social reform and on the pretext of the needs of war, freedom is being concentrated in the Executive as the symbol of the State.

As sovereign citizens of our respective States and of the United States, we demand of all of our elective officials, both State and Federal, the resumption and exercise of their powers in accordance with our constitutional system.

We demand the reestablishment of the legislative, judicial, and executive as separate and coordinate branches of government equal in dignity and power.

We demand that the bills of rights in our respective State constitutions and the Bill of Rights in the Federal Constitution be scrupulously observed.

We demand that all our foreign policies, political and economic, be related definitely to our American needs and ideals, and with the objective of protecting and perpetuating the form of government and economic policies which have made our country great.

We demand that our foreign policies, whether political or economic, shall not be permitted to destroy or impair either our form of government or our standard of living.

A proper respect for the future of mankind makes it fitting, this July 4, 1943, that we reexamine our present state and rededicate ourselves with a new devotion, not only in word but in deed, to the basic principles, held by our forebears, which have too long been forgotton or ignored.

Therefore, we pledge ourselves to organize committees of correspondence to advance these, our faiths, throughout the country. And we call on all persons of like mind and faith to join with us.

Believing that absolute arbitrary power over the lives, liberty, and property of free men exists nowhere in a republic, not even in the largest majority, and that the maintenance of our free institutions and the perpetuity of the Union depend upon the preservation of the rights of local self-government, unimpaired to all the States, we have hereto set our names.

War Bond Sales in Greenville County, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BRYSON. Mr. Speaker, I have just been advised by Mr. Ellis M. Johnston, chairman of the war finance committee for my home county of Greenville, S. C., that sales reported second war loan drive April 12 to May 1, 1943, and that the total sales of all Treasury Department sales in said county were $8,600,529, which is by far the largest amount of securities sold in any county in the State.

It is with much pleasure that I make this public acknowledgment of the fine services rendered by Chairman Johnston and his coworkers in the sale of war securities. I also here and now proudly acknowledge the fine cooperation on behalf of the thousands of the good people of my home county and district who are continuing their purchases of war securities.

Speech at Dedication of Honor Roll at Milford, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday July 8, 1943

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following address I delivered at the dedication of the honor roll at Milford, Mass., July 4, 1943:

On this blessed day of American independence, when we once more commemorate the birth of our beloved country, it is my great privilege to join with you in dedicating this beautiful honor roll to those who have entered the service of our country.

Here, in the midst of their homes and the places they loved best of all, with their relatives and friends gathered about this sacred shrine, with public officials, leading citizens, and civic and military organizations lending their dignity, with esteemed spiritual leaders bestowing their prayers, all of Milford is proud indeed to pay homage and render tribute today to its loyal, patriotic sons and daughters.

From the homes and firesides of this beautiful community, in numbers more than commensurate with its size, these brave young folks have rallied to the call of country's need and have gone forth unselfishly to many parts of the world to do their vital and constructive part in defeating the tyrannical forces of brutality and greed that would overpower our Nation and destroy our priceless institutions.

It is, of course, most appropriate that we should accord them, through these ceremonies and this most artistic scroll, some measure of our grateful acknowledgment of their immortal sacrifices and unselfish service. There is a particular significance, however, in the fact that we should gather here in such large numbers on the glorious Fourth of July, because this day, perhaps more than any other American holiday, symbolizes the courage, the faith, the idealism and the devotion to country which these gallant young folks now demonstrate. This day, above all others, exemplifies the struggles, the trials, the sacrifices and the almost incredible hardships of those who established American liberty and turned over to their successors a greater measure of freedom and justice than human beings had ever been able to obtain.

For over 160 years, through adversity, through the dark clouds of dissension and civil strife, through trials that sorely tested the fortitude of the people, through ominous storms of war—indeed, through every human ordeal—this Nation has perpetuated that liberty, that justice, and that freedom and has maintained here in the Western Hemisphere a great liberal government which has been at once the refuge of the downtrodden and the oppressed and the hope of lovers of freedom and peace.

In this hour of peril, when we are caught in the devouring tentacles of global war so vast and so colossal that it is almost beyond comprehension, the fiber and mettle of our people is being tested as never before. We are not only called upon to wage war in distant parts of the world, in almost every clime and place inhabited by human creatures but, most unfortunately, we are also faced in our own country with the menace of the destruction of our priceless form of government and economic system.

Thus the American people at this most crucial time are fighting two wars, one against foreign tyrants and ruthless dictators, and the other against scheming, cunning, designing domestic enemies who seek to replace our democratic institutions with the slavish, totalitarian state.

On the first Fourth of July the agents of a monarchial despot were ravaging the land and suppressing the rights of man. Today, agents of our own Government, often acting with the same disregard for fundamental rights that characterizes the Commissar, dominate some of our Federal administrative agencies and bedevil our people. The influence of some of these radical commissars and their civilian associates would reach into every American home, would strike at almost every American institution—at free speech, at free worship, at free economic activity, at the family unit, at the free way of life itself. Indeed, almost every phase of our existence has come to be regulated and regimented until the free initiative of our people is well nigh threatened with extinction. These dangerous tendencies and frightening realities must be checked.

If carefully planned movements, executed by cunning, radical groups, are permitted to reach their objectives all free government will be destroyed, all the basic liberties which the American people have fought to achieve during our whole history, and which our gallant sons and daughters now so bravely fight to maintain, will be lost. The will of bureaucratic commissars, ruling with an iron hand from the National Capitol over the destinies of the American people, will supplant the prerogatives of our chosen Representatives. Democracy will be ended—totalitarianism, bureaucracy, dictatorship of the proletariat, call it by any name you will, inspired and controlled by Communists and visionary social reformists of every type and breed, will preside over the Government of the United States. That is their aim, that is their determined purpose, that is what they intend, and that is what they are well on their way to accomplish.

What are we going to do about it? What are the free, untrammeled citizens of America going to do about it? Are we going to sit idly by in supine resignation and indifference while radical schemers and reformers tear down the magnificent citadel of American Government before our very eyes, or are we going to fight here on the home front, just as our brave boys are fighting in every part of the world, to keep and preserve our sacred liberties, to maintain and protect our right to live as free men and women.

As we bow our heads in prayer for Milford's gallant heroes who have already given their all that our country might live and for the safety and well being of their comrades now engaged in the most fateful struggle of all times, our thoughts come back to the homes and firesides of this great and patriotic community, to the mothers and fathers and relatives who are left behind to mourn their great loss, or to endure the indescribable agony that is known only to those who grieve and worry through long nights and trying days over the fate of their loved ones.

These brave sons and daughters who are in every part of the world, in every arm of the service, in every phase of this terrible global war, fighting so valiantly for the sacred cause of American liberty and safety, have attained great distinction. They hold every rank of merit. Some have been cited for heroism and bravery in action, and all are demonstrating a spirit of sacrifice, gallantry, and devotion that is to the everlasting credit of themselves, their families, and our country. Milford should lift its head in pride today for the glorious patriotism demonstrated by these young heroes who can be found everywhere in the vanguard of America's fighting forces making their unselfish sacrifices for home and democracy.

This beautiful honor roll placed here in the very midst of this beautiful and progressive community by the thoughtfulness and generosity of its citizens, will serve as constant reminder of the patriotic devotion which has impelled these noble sons and daughters of Milford to face even death itself, in order that our Nation may be spared from tyranny, injustice, and oppression.

Their unforgettable sacrifices emblazoned as they are upon this honor roll enriches, ennobles and consecrates it more eloquently than any words of ours. The large number of names appearing here must be a source of great pride to us all. Every race, every creed, and every faith is represented. But how inspiring it is to note the many names of our fellow citizens of Italian blood and heritage which appear on this scroll. This furnishes stronger proof than anything else of the magnificent patriotism and loyalty to America of our esteemed and respected Italian-American friends whose love of country, whose willingness to render unselfish service and to make unstinted sacrifices is excelled by no other group of our fellow countrymen.

Love of country, love of family, love of church, love of the freedom of America, willingness to fight and to die, if need be, to protect and preserve it, these are the things that are gloriously manifest to all of us today as we gaze upon this roll. These are the things that have made America what it is, a land of refuge and hope and these are the things that will keep America what it is, a place where free men and women may live their lives in harmony, in toleration, and in peace, under institutions of equal opportunity for all.

Though the sacrifices be greater than those of any war this country has ever fought, these brave sons will surely defeat the enemies of our Nation. It remains for us who are at home to destroy the evil forces here within the confines of our own land, which conspire to undermine our precious liberties and substitute the slave state of economic oppression. If we wage this home-front battle for freedom with full appreciation of the dangers that menace us, we will be able to assure our heroes that this war will be conducted with efficiency and speed and that when it is over they will be able to come back promptly to their own homes and families and find the same free, democratic country they left, untarnished and unstained by the stigma and curse of unbridled radicalism, where they may enjoy once again the God-given right of every American citizen to live without exploitation or regimentation by the Government, under the free institutions ordained by our unequaled, matchless Constitution—a place where the right to free worship, free speech, and free enterprise, and all the other freedoms we cherish, are protected by law—a place where the sacred institution of the human family upon which all civilization is based is safe from the reach of fanatical, radical reformers.

And so on this great anniversary day of American independence as we proudly dedicate this sacred roll of honor to the living and the dead, to the gallant heroes of Milford, let us remember the great sacrifices which the early American founders, and countless generations since their time, have made to keep and preserve our blessed land. Let us catch some of the spirit of '76, something of the willingness gladly to fight and die for liberty and let us work and strive with all our hearts and our full strength to keep and preserve it for ourselves and those who come after us, praying to Almighty God that throughout the ages yet to come no enemy may set foot upon the sacred shores of America and that we who enjoy that proud bequest of loyalty, sacrifice, and patriotism, conceived and nurtured in the minds of the greatest statesmen the world has ever known, sheltered and defended by the undying devotion of those who preceded us, protect and preserve that liberty in our own time and transmit it unimpaired and untarnished to our posterity so that freedom and peace may dwell in the homes and among the people of America.

Reflections of an Editor

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank M. Sparks, from the Grand Rapids (Mich.) Herald of July 6, 1943:

REFLECTIONS OF AN EDITOR

(By Frank M. Sparks)

Lynn Clark, Kent County commissioner of schools, is in trouble and is asking the board of supervisors to help him out when it meets Wednesday. Well, it isn't so much Clark who is in trouble but the rural school system. The rural schools of Kent County need sadly a supervising teacher. Now this new helper he is asking is not for the purpose of installing any new-fangled notions in the school system but to keep the rural schools up where they belong in just the plain ordinary "three R's" and other fundamentals of a grade-school education.

Clark is suffering under the same handicaps that most of us are, no matter in what sort of business or profession we may be engaged. A great many of the rural school teachers have gone into the service or into some other occupation helpful to the winning of the war. The result is that the schools are suffering a tremendous shortage of teaching talent. To do as well as he can under the handicap Clark has called into service many teachers who perhaps have been away from their profession for 10 or 15 years, and so are entirely out of touch and out of practice, say nothing of being more or less ignorant of modern teaching methods and the courses to be taught. Many of these were mighty good teachers in their day but they must now have somebody to help them along a bit until they can get their bearings once more.

Clark also has been forced to employ some teachers who never did have much experience and perhaps never were the best sort of teachers and never will be. But he has to have teachers, so he has called in whatever he can get. Of course, this class of teacher especially needs some supervision and assistance in order to do even as well as she is capable or perhaps a little better than she otherwise might. During this last year he has employed 62 new teachers and expects it will be necessary to get a great many more of them in the coming year. It is quite probable that he will lose many of his old teachers and that some of those who are filling in now for one reason or another may not desire to return.

Meantime, his own work in the office, reports and all the other administrative matters which present conditions have thrust upon him makes it impossible for him personally to go out and give the help to these new teachers that they must have if the rural educational facilities are not to suffer. His deputy, Mr. Guenther, who ordinarily would be able to help out, is overrun with his work as truant officer. Delinquency and truancy have increased to an alarming degree and Guenther's time is more than occupied trying to keep pace with this phase of his work.

THE GREAT GROWTH OF THIS DELINQUENCY

Clark points out that in this last year delinquency and truancy among the students of the rural schools have become really alarming. These are the figures he shows: In 1940—41,152 cases of delinquency and truancy. In 1941—42,147 cases. In 1942—43,294 cases. This is something for the school authorities and for the parents to give some consideration. It is a most serious matter, born of the unsettled conditions of the times. In addition, work permits have jumped from 174 in 1937–38 to 751 in 1940–41. These likewise are expected to increase as the war goes on.

In Kent County are 200 school districts, including Grand Rapids and all other large communities. But there still are 156 rural schools operating and 22 closed because of the prevailing conditions. Now, since these schools still operating are widely scattered, it is no simple task to give them all the supervision in all departments they ought to have. In order that the schools still operating may continue to operate, it is necessary to employ whatever and whoever may be available as teachers. Then, since many of these teachers are inexperienced and, as said, many of them have been out of harness for 10 to 15 years, it seems highly desirable that somebody be employed who can give such help as may be necessary and desirable. So Clark is asking the board of supervisors to authorize the employment of a supervising teacher.

Some of the supervisors are inclined to let the matter drift until the October session, but Clark points out that with the great demand for teachers everywhere, it is extremely doubtful if he will be able to find the right person so late in the fall.

Seems as if Clark's position is entirely logical and that the sooner the supervisors give him the authority and the sooner he finds a proper person for the place, the more certain are the students in the rural schools to have somewhere near adequate instruction in the foundations of an education.

America's Responsibility for a Christian World Order

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Dr. R. H. Martin, editor in chief of the Christian Statesman:

We are facing a show-down in one of the greatest issues that ever confronted the human race. This global war is a struggle to the death to decide whether we shall have a free or a slave world. We must and shall win it. But what of the peace? We won the last war and lost it in the peace. There is danger that we may repeat the same tragic mistake and thus make meaningless all the sacrifice of blood and treasure required to win this war. Winning the peace is essential, and a far more difficult task than winning the war. The hardest governmental job that ever faced the world is the coming peace. To win it requires as much preparation as is required to win the war. We should prepare for it now.

Our sons and brothers in uniform are giving their all to win the war. We will be recreant to them unless we are ready to give as much to win the peace. Whether it shall be a just and durable peace or only a breathing spell to prepare for another greater war, will depend upon America more than any other nation.

THREEFOLD CAUSE OF THE WAR

As American citizens what can we do to help our country meet her responsibility for the coming peace? To answer this question we need to have before us the answer to another question. Why have the two greatest wars of history occurred in the lifetime of most of us? The answer is threefold:

(a) This once wide world has been reduced to the size of a neighborhood. Undreamed of inventions, magic means of production, transportation, and communication have brought the peoples of the whole earth into close contact. Measured by travel time, the world is actually smaller today than our country was in the days of Washington. It took him 7 days to go by horse-drawn vehicle from Mount Vernon to New York to be inaugurated. Now our Army bombers fly from the United States to China and India in less than 3 days. Today one can travel from New York to Moscow by plane in less time than one can go from New York to Miami by train. No spot on the globe is more than 60 hours distant from your local airport. In this shrunken, interrelated, and interdependent world the peoples of all races and nations jostle each other in the streets.

(b) This neighborhood world is made up of some 60 or more independent sovereign nations, each claiming the right to do absolutely as it pleases—to make demands on other nations, raise armies, build navies, and make war to enforce its demands. In their dealings with each other these nations are actuated not by the Christian law of justice and brotherhood but by the pagan law that might makes right. What can we expect but the present holocaust of world-wide war?

(c) Contributing also to the world debacle is the failure, not of Christianity but of the church to bring to bear directly upon nations and governments the power of Christ and His principles—the only power able to overcome international discord and thus make it possible for nations to live in peace with each other. The church has faithfully proclaimed Christ as the Saviour and Master of individual life and has applied his teachings to individual relationships, but she has signally failed in proclaiming Him as the Saviour and Lord of national life and in applying His principles to nations in their relations with each other. Hence today, even within Christendom, the restraining power of Christian justice and brotherhood has not been brought to bear upon the selfishness and greed of nations in their dealings with each other.

WHAT IS OUR RESPONSIBILITY?

In the light of the above, what can we, as American Christians, do to help our country meet her responsibility in setting up the new world order? What our national leaders do in this matter will depend upon what the American people want done. What, then, is our responsibility?

1. Our first responsibility is to build a public sentiment for a Christian world order.

If this new order is to bring peace, it must be reared upon solid rock, not upon shifting sand. It must be built upon moral foundations, for this world is a moral order which is based upon religion.

AMERICA'S CHRISTIAN FOUNDATION

Upon this rock our founding fathers reared our Republic. The Declaration of Independence reads: "All men are endowed by their Creator with certain inalienable rights to secure which governments are instituted among men." It further declares that America was entitled to a separate and independent existence among the nations "by

the laws of nature and of nature's God," and affirms "reliance upon the protection of Divine Providence" in the support of this declaration. Thus our fathers reared this Nation upon God and His moral laws, laws written into the structure of human society and transcribed in the Word of God, the book which President Jackson said is "the rock upon which this Republic rests." These laws have their fullest and highest expression in the life and teachings of Jesus Christ, Savior and King of nations.

He is the cornerstone upon which to build the government of the world in accordance with the two basic laws of His kingdom—righteousness and human brotherhood.

BUILDING ON THE SAND

Hitler and other national builders have said, "It isn't practical to build a political order on this foundation." So they have tried to build on other foundations—on national self-interest and aggrandisement, racial superiority, economic exploitation. Today their building is falling in ruins. There can be no peace so long as governments are built on the shifting sands of human expediency. Have we not learned by said experience that the only way to secure national stability and peace is by building our national structures upon the foundation which God has laid and according to the principles of His kingdom?

We, therefore, propose—

A Christian charter for the new world order embodying a recognition of these fundamental principles and their implementation in a bill of rights for mankind.

To develop and strengthen a public sentiment for this Christian world order until it becomes the dominant sentiment of the country is a task which challenges the Christian citizens of America and her church leaders. To accomplish this task we should be concentrating our best energies. In this field we can render our greatest service to our country, to humanity, and to the kingdom of God.

2. Our second responsibility is to build a public sentiment for an international or world government.

A framework of world government in which these principles can operate in the community of nations is essential to world peace.

INTERNATIONAL ANARCHY

Today, within the boundaries of nations we have government and law to which individuals and groups are subject, and under which controversies are settled by peaceable means. But in the no-man's land of international relationships we are, as yet, without government or law. That is, we have anarchy in the international realm. Under the doctrine of national sovereignty each nation is a law to itself. So long as this anarchy continues there will be constantly recurring global wars. The establishment of government and law in the international realm is essential to peace.

The League of Nations was the greatest advance the world has yet made in providing an instrument of international political control. But experience has shown that the League was not sufficient to accomplish the purpose for which it was set up. It failed, not because the idea was wrong, but because it did not have sufficient popular support and because it lacked authority to enforce its decisions. No world government can be effective until the nations are ready to surrender to it some measure of their national sovereignty. Our experience has taught us that leagues, treaties, agreements, voluntary submission of disputes to a world court are not sufficient.

ESSENTIALS OF WORLD GOVERNMENT

Justice Roberts of the United States Supreme Court says: "The present war is witness to the fact that in world crises begotten by race pride, by the lust of national aggrandisement and by national selfishness, international law is powerless." Is it not evident that so long as national sovereignty remains absolute there is no way to prevent nations from failing to keep their international obligations? There must be a fundamental framework of government to which the people of the nations constituting the world government surrender that proportion of their nation's sovereign prerogative which is essential to an international order able to prevent any nation, or group of nations, from asserting an unbridled will by resorting to war.

It is evident that a world government of this sort must have a judiciary to which disputes between nation and nation, and between nations and the world government, must be submitted for adjudication. It is equally plain that it must have a representative assembly to implement its delegated powers. Also, that it must have an executive to administer and enforce its laws, and that this executive must have at its command a police force of sufficient strength to effectuate its laws.

PREPARING AMERICA FOR THIS RESPONSIBILITY

The responsibility for setting up a government of this character will at first rest chiefly upon the United States, Great Britain, Russia, and China. The United Nations under the leadership of these four nations are winning the war. Under this same leadership a world order of peace must and can be established.

At first its membership will be limited, but it should presently include all the United Nations, be open to neutral nations, and finally to the Axis Nations on their acceptance of the conditions of membership.

Is America ready for a world government of this character? Will public sentiment support it? Is she ready to surrender even the slightest measure of her national sovereignty to make such a world government effective? Here again the Christian citizens of America face a duty of transcendent importance to build an intelligent public sentiment for a world government of this character. For the Christian doctrine of the unity of mankind and of the place of government and law in the world's redemption is incompatible with international anarchy.

3. Our third responsibility is to build a public sentiment for American participation in setting up this Christian world order.

There are impelling reasons for our participation:

a. America holds the key position with reference to the peace. Our influence and power in the world are so great that no world order that has any chance of maintaining peace can be established without our participation. Not only Great Britain but the other United Nations are waiting on America to see what she will do before they decide on what kind of peace is possible.

b. Our national self-interest demands our collaboration. The basic lesson hammered into us by the events of the last 25 years is that the world is one. We are inexcusably blind if we cannot see that we are members one of another, that when one nation suffers by injustice, oppression or impoverishment, sooner or later all other nations suffer with it. Our involvement in these two world wars was inevitable. Those were true and brave words that Prime Minister Churchill spoke to the American Congress:

"Twice in a generation has the long arm of fate reached out across the oceans to bring the United States into the forefront of the battle. If we had kept together after the last war, if we had taken common measures for our safety this renewal of the curse need never have fallen upon us."

OUR CHRISTAIN OBLIGATIONS

c. As a Christian people, we have obligations to humanity which can be fulfilled only by our collaboration. Our Supreme Court has declared, "This is a Christian Nation." National irresponsibility is utterly incompatible with our Christian origin and character. When Satan made war on the human race the Almighty did not build a wall of isolation around heaven and issue a neutrality proclamation. He sent His Son into this sin-cursed, war-torn world on a mission of righteousness and peace.

The basic law of the Christian life, "Thou shalt love they neighbor as theyself," as applicable to nations as to men—requires America today to think, plan and labor for the safety and welfare of other nations, to the same extent as she thinks, plans and labors for her own safety and we'fare.

OUR CHRISTIAN DUTY

How we shall meet this responsibility is for you and me and the Christian patriots of America to decide. We must build a strong, overpowering public sentiment for our collaboration in setting up this new order, and a faith, an abiding conviction that in spite of all obstacles, with our help, this new order can and will be established. American Christians have never faced a more challenging task.

4. Our fourth responsibility is to express to our public officials our convictions concerning the new world order.

The importance of bringing our convictions to bear upon those who will represent us in making the peace is secondary only to the creating of a strong public sentiment for the right kind of a peace.

Please, O. P. A., Have Mercy

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. JENSEN. Mr. Speaker and colleagues of the House, I trust those in control of the O. P. A. will read the following appeal, typical of just how greatly concerned independent retailers are about the future.

If we must have a Government by bureaucrats instead of by laws until 1944, I hope at least these fellows will have a little respect for the things our American boys are fighting for and dying for today—American liberty and justice.

FARMINGTON, IOWA, *June 16, 1943.*

Mr. BEN F. JENSEN,

Washington, D. C.

MY DEAR SIR: Please help save these nice little towns along the rivers and the highways.

Please help save the independent retailers so they can pay the taxes to help keep our schools going, in fact please help save our country by asking the Office of Price Administration to obey the law before making further appropriations. Thank you.

Yours truly,

HENRY GENTHER, Jr.

Protest Against Racial Discrimination

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by the "March on Washington" group and unveiled as a scroll at an interdenominational, interracial prayer service at Soldiers' Memorial, Chicago, Ill., July 4, 1943, in connection with the "We Are Americans Too" conference, and printed in the Washington Evening Star on July 7.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FELLOW AMERICANS—NEGROES ARE AMERICANS TOO!

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."—Declaration of Independence.

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."—Constitution of the United States, fourteenth amendment.

WE ARE AMERICANS TOO

On the basis of the principle of the Constitution of the United States and the Declaration of Independence, whose one hundred and sixty-seventh birthday we celebrate today, we address this appeal to the people of America and to the conscience of the world.

Right here in our own country is one of the great moral issues of this war: Shall we have democracy for all of the people, or for some of the people? An all-out war against fascism cannot be fought on a jim-crow basis. Race prejudice is obstructing the Nation's effort to win the war and plan a real peace.

The American people have met this issue with indifference, suppression, and violence. The recent riots in Los Angeles, Beaumont, and Detroit are sufficient proof of this.

Negroes have shared in the building of our common country. From the Boston Massacre to the north African offensive, their blood has watered the sands of every war in defense of American democracy. Their labor, more than anyone else's, has built the South. Their music, folk tales, and dreams have helped make American culture what it is. This is their country in which they were born, for which they and their fathers have toiled and died, and to which they stand ready to give the last full measure of devotion.

But how are these 13,000,000 Americans treated?

I. Negroes are discriminated against in the very armed forces which summon them to shed their blood for their country. They are drafted in jim-crow quotas, trained in jim-crow regiments, and separated from their white comrades in arms in the fighting units. All too often, they are herded into menial tasks and labor battalions.

II. Negroes are denied equal opportunity in both public and private employment. They are discriminated against in training, placement, up-grading, and wages in war industry. Sometimes this is true when the Government itself is the employer. Moreover, 33 international labor unions bar Negroes from membership.

III. Negroes are denied the right to vote in most of the Southern States. A combination of intimidation, poll taxes, white primaries, and all manner of specious tests stand as barriers between the Negro and the ballot box.

IV. Negroes are denied equal educational opportunity: In most of the South the Negro child receives less than half of his share of the funds for public education, the Negro graduate student is denied the training of the tax-supported State university, and the Negro teacher is paid less for the same training and work as other teachers. Here again is the myth of equal but separate. Even in the North and West, Negro professors are barred from the faculties of practically all American universities.

V. Negroes are caricatured and slandered in the press and on the stage, screen, and radio. School textbooks paint the Negro as a happy slave, a buffoon, and a corrupt citizen. Best-selling novels and million-dollar movie plays repeat this lie of the history books. Newspapers play up Negro crime and play down the constructive achievements of Negroes.

VI. Negroes are denied participation in the policy-forming administration of government. Even when there are Negro race relations advisers to Government agencies, these advisers are not permitted to determine policy, even in this special area, and nobody accepts their advice.

VII. Negroes are forced to live in restricted residential areas and segregated housing projects. Isolated and forced into a ghetto, the Negro thus becomes the prey of profiteers and other exploiters.

VIII. Negroes are Jim-crowed in trains, busses, theaters, hotels, restaurants, and other public places; and throughout the South are forced into Jim-crow schools, libraries, hospitals, and other institutions supported by taxes paid by all of the people.

IX. Negroes are lynched and murdered by mobs and cowardly night-raider bands. Such treatment in a democracy is intolerable. Accordingly, we appeal to the American people to support us in the fight to wipe out these antidemocratic practices.

I. Demand a democratic army. We call upon the President to enforce section 4 (a) of the 1940 Draft Act, which reads: "In the selection and training of men under this act, and in the interpretation and execution of the provisions of this act, there shall be no discrimination against any person on account of race or color."

II. We demand equal access to employment opportunities. This means a fair employment practice committee which has power to enforce decisions based on its findings; and no discrimination in training opportunities, placement, wages, promotions, and membership in trade-unions.

III. We demand an end to disfranchisement in the South. The enactment of a Federal anti-poll-tax law, abolition of the white primaries, and other registration devices that limit a free suffrage and enforcement of the fourteenth and fifteenth amendments to the Constitution, will guarantee the right to vote to all men.

IV. We demand equal access to educational opportunities. This means equal facilities for the Negro child, equal pay for the Negro teachers, and for the Negro student equal access to public tax-supported institutions of learning.

V. We demand that the story of the Negroes' contribution to America and to the world be told. The newspapers, radio, and screen can thus end the caricature and slander of Negroes.

VI. We demand Negro and minority group representation on all administrative agencies so that these groups may be able to determine policies for all of the people.

VII. We demand an end to residential ghettos and restrictive covenants.

VIII. We demand abrogation of every law which makes a distinction in treatment between citizens based on religion, creed, color, or national origin.

IX. We demand the strict enforcement of the Constitution, especially of that clause which guarantees: "No person shall be deprived of life, liberty, or property without due process of law."

Therefore, in the name of democracy, in the name of the common interests of humanity, in the name of a real victory and a real peace, we call upon our fellow Americans to join with us in this struggle for human dignity and equal justice for all. Moreover, the colored peoples of the world, in Asia, Africa, and Latin America, will test the sincerity of our declaration about world democracy by what happens to the Negro right here in the United States. Let us band together and make democracy a living truth.

Signatures: A. Philip Randolph, E. Pauline Myers, Aldrich Turner, Layle Lane, Cornelius Scott, Dr. L. D. Reddick, Alfred Baker Lewis.

The American Mind

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Independence Day editorial from the New York Times, July 4, 1943:

"THE AMERICAN MIND"

When John Adams and Thomas Jefferson were both old men Adams wrote that there was not an idea in the Declaration of Independence "but what had been hackneyed in Congress for 2 years before." Jefferson was at first annoyed. Later he realized that Adams was right. The Declaration, he said, "was intended to be an expression of the American mind. * * * All its authority rests upon the harmonizing sentiments of the day, whether expressed in conversation, letters, printed essays, or the elementary books of public right, as Aristotle, Cicero, Locke, Sidney, and so forth. * * * I did not consider it as any part of my charge to invent new ideas altogether, and to offer no sentiment which had ever been expressed before."

Historians have traced the ideas of the Declaration through the chronologies of the Thirteen Colonies, the struggles against royalty in England, the writings of the French political philosophers, and further back still. The beginnings cannot be found. But the important thing for Jefferson was that the document he was asked to compose should be, as of July 1776, "an expression of the American mind." If it failed in that respect it would fail in every respect. He could find words, when other men could not, for what the Nation wanted to say. He could say

nothing that the Nation, or the major part of it, did not want to say, in the great crisis with which its people were confronted. If he had contributed a single original idea it would very properly have been rejected. No wholly original idea ever was or ever will be instantly accepted by a majority.

We can apply this principle to today's situation. The one hundred and sixty-seventh anniversary of our independence finds our welfare closely linked with that of Britain, Russia, and China. If those three nations collapsed we should not long be independent. If we collapsed, not one of them would long be independent. This is true now, and it will be true when this war is over. The new fact in the world is the fact of interdependence. We may not feel like picking a date in the calendar and calling it interdependence day, but the situation itself we cannot alter. No nation can be independent today unless it is willing to assume some responsibility for the independence of other nations, and to play its part in safeguarding the security of those nations.

The only question is whether this truth is as "self-evident" to Americans in 1943 as were the truths of the Declaration to Americans in 1776. They had arrived at them by hard experience. We also have had the hard experience. We were not convinced by the First World War. We are now in the midst of a Second World War. If this does not teach us what we have to learn we will have to go back to school in a third world war.

The evidence is that we stand in regard to the problem of our time where our ancestors of 1776 stood in regard to the problem of their time. The Constitution came more than a decade after the Declaration. A world constitution may take longer. But a declaration for 1943, recognizing in broad terms this Nation's duties, responsibilities and necessities in maintaining a lasting peace, would be a truthful "expression of the American mind" right now.

Livestock Industry Faces Critical Situation

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. DWORSHAK. Mr. Speaker, there is widespread apprehension among all groups of citizens in Idaho over the failure to adjust satisfactorily the various problems connected with the livestock industry.

This is one of the most important industries in Idaho and consequently there is great concern over the need of early readjustment of the various factors which are retarding the orderly marketing of livestock commodities. Under permission to extend my remarks, I am presenting herewith the views and recommendations of an influential group of livestock producers, feeders, packers, retailers, consumers, and farmers:

The meat situation, in this area and the Nation, has become critical. Already the depleted meat supply in the intermountain area and the Pacific Slope States has become a major catastrophe which will further reduce the amount of meat that must be furnished to the armed forces and will be detrimental to the health, well-being, and morale of civilians.

The Nation's consumers have already been the victims of impractical and theoretical handling of meat under governmental regulations. If such bungling and mismanagement continues, mounting difficulties will face producers and consumers alike, with the fatal prospects of bare meat counters and a drastic increase of black-market operations.

Accordingly, this group offers the following recommendations:

1. Ceiling prices both at the slaughter and retail levels only, must be adjusted to permit a reasonable margin of profit to both based upon the cost of live animals. Such prices should not discourage the production, feeding, and slaughtering of livestock.

2. Eliminate quota restrictions upon the slaughter of live animals. Make the rationing program upon the consumption of meats by the individual consumer the only control with reference to the amount of meat that should be supplied, with exception of the requirements of the armed forces.

3. Relax grading requirements now imposed by the meat regulations. It is believed by the committee that a relaxation of the grading requirements will result in a saving in the transportation of livestock and feed and a reduction of the threat of an extreme shortage in feeds and reduce the cost of the finished livestock. Experience indicates that the consumer in this area does not want and does not eat as much fat as is required in Government specifications for AA and A grade animals. Retail prices should be based on a flat mark-up based on wholesale prices. The economic forces of supply and demand, plus competitive factors of retailing, will operate to keep consumer prices in line without additional artificial control.

4. Increase the ceiling prices on animal byproducts. The present ceilings upon animal byproducts were based upon livestock prices at lower than the prevailing prices today. The result has been to throw the burden of increased costs for live animals upon the meat. It is believed that by distributing the load of such costs more equitably upon both the meat and the byproducts derived from the live animal, there will be a lessened pressure to increase the selling prices of the meat. An increase on hides and tallows is particularly feasible.

5. The regulations should be amended to eliminate provisions requiring discounts upon quantity purchases. These discount requirements are bringing about a tendency to transport and deliver small quantities of meat and, therefore, to increase the wastage of manpower and transportation facilities.

6. Controls over the production, prices, distribution, and rationing of meats should be consolidated in one agency. It is believed that the tendency to spread this responsibility over several agencies will merely result in increased confusion and duplication of administrative costs. Decentralization of administrative power to State offices is urged in handling local problems.

7. The committee vigorously protests the inauguration of the roll-back and subsidy program.

8. The committee urges that if Nation-wide application of these proposals is not considered feasible, they should be applied to the Intermountain area and the Pacific Slope States. Experimentation in this area could not disrupt our local meat situation more than it is now. In our opinion, it would be successful if applied and should be tried. If successful in this area, then Nation-wide application could be attempted with little revision.

ROSTER OF THOSE PRESENT OFFICIALLY REPRESENTING GROUPS AS INDICATED

A. H. Caine, chairman, manager, Idaho Livestock Production Credit Association; M. C. Claar, secretary, Idaho Wool Growers Association; M. N. Hoagland, Boise, Idaho; F. B. Wisner, retail meat dealer, Boise; M. O. Anderson, King Packing Co., Nampa; E. T. Taylor, master of Idaho State Grange; E. P. Rinehart, secretary, Idaho Swine Growers Association; C. W. Hickman, consumer; R. H. Tallman, manager feeding operations, Amalgamated Sugar Co.; D. Sid. Smith, sheep producer, Shoshone; George N. Tucker, Farm Market Relations, Inc., Boise; Leon Weeks, secretary, Idaho Cattlemen's Association; Earl Murphy, executive secretary, State chamber of commerce; Luke Williams, consumer, Boise; T. C. Bacon, sheep grower, Twin Falls; Ned Harlan, secretary, Boise Chamber of Commerce; M. Dudley, hog grower, Boise; J. O. Beck, cattle producer, Mayfield.

The Navy Officially Prohibits Anti-Semitic Utterances in Navy Publications

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks I include herewith a letter from Capt. Leland P. Lovette, of the United States Navy, under date of July 7. The Members of the House will recall my previous extension of remarks in which I included an exchange of correspondence between myself and officials of the Navy Department on the subject of anti-Semitism. I am happy to indicate by the following letter that the issue of anti-Semitism creeping into publications edited by or intended for naval personnel under the guise of alleged humor or in any form has been closed by the wise action of the Navy in directing that no religious or racial attacks be made in these publications.

NAVY DEPARTMENT,
Washington, D. C., July 7, 1943.

The Honorable VITO MARCANTONIO,
House of Representatives.

MY DEAR MR. MARCANTONIO: In compliance with your recent request, I am forwarding an order issued by the Chief of Naval Personnel under date of June 21, 1943

"R-1175—Derogatory racial or religious material in ship and station publications.
P-253-LAH, A10-6, June 21, 1943.

"Action: All ships and stations.

"1. It has come to the attention of the Navy Department that derogatory racial and religious material, principally in the form of alleged humor, occasionally has found its way into publications edited by naval personnel at various ships and stations.

"2. Commanding officers are directed to bring to the attention of personnel editing such publications that the Navy Department objects to material which, whether humorously or not, disparages or belittles any American or allied racial or religious group.—Bureau of Personnel, L. E. Denfield."

Sincerely yours,

LELAND P. LOVETTE,
Captain, United States Navy,
Director of Public Relations.

Where Is the Corn?

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. LEMKE. Mr. Speaker, suddenly this Nation finds itself short of corn. The same is true of corn as was true of wheat. The Department of Agriculture kept telling us that we had a surplus when in reality there was a scarcity. The truth is there never was an adequate carry-over of either corn or wheat. The condition in which we find ourselves is the result of the philosophy of "the abundant life by scarcity."

Uninformed O. P. A. experts, radio commentators, and columnists blame the farmer. In their ignorance of the facts, they say that the farmer is feeding it to hogs because he can get more for his corn in that way. May we remind these O. P. A. experts, commentators, and columnists that with these hogs he feeds them pork chops? Of course, these get their information from the bureaucracy. They get it from those who manipulate a scarcity into a surplus by juggling figures.

There is a real shortage of corn. The reason for this is that the Department of Agriculture restricted production. During the 5-year period 1929–33 the average acreage of corn harvested in the United States was 104,500,000 acres. By 1941, under the triple A program, this was reduced to an average of 91,977,000 acres.

In 1943 the Department partially removed its restrictions and the acreage planted to corn increased to 96,800,000, but here the Lord stepped in and helped the program of the Department when it retired from business. The floods and cold weather will reduce this 96,800,000-acre planting so that less than 90,000,000 acres will be harvested. That is, perhaps, a deserved punishment for our wanton destruction and curtailment of agricultural products.

Again, last fall the Secretary of Agriculture asked the farmer to increase the number of hogs. The farmer complied. In 1940 the number of hogs raised was 63,000,000. In 1942 this was increased to 80,000,000 head. The number in 1943 is estimated to exceed 100,000,000. The Government also asked the farmer to increase the average weight of his hogs before slaughter by 10 pounds over that of 1942. Those additional 20,000,000 hogs and that additional 10 pounds on 100,000,000 head take corn.

The question is not whether the farmer gets more for his hogs than for his corn. The question is where is the corn? The farmer has his investment in the growing hogs. He will have to feed them or lose his entire investment. If Congress had had sufficient courage and intelligence enough to have passed our cost-of-production bill in place of blindly following the bureaucracy's philosophy of "the abundant life by scarcity," then we would not find ourselves in this dilemma today.

Even if we remove the ceiling on corn entirely there will not be enough corn to supply the industrial and feeding needs of the Nation. I repeat the reason for this is because the Department of Agriculture reduced the acreage from 104,500,000 to 91,977,000.

In addition, the Government asked the farmers to increase the number of cattle. Again the farmer complied. The number of cattle in the United States in 1934 was 74,400,000 head. Then the Department began its wanton destruction, and by 1938 the number had decreased to 65,200,000. But, at the request of the Government, by January 1, 1943, the farmers had again increased the number to 78,200,000. These cattle require feed and especially do the beef cattle require corn for finishing.

By this time it ought to be clear, even to the bureaucracy, why there is not enough corn for feed and commercial purposes. The Nation now knows that the philosophy of "the abundant life by scarcity" has been and is a flat failure, that it has all but wrecked the Nation's food supply.

Again a supine Congress permitted the Government to draft the farmers' sons and their help. The result is that there is plenty of corn still unhusked within 30 miles from the city of Washington. You can travel through the States of Maryland, Pennsylvania, Ohio, Indiana, and Illinois and see hundreds and thousands of acres of corn still in the fields ungathered. Some of this floated down the rivers during the recent floods, while the rest rotted in the fields.

Let us put the responsibility where it belongs. The corn shortage is the result of an ignorant bureaucracy and of the W. P. B. and the War Department here in Washington, that did not have sense enough to know that the civilian population, as well as the armed forces, must be supplied with food and clothing.

The farm-help shortage was further augmented by the farm-machinery shortage. Donald Nelson, the head of the W. P. B., placed one Joseph Weiner, a Russian-born Columbia College graduate, in charge of civilian supplies. This foreign-born individual knew little about this Nation outside of the city of New York. He refused to allow sufficient steel to the manufacturers of farm implements.

It is true Mr. Nelson finally fired Joseph Weiner, but he never should have been appointed. But why was he kept on so long after he had made a failure? Was that part of the policy of "do not change horses in the middle of the stream"? If so, let me suggest to the bureaucracy that Congress from now on is going to change horses whenever they find an old nag is incompetent and is sinking. In the future Congress will not be afraid to leave the old nag in the middle of a stream and get onto a colt that knows how to swim and that will safely get it and the Nation across the stream.

Where To Economize

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Clapper, from the Washington Daily News of yesterday:

WHERE TO ECONOMIZE

(By Raymond Clapper)

ALLIED HEADQUARTERS, NORTH AFRICA, July 7 (by wireless).—What appalls me about war is the unbelievable waste of life and effort and nature's riches.

If congressional advocates of economy, who have been trying to cut a few million dollars out of expenditures, want to do a real job of economizing, they have the biggest opportunity any men in public life ever had. Let them turn their efforts for economy into the largest field of all for saving money, material, human labor, and life. Let them start the greatest economy campaign of all time in Congress—an economy drive to prevent future war.

That is the challenge to this generation of public men—to see to it that the power and prestige of the United States is used to insure humanity against another such war as this one. No effort in public life will bear such rewards for all peoples, if successful, as an effort to adjust differences between nations by some more economical means than total war.

The cost of war, even in the restricted sense in which I have been seeing it, is appalling to me. I hear that Congress has appropriated the incredible sum of $100,000,000,000 for next year—which is far more than the total income of the whole American people in the best years before the war. We spent some $70,000,000,000 on war in the last fiscal year.

But the dollar cost is only part of it. Think of the exhausted resources, irreplaceable natural wealth which all nations are pouring into the conflict, useful careers being interrupted for millions of men, loss of health and life for thousands of them.

Traveling around Britain and here in north Africa, I have seen acres of ammunition dumps, sometimes driving for miles along roads lined with piles of big shells, bombs, land mines, stacks of metal boxes filled with machine-gun ammunition. I have seen acres of trucks, jeeps, and other vehicles, warehouses packed with all kinds of merchandise.

Nobody should think I am suggesting that we be niggardly in outfitting and equipping our men. That is not the point at all. The point is that to fight modern war the whole of civilization must consecrate itself to the task of mass slaughter and mass destruction. Nor am I suggesting this war was unnecessary. It obviously was inescapable after international anarchy was permitted to continue and aggressors were allowed to grow strong enough to resort to force without being confronted with an effective opposition.

Just as a minor operation in time may prevent a major one, so the use of minor force in time might have prevented this war. Regardless of what might have been, we now have a new opportunity coming along. When we see millions of American men committed to throwing everything, including their lives, into war, we are showing callous indifference not to begin now doing everything possible

to prepare the way for the effective restraint of future aggression.

If it is possible to organize a vast war machine and wage successful war on the modern scale, then it also must be possible to organize a machine for preventing war.

Those are thoughts that go through my mind time and again as I see convoy after convoy of Army trucks, or see jeeps bouncing down the dusty roads, or see ships in a harbor, and planes covering an airfield, or a street full of men marching in desert-tan uniforms.

Human Interest

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RIZLEY. Mr. Speaker, I have stated on many occasions that the power of the country newspaper and the philosophy of the country editor is the greatest bulwark the American people have against those who would make America over.

The rural newspapers and the sound philosophy of the country editor are the people's best weapon to save America from the starry-eyed dreamers who apparently believe that the Constitution has outlived its usefulness, and that free enterprise, integrity in government, and old-fashioned honesty are no longer needed.

I include as part of my remarks an interesting and timely editorial recently appearing in the Boise City News, under the title "Human Interest," by Fred R. Kreiger:

HUMAN INTEREST

(By Fred R. Kreiger)

THIRTY MILLION DOLLARS FOR WAR BOND ADS

Just what is this Nation coming to if every interest and clique of the country continues to demand more profit and subsidies in the midst of one of the hardest wars we have ever fought?

Now the National Editorial Association favors an appropriation of $30,000,000 to pay newspapers of the Nation for war-bond advertising.

Human interest may be grieviously out of step with the rest of the gang, but we are unequivocally opposed to the Government appropriating one cent for war-bond advertising.

What brand of patriotism is this that demands financial remuneration for a war effort of any kind through the columns of a newspaper, a medium which has always been one of our finest public services? To us it appears low and cheap, not representative of true American journalism. We do not believe the idea came from old-time, fundamental editors—but rather suspicion it originated in the minds of journalistic students who later became "jitterbug" editors.

What an affront to the memory of Horace Greeley and Col. Henry Watterson, old-time journalists; and to such statesmen as Col. Theodore Roosevelt, Woodrow Wilson, and William McKinley.

The writer of this column, because of a dire shortage of labor, could go to a larger town where there are big war industries, and receive a salary increase of $15 a week over what the small town of Boise City is able to pay—but there is a war on; the editor of the News made a sacrifice by joining the Army; I am badly needed here mechanically, and will not swap my patriotism for a few lousy dollars extra pay each week.

For our own self-respect, a respect for posterity, and above all, respect for our fine young men on the battlefields of the world, let us all quit looking at this war from a standpoint of the money that might be made from it.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD I include a letter written by me on April 1, 1943, to Mr. Martin V. Coffey, department commander of the American Legion of Ohio, Columbus, Ohio, and his reply under date of April 14, 1943. I want to congratulate the World War Veterans' Committee, and especially the chairman, the distinguished Member from Mississippi [Mr. RANKIN], for his speedy action in having H. R. 2703 become a law. The records will show this bill was introduced by Chairman RANKIN on May 13, 1943, reported from the World War Veterans' Committee on May 18, 1943, and is now ready to go to the President's desk on July 7, 1943.

As time goes on, this bill will prove of greater benefit to the veterans. I certainly was most happy to aid in my small way by voice and vote in the passage of this legislation, which puts the burden of proof of service connection disability on the Veterans' Administration, that no service connection disability exists. It has always been my opinion that when anyone has been accepted into the armed forces, such acceptance should be treated as prima facie evidence that the veteran was in good health.

Again I congratulate the World War Veterans' Committee and all who assisted in the passage of this legislation—a job well done.

The letters follow:

APRIL 1, 1943.

Mr. MARTIN V. COFFEY,
Department Commander,
The American Legion,
Columbus, Ohio.

DEAR COMMANDER: As a member of the Invalid Pensions Committee of the House of Representatives, as a World War veteran, and as a member of the American Legion, I feel that an unfairness is shown to the dependents of deceased veterans because of the present law which compels the dependents of the veterans to prove that the veteran's death was caused by direct connection and in line of duty.

We have hundreds of cases before our committee in which it seems nearly impossible for the dependents to prove direct service connection which caused death. As the veterans of World War No. 2 return, these cases will be multiplied by the thousands.

I am of the firm conviction that when a man is accepted into the Army and has passed the physical examination, he is physically okay and that if he dies while in the service his dependents are entitled to that compensation and that the proof and burden should be on the Department to prove he is not entitled to benefit.

I would even extend this statement to cover the veteran after he has been discharged from the Army, because there are thousands of cases that when the boys are discharged they think they are physically all right, but after their return to their civilian duties they find out their health has been impaired by some activity during their term of service.

This probably is a somewhat radical change from our various laws, but I think the laws should be changed as stated above, in all due fairness to our veterans.

I will be very glad to have your opinion and to know whether or not your State organization would turn its support to this type of legislation. I will be glad to have your personal comments on this proposed legislation.

Yours in comradeship,

J. HARRY MCGREGOR.

THE AMERICAN LEGION OF OHIO,
April 14, 1943.

Hon. J. HARRY MCGREGOR,
Congress of the United States,
House of Representatives,
Washington, D. C.

MY DEAR COMRADE: Gradually working my way through the pile of correspondence that has accumulated on my desk, I find another letter from you dated April 1 calling my attention to the unfairness being shown to dependents of deceased veterans by reason of the present law which compels the dependents of veterans to prove that the veteran's death was caused by direct connection and in line of duty.

I am again taking the liberty of referring your communication to Francis M. Sullivan, executive director of our national legislative committee located in Washington and asking Francis to communicate with you for discussion of this problem at a time that will be convenient for you.

I most certainly appreciate your thoughtfulness in this matter and I hope we can discuss it when I am in Washington, which will be the latter part of next week.

Sincerely yours,

MARTIN V. COFFEY,
Commander, the American Legion,
Department of Ohio.

He Is Not Here!

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. SIKES. Mr. Speaker, under extension of my own remarks I wish to include a beautiful passage of spiritual literature entitled "He Is Not Here":

HE IS NOT HERE!

With sad steps Mary and her companions had come that early morning to gaze upon the grave of the sleeping Master. It was the first, most wonderful Easter Day of all. Reverent hands would minister to His broken body. They would perform that last act of devotion of love with heavy hearts.

And now, instead of the rock-hewn, stone-guarded tomb, which held all that death had left them of their beloved, there flashed before their tear-dimmed eyes a vision of splendor and glory. It illumined the empty sepulchre and pointed in the direction of that even more radiant heaven to which the Christ had ascended.

The golden and amber-tinted dawn, just appearing over the hills, paled in comparison with that glory upon which the gaze of the faithful women now rested. The songs of the birds, caroling their early songs of gladness, were lost in that clearer, more triumphant proclamation which, for so many a passing century, has echoed down the ages, and shall, till time itself shall be no more.

"He is not here, for He is risen."

The words come back to us. They speak to us the same message of hope and reassurance. They create in our hearts a radiant hope that cannot be destroyed. They triumphantly affirm the ultimate victory of good over evil, of life over death, of love over hate, of God over all His foes. They inspire us to meet every disappointment without dismay, and face every trial life may bring without bitterness, for the glory of the empty tomb still shines, beckoning us onward, and upward.

Polluted Water Peril at Chicago

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Sun:

CITY'S WATER PERIL GROWS; MAYOR ASKS FEDERAL AID

Water consumers were stirred yesterday as additional warnings of impending epidemics from the city's polluted south-side water piled up. Yet officials, from health authorities to the mayor, agreed they would be unable to provide a remedy until the Federal Government allows a greater diversion of lake water.

"Only a miracle will save Chicago from an epidemic of water-borne diseases," said Oscar Hewitt, city commissioner of public works. He added his warning to that of Dr. George E. Wakerlin of the University of Illinois, who characterized the South Side lake water as little better than diluted sewage.

HAMMOND ENTERS FIGHT

Hammond, Ind., sanitary officials entered the fight yesterday by suggesting that East Chicago and Whiting, Ind., take steps to set up sewage disposal plants such as the one in use at Hammond.

Other suggestions to clean up the water supply were:

1. Speeding of governmental measures to build a dam in the Calumet Sag near its confluence with Lake Michigan to hold back refuse until it can be treated.

2. A new appeal by Mayor Kelly to the War Production Board for priority to complete the sanitary district disposal plant.

3. Encouragement of more war plants to install evaporator equipment to remove contamination before it reaches Lake Michigan through the sewage-disposal system.

Hewitt predicted the danger will become acute in August and September, when the prevailing winds are from the south.

Then, he said, the accumulated sewage will be swept directly into the zones of the two cribs supplying water to the South and Southwest sides.

MUCH WASTE IN WATER

"In August of last year," he said, "the daily average coliform count—the amount of human waste in the water—soared to 3,319 a cubic centimeter, and in September it rose to a daily average of 6,907. A count of 50 has been fixed by the United States Public Health Service as the danger line."

Hewitt said it would probably be impossible to complete during the present summer enough units of the South Side filtration plant to alleviate conditions. These units, when and if completed, would remove 70 to 75 percent of the pollution.

Because the War Department has shown no inclination to permit increased diversion from the lake beyond the 1,500 cubic feet a minute, as set by a Supreme Court decision, to the former 5,000-feet flow, which would carry off most of the waste, Mayor Kelly made another appeal to the War Production Board for priorities to permit completion of the sanitary district disposal plant.

"I have already sent additional arguments to Washington as to why we should have a temporary increase in water flow through the sanitary canal," the mayor said.

HAMMOND EXPLAINS METHOD

"We should have 5,000 cubic feet a second flowing through the waterway until this emergency is cleaned up, instead of the 1,500 cubic feet a second, which has proved insufficient under war emergency. Up to date deaf ears have been turned toward our appeals."

At Hammond, Ind., Carl Carpenter, superintendent of water, said the city had been reprocessing industrial waste through the Hammond Sanitary District for more than a year.

"But some of the communities have not been showing full cooperation," he added. "If East Chicago and Whiting would treat their commercial waste as we are, it would relieve the Chicago situation."

MORE CHLORINE USED

So far as chlorination of the water is concerned, Hewitt said:

"Normally we use 6 to 8 pounds of chlorine a million gallons to purify the water. We have been forced to use 11 pounds a million gallons and have used as much as 16 pounds."

"We are gathering data and will have a meeting of our committee next week to look into the unusual number of diarrhea cases that have appeared this year on the South Side," said Dr. Robert Black, chairman of the health committee of the Chicago Medical Society.

BOILING NEEDLESS NOW

Despite the fact that many South Side residents have been boiling their drinking water, Dr. Morris Fishbein, editor of the Journal of the American Medical Association, said yesterday this step was not yet necessary.

After a conference with Dr. Herman N. Bundesen, city health commissioner, Fishbein said:

"City engineers are watching the situation carefully, and as soon as a hazard arises they will issue a warning to boil drinking water. The present hazard does not seem to warrant issuance of this warning now.

"An outbreak of dysentery on the South Side would be a menace to the entire city.

"Chlorination does not kill the amoeba in amoebic dysentery nor does it kill the virus of infantile paralysis, but boiling the water kills both."

Polish-Russian Peace

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Philip Simms, from the Washington Daily News of July 7, 1943:

POLISH-RUSSIAN PEACE

(By William Philip Simms)

The broken relations between Poland and the Soviet Union may shortly be mended despite the tragic and, in some respects, irreparable loss of Gen. Wladyslaw Sikorski, the Polish Premier.

Officials here have been assured that Polish policy, both domestic and foreign, will continue along the same lines as before the general's death at Gibraltar. The Government will remain one of national union, representing a coalition of Socialists, peasants, Christian Democrats and Moderate Nationalists.

With regard to Russia, it is said, the Polish Government will continue a course of moderation and conciliation, disregarding the demands of the small groups at either extreme.

Napoleon called Poland the "key to the European edifice." Washington and London agree with Napoleon. They acknowledge that Russia forms the great mass of the structure but, they warn, unless the Polish keystone is fitted into its proper place, the whole thing eventually will tumble down.

That is why officials here attach so much importance to a Russo-Polish rapprochement. A week ago I revealed that such a rapprochement is expected shortly. Forty-eight hours later, in Cairo, General Sikorski confirmed that a move was under way to reestablish diplomatic relations between the two countries. Unfortunately, however, 2 days later he was killed in an airplane crash.

The precise formula for the settlement, of course, has not been announced. In fact, it is likely that a final arrangement cannot be reached until after the war. What is being sought now is a just and reasonable basis for a final understanding.

Such a basis might be something like this:

1. An immediate Polish-Soviet agreement to return to the status quo as of July 30, 1941, with regard to both Polish territory and Polish citizens.

2. An agreement in principle to (A) a postwar alliance between Russia and Poland; (B) a similar alliance between Russia and Czechoslovakia, and (C) a third alliance between Czechoslovakia and Poland.

At different times both Russia and Poland have agreed to each of these points. The Polish-Soviet agreement of July 30, 1941—shortly after Germany invaded Russia—was signed in Downing Street, London, in the presence of Prime Minister Churchill and Foreign Secretary Anthony Eden. Russia recognized the German-Soviet treaties of 1939 partitioning Poland "as having lost their validity."

Today about all that Russia is asked to do is to stand by her signature of less than 24 months ago. As for the triple alliance between Russia, Poland, and Czechoslovakia, that suggestion came recently from Moscow—a suggestion which both Gen. Sikorski and

Dr. Eduard Benes, President of Czechoslovakia, were quick to accept.

United Nations officials here feel that a Polish-Soviet understanding ought not to be difficult now. The impression here is that the Polish Government in London will not greatly modify the stand it took under Premier Sikorski's leadership. Apparently, therefore, only Moscow remains to be convinced.

All agree that Russia, first and foremost, is seeking maximum security for herself. This she can have, they feel, only with the friendly cooperation of post-war Poland, Czechoslovakia, and her other neighbors, plus the collaboration of the British Commonwealth, France, and the United States.

If, on the other hand, Russia insists on going it alone, and if she makes bitter foes of her neighbors by shifting frontiers and peoples about to suit herself, a third world war will be inevitable.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LAMBERTSON. Mr. Speaker, we are going to our districts for 2 months to be a listening post.

My prophecy is that F. D. R. will not do much on roll-backs beyond what is started.

We are in favor of letting the soldiers decide our future foreign policy when they return, Americanism or globaloney.

In the disposition of the N. Y. A. machinery, we make it accessible to all agencies but lend-lease. This is one thing we thought to leave at home.

Because Congress was delayed 4 days in the fiscal year on stopping N. Y. A., it cost $576,000. Quite an expensive illegitimate baby, don't you think?

In the long and many times renewed conferences on appropriations in the past 2 weeks, I have developed a higher and keener appreciation of our democratic process.

"Congress passed a bill. The President vetoed it. The Senator advocates that Congress change its mind. I advocate that the President change his mind."—Senator TYDINGS.

A Nudealer from one House and a Republican from the other will go out during the recess in pairs, like the disciples of old, to sell their new religion of the one world to the people.

Some official paid Mayor LaGuardia's town $2,600,000 for the bottom of the Hudson River, a navigable stream, in which the *Normandie* lies. The Nudeal is not only high and wide, but she's deep.

For 10 long years JOHN TABER has been the ranking man of the minority on appropriations. His industry, dissecting ability, horse sense, and courage make him the modern watch dog, and believe us there is much to watch. This is not a tribute—just a statement of facts.

How To Win the War and Save the Republic

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HOFFMAN. Mr. Speaker, under permission to extend my remarks, I print a talk delivered June 15, 1943, at Cleveland, Ohio.:

Interwoven and first in the minds of all patriotic Americans, given thought during the day, and the subject of prayer at night are the two questions—

1. How can we win the war?
2. How can we save the Republic?

Not only do we wish to win the war quickly, but we desire to win it with the least possible suffering and loss of life. But the winning of the war will be futile unless we save the Republic. Let us save the Republic after the war is won, not by revolutionary means, not through violence and bloodshed, but by using peaceful, constitutional methods. Come hell or high water, the Republic must be saved.

HOW TO WIN THE WAR

It is a waste of time and energy for civilians to debate military procedure. We will do well to avoid discussion of strategy. Civilians as a class have no knowledge as to where or when our men should fight in order to wage successful battle.

We do not know the number of men required, though we do know there is a limit to the number we can feed, equip, and transport.

We do not know the kind or the quantity of weapons with which they should be equipped, nor the moves which they should make in order that our enemy may be defeated.

No one, however high his rank, who lacks military training, should assume the burden or the responsibility of determining for those trained in warfare the course which our armed forces should follow.

Let us avoid the blunders of the Civil War, which brought disaster to our armies, death to thousands of men, and which grew out of the ambitious political action of civilians and Government officials of that day.

Let me repeat here, now, what has so often been said. No criticism of the conduct of the war, of the men or of the officers who are fighting your battle and mine, has been or will be made by me, nor, so far as I know, by any Member of Congress.

All desire to aid our allies in Europe, Asia, and Africa, and all insist that adequate aid be given to our forces in the Aleutians, to MacArthur and his heroic men in the Pacific. None—no; not one—anywhere, wherever we may have sent him, should be left without adequate support.

Dismissing, then, the thought of giving advice to those who are charged with, and who are doing, the fighting, let us turn our attention to what we as civilians here on the home front can and must do, if the complete defeat of our enemies is to be brought about quickly and with the least possible suffering and loss of life and the Republic saved for the boys who come home.

But first let us understand why we are here tonight.

Yesterday, June 14, was Flag Day. It was first so proclaimed by President Wilson on June 14, 1916, and June 14 was chosen because it was the anniversary of June 14, 1777, when the Continental Congress adopted the Stars and Stripes as the official flag of the United States.

The American Flag Day Association was incorporated in Illinois in 1894, and its purpose was to, on each succeeding June 14, rededicate our loyalty and our adherence to our flag, the Stars and Stripes.

On May 4, last, President Roosevelt issued a Flag Day proclamation, in which he urged that the flags of the other 31 nations be honored in this country on our Flag Day.

This being a time of war, other nations being associated with us in that war, it is well that their flags should also be honored.

But it should never be forgotten, on June 14, or on any other day, that the Stars and the Stripes is our flag; that it is the flag, and the only flag, to which we owe, and, with God's help, we will ever owe, allegiance.

In the President's proclamation, there was more or less about the United Nations and the brotherhood of man.

The Office of War Information in Washington presumed to give the American people directions as to how they should observe Flag Day. It suggested:

"In order that the celebration of Monday, June 14, as United Nations Flag Day shall be given point and direction, the following suggestions might well be kept in mind:

"1. Maximum display of United Nations flags.

"2. Use of the term 'United Nations' whenever possible.

"3. Emphasis on the principles set forth in the Atlantic Charter for which the United Nations are fighting.

"4. Emphasis on the importance of teamwork among the United Nations, not only in war but in the peace that follows."

But just as there is in this universe for us but one God, let us remember that there is in this world just one flag, just one Nation, to which we owe an unwavering, unlimited, unquestioning devotion and allegiance.

And that Government is the United States of America, and that flag is the Stars and Stripes.

Let us get this straight. My purpose here tonight is not to speak for the Democratic Party nor for the Republican Party, nor for any political party, but to express the need which our country today has for a united, all-out effort, not only to win the war but to save the Republic.

Yesterday, from the Portland (Oreg.) Journal came a reprint of an article appearing February 12, 1933, dated at Pinehurst, N. C., reading as follows:

" 'The United States is headed for an important part in another general war which is inevitable,' Henry Morgenthau, financier and former Ambassador to Turkey, said in a lecture here."

It is impossible for me to subscribe to the doctrine that war is inevitable, but, if it be true, as the present Secretary of the Treasury said, that war is inevitable, then it is foolish for this administration, of which he is a most important member, to advocate a superworld to end all war.

We all hate war, and many of us not only, like some others, hate war but we did our utmost to keep this country out of war.

There are those in this country—some columnists, some editors, some publishers, some radio commentators—who, ever since 1933, when Mr. Morgenthau made his announcement that war was inevitable, have been hot for war, and who, since the war began, have been accusing all who opposed war with a lack of loyalty and patriotism.

They have created disunity by their false, slanderous, and libelous charges, and cowardly would we who sought to avoid war be if we let their vilification go unchallenged,

or failed to do our utmost to show the falsity of their charges, their failure—their utter, complete failure—to themselves render any patriotic, efficient service toward the winning of the war.

Germany has its Hitler; Japan has its Hirohito; and each, in his misguided, vicious way, is doing his utmost to further the interests of his country. Russia has her Stalin and Great Britain has its Churchill, and each speaks for the land he loves, for the flag under which his brothers fight, for the government of which he is the head.

Stalin speaks for Russia, for no other nation. Churchill speaks for Great Britain, for the Empire, for the preservation and the extension of the Empire, for Englishmen everywhere—and for no other land or government.

Here in the United States of America, the common man, the man on the street, the man behind the counter, the man in the factory, and the man on the farm—the common man—he speaks for America. May his voice ever be heard. May his will in the end prevail. May the Stars and Stripes continue to be our flag; the Constitution our guidance.

Let Marshall Field, the third, and all his millions, and the puppets who speak and write for his money; let the Chicago Sun, New York's PM, the Communist official publication, the Daily Worker, and publications like the New Masses, the New Republic, and all the purchaseable press—and thank God, there is but little of it and what there is has less influence—let them rant and rave; let them accuse us of being rabble-rousers. Let them say what they will. Those who have the fate of America at heart know that some publications but distribute falsehood, disunity; but seek to destroy the confidence of the people, not only in their chosen representatives, but in their form of government.

We who sought to avoid war, those of the great Middle West who abhorred war, have been doing, they are doing, and they will continue to do, their utmost, not only in support of the fighting men, but for the preservation of the Republic.

Because we are out to win this war, to save the Republic, we cannot and we will not slavishly and idolatrously accept and give adherence and obedience to the theories of those who advocate the overthrow of our Government, the remaking of America, the substitution of a flag of a super world-government for the Stars and Stripes.

We will, whenever we discern in the New Deal policies, in the theories of the Communists, in the acts of the bureaucrats, a tendency to put into practice ideas or plans which we know will lessen the support which our armed forces should and must have if they are to win, hesitate not one single minute to fight and destroy those plans, ideas, and theories, regardless of what may be said of our efforts.

There is no reason to believe that the bureaucrats at Washington are infallible; that they are all-wise. Businessmen, industrialists and farmers know, from actual experience, that many a hampering, hindering, restrictive order, rule, and directive has come out of Washington.

We should have, and we will have, but one thought, but one motive, one purpose—the winning of the war and the preservation of the Republic.

THE HOME FRONT

When war was waged by roaming tribes, who subsisted upon the country, the home front was not important. But in these days of modern warfare money, food, clothing, transportation, and production are vitally important.

Money must be had because it is a medium through which we purchase all those things which the fighting man must have if he is to win. Because we had no financial backlog, but rather an unprecedented public debt, at the beginning of this war we all realize that taxation, however exacting, will not provide the necessary billions to carry on a world-wide war.

Having declared that we are not only the arsenal but the granary of democracy, having undertaken the task not only of arming but of feeding the whole world, billions upon billions have been, and will be, required. The only source from which those additional sums can come is through borrowing, the issuing of bonds, the increase of our national debt.

But, again, when that money is spent into the hands of the people go billions of extra dollars or their equivalent. The immediate result is inflation, which, again, is followed by skyrocketing prices.

Recollection of our school days history will carry us back to the days when originated the expression "not worth a continental," when continental currency was plastered on a dog to show its lack of value.

It may not be too much to say that victory was saved for our Revolutionary forefathers when Robert Morris came to their rescue with funds raised principally in Philadelphia, New York then being in the hands of the British. Today the millions of purchasers of small bonds are performing a like patriotic and necessary service.

Notwithstanding the fact that billions have been appropriated—a hundred billion will be required during the coming year—the President recently asked for another tax bill to yield some sixteen billion additional dollars. The need being so great, there is no excuse for waste, extravagance, or incompetency in its expenditure.

This brings us to the conclusion that one of our contributions toward the winning of the war is the insistence, upon every possible occasion, in no uncertain terms, that all lost motion, that every single item of waste, that every unnecessary expenditure, be, without delay, eradicated by this administration.

There is no excuse for leaving open the door to those who would reap excessive profits, demand excessive salaries or wages.

Soon, from the well of the House of Representatives' Chamber in Washington, a Congressman will name corporations which have made exorbitant profits out of their war contracts; will cite instances where employees in factories have made as much as $8,000 per year.

Suffice it for the moment to say that, when corporations using borrowed Government money, can build and operate factories, receive Government orders for war material, and finance the whole thing, from the day when the first sod was turned to erect the plant to the shipment of the finished product from the factory, on Government funds, and make a profit of 1,000 percent, there is something rotten—not in Denmark—but in Washington. It is not an African who is in the wood pile, but a New Deal politician.

When Chicago drivers delivering milk and who are making $8,000 per year, strike and insist that they receive $25,000 per year, and, unmolested, try to enforce their demands by boycotts and sympathetic strikes, it is time to smash the political alliance between this administration and labor racketeers.

When employees in factories hold up production and insist that they receive greater compensation per year than do our generals and our admirals, it is time the people made themselves heard.

Regardless of the merits of their demands, what excuse is there for John L. Lewis, when, at his command, more than a half million men engaged in the production of the coal upon which the operation of the factories which make our arms and munitions depends, lay down their tools and refuse to work?

That our men on the fighting fronts have lost all patience with strikes, slow-downs, and work stoppages is shown by the letters which come back from those fronts. That the officers with the fighting forces have no sympathy with such procedure is evidenced by the fact that those letters from the fighting men come through uncensored.

No one longer objects to unions or to collective bargaining. But we on the home front must insist that the demands of our fighting men that those who remain at home render full measure of service be complied with.

When an executive in a plant producing instruments needed by our armed forces receives upward of $39,000 per year, we are led straight to the thought that the taxpayer's money is paying an excessive price for the instruments sold by that corporation to the Army and the Navy.

We are not doing our utmost when we insist that, for all services rendered by us, we receive a carry-home wage which, after all deductions for taxes, insurance, social security, and union dues, equals the previous total wage and which gives us an increase which includes all additional costs of living.

If we are to have a wage which is to include every additional cost imposed upon us by the war, then tell me, if you will, what, if anything, we have contributed to the war.

If we are to have, when engaged in production, retail or any other business, a profit equal to or greater than that made prior to the war, we are not contributing toward the cost of that war.

After figuring just how much increase in wage or in profit the other fellow, whom we criticize, is making, why not give a little consideration to our own situation, our own demand, and then answer truthfully the question whether we are doing our utmost, our best; whether we are really actually sacrificing anything, or as much as we should.

The man who is fighting amid the snow and the ice of Alaska; who last week was digging fox holes in the frozen soil of Attu; who will soon be called upon to risk his life in an assault upon Kiska, is not encouraged by the knowledge that, here at home, some of us are complaining of a lack of gas, of fuel oil, of butter, of beef, or of anything else. He just cannot understand why we should grouch about long hours.

The American boy, flying his bomber or his fighter through the mists and the fog, the sleet, and the snow, of the Aleutian Islands, or miles high over the South Pacific, has just cause of complaint when here at home production is stopped, even for a moment, in any of the factories, upon the production of which his life, the success of his mission, depends.

Rickenbacker, who tossed for 23 days on the waters of the Pacific, staring death in the face, holding a dying comrade in his arms, who appealed to Americans generally and in particular to American workers to do their utmost to aid his comrades, may be publicly called a rat by a crazy so-called organizer; Rickenbacker may have his pictures barred by union organizers from theaters when he appeals for the Red Cross and for his comrades; but loyal Americans know him for what he is—a patriotic American fighting man, who, in the First World War and in this has gone into the valley of the shadow of death; whose heroism and self-sacrificing devotion to his country is the admiration of every true American.

We here on the home front know that our enemies will never be defeated, the war never will be won, until we who remain at home all day and every day do our utmost.

Nor is there lack of task or opportunity for any one of us. No man, no woman, who is able to walk but can contribute something to the war effort. In the smaller towns, in the outskirts of the cities, there are the gardens,

each small in itself, producing but a little of the food which all must have. But, in the aggregate, millions of them—yes, millions upon millions—each tended with loving care and faithfully, will take at least one family for a time out of the purchasing line, leaving more for others. And hundreds of thousands, perhaps millions of those gardens, will produce a surplus, the total of which will be equal to the production of many farms.

In every home, in every city, there is an individual who, if correctly advised and proper opportunity given, can do just a little more on the home production front. It is your business, it is my business, to see that that opportunity is created.

Every farmer in the land, his wife and his children, can work, and practically all of them are working, from morning until night and some, with the aid of tractors and the headlights upon them, far into the night, to grow the food which their sons, brothers, and fathers—yes, and our fighting allies—must have, if the battle is to continue.

No one questions the loyalty of the American worker. He, like many another, is the victim of circumstances. Few indeed are the workers who, having sons or brothers or parents with the armed forces, would, if they realized the situation, the necessity for production, lay down their tools, forsake their jobs, go on strike.

We are all selfish, but that selfishness will every time give way, if once we understand that because of it, someone far from home may die as the result of our action or inaction.

There are those in factories who are wasting their time; who are interfering with production; who are slowing down production. But few indeed they are in number. Out of all proportion to their number is the blighting result of their actions. They, by continuous, enthusiastic service day after day can contribute their efforts toward the defeat of our enemies.

In Washington, to save not more than a sixteenth of a mile, across the Tidal Basin, using steel needed in the war effort, apparently in furtherance of the plan to beautify Washington, the bureaucrats are throwing a bridge at a cost of millions of dollars, which should be used to purchase support for the armed forces.

There are bureaucrats in Washington who, desirous of continuing themselves and their departments in office, insist upon appropriations, upon the expenditure of money, for purposes which are not only not needed, but are harmful.

The head of the Office of Price Administration, Prentiss Brown, is a tyical American and, in my judgment, if permitted to have his will, would bring order out of the confusion which now exists throughout the country because of the hindering, conflicting rules and regulation promulgated by the Office of Price Administration.

The law under which he acts and which is the law insisted upon by the administration, by the President himself, is unworkable, and the Office of Price Administration is shot through and through with men who know little or nothing of the businessess which they undertake to regulate.

Small businessmen, small industries, have been and are being put out of business and production. Farmers are handicapped because too many of the skilled farm workers have been taken into the armed forces; because farm machinery, which they must have if they are to produce, has been shipped to other countries. The administration still limits the number of acres which can be sown or planted to needed farm crops.

Into my office last week came a letter from a processor of dairy and poultry feed, which tells how it is becoming impossible to obtain the corn, the wheat, the concentrates, the beef scrap, which must be had if feed for the dairying and the poultry industry is to be made.

Lack of this feed means that millions of laying hens will go on the market; that cows giving milk will be sold for beef; that, in the coming fall, winter, and spring, there just will not be the needed eggs, poultry, milk, butter, and beef available, either for home consumption or for our armed forces.

That same letter carried the statement that, due to the lack of feed, 6-week-old pigs, which 2 weeks ago were selling for $11 and $12, were a drug on the market for $4 and $5 each. Six-week-old pigs are of little value as food and, if the corn is not available—and it is not in Michigan at the present time—that means shortly there will be less pork to eat.

We ask, what has all this to do with us and with the winning of the war? Nothing at all, unless we take action. And what action can we take?

You have Senators and Representatives in Congress. To them in no uncertain terms you can make known your views, your demands. You can insist that they take action without any further delay to bring order out of confusion; that they at once get rid of those in the Office of Price Administration and in other departments at Washington who haven't the slightest idea of what it is all about, and place in charge of the administration of the laws production men, businessmen—men who know how to produce, process, manufacture, fabricate, and transport—and that, then, having placed them in positions of power, you insist that the President and his "little kitchen cabinet" keep their incompetent planning out of the picture.

The President cannot do everything. Let him give authority to competent men, who believe in the American way of doing things, and then let him avoid any and all interference with them.

Unless something like that is done, this war, if it is not lost, will be prolonged, and thousands—yes; perhaps hundreds of thousands—of our young men will die because, here at home, on the home front, we have failed them.

HOW TO SAVE THE REPUBLIC

As a Republican, I do not choose at the moment to charge that this administration is planning to overthrow constitutional government; is seeking to destroy the confidence of the people in their representatives in Congress.

We are aware that it was the President who said at the beginning of his second administration in 1936 that in 34 months he had built up new instruments of public power which in improper hands would provide shackles for the liberties of the people. Today much of that power is in the hands of those who desire to remake America. The Federal pay roll has on it too many Communists and Communist sympathizers.

We recall that 9 months later he boasted that in his first administration those who opposed him had met their match; that he expressed the desire that of his second administration it could be said that they had met their master.

It is a matter of common knowledge that the President made of Congress for a period of years a rubber stamp and that a revamped Supreme Court gave force to the economic and political theories of his administration.

But disregard for the moment the statements of his political opponents; the facts as to events which are in the past. Let us come down to the present.

The South is a Democratic stronghold. In that Democratic stronghold there is no State more loyal in its support of our Constitution, in its insistence that public officials abide by its terms, than the State of Texas.

In the Congress of the United States there is no more ardent, loyal, enthusiastic Democrat than Senator W. LEE O'DANIEL, of Texas. Exasperated by Office of Price Administration regulations which threatened the poultry industry in his State, he made the statement that responsible officials in the Administration were—and I quote:

"Taking orders from somebody, and that what they are doing is only part of a plot to change our Government into communism, socialism, or some other foreign 'isms,' which means a dictatorship and regimentation of our people and abolishing our private system of enterprise."

Operators of small factories, businessmen, farmers—in fact, everyone who is endeavoring to carry on the business which provides the tax money; which produces, processes, manufactures, or transports the things which are needed to keep this Government a going concern, to maintain the foundation which supports the armed forces—have all been hampered and hindered in their efforts by bureaucrats, by New Deal planners.

The blighting effects of this administration are so widespread that millions of people throughout the country are almost ready to give up in despair.

Only a week ago, appearing before the House Small Business Committee, W. H. Albers, president, Supermarket Institute of Cincinnati, testifying, said:

"Let the policy of the organization be based on facts and let the Office of Price Administration stick to that policy. The agency now has become so hopelessly disorganized that the time has arrived for mobs to descend on Washington."

No one wants mob violence, but we have mob violence out in California, where the zoot-suiters have been so lawless that they have finally aroused the indignation of the men in the armed forces to such an extent that riot after riot has occurred. And the answer to that problem was an order excluding the men of the Army and the Navy from the public streets of the city of Los Angeles.

The correct answer, the proper answer, to the lawlessness of those gangs would have been law enforcement. Throw the zoot-suiters into jail. Try them and, if found guilty, convict them and send them to prison.

What must be the thought of the soldier or the sailor, walking the streets of a California city, when he and his girl friend are assaulted by a gang, and, when his comrades retaliate in kind, they are barred from the streets of the city which they will shortly be called upon to defend with their lives on some foreign battle front?

Throughout this land other gangsters are depriving American citizens of their rights. In one little Michigan city convicted criminals from the city of Detroit, driving on rationed gas and rationed tires, roam the streets, picketing grocery stores which sell milk delivered by men who have refused to join a particular organization.

Our boys are fighting to carry the "four freedoms" including freedom from want and freedom from fear, to the people of India, of the islands of the southern Pacific. Yet here at home grocerymen are not permitted to sell food to hungry people just because other men who deliver milk to them refuse to pay a fee demanded by gangsters from Detroit.

It all stems back to the political alliance between the administration and union political leaders. The result is the destruction of freedom from fear and, in many cases, freedom from want; for by the activities of the so-called organizers the legitimate business of patriotic American citizens is destroyed.

In another Michigan city manufacturers of shells were told that the finished product as well as the materials to make the shells would not be transported to or from their factories if they continued to buy coal from a dealer whose drivers refused to join a particular union.

It all finds support in the political alliance between labor leaders and the administration, determined to have its arbitrary way; to purchase political support, regardless of its lip service to the "four freedoms."

In Congress a bill was passed last week by a vote of 219 to 129 which provided that union men before a strike which would throw them out of work was called should have the right by secret ballot to determine whether a majority wanted a strike.

When that bill was before your Congress and after it had been passed, William Green, head of the American Federation of Labor, and the American Federation of Labor announced that it was the purpose of that organization to defeat every man who voted for that bill. Now, mark you, who voted for a bill which gave members of the American Federation of Labor a vote on the question as to whether they would strike in an industry which was producing arms for their sons and brothers.

Prior to the last election the executive committee of the teamsters' union in New Jersey announced that they had $4,000,000 cash on hand and the executive committee of that organization authorized its president to use so much of that $4,000,000 as might be necessary to defeat a Member of Congress.

The organizations which are making these demands are the political allies of the administration in power. If this Government is to be preserved; if the Republic is to remain, then the people must, by their protests, by their petitions, by mass meetings and by letters, by personal conversation, bring home to their representatives in Congress the knowledge that these pressure groups must not control legislation.

Let those publications which advocate the hauling down of the Stars and Stripes, the substitution of a flag of a superworld government, and whose god is the almighty dollar, call us names, make their false charges of a lack of patriotism by insinuation and innuendo, through news story and editorial, continue to stir up disunity and discord.

The American people have too much good sense, too much of good judgment, to be either deceived or misled. Proof of this is found in the futility of their efforts when at the last November election, and in fact at every election since, the people at every opportunity have repudiated their preachments, denied their demands.

It is the policy of this administration, of those who do not believe in America, in its people or its form of government, to brand all those who oppose any of their ideas as disloyal, as unpatriotic.

This, under the Constitution, is a people's Government. It can remain so only if the people now—without delay—meet the false charges which are hurled against those who oppose efforts which will destroy the republic.

While our fighting forces save us from Hitler and Hirohito, we here on the home front must save the country, the Nation, from the bureaucrats and planners, from the Communists, and the New Dealers.

Be of good cheer. Be not dismayed. The truth, courageously told and oft repeated, will prevail. Hour by hour and day by day, keeping ever in mind the principles set forth in the Constitution given us by our forefathers, let us do all things which will aid the men who are fighting our battle; which will overcome and defeat the efforts of those who here at home would destroy all those things which our fighting men hold near and dear, and which will be their only reward when the battle has been won.

When someone tells you or charges that you are unpatriotic; that you are hindering the war effort by opposing some administration policy; by criticizing something which is defeating the efforts of our fighters, ask him how many War bonds he has bought; how much of food, of clothing, of munitions of war he has produced; how many hours per day he has worked.

Ask him whether he believes in the Constitution, or whether he has some plan for overthrowing constitutional government, surrendering our independence, hauling down the Stars and Stripes and joining in a world supergovernment, which will keep our boys policing and fighting in foreign lands for years to come; which will keep our farmers working every daylight hour to feed people in foreign lands.

Ask him whether he believes in America, has confidence in her people, faith in the God who has guided us in the years that have gone.

Tell him in words short and loud that you believe in religion, in the existence of a supreme deity, in our country, our Constitution, and our people, and that, for you, the Stars and Stripes is the flag under which you wish to live and die, and, as your conscience dictate and your God may answer your prayers, you intend, come what may, to follow a course which will keep it flying until the boys come home.

Our Moral Responsibility

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KENNEDY. Mr. Speaker, this morning, I read an impressive editorial in the New York Times, concerning St. Paul's Episcopal Church in Mount Vernon, N. Y. New York is my State, and beautiful Mount Vernon, a suburb of New York City, is only a few miles from my home. I have visited this historic spot hundreds of times and have always come away with an inspired and appreciative heart. Indeed, my parents took me there often, when I was a child, and I can still remember how their eyes would glow when they looked upon the patriotic monuments to our Nation's history. For they, like the founders of this country, came from a far land—a land which has fought unabatedly for freedom and the democratic way of life. I can remember hearing the bell of St. Paul's, that original bell, made by the very makers of the Liberty Bell. Today, the beautiful bells of the cathedrals of Europe, so much a part of the life of the people, are silent. Notre Dame, Bruges, Lourdes, St. Sulpice, and Trondheim shall echo no longer to the sound of their joyful and prayerful bells until every trace of the invader is swept from their lands; but in our country every church, of every denomination, sounds that glad note.

Now that we are about to recess for the summer, it is not amiss to turn our consideration to some of the larger and more general aspects of our history and to realize that our proud freedom and our brave name of America were made possible by men who sprang from alien soil, but whose hearts and souls rushed from persecution and tyranny in the Old World to liberty, and the self-discipline which liberty requires, in the New. If we remember that the fathers of our freedom fought against hatred and narrow-mindedness, against tyranny, corruption, religious and social persecution, and unjust economic discrimination, and all the other evils which totalitarianism has reawakened in other parts of the world today, we may better understand the terrible plight of the oppressed peoples of Europe and Asia. We may better judge how to alleviate that plight.

I submit this editorial for the attention of Congress:

OLD COLONIAL CHURCH

Announcement by Secretary Ickes that St. Paul's Episcopal Church in Mount Vernon has been designated as a national historic site doesn't affect it proprietorship, which remains in the corporation. It means that the National Park Service will have a hand in the care of the property. Few churches have more flavor of old New York. Van Cortlandts, Rhinelanders, Roosevelts have been pewholders or vestrymen there. Some years ago the President's mother was chairman of the committee to restore the church.

The earliest church building on the Green was a frame house, 28 by 18, and shingled on the sides. The present church, built in 1761, is of stone with a square tower at the front. It is of Georgian Colonial style. The date of the first genuine Georgian church in this town, St. Paul's Chapel, was 1764. The Green, the Eastchester Green, is famous for that election in 1733 for printing a true account of which John Peter Zenger, of the New York Weekly Journal, was tried for seditious libel against the Crown. His acquittal is the earliest monument of American freedom of the press.

In the seventeenth century Eastchester or Mount Vernon was called Hutchinson's after Anne Hutchinson, who lived there for a time after having been driven out of Massachusetts for her theological views. She was to die at the hands of the Indians on the shore of Pelham Bay. During the Revolutionary War St. Paul's was a Hessian hospital. After the battle of Pell's Point, 90 Hessians died in the church and were buried in the sand pit. The church bell still in use, cast by the makers of the Liberty Bell, was buried in 1775 to keep the enemy from making it a cannon. After the Revolution, St. Paul's was used as a courthouse, and Aaron Burr tried cases there. One more curious detail the guidebook gives: "George Washington Adams, son of President John Quincy Adams, drowned nearby in 1829, is buried here."

Almost daily in the pages of our newspapers and magazines, in platform speeches and on the radio, in the theaters and movie houses, by letter and private appeal we are besieged by pleas for some alleviation of the sufferings of the oppressed peoples. Such appeals are not only highly praiseworthy but absolutely necessary to keep ever before us the principles for which we are fighting, the sympathy and understanding which must flourish in our souls, the aid we must give, and the warnings of what should befall us should we attempt to reap the whirlwind of selfishness.

At the same time, it is well to balance these essential concepts with the facts of the case. We have been giving, and continue to give in increasing measure, all the aid to the oppressed which we can possibly muster. Lend-lease supplies

must of necessity go through the blockade at their own peril. The wonderful work done by the Red Cross, impeded as it is by the necessary blockades imposed by the United Nations, as well as the destructive actions of the enemy, continues to flourish. Although the Red Cross, the Quaker Relief, and the various Catholic relief societies are not able to send food to occupied countries, they can and do furnish medical supplies.

The injuries to the physical well-being and to the morale of the persecuted peoples of Europe will take a long while to cure. Perhaps two generations is not enough to allow. Deprivations and injuries in China are undoubtedly equal to those in Europe, but are to some slight extent counterbalanced by certain aids which we give the new China, and which we probably would not have given so quickly or in such measure were not the Chinese our active friends and allies in the present crisis. One murdered Chinese child may represent a pennyworth's value, or the worth of the whole world, depending upon the ethical viewpoint of the beholder. But we are training hundreds of young Chinese women as Red Cross nurses, and perhaps, now and after the war, their acquired knowledge may save the lives of whole generations. We are teaching the Chinese how to use and care for water-cooled machine guns, trench mortars, antitank guns, and other weapons of destruction. This means that, after the war is won, we will have taught them the principles of modern machinery, and what they have learned about jeeps and tommy guns—which, it is said, they have come to love as do our own Yanks in the Mediterranean and New Guinea—can be applied to those pursuits of peace which concern commercial flying, mechanical harvesting, road-building by tractors, bridge-building by caissons. Perhaps this may sound like cold comfort, but it is equally cold fact.

Only yesterday President Roosevelt sent a special short-wave radio greeting to the people of China on the sixth anniversary of their resistance to Japanese aggression. He said:

> Our friends have long known what our enemies are learning today—that the promises of the United States are always kept and our pledges are always redeemed.

We have been able to get some food into Greece. Our supply may be inadequate, but at least it is something. Naturally, the United Nations oppose any relief which will only fall into the hands of our enemies, and so feed and clothe and succor those who oppress the very ones to whom our help, and our hearts, are directed. With the initial aid of the Turkish Government, who sent the very first of the food supply ships to Greece, with the use of borrowed Swedish ships and the invocation of lend-lease, food has gone to the Greeks, in small measure, and at the peril of capture or sinking.

Obviously, the American Nation, as well as the unfortunate folk of such countries as Norway, France, Belgium, and Holland, question: If even an occasional trickle of food can go to Greece, why not to the others? As a certain delegation of Norwegian seamen put it, they do not wish to go home at the end of the war and "have to go to the churchyards and find the crosses of their dear ones who have died of hunger." Hostile groups, both here and abroad, encourage such natural fear and concern, and stir up dissension by capitalizing upon it.

The "why" is the almost sure danger of strengthening our enemies with materials intended for our friends. The solution is to get the war over with as quickly as possible, and then to allow some such committee as that which is now being formed under ex-Gov. Herbert Lehman, of New York, for the organization of American aid in reconstruction, to take over and restore the full vitality of the small democracies.

In the last war we brought great aid to France and Belgium even while the fighting was going on. But we did not have such stiff essential blockades imposed of necessity by ourselves and our allies, nor did we engage in a war which encompassed every ocean in the world.

Of our two problems, after victory is won, the first is the assistance of rehabilitation of the oppressed peoples of the earth; the second is the matter of post-war immigration. The first must rest in the laps of such agencies as the aforementioned for the organization of American aid in reconstruction. The second will be a matter of consideration not only for members of the legislative body, but for every American citizen. Certainly we do not wish to become, nor do we propose to be, a sort of catch-all for the misfits of the earth. With our present system of quota immigration we could never become that. On the other hand, we must make ourselves ready to welcome useful citizens. We must remember that one Toscanini is worth a thousand Capones; and that we have gained Einstein, even though Fritz Kuhn is in a detention camp. And the little, unimportant people who come here full of hope and who go to work earnestly, who pledge sincere allegiance to our flag, and who learn our language, have every right to enjoy our privileges. At one time all of us, save the Americans who are entirely of Indian blood, were immigrants, whether we stepped off the *Mayflower* onto Plymouth Rock, or came, hopeful and trusting, like my parents, from Ireland only one generation ago.

No matter when we or our forefathers came to this great land, our hearts stir to the words of Felicia Heman's poem, The Landing of the Pilgrim Fathers, which every school child learns:

The breaking waves dashed high
On a stern and rock-bound coast,
And the woods, against a stormy sky,
Their giant branches tossed.

And the heavy night hung dark
The hills and waters o'er
When a band of exiles moored their bark
On a wild New England shore.

What sought they thus afar?
Bright jewels of the mine?
The wealth of seas; the spoils of war?
They sought a faith's pure shrine.

Ay, call it holy ground,
The soil where first they trod.
They have left unstained what there they found—
Freedom to worship God.

This country was made by people driven here from other lands through oppression and religious tyranny and hunger and fear. They, a few of them, built St. Paul's Episcopal Church in Mount Vernon; more and more of them built such churches all over our country. They were proud of what they made. Let us keep it fair and brave for their descendants; at the same time, let us resolve never to close our doors against the equally courageous men and women of today—and tomorrow.

The Strategy of Truth

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the RECORD an address on the subject "What O. W. I. Sets Out to Do for Us," delivered by Liam O'Connor, Special Assistant to the Director of Domestic Operations, Office of War Information of the O. W. I., and published under the heading "The Strategy of Truth" in the magazine Commonwealth.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE STRATEGY OF TRUTH—WHAT OFFICE OF WAR INFORMATION SETS OUT TO DO FOR US

(By Liam O'Connor, Special Assistant to the Director of Domestic Operations, Office of War Information)

Truth, it has been said, is the first casualty of war, and the propagandist is the assassin. According to this view, the propagandist is essentially a liar; he uses the lie to mislead the enemy, to deceive his own people, to secure the aid of neutrals and allies. He has one aim, as Goebbels puts it, "the conquest of the masses. Every means that serves this end is good."

Hitler is in full agreement with his Minister for Propaganda and Public Enlightenment. He believes that the propagandist should not only qualify as a liar, but that he should be as big a liar as possible. Hitler's principle of the big lie is stated in Mein Kampf. There we read that it is a "very sound principle" that "a definite factor in getting a lie believed is the size of the lie * * * for the broad mass of the people in the primitive simplicity of its heart more readily falls victim to a big lie than to a small one."

The United States Government emphatically does not subscribe to this conception of the nature of the propagandist. It does not believe that a declaration of war necessarily implies a moratorium upon truth and an open season for specialists in the colossal lie. On the contrary, the Office of War Information was set up, in the language of Executive Order 9182, "in recognition of the right of the American people and of all other peoples opposing the Axis aggressors to be truthfully informed." The comment of Elmer Davis, Director of Office of War Information, upon this order is unequivocal:

"We even intend to see to it that the enemy peoples are truthfully informed, because we believe the truth is on our side, not only as

to the nature and issues of the war, but as to who is going to win it. We cannot profess that we are going to tell the whole truth, because some things must be held back on the ground of military security; but we are going to tell nothing but the truth, and we intend to see that the American people get just as much of it as genuine considerations of military security will permit. * * * Propaganda * * * is an instrument which may use truth or falsehood as its material, which may be directed toward worthy or unworthy ends. We are going to use the truth, and we are going to use it toward the end of winning the war. * * *" In short, we are determined to fight the enemy's strategy of lies with our strategy of truth.

But this is more than a conflict of strategies. Each of these strategies is based upon a philosophy of man. Those philosophies are radically opposed one to the other. Thomas Jefferson stated the conflict clearly: "Men by their constitution are naturally divided into two parties. Those who fear and distrust the people, and wish to draw all power from them into the hands of the higher classes. Secondly, those who identify themselves with the people, have confidence in them, cherish and consider them as the most honest and safe, although not the most wise, depository of the public interests. In every country these two parties exist, and in every one where they are free to think, speak, and write they will declare themselves."

The essential conflict, therefore, is between an illiberal conception of man and a liberal conception; between the Fascist notion that the average man is a boob to be manipulated unscrupulously by an "élite," and the democratic idea that every man has the right to think his own thoughts, speak his own mind, and live his own life—so long as he has a proper regard for the rights of others.

The Fascists have not bothered to hide their contempt for the common man. Hitler's Mein Kampf states that "The intelligence of the masses is small, their forgetfulness is great." Goebbels echoes this opinion. "The ordinary man," he says, "hates nothing more than two-sidedness, to be called upon to consider this as well as that. The masses think simply and primitively."

It is true, as Thomas Jefferson pointed out, that the average man is not an intellectual giant. The average man himself would be the last to make any such pretension. But it is also true that the present limitations of popular thinking should by no means be regarded as final, unchangeable.

It may well be asked, can this strategy of truth be concerned only with truth? Must there not be, in addition to appeals to the intelligence, appeals also to the emotions? Are such emotional appeals not demanded if effective action against the enemy is to be secured? And, are not such emotional appeals destructive of truth itself?

These are basic questions and they must be answered. We deal in facts, the facts whish we and our allies must have to understand this war and to bring it to a victorious conclusion. We deal also in the background information without which facts have little or no meaning. This material must be presented, not only at home, but to widely different publics abroad. Abroad we must assure the French intellectual, the Chinese businessman, and the Filipino peasant that there are good reasons still to hope, good reasons still to fight on; we must convince neutrals and wavering satelites of the Axis that our cause is just and that it has the strength to prevail; we must speak to the Nazi official in Berlin and the Japanese official in Tokyo and make them realize that a time of reckoning draws nearer every day. We have outposts in allied countries which handle the material sent from here and also supplement it with material which they prepare and distribute to neighboring areas. As the Director of the Office of War Information has pointed out, "By encouraging our allies, convincing the neutrals, and sowing doubt and confusion among our enemies, they are making their contribution to the eventual victory of our armed forces."

In adapting our information to the cultural backgrounds of different groups we are following the excellent precedents set by Benjamin Franklin and by Woodrow Wilson. If we are to be sure that our message is understood by all peoples, if we are to be sure that the emotional values of this message of hope and defiance of aggression are properly appreciated, we must make these adaptations. Information which is not understood, which arouses no strong feeling, obviously cannot lead to action. But—and this is an all-important qualification—the emotional weight of our materials must never be permitted to destroy the accuracy or proper proportion of our information. Were this to happen, we should lose the confidence of those whom we wish to persuade, confidence which is vital to our successful operation. To a dealer in the truth even the appearance of telling a lie can be fatal.

At home the situation is somewhat different. We are not speaking here to strangers, even to strangers bound to us by the brotherhood of arms, but who nonetheless we must make some effort to understand. No; we speak here to our own, to our relatives and friends, to the members of that great household, the United States. Between members of the same household there is no need for carefully composed speeches. Simple words, plainly spoken, are enough. Indeed, any attempt on the part of any Government agency to "sell" the war to Americans by, for example, the crass methods of the circus barker, would be a monstrous impertinence. We have all made investments in this war, the investments of the flesh and blood of fathers and sons, of brothers and sisters. On far-flung battle fronts, from Guadalcanal to Kiska, from the British Isles to north Africa, these men and women are facing the enemy; they are enduring privation and wounds and disease. At this very moment some of them are dying. Others will return, later, broken in mind and mutilated in body. We who wait for news of those who are dear to us, we who live with them in our dreams though the distance of half the world divides us, do not need to be "sold" this war.

What we do need is the unvarnished truth, the truth which will help us to produce more tools of combat, grow more food, and sacrifice more of our time and energy and money so that our ultimate victory will be the more speedily assured.

An example or two may help to show more adequately how our strategy of truth differs from the enemy's strategy of lies. You will recall the agreement between Great Britain and ourselves in August 1940, whereby British bases in this hemisphere were traded for some of our destroyers. Completely contradictory interpretations of this event were brodcast by the Nazi radio to various audiences. The German home front was informed that the agreement proved the weakness of the British since, as the announcer put it, "they are selling out the Empire for scrap iron." The United States was told, however, that the deal was a sign of British strength, because it was in reality the beginning of a process by which we should revert to the status of a British colony. But this alleged United States weakness was transformed into United States strength for listeners in French Canada, in Latin America, and in Great Britain—to the French Canadians and Latin Americans it was said that Yankee imperialism was now about to dominate the entire Western Hemisphere—to listeners in Britain went the charge that the United States was plotting to prolong the war by inadequate assistance in order that the British Commonwealth should at last become the United States Empire.

Here we have complete disregard for facts, for consistency, for honesty. There is no attempt at all to tell the truth, but merely a cynical use of whatever statement seems most likely to be in accord with the prejudices, the hopes, and the fears of a given group. That is the principle of the big lie in actual operation.

Lies such as these are broadcast 24 hours a day from the short-wave stations of Germany, Italy, and Japan. Each transmission is beamed at a definite target in the appropriate language or dialect. Let me give you a brief outline of how our strategy of truth is employed against this steady barrage of falsehood.

We have a short-wave monitoring service which enables us, day by day, to keep tabs on what the enemy is saying. Foreign-language experts listen to his broadcasts, transcribe, and summarize them. The transmissions are then classified and analyzed. Within a few hours of the original reception it is possible for us to expose the enemy's contradictions, distortions, admissions, and omissions over our own short-wave stations in some 30 languages, and to deflate his lies, no matter how astronomical in size they may be, with the truth.

We have hit the enemy in a vital spot, and we have hit him hard. He has made some attempts to answer our exposures of his lies, but, as the proverb puts it, a lie has only one leg; the more a liar tries to justify himself the more hopelessly does he become involved. He has been compelled to forbid listening to our broadcasts among his own nationals and among the population of occupied countries, and to punish violations of this prohibition with death. There could be no more eloquent proof than this of the impotence of a propaganda of untruth.

It is significant that this impotence was recognized in an official German publication as early as 1936. I refer to the Handbuch der neuzeitlichen Wehrwissenschaften (Handbook of Modern Military Science), published in that year under the sponsorship of the German Society for Military Politics and Military Science. The volume was edited by Major General Franke. It declares: "Even the most obvious untruthfulness is readily believed by the unsuspecting masses of the population. But lies have short lives and their poisoned arrows may fall back on him who used them first.

"Therefore, sound propaganda, made to last, must use only statements which are based on facts, and which will increase the confidence of public opinion. * * *" Hitler would have done well to have listened to these words of warning in 1936. He put his trust instead in his principle of the big lie. Today we are shooting his poisoned arrows back at him. And the poison that he himself distilled is now working upon him.

Let me give you another example. Shortly after our entry into war Tokyo, Rome, and Berlin launched by short wave a concerted campaign against religious groups. The aim was a familiar one: to divide and conquer. On its beam to South America Tokyo stated that Protestants and Jews in the United States were banding together to exterminate Catholicism below the Rio Grande. Rome supplemented this by telling North America and Eire that the Protestant tyrant Roosevelt had landed troops in Northern Ireland for the purpose of wiping out Catholicism in Eire. Berlin, however, assured us that President Roosevelt was a second Moses. Tokyo claimed that more than 50 Protestant leaders had pledged cooperation with the Japanese forces; not one of these leaders was named. Tokyo also alleged that Archbishop O'Doherty, of Manila, and Catholic missionaries in Hong Kong had approved the Japanese occupation of Manila. Berlin made frequent mention of

its mobile churches for German troops in Russia. Tokyo outdid all competition in a broadcast to the Filipinos. The announcer solemnly proclaimed: "When the Japanese entered Manila the natives said, 'The angels have come. The angels we have awaited so long have now descended.' * * * Church bells are striking, their merry notes pealing out to the land."

The divisive intention of these bare-faced lies was unmistakably clear. We at once made the facts known to the religious press and radio. With one voice, from coast to coast and from border to Gulf, the religious press and radio castigated these lies; with one voice they proclaimed the unity of Protestant, Catholic, and Jew against Axis aggression; with one voice they proclaimed that religious groups were determined not to be divided, not to be conquered. The general press and radio joined in the chorus. So also did the domestic foreign-language press and the domestic foreign-language radio. Then, on our short-wave transmitters, in all the major languages of the world and even in languages and dialects comparatively little known, we reported this united defiance to Axis duplicity of the organized spiritual forces of America.

The effect was dramatic: For the moment Tokyo, Rome, and Berlin dropped this attack; their sudden silence on the subject was profound.

This decisive defeat did not permanently discourage the enemy, however; it merely taught him that religious groups are not as naive as he had imagined. Since then he has returned to the attack, not once but again and again, using methods a good deal more subtle. With the help of the organized press and radio of the country—especially that of the Catholic, Protestant, and Jewish services—we have met these recurring attacks and we will continue to meet them. We cannot afford to relax. We must not forget for a moment that the enemy wants to create war between Protestant and Catholic, that he wants to turn both Protestant and Catholic against the Jew. We must remember that his grand strategy is to divide us among ourselves, and to divide us from our allies, particularly from the British and the Russians. Only by unceasing and aggressive vigilance, only by an adamant skepticism toward all appeals addressed directly or indirectly to narrow group partisanship, only by faith in the American ideal of freedom and justice and brotherhood for all shall we survive.

A Mother Prays

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. SIKES. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD, a splendid work from the pen of Florida's great poet, Will D. Muse. It is entitled "A Mother Prays."

A MOTHER PRAYS

Watch over him, O Lord!
He is so young, so innocent and kind.
He does not know that thing called hate,
He knows not greed nor lust for gold.
He only knows that skies are blue,
That summer brings the roses . . .
And that birds are harbingers of happiness.
And yet . . . he felt the thrill of
Bugle call . . . the sound of marching men.
In him was born that nameless thing
Called loyalty. His youthful blood
Is hot from fires of liberty,
Burned long ago, to light our way
Through years of conflict and defeat.

Watch over him, O Lord!
And when the echoes of war's thundering
Have thinned to silent victory,
Let him come back, to step
So proudly through the little door
He left so lately. . . .
Thus a mother prays. . . . Let him come back.

—*Will D. Muse.*

The Two Fronts in Washington

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ROBERTSON. Mr. Speaker, the following editorial from the May issue of Trusts and Estates reflects the sentiments of the members of the Ways and Means Committee who voted against the continuance of the Bituminous Coal Act—an experiment of Government control and price fixing of an essential industry:

There are two distinct philosophies represented in official Washington circles, a fact which must be borne in mind in viewing congressional as well as bureaucratic activities. Industrialists and businessmen who have been found essential to promotion of the war-production effort, together with a large number of Members of Congress, and many officials as well as career employees of regular Government departments, are primarily interested in practical matters such as winning the war and maintaining some semblance of a free-enterprise system. In the other camp—and this includes some of the highest advisors as well as the "entrenching bureaucracy"—are those primarily concerned with the new social order: the so-called controlled economy adherents bent on reform first, last, and always.

Decisions of vital importance, especially on the production and tax fronts, are delayed or vitiated by compromise with the powerful forces of paternalism. These benevolent despots (benevolent with the taxpayers' money and despotic in the theory that they know better about what is good for the people than they do) are a hang-over from the "social gains" school, which is dangerous to our national security in times that call for social sacrifices. It has set an official example for the sort of demands which John L. Lewis has made. The result is that we are seeing our unity of purpose weakened by an internal fight between paternalism and production, with more attention being given to who gets the profits than to who gets the munitions. There are many in high policy-making places who have for years been thinking in terms of distribution of an abundant supply of goods and wealth.

We now have to think in terms of stimulating production to offset a scarcity of men, materials, and time, which controls only one side of the problem. Catchy slogans and high-sounding promises for tomorrow are no match for performance today. The simple fact seems to completely escape the paternalists that you can't run a war and social uplift at the same time. Dr. Lin Yutang expressed it succinctly when he called for a fifth freedom, freedom from humbug:

"The war calls for a leadership that rests on first principles. It calls for a man with the mind of Abraham Lincoln, with its simplicity and strength. But we are so busy throwing up and laying bricks for the second and third floors that we are perfectly contented to think about the foundation afterward. And we are surprised that the bricks laid with so much pathetic effort yesterday always threaten to go out of plumb today."

We can no longer afford to sabotage the capacity of our business-trained men in war policy by socialistic nibbling at the foundations of war and public wealth production. Let us have two fronts, but abroad—not in Washington.

Bureaucracy Has Failed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. PITTENGER. Mr. Speaker, critical days and troublesome problems are ahead of us. We can charge 90 percent of this situation to the failure of administrative officials in our Government to perform their duties properly. Too many people forget that our form of government consists of three departments, the legislative, the judiciary, and the executive branch of government. The primary duty of Congress is to enact legislation. The responsibility rests upon administrative officials appointed by the executive to administer the laws and carry out their purposes. If Congress exceeds its authority under the Constitution of the United States there is procedure whereby the courts can declare such a law unconstitutional. Ours is a government of law and not of men.

I do not hesitate to say that Congress has passed all wartime legislation that has been requested by the executive branch of government. Further, it has passed legislation giving the executive branch of the Government emergency war powers in connection with our domestic problems. It has cooperated to the fullest extent.

Having done this, Congress had a right to expect that the Government bureaus and administrative officials would cooperate fully in working out our domestic affairs to the advantage of the American people. Just the reverse has happened. Bureaus and bureaucrats now flourish like a hoard of locusts and are doing more harm than good. If we lose this war, it will be because of the bungling and ignorance with which administrative officials have tackled and proceeded in connection with our domestic problems. Many of these officials have consistently mismanaged the affairs of the country. Steady efforts have been made, for example, to ruin small business and ad-

ministrative officials have done a fairly good job in this direction. In these remarks I do not mean to criticize some Government agencies and some officials who have managed their affairs efficiently and intelligently.

I want to direct my remarks to some phases of the Office of Price Administration. That office has been guilty of more ignorant bungling than any other agency of the Government. It has been almost directly responsible for our present serious food problem. I do not mean to relieve some officials in the Department of Agriculture from their responsibility. They have contributed by their activities and efforts to bring upon the American people the present food shortage in what ought to be a land of plenty. The O. P. A. has mishandled and mismanaged the rationing program.

In a land that produces a surplus, rationing of many products should be unnecessary. The O. P. A. has failed to carry out the law which created it and which had for its purpose the prevention of the increased cost of living. As I have said before, this agency ought to be abolished. As long as it exists, we will have our black markets and we will have incompetent administrative heads continuing their work of ruining American small businessmen and industry in general.

Time will not permit me to discuss other phases of activity of this dangerous organization. However, I will say that I have received letters by the hundreds from all over the State of Minnesota from many different industries, from farmers and from everybody else protesting against the practices of the O. P. A.

I am prompted to make these remarks because the other day I received a letter from a loyal businessman, the head of a concern with three or four hundred employees. He points out in his letter that the O. P. A. regulations regarding the furniture problem are without rhyme or reason and that they are creating black markets in the furniture industry. He points out that he will follow the regulations, but unless they are changed the business of his concern will be ruined. I predict that the men in charge of this problem will go right ahead and ruin this man's business. His letter contains this significant phraseology:

> Our only hope is Congress. The Office of Price Administration is hopeless. We must have certain controls, but the people who are going to direct these controls should be men of experience.

Of course, if this businessman finds his industry losing money and if he has to close it down, some three or four hundred employees are going to be out of work. I can point to many other instances in many other lines of industry. The ones who are going to suffer the most are the wage earners who will be thrown out of employment. I want to serve notice on the administration officials that I have a very definite impression that the average American citizen feels just as I do about this matter. We ought to abolish the O. P. A. and establish a new agency where people of experience can take charge.

In this connection I call your attention to an editorial in the Duluth News Tribune of Duluth, Minn., for June 30, 1943, which is very much in point in this discussion. This editorial reads as follows:

NATURE PRODUCES: MAN MUDDLES

With a food shortage threatening the Nation, the muddled conditions in Washington present a situation that sooner or later will become intolerable to the American people and something will be done about it. Let us hope the people will not wait too long in making the demands that will cause the administration, the bureaucrats, and Congress to wake up, lay aside their personal differences and jealousies, and make provision that will give the troops and the public the service and food that the country holds in abundance.

The fault is not a shortage in the country, but a question of distribution; and the fact is that Washington does not seem capable of meeting the situation and handling it as it should be handled. Nor will the administration permit anybody who knows how or whose training is supposed to fit them to know how to take over the situation and clear it up. The resignation of Chester Davis, Food Administrator, is illustrative of that weakness in the administration. Mr. Davis, whose training seemed to make him singularly fit to handle the problem if given a free hand, very frankly said that he could not do it, for he had been given no authority. Nor has anybody else been given authority with any degree of security.

We hear much about the shortage of corn, for instance. How does that happen when the production of corn in 1942 was 867,702,000 bushels more than the average production for the 10 years, 1930–39, and 497,637,000 bushels more than the crop of 1941? These are official figures.

We hear of the shortage of meat. Why, when it is announced that there is 30 percent more beef cattle on hand now than in the average year?

There are other figures in other commodities almost as out of line with the situation, but these will serve as indicators.

Do we need more production or more statesmen?

Before Congress adjourns it seems to me that we have some very pressing business. We have to face this muddled-up O. P. A. situation. When administrative officials prove a failure, then Congress, as a last desperate measure, should set up its own committee to control the executive agencies which it creates.

In other words, it is my opinion that a congressional committee should be authorized by law to supervise the Office of Price Administration, and to bring order out of chaos. I realize that this is a new departure in the field of government. Never before in our history has it appeared necessary. It is my opinion that it is now necessary for the protection of the American people.

You cannot go on creating boards, bureaus, and then new boards and bureaus, ad infinitum. We already have too much alphabetical soup.

These various war agencies, whose only excuse for existence is to strengthen our domestic economic situation and solve our domestic problems, so that we may more efficiently support the Army and the Navy, and all of our armed forces, should have some of their power taken away and the proper congressional agency should take a hand.

I think we are going to be forced to that procedure. In this viewpoint I find that I have some support of a rather high character. I refer to an article by Senator ARTHUR H. VANDENBERG, in the Coronet for July 1943 which is entitled "Why Not Deal Congress In."

I commend this article to your careful attention. While it deals with the broad question of winning the war, and calls for congressional participation in the activities of the War Department and the Navy Department at the same time the same argument which Senator VANDENBERG advances for that procedure is very much in point in connection with the argument I have made for congressional control over these administrative bureaus, whose efforts are primarily concerned with problems which are neither military nor naval in character.

Senator VANDENBERG's article has been inserted in the CONGRESSIONAL RECORD for June 23, 1943, and appears on page 6338.

He says at one point:

> You can't be expected to play a poker hand if you aren't allowed to see the cards. Translated into the sterner lexicon of war this means that Congress cannot cooperate effectively if it is denied the total war information which wise decisions require. Today there is no adequate war liaison between the executive and the legislative branches of the Government.

At another point he says:

> In the matter of post-war planning, we again question how Congress can act wisely if it has no connecting link with executive commitments and policies regarding the attitudes of our allies. For instance, the very morning that Secretary of the Treasury Morgenthau was telling some of us about his plans for post-war "international stabilization" as a great secret, our plans were told to the world in London.

It is well worth your while to carefully study this constructive and statesmanlike discussion on the part of the distinguished Senator from Michigan.

Tagged Press Not Part of Planned Economy

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RAMEY. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an editorial which appeared in the July 7, 1943, edition of the Toledo Times:

GAGGED PRESS NOT PART OF PLANNED ECONOMY

The Government is edging toward a kind of censorship. This is something in America, at war or in peace, cannot afford.

The trend is subtle, moving easily toward a control of what the public should or should not know about Government activities.

The smoke screen behind which the administration hides is the necessity of shielding war secrets. But censorship is one of the political crimes which cannot be committed in the name of national security.

News reporters, schooled in the ways of Washington, often knowing the beaten paths better than the politicians, know where to get the news. They know how to find out what is going on.

They do find out. And this is getting under the tender skin of the administration higher-ups.

The administration has taken the viewpoint that its department heads are in a better position than anyone else to know what information should be given the public. This attitude is assumed under the guise of guarding information which might be helpful to the enemy.

Newspaper readers should know that the newspapers of America have never submitted to political censorship, yet since the beginning of the war, they have applied their own censorship, perhaps far more rigid than any government could enforce, to guard information of military value.

There is too much of an opportunity for the administration to use the "protection of war information" to cover up its own errors. No department head is going to hand out a new release bearing the details of one of his own colossal blunders. It isn't human nature for an individual to expose his own ridiculous mistakes.

Yet this is what the administration is trying to do. The New Dealers who, in spite of the war, have their eyes glued on their chances of staying in power in next year's elections do not want reporters to write anything which has not been approved by the head of the department or agency involved.

If this course were to be followed, the public would be led to believe that everything was running along in apple pie order in Washington, that everyone cooperated thoroughly with everyone else, and that no one, appointed under the New Deal banner, could possibly make an error.

The public may rest assured that the administration will get by with no such foolishness. The newspapers of the country will not print military secrets, but they will, as they always have, expose, fairly and fearlessly, the errors of those political favorites who have been misplaced in office.

We have been dragged a little deeper into this politically planned economy than we think, but we shall never permit a gagged press to become a part of that economy planned to keep the New Deal in office forever.

Experienced Person With Office of Price Administration Offers Good Suggestions

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. PATMAN. Mr. Speaker, I have received a letter from Mr. Sam M. Weiss, of Paris, Tex., that has so many constructive suggestions in it relative to O. P. A., I am inserting it in the CONGRESSIONAL RECORD. It is as follows:

PARIS, TEX., *July 5, 1943.*

Hon. WRIGHT PATMAN, M. C.,
Washington, D. C.

DEAR WRIGHT: For several weeks I have been listening daily to someone discuss Office of Price Administration over the radio, read numerous newspaper articles, etc., all of them discussing that very vital agency.

I am firmly convinced that if we are to avoid ruinous inflation it is essential that we control prices. It follows, therefore, that the Office of Price Administration would certainly be a very important and necessary agency at this time.

For your information, I am connected with the Lamar County Office of Price Administration set-up; therefore, I have a fairly good idea of its workings insofar as it actually operates and not the theoretical idea.

On June 26 the Congress appropriated a certain sum for the operation of Office of Price Administration but eliminated all the necessary funds for its enforcement. Frankly, everyone who has anything to do with the Office of Price Administration; or, as a matter of fact, is interested in the welfare of our country was astounded at the action of Congress. What in the name of Heaven, does the Congress mean to vote a large sum of money for the operation of an agency such as Office of Price Administration if it cannot enforce its orders?

As a matter of fact, I, for one, believe that the Office of Price Administration will rapidly develop into just one more racket similar to what the eighteenth amendment brought about 15 to 20 years ago.

A large percentage of the American public will gladly obey the law if they understand what you want them to do and the reason for it. I believe there is a certain small percentage of chiselers who are constantly looking for just some such thing to get rich at the expense of the law-abiding citizens, and the Congress, for some unknown reason, always manages to leave enough loopholes for these reprobates so they can operate without much trouble.

The legitimate grocer, meat market, or what-have-you, is doing his best to comply with Office of Price Administration instructions. In so doing, his cost of operation has gone up because he must keep up with a lot of things required by the agency. On the other hand, there are a number of chiselers who pay no attention to anything and whose business is increasing daily and their profits mounting at the expense of the legitimate merchants.

May I cite you one other case that I am personally familiar with, to show you just what happens when you authorize an agency to issue certain orders and do not appropriate the necessary funds for its enforcement? Mr. Ickes issued a directive to the oil industry telling them what hours a retail station can stay open and sell gasoline to the different classes of trade. The legitimate dealers are complying with Mr. Ickes' directive, but the chiselers do not. I wrote to Mr. Dudley Cornell, district director of marketing, at Houston, and asked that he send someone up here to investigate matters. He wrote back and told me that he was very sorry, but their appropriations for enforcement were extremely light and that he could not spare a man to send up here, but he would write a certain dealer a letter. I waited several weeks and traced Mr. Cornell. He answered, stating that he had written this party a letter, but had not yet heard from him and that he would try sometime to send someone up here.

Now, all in the world such things accomplish is to cause a lot of good, honest citizens to cuss the Congress and everyone connected with it for causing certain hardships to one class and make it possible for others to get by.

I hope you understand my position. I am for anything that is best for our country today and will help win this war. If the Office of Price Administration will stop inflation, let us have it; but, for heaven's sake, if we adopt the Office of Price Administration because England and Canada tried it and found it working, then why in the world don't we enforce it just as England and Canada do?

This is not intended as criticism against you or anyone else personally. I am merely giving you this because I hear it every day on all sides and being connected with the Office of Price Administration, I see its weak points, but they are mostly traceable to the fact that the Congress permitted a lot of loopholes in the act, making it practically impossible for the Office of Price Administration to enforce it.

These are some of the things I am sure you will hear plenty of when you get back to your district.

Sincerely yours,

SAM M. WEISS.

The Corn Shortage

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. SABATH. Mr. Speaker, the gentleman from North Carolina, as well as my colleague from Illinois, has explained the situation that confronts us, namely, that pledges have been made that the price of corn will be held at $1.07 per bushel. I feel that this Government should stand by the pledge and protect the farmers who in good faith, especially the small farmers, sold corn at that time. The 800,000,000 bushels of corn that are being held are being held by the big farmers and the speculators. We should not today or at any time try to help the speculators and the gamblers in corn by raising the price so they may make excessive profits. I am, indeed, surprised that some of the Members cannot see through this corn propaganda—propaganda that the eastern farmers, hog and poultry raisers are suffering because of their inability to obtain corn for feed purposes. If that is so, we should insist and order the sale of corn now held by the Government, and call in all the loans that have been nade on corn. I understand there are millions of bushels that can be, and should be, released if there is such a shortage as is claimed. On the other hand, we have over 800,000,000 bushels of wheat, which experts maintain is superior to corn for every purpose, including that of feed.

Some of the gentlemen who are so interested in corn for feed purposes are criticizing the Government. Why should they not criticize the big speculators who are holding corn until such time as they can squeeze every possible dollar far above the parity price? They fail to realize that by yielding to the pressure of these corn manipulators and speculators it will cost the consumers millions of dollars, because corn is used for the production of so many needed commodities that failure to obtain an adequate supply will destroy many manufactures and industries that are dependent upon obtaining corn at a fair and reasonable price.

In contrast, when a few hundred or a few thousand laboring men, who cannot exist on the wages they receive, protest and demand a higher wage, they are immediately abused and speeches of condemnation are made on the floor, but when corn farmers go on a strike for the purpose of mulcting the American consumers, not a word is said.

A few days ago, the Food Administrator, Judge Marvin H. Jones, appeared before the Committee on Rules. He explained the existing situation, and I am satisfied if he will be given sufficient time he will obtain enough corn for all needs with a minimum delay.

The general hue and cry of the "corn advocates" is difficult for me to analyze. For instance, my colleague the gentleman from New York [Mr. FISH] wants a special committee appointed because he claims the chicken and hog raisers are experiencing a great shortage of feed corn, this notwithstanding that he claims to have the richest district in the United States. Consequently his great interest in corn is very "fishy" to me.

Mr. Speaker, I feel, as I have stated, that all corn on hand over which the Government has jurisdiction should be placed upon the market, and that all loans should be called and that corn should be taken over at the price agreed and fixed upon many months ago, which is not below but way above the cost of production.

In conclusion, it is my opinion that the hoarders of corn are not aiding the cause of agricul ure or of the farmer for whom so much has been done by this administration. In this connection I insert a statement giving the appropriations for agriculture for the years 1933 to 1943:

Appropriations for agriculture, 1933–43

Fiscal year ending June 30, 1943:	
1933	$316,883,236.00
1934	110,512,207.00
1935	1,264,680,091.00
1936	810,793,320.61
1937	726,916,823.04
1938	774,935,873.00
1939	1,281,889,237.16
1940	1,423,262,745.11
1941	1,161,261,379.13
1942	1,452,073,144.00
1943	824,567,700.86
Total	10,147,775,756.91

Mr. Speaker, this shows what the Roosevelt Administration has done for the farmers. The figures do not include the amounts provided in other appropriations for the interest of the farmers, nor does it include approximately $2,000,000,000 included in the Lend-Lease Act which also has been of direct benefit to the farmers. All told, the appropriations for the past 11 years for the benefit of the farmers have been in excess of $12,000,000,000.

I want the Members, especially the Republican Members coming from the rural sections, to furnish this information to those farmers who feel that enough has not been done for them. I know the Republican Members who come from the city districts will make capital out of the fact that tremendous sums of money were appropriated in the interest of agriculture.

Our Relations With Post-War China

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. CLARE BOOTHE LUCE, of Connecticut, before the Institute of Arts and Sciences, Columbia University summer session, Tuesday, July 6, 1943:

Ladies and gentlemen, I am keenly aware of the honor you do me in inviting me to address this distinguished forum on a question as important as America's Post-war Relations with China. Indeed, I believe there is no question, apart from the actual winning of the war itself, more important to all Americans and to their children. For the answers that the West, and particularly the people of America, give in the next 10 years to the many problems posed by the violent awakening of 450,000,000 will either lay the foundation of peace or set the stage for war and revolution and turmoil throughout the world for a century.

Today, I believe, America is truly aware of Asia and its meaning to us as a civilization and as a nation. The veil of indifference that clouded the popular mind, no less the minds of our statesmen, was brutally ripped away at Pearl Harbor. Today we know, or should know, that it was not Hitler nor nazi-ism, nor Mussolini, nor fascism which shaped and guided this tremendous and evil storm that has engulfed us in the Pacific. We know that this was the bloody whirlwind which all the West has been sowing for 50, perhaps 100 years, in the Far East, and its seeds were greed and imperialism, contempt, and indifference, smugness and flaunted superiority.

Pearl Harbor was not inevitable. At any time, I believe, after the establishment of the Chinese Republic in 1911, wise and generous statesmanship on the part of the West, above all generous and farsighted American statesmanship, might have prevented the martyrdom of China at the hands of Japan, and thus averted the holocaust in the Pacific. We Americans will make a terrible mistake if we insist on thinking that Hitler engineered the Japanese attack upon us. Hitler merely provided the Japanese with an opportune moment for throwing down the last great challenge at Pearl Harbor to western statesmanship which years before Hitler had begun to show itself weak and flabby and vacillating toward the Orient. The first challenge which we had failed to meet was, of course, the rape of Manchuria in 1931. From then on our American failure, and the failure of the British, to come to the aid of China by every diplomatic means in our power, made the war with Japan inevitable, Hitler or no Hitler.

Indeed, Hitler may well have done our Nation a great service by encouraging the Japanese to strike when they did—which, in my opinion, was too soon for their own purposes, since China had not yet been fully subdued and conquered. And until China is conquered Japan could never, and can never, be victorious. So deeply ingrained in our western statesmen and our American statesmen was Pacific appeasement that I fear we would have allowed the conquest of China had we not been stabbed broad awake, before it was too late, at Pearl Harbor.

Four years ago I visited a poet—an American poet who was living the life of an expatriate in France. Her name was Gertrude Stein, and, as you know, she is not exactly famous for the crystal-clarity of her utterances. And yet Gertrude Stein put the proposition about China which I shall lay before you tonight more simply and more clearly, certainly than any of our statesmen was putting it then and perhaps as clearly as any of them has put it since then. I ask you to remember that this was over 4 years ago, in France, at a time when the world had hardly awakened from the dream of Munich to fall into the nightmare of the second European war.

We talked of a visit I had just made to the halls of the League of Nations at Geneva—which was a few hours' drive from Miss Stein's little farmhouse on the side of a French mountain near Aix-les-Bains. I spoke of the great, empty, marble halls, the long, deserted marble corridors—the white sepulchre of the dead League of Nations. The talk was all of European statesmen and the European ghosts-of-war which haunted them.

"Will there be another war, really?" I asked Miss Stein.

"Oh, yes," she said, "there will be. That's what you've been telling me, isn't it?"

I said, "Well, there's nothing we can do—we Americans—about it."

"Oh, yes," Miss Stein said, "there is." "But we won't do it."

I said, "What is that?"

And Miss Stein said, "Well, if we want to win this war we're going to have, the thing we've got to do first is save China." And then she said, very happy, "It's wonderful to know what you can do, even if you don't do it."

And I said: "But why is the first thing for us to do to save China?"

And she said: "Don't you see? It's very plain. We must save China first; because there are so many millions more Chinese than there are of us that if we save them first there will be that many more millions of them to save us, when we need them, in the world which is around and not flat anywhere."

Now I see, we all see, how right Gertrude Stein was. Had we saved China in the years after 1911—had we forbidden, as we could have, the rape of Manchuria, had we looked to our Pacific defenses in the Philippines—which were an American commitment, requiring no European aid or advice during the past 10 years, had we ceased long before Pearl Harbor to appease Japan with scrap and steel, had we supplied China with the airplanes and instruments of war she needed instead—we would have saved our 130,000,000 Americans much agony—and much bloodshed.

Fortunately for us, the Chinese were able to carry on without our vigorous salvation. Tomorrow marks the sixth year of their war against Japan. Six years ago the Japanese fired on them at Marco Polo Bridge. In those 6 years millions of Asiatics have died for freedom and millions are still willing to die. Not for our freedom, let it be plain, but for their own freedom. But because they were willing to do so, our own dead will not have died in vain at Manila, at Pearl Harbor, at Attu, in the southwest Pacific today with General MacArthur and Admiral Halsey.

This must be the most important factor in our post-war thinking about China: Although China is not, in our political sense, a democracy, it is a freedom-loving people, utterly prepared to preserve its freedom or perish. This fact cuts across all thinking on racial lines. However, desperately the Japanese, like the Germans, attempt to draw the issue along lines of race or color, the truth is in Asia, as in Europe, the battle is between men who would be free and men who would enslave them.

If we stick with the free men of Asia and with the cause of freedom everywhere in Asia, as we are determined to stay with the free men of Europe, we cannot fail to win the war.

Never has a people or a generation of men had a more magnificent opportunity than this one. To be sure the task is a gigantic task. It would be foolish to underestimate the problems which the revolution in Asia, the coming awake of Asia to the modern industrial age, will carry with it. All the facts about Asia are incredibly complex and many of them contradictory. But the paramount one, as I have said, is neither complex nor contradictory; millions, indeed billions, of Asiatics today aspire to self-government, to freedom, and to what we call material progress. For America and American statesmen to fail, in our age, to canalize these aspirations into fruitful fields is not only to lose the peace in our time but, perhaps, in the end to destroy America. For remember, there are so many millions more of them than there are of us that if they set off one way down the highway of material progress, with hate in their hearts for us, and we set off another with indifference in our minds and souls, we shall not survive should we meet them on the crossroads of a third war in a world which is around, is around, and not flat anywhere.

It is, of course, not possible in the time allotted to me this evening even to touch upon more than one or two of the problems which will face us in our post-war relations with China. And the Chinese are only one of the peoples we must consider in our Pacific relations. And yet every one of these problems is inextricably linked with the other, and all must dovetail reasonably well into any far eastern policy which will have a chance of bringing peace and progress to the Pacific. To make the widest possible generalization, for the moment, which will cover them all—and here I include India—cooperating with foreign powers which now have imperialistic claims upon them, the United States must use its prestige and good offices tirelessly in the direction of assuring all the peoples of the Far East more and more self-government and autonomy. It must cooperate at every turn to help raise the living standards and educational standards of the Pacific peoples and increase the flow of international trade by intra-Pacific trade agreements.

In order to do this, above all in order to be in closest touch with China, which because it is already a great sovereign freedom-loving country is the foundation stone of an American Far East policy, we must have a clear, well-defended route to the Far East. Beginning at Hawaii, we must fortify and protect our stepping stones: Midway, Wake, Guam, and in the Philippines we must keep naval and air establishments adequate to preserve these free islands against any future aggression. We must, of course, take from Japan those islands which have in the past endangered this Pacific defense route. All of which is, I believe, self-evident to the American people today.

But let us return to China. All American thinking on the subject of a far eastern policy that will maintain peace over half the world must be posited on a strong, solid, stable, and friendly China.

How, then, do we proceed toward helping to bring about this kind of a China? Or, rather, how do we help China fulfill this goal which she has suffered already so deeply to attain herself?

First, and foremost, by living up now and today to our moral commitments in China: by sending directly to China, yes, directly over the pinnacled, snow-capped Himalayas, the Great Divide of Burma, the strength in the air she must have to beat at the paper heart of Tokyo. And then to send her indirectly, by way of MacArthur and Halsey, the material that will open a great and brutal and decisive second front in the Southwest Pacific. These are the things we must do now for China. And I do not hesitate to say that our failure to do so will eventually be as costly in American lives as in Chinese lives.

Now I do not wish tonight to be accused of indulging in armchair generalship while purporting to discuss our post-war relations with China. But I believe that war and peace are indivisible; one takes shape in the womb of the other. Everyone who has seen, as I have, the tragic fragments of the long and bloody struggle of the Chinese people is aware of their keen and critical and at the same time agonized watchfulness of the American and British war effort in the Pacific. Free and fighting China is still free and fighting, but her soldiers are wearied by 6 years of war. They are riddled with illness and despondency. Her people are starved and tortured, her statesmen determined but growing daily more cynical. To be sure, they understand the problem. They will wait and fight, and fall back and advance, and fight and wait, as they have for 6 long years. But the fact stands; since December 7, 1941, Tokyo has been bombed once. And yet thousands upon thousands of tons of high explosives have been dumped not only upon Germany but upon nondecisive objectives all over the periphery of Europe.

The best way to assure ourselves that China will be strong, stable, and friendly in the future is plainly to do everything within our power to keep her strong, stable, and friendly now. And that means more and still more military aid to China.

But let us pretend for a moment or assume for a moment that within the next 6 months that aid is forthcoming and with it victory over Japan.

Are there any other practical measures, other than military, we could take to assure ourselves today of the friendship of China tomorrow?

I suggest one: The repeal in Congress of the Chinese exclusion act, which would go far to promote better understanding between ourselves and the Chinese Nation. Today an exclusion law specifically naming the Chinese, bars Orientals from this country. Those Chinese permitted to enter temporarily must acquire a special certificate defining their status, and are often ignominiously kept in long custody at ports of entry, pending examination. They are also ineligible for naturalization or citizenship. These anti-Chinese laws put upon our statute books many years ago by Congress, seem to have anticipated and given approval to the whole Hitler doctrine of race theology. The next Congress will attempt to repeal them, and put the Chinese people under the regular, long-established quota system. That quota would allow the entry of exactly 105 Chinese a year, hardly a threat to American labor markets, the American way of life, or even our so-called white civilization. Until this insult, this gross insult to the Chinese people, is wiped from our statute books, Americans can hardly claim to be fighting for and with the Chinese for freedom and human dignity. We must translate our high-sounding words into deeds now: military aid to China and the moral aid, the wiping of this stigma of exclusion from the Chinese, are two immediate and urgent steps we must take.

It is in the field of our post-war economic relations with China that the greatest room for generous and wise statesmanship both in China and America lies. The fact, subject to no dispute, is that when the war ends China will be a very needy nation. The big question, the all-important question, will not be, of course: What does China need? For China will want and will need everything—shoes and ships and sealing wax and cabbages, though no kings. She will need and want everything from needles tc harvesting machines, from vaccines to railroads, from straw hats to printing presses.

And no one doubts American manufacturers can supply these needs. But will they be supplied? That is the question. Because China's greatest need will be money with which to pay for her other needs. For China will be not only a needy but a tragically impoverished country. Wise statesmanship in China will do everything in its power to produce for trade, while raising the living standard and income of the average Chinese. Wise statesmanship in China will do everything to help free the Chinese farmer from the exploitation of the landlord, and, at the same time, to industrialize China. Above all, wise statesmanship in China, while soliciting international government loans, will also encourage the investment of private foreign capital in China, and the development of China by private enterprise.

This does not mean the Chinese will tolerate the exploitation of China and the Chinese in the old imperialistic sense. They will not. They have died, as I say, by the millions for a free China, and they intend to keep it free. But foreign investment must and should be encouraged by a greater measure of government honesty and national dependability than the Chinese have so far displayed.

On our side of the water our statesmen must, by wise trade policies, do everything they can to aid the Chinese to export. We must not set our duties too high, or China will never be able to repay those obligations which we now hold, no less service the new debts which China must incur if she is going to get the wheels of progress turning over again in the Far East. And the policy of our Government, like that of the Chinese, should be to encourage the investment of private American capital in China, rather than that of the whole people, which might merely result in a recurrence of the terrible World War No. 1 experience, when our foreign loans turned sour because in our fiscal and tariff policies we refused our debtors the means to repay them.

In the end I believe it to be an economic truism to say that the greater the damage we inflict by unwise trade policies on the economies of other nations the greater will be the damage to our own export markets. China, the land of 400,000,000 customers, is still an economist's dream. It has not yet come true. But with wisdom and generosity and patience and the exercise of sound business sense on the part of our statesmen and legislators it can begin to come true in our time.

Now you may have noted that so far I have discussed our post-war relations with China without once mentioning a post-war world organization of any kind. This may not seem so remarkable to you as it does to me. Perhaps living and working in Washington as I have for the past 6 months I have become unduly sensitive to the prevalence in every discussion of a post-war world of what are called mechanisms, machinery, plots, plans, blueprints, prospectuses, and organizations for post-war worlds. Not a day passes but there crosses my desk some elaborate and even noble scheme for the organization of a post-war world. Many of them are ingenious in device, noble in concept, all are magnificent in purpose. Perhaps one of them, or one like them, will capture the imagination of America and even the world. Who knows? Perhaps, then, the energies of the world—too long poured into destructive wars—will be poured into the construction of a beautiful edifice for the running of a federated world.

But I am reminded, when I see some of these plans, when I hear their details so hotly debated by their many adherents, of the story that was told to me in India of the building of the world's most beautiful structure—the Taj Mahal.

In 1631, you remember, the Shah Jahan, a great and noble young Indian prince, lost his beloved wife, his beautiful darling, the gay and radiant and tender Mumtaz Mahal. The shah's grief was black and terrible and for

days he was inconsolable. He had been an active and creative prince, but now that his lovely wife was dead he had no wish but to die too.

He decided, however, before he took his own life, to build a temple for his wife's remains, a temple worthy of her beauty and virtue. He ordered all other Hindu temple building stopped at once and sent for the greatest architects and builders in the land. A year after Mumtaz Mahal had been laid aside in a small black wood casket in a little burial ground in Agra, ground was broken for the Taj Mahal. Twenty years went by, during which the Shah worked tirelessly on details of the plan with his architects and the new artists that he was always sending for. In 1650 there stood the Taj Mahal, its great center dome and small domes encrusted with agates, jaspers, and blood stones—the most exquisite and beautiful building in all the world. Twenty years before, in the fullness of his grief, the young prince had arranged the heart-breaking details of the funeral cortege that would wind its way to the great central hall. No one had ever dared speak to him of it since, for fear of evoking his old grief and despair.

So his ministers just notified him that the Taj Mahal was complete at last and, said they delicately: "The procession waits, your majesty." The prince, radiant with the joy that comes of fulfilling a long and arduous and noble task, got upon his white elephant with the great bannered cortege in the rear. No one spoke to him because no one dared speak to him until the procession reached the great portals of the central dome. The prince dismounted, walked into the beautiful central hall. He stood there entranced. Then suddenly he broke into an angry exclamation: "What is that?" he demanded angrily, pointing at something small and black and oblong that lay on the marble floor. "How did that ugly object get in here? It completely mars the beauty of this hall. Take it away."

And quietly they took away the little black box in which lay the remains of Mumtaz Mahal. The prince had forgotten why he had built the Taj Mahal.

Do not let us, in our fascination with plans for a post-war world, forget why we work to build our world organization edifice—to preserve peace between the nations, lovely peace, done to death in 1931 in Manchuria.

One of the simple ways to bring about that long peace for which we today make so many complex world architectural plans is to begin now deciding precisely what we, as a Nation, wish to do about China. In reaching this decision we need not be balked by any other nation, we need scarcely wait for any other nation; certainly we need not wait to think this problem through. We can begin today, tonight, now, planning a policy for China which, if we follow it in honor and dignity, will keep peace over half the world for 50 years.

Then if the people will, let them have the Taj Mahals of world organizations, too, since they do such honor, in their beauty, to the endlessly creative mind of man.

Résumé of Veterans' Legislation During the Seventy-eighth Congress

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a résumé of the legislation enacted and bills reported by the Committee on World War Veterans' Legislation, of which I have the honor to be chairman, during the first 6 months of the first session of the Seventy-eighth Congress.

I call the attention of the Members to this statement because I am sure it will be of both interest and assistance to them in handling veterans' cases or making reports to their constituents on veterans' legislation:

H. R. 1749, "To amend Veterans Regulation No. 10, as amended," grants to veterans of World War No. 2 hospitalization, domiciliary care, and burial benefits on a parity with World War No. 1 veterans. This bill was approved by the President on March 17, 1943, and became Public Law No. 10, Seventy-eighth Congress.

H. R. 2023, "To amend section 301, World War Veterans' Act, 1924, as amended, etc.," authorizes renewal of the expiring 5-year level premium term insurance policies by the agent or beneficiary of an insured service man who is outside the continental limits of the United States. This bill was approved by the President on May 23, 1943, and became Public Law No. 13, Seventy-eighth Congress.

H. R. 801, "To amend title I of Public Law No. 2, Seventy-third Congress, March 20, 1933, and the Veterans Regulations to provide for rehabilitation of disabled veterans, etc." This bill provides rehabilitation of disabled veterans of World War No. 2, to be administered by the Veterans' Administration. The measure was reported unanimously by the Committee on World War Veterans' Legislation on February 3, 1943; however, before the House had acted on the proposition, the Senate Committee on Finance reported, and there was passed by the Senate, the companion bill, which was identical with H. R. 801. S. 786 was referred to the Committee on World War Veterans' Legislation and the committee substituted it for H. R. 801. The measure became Public Law No. 16, upon being approved by the President on March 24, 1943.

H. R. 986, "To define misconduct, for compensation and pension purposes, as limited to felonious misconduct." An analysis of this measure is contained in the Committee Report No. 462. The bill passed the House on June 8, 1943; and passed the Senate on July 7, 1943, and is now on the President's desk awaiting his approval.

H. R. 2703, "To provide more adequate and uniform administrative provisions in veterans' laws pertaining to compensation, pension, and retirement pay payable by the Veterans' Administration, and for other purposes." A complete analysis of this bill, which affects veterans of World War No. 1 and World War No. 2 and their dependents, is contained in the Report of the Committee on World War Veterans' Legislation, No. 463. The measure passed the House on June 21, 1943, by a vote of 194 to 0. It passed the Senate with slight amendment on July 7, 1943, and the House concurred in the amendment on the same day. The measure is now on the President's desk, awaiting his approval.

H. R. 799, "To make temporary disability ratings of World War veterans permanent after 10 years." This bill was unanimously reported by the committee and is now pending on the House Calendar.

H. R. 1744, "To provide Government protection to widows and children of deceased World War No. 1 veterans." This bill provides compensation to widows and children of deceased veterans of World War No. 1, if the veteran served 90 days and was given an honorable discharge; or, who having served less than 90 days was discharged for disability in the service in line of duty. This bill was reported unanimously by the Committee on World War Veterans' Legislation and is now pending on the House Calendar.

In addition to the above résumé, the Committee on World War Veterans' Legislation has a limited supply of copies of a committee print entitled "Historical Statement of the Laws Enacted and Veterans Regulations Promulgated on and After March 20, 1933, Relating to Veterans and Their Dependents With a Complete Statement Regarding Expenditures for Hospital and Domiciliary Construction."

This document contains all legislation enacted for the benefit of veterans and their dependents up to and including April 15, 1943. Copies may be obtained from the Committee on World War Veterans' Legislation, room 356, old House Office Building, phone extension 336.

Townsend Old-Age Pension Plan

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RAMEY. Mr. Speaker, even though, to the disappointment of many Members of this House, including myself, and countless thousands of people throughout this entire country, more than 6 months of the Seventy-eighth Congress have passed by without any sign of action looking toward the consideration of H. R. 1649—the Townsend-Cannon bill—which carries the endorsement of the Townsend organization, I want to utilize this opportunity to set forth briefly the tangible and intangible angles—the hard, cold, practical economic facts as well as the moral or spiritual aspects—of the Townsend old-age pension plan.

It truly has been said that necessity is the mother of invention, and the evolvement of the Townsend plan only proves for the *n*th time the accuracy of that pithy adage; as most of us are aware, this idea of Dr. Townsend for a Nation-wide old-age pension plan, to be sponsored and administered by the Federal Government, was conceived during the depth of the economic depression that stalked over the length and breadth of this great land of ours more than a decade ago.

While the Townsend plan in its entirety has been by no means as yet achieved, it has not been without force and driving power because it was the widespread interest it stirred and created—the vista of hope it envisioned—in the early 1930's that gave impetus to the adoption of the Federal Social Security Act which was placed on the statute books in 1935. Certainly all of us will concede that the enactment of that law, while inadequate to meet and cover the bare necessities of our elderly dependent citizens, was a step in the right direction; even though it affords only meager benefits, it has served to establish the principle and accord recognition and a concrete

foundation to a national social-security system in this country. But that it was only a step toward the ultimate goal is indicated by the fact that interest in the Townsend movement—despite delays, disappointment, sharp legislative tactics, and maneuverings—has vigorously flourished in every State in the Union for some 8 years subsequent to the passage of the Federal Social Security Act; indeed, its adherents, both in and out of Congress, are just as insistent today as ever they were in their demands that the Townsend old-age pension plan, solely on its merits, be accorded open and fair congressional hearings and consideration by the National House of Representatives and the United States Senate. No more than it is possible to knock out and get a really good man down is it possible to knock out and destroy a really good idea—neither knows the meaning of "can't," neither will accept failure as the final verdict—both will continue stubbornly to persevere, regardless of any discouragements or obstacles encountered, toward ultimate success and triumph. And so the Townsend plan continues to persist, continues to refuse to be relegated to the background, and continues to be the hope of millions of our elderly dependent citizens.

In the current Congress there is pending a bill, H. R. 1649, introduced by Congressman PAT CANNON, of Florida, which embodies the provisions of the Townsend plan and which is cited as the Business, Employment, and Security Insurance Act. There is nothing complicated, involved, or mysterious about this bill. Let me read its title:

> A bill to provide every adult citizen in the United States with equal basic Federal insurance, permitting retirement benefits at age 60, and also covering total disability, from whatever cause, for certain citizens under 60; to give protection to widows with children; to provide an ever-expanding market for goods and services through the payment and distribution of such benefits in ratio to the Nation's steadily increasing ability to produce, with the cost of such benefits to be carried by every citizen in proportion to the income privileges he enjoys.

The objectives of the Townsend plan are clearly stated in that title, but I especially want to explain and emphasize two sections of the pending Townsend-Cannon bill—titles II and III, the first of which provides for the raising of the necessary funds with which to defray the expenses of the proposed benefits, and the second of which deals with the administration and distribution of those benefits.

Title II of this bill directs that there shall be levied, collected, and paid a tax of 3 percent of the gross income of all persons or companies derived from any and all sources, except in personal incomes there shall be an exemption up to $100 per month. By means of the collection, as a tax, of the stipulated 3 percent of gross income, the money to provide for the payment of the benfits set forth in the general title of this bill would be raised; mind you, raised currently and paid currently—not a mortgage on the future to be carried and refinanced over an indefinite and vague period of time—not something borrowed or gone into debt for—not an obligation to be borne by generations yet unborn. Indeed, it may well be that the thrifty and wholesome efficiency of the financial structure on which the Townsend plan is based accounts for some of the blind, unreasoning opposition that prevails in certain quarters to its adoption.

Of course, we all realize how ultrafashionable Government borrowing and staggering Treasury deficits have become during the past 10 years, but we also are aware that no sound economist or practical financier as yet has been persuaded by existing trends in Government financing to spurn or discard the tried and true principles of the thrift that requires keeping in current balance income and expenditures. Nations, my good friends, are only large collections of individuals and nations operate under the same basic economic principles as do individuals. Some of us probably long ago decided that Government financing is too remote, too complex and intricate for us to comprehend, although as individuals we fully understand and appreciate that we are vastly more secure, content and better off if we can at least keep our personal budgets balanced and remain clear of the haunting specter of debt; while governments have infinitely greater credit facilities and immensely broader latitudes in which to conduct their financial operations than do mere individuals, nevertheless the same inexorable basic economic laws govern the operations of the national purse as govern the pocketbook of the individual. And so we find this provision of the Townsend plan—currently raising the revenue to defray the payment of the proposed benefits—well within the scope and requirements of thrift and sound economic principles and procedure.

Parenthetically I want to stress that word "thrift" because the requirement of current financing as stipulated in the Townsend plan eliminates the onerous burden of interest payments on borrowed money, debt adjustment and refinancing and all that complicated and cumbersome process entails over a period of years.

Having made a most thorough and detailed study of the financial structure of the Townsend plan, I am satisfied that any person who will exert himself or herself to make a similiar investigation and study of it cannot fail to be convinced of its economic soundness.

Now that we have considered the means by which the fund shall be raised with which to pay the benefits proposed in the pending Townsend-Cannon bill, let us consider title III of the measure which makes provision for the administration and operation of the plan, the manner in which the distribution of its old-age pension and other benefits shall be distributed.

Briefly, title III provides that there shall be created in the Treasury of the United States an account into which shall be deposited each month the accumulated proceeds raised through the collection of the previously described 3-percent tax on gross income, as provided under title II of the bill.

On the 20th day of the month succeeding the month in which the Townsend-Cannon law is passed, and on the twentieth day of each calendar month thereafter, under the direction of the Secretary of the Treasury, there shall first be deducted from the total sum collected the necessary expenses involved for administrative purposes, after which the remainder of the fund shall be prorated and paid monthly to the persons eligible for benefits under the act. Please note that carefully—first, the administrative expenses are to be paid out of the fund accumulated monthly through the collection of the specified tax, and, second, the remainder of the fund is to be prorated and paid monthly to the persons eligible to receive benefits under the act.

Now, let me stress this point: The amount to be paid monthly to each individual would vary from month to month as the fund to be distributed in benefits would depend on the amount of taxes collected each month under title II of the act, and the total amount of that tax would necessarily fluctuate in proportion to the rise or fall of general business transactions and employment activities. I want to particularly emphasize that point because, in my judgment, one of the most deleterious and harmful impressions that has attached itself to the Townsend-Cannon bill is the wholly unwarranted promise of a pension at a guaranteed rate of $200 per month to every citizen 60 years of age or over. That $200-a-month business is a myth, pure and simple. Let me stress that the pending Townsend-Cannon bill holds out no such Utopian promise; instead, it is based on a straightforward, out-and-out business basis; in short, so much raised, so much paid—no more and no less.

As to the constitutional or legal authority for the enactment of the pending legislation containing the provisions of the Townsend plan, we have only to glance at article I, section 8, of the Constitution of the United States, known as the welfare clause, which reads as follows:

> The Congress shall have power to lay and collect taxes, duties, imports, and excises; to pay the debts and provide for the common defense and general welfare of the United States.

Let the opponents who raise a hue and cry regarding the unconstitutionality of the Townsend plan ponder article I of our great charter of government.

Another legal point that belabors many people sympathetic to the Townsend plan is why the legislation embodying its provisions has not received more fair consideration and expeditious action; frequently I have been asked, "Why should the Ways and Means Committee be permitted to continue to have jurisdiction over this legislation?" The answer to that query is simple; under the established rules of Congress the Committee on Ways and Means of the House and the Committee on Finance of the Senate are the two congressional committees which have jurisdiction over and pass on all revenue-raising legislation. Obviously the legislation embodying the Townsend

plan definitely and specifically involves taxes. Of course we are all aware that the Constitution provides that all revenue legislation must originate in the House of Representatives, for which reason no tax legislation can be initiated by the Senate; under the long-established rules and procedure of the Congress, the House Ways and Means Committee must initiate and act first on all tax measures before the Senate can take them under consideration.

These days we hear much discussion about plans for the post-war world. When the ensuing tragic world conflict comes to an end, not all, unhappily, but several million of our men in the armed services will be returning home, eager and anxious to resume their normal lives. What does that mean to the average young man? It means a job, an opportunity to earn and create a decent standard of living; to marry and make a home for his wife and himself and rear a family. One of the basic requirements for the materialization of that natural and laudable ambition is a job.

As long as 15 years ago, the rapid strides made in industrial mechanical equipment and scientific management brought about a displacement of labor; machines began doing the work that formerly kept many hands busy and doomed them to idleness. The recent and further technological advances that have been made in our laboratories and industries under the impetus and pressure of the present war have not as yet been measured and are not yet known, although we may be sure that these advances will be a factor in post-war employment opportunities. But in any event, and regardless of any circumstances, way must be made for the returning young men from the battle fronts; they must have opportunity to work and return to the normal way of living that so much they desire.

Making the Townsend plan a reality—providing for the economic security of our elderly dependent citizens—would not only remove from the employment market one segment of approximately 8,000,000 elderly people, thus decreasing employment competition, but it would enable many a father or mother to help tide over that son, returned home from the shattering experiences of global warfare, who will require individual encouragement and a little time to readjust himself to normal living—that boy who will need time to swing back to normal surroundings and routine civilian living—for whom a Government hospital will be no help, but who will find himself again through just hanging around home for a while, feeding on stacks of Mom's homemade buckwheat cakes and juicy pies, tinkering around Pop's carpenter shop in the basement, or just shoveling a path through the snow out to the chicken coop or to the front gate, busying himself with chores and odd jobs around home. If these young men could return home to find even a part of their world secure and stabilized, rather than to be confronted with the responsibilities of solving the financial living problems of their elders, such a fortunate condition would be a real factor in creating confidence and building morale.

Heretofore I called on our great Constitution to bear witness to the legality of the Townsend-Cannon bill; in closing permit me to call on even higher authority—the Book of Books—to bear witness to the justice and merit of this most humanitarian plan that we as a Nation would do well to adopt and thus as a people unite in complying with the solemn exhortation of the fourth commandment—honor thy father and thy mother.

Economic Reclamation Projects in the West

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks I include a news release by the Bureau of Reclamation on an address Economic Reclamation Projects in the West by Acting Commissioner Harry W. Bashore, of the Bureau of Reclamation. The address was delivered before the Citizens Conference on Planning, at Omaha, Nebr., on June 14 by Walker R. Young of Denver, Colo., assistant chief engineer of the Bureau.

The subject is one of supreme importance to every one of the 17 States bisected by or west of the one-hundredth meridian, and I am glad to see the Bureal of Reclamation is doing constructive thinking along this line. First we must provide employment opportunities for returning servicemen and settlement areas on irrigated land where soldiers, sailors, and marines who will be seeking farms can be self-sustaining.

Mr. Bashore's address points the way for a substantial contribution to the desired ends.

The news release and the address are as follows:

Construction by the Bureau of Reclamation, Department of the Interior, of 79 or more irrigation and multiple-purpose projects in 17 Western States as a giant post-war public-works program to cushion the shock of the demobilization of service men and emergency war workers was outlined today by Walker R. Young, assistant chief engineer of the Bureau of Reclamation, at the Citizens' Conference on Planning at Omaha, Nebr.

Speaking for the Bureau's acting commissioner, Harry W. Bashore, on the subject, Economic Reclamation Projects in Western Public Works, Mr. Young emphasized that the Bureau's program would serve a fourfold purpose. It will provide employment during construction, settlement opportunities, a means of increasing agricultural production to make the West more nearly self-sustaining, and provide additional power for industry, farms, and homes.

The Bureau proposes to complete work on 25 projects where construction has been halted or retarded by the War Production Board and begin construction of four large new projects which have been authorized, but where work has been deferred by war conditions. In a third group is a shelf of 50 projects, principally irrigation, for which blueprints are to be ready and construction may start on short notice.

Mr. Young said that if the Bureau's post-war construction program were crowded into 1 year, work would be provided for more than 425,000 men at the sites and in widely distributed industries. When completed the projects will serve an estimated 7,800,000 acres, a large part of which will be land now inadequately irrigated by other systems and the remainder new lands for home seekers.

Settlement opportunities on newly irrigated farms will be provided for from 50,000 to 60,000 farm families. From 20,000 to 25,000 additional farm families in the Great Plains and other drought-ridden areas will be rehabilitated, and security will be given, through additional water supplies, to 85,000 to 100,000 other families in areas now faced with recurring water shortages. To maintain an increasing population the West must have irrigation expansion.

On uncompleted and new projects of the post-war program, more than 3,000,000 kilowatts will be added to the installation of 2,500,000 in place at the end of the war, as the power market in the West justifies the outlay.

Mr. Young pointed out that Bureau projects are now making major war contributions: 4,000,000 acres of highly productive land growing vast quantities of food, forage, and fiber, and power plants producing more electrical energy for war factories than was generated in the whole western third of the Nation at the close of World War No. 1.

The address in full is as follows:

"In preparing my discussion of the subject of the place of Economic Reclamation Projects in Western Public Works I was interested in Webster's definition of 'economic' as 'pertaining to the satisfaction of man's needs.'

"Paraphrasing that definition I emphasize that the objective of Bureau of Reclamation projects is to meet the urgent requirements for water conservation of the western third of the Nation, in war and in peace. The conservation of western water resources for irrigation of agricultural lands is esesntial today to provide food for the fighting forces and the civilian population of this Nation engaged in a life-and-death struggle for its existence. When peace comes, Reclamation will provide the settlement opportunities and means for the maintenance of the increased western population resulting from the wartime industrial expansion.

"Through the double and sometimes triple use of water, Reclamation power projects alone are producing today more electrical energy for war plants than was generated in the whole western third of the Nation at the close of World War No. 1. In a happier day, when our swords are beaten into ploughshares, this power will assure a permanent western industry to provide a market for labor and for increased agricultural production.

"A third major objective of Reclamation projects is water for municipal and industrial purposes. Flood control, navigation, recreational benefits, and wildlife refuges also enter the picture.

"The Bureau of Reclamation, on Thursday, June 17, observes the forty-first anniversary of the establishment of Reclamation as a national policy. Today its energies are focused upon maximum contributions toward the prosecution of the war.

"From the 4,000,000 acres of highly productive land watered by Reclamation systems

in 15 western States will come this year vast quantities of food, forage, and fiber. These supplies are essential in filling the quota of agricultural products which the West is expected to meet. Production of these war crops in the West for the West helps relieve congestion on overcrowded cross-country transportation systems.

"The urgent and multiplying need for greater food supplies is manifest. When the recognized need for food, as a partner to guns in production for war, is implemented with clearance and priorities by the War Production Board, the Bureau can resume construction on irrigation facilities that by 1945 will expand by one-third the acreage now served.

"In the field of power, the Bureau is the largest producer of hydroelectric energy in the West. Its project plants generate today at the rate of 800,000,000 kilowatt-hours per month. The output is used primarily for the production of aluminum, magnesium, and other war supplies. In another year the capacity will be increased a third with a corresponding gain in war production. Projects under construction or where work can be quickly resumed can further expand the supply for war factories.

"Practically every one of the 46 reclamation projects now in operation serves some military activity. Air bases in the desert areas have been made possible by irrigation developments, power is being supplied to war factories, and domestic and industrial water is provided to troops, industries, and communities whose activities are linked directly with the war.

"These contributions to the national security have all come about through western public works. In the 41 years of its operation, the Bureau has expended more than $800,000,000 on the construction of western projects. More than 65 percent of this amount was spent in the period from 1933–43 when the greatest strides were made toward harnessing western rivers and turning them into avenues of service to man and country. Ninety-five percent of the construction costs is reimbursable.

"The greatest impetus for Reclamation developments came with the recognition by President Franklin D. Roosevelt of the potential wealth that was dormant in western waters and land. As Public Works Administrator, Secretary of the Interior Harold L. Ickes recommended, and the Bureau carried out a program that laid the foundation for the enlarged service Reclamation is now performing in the national emergency.

"With this background I come now to what the Bureau of Reclamation will contribute to a program of post-war public works in the 17 States bisected by or west of the 100th Meridian.

"First, the Bureau proposes to complete work on 25 projects where construction has been halted or retarded by the War Production Board. On some of these projects the restriction may be lifted in the interest of food or power production for war, but in all probability none will be entirely completed before hostilities cease. These projects range in size from relatively small irrigation developments to extensive undertakings like the Columbia Basin Project in Washington, the Central Valley in California, and the Colorado-Big Thompson in Colorado, where power facilities are an important factor in assuring repayment of construction costs.

"The next group includes four large new projects which have been authorized under the reclamation or other laws, but where the inauguration of work was deferred as a result of war conditions.

"In the third group is a shelf of at least 50 projects, principally irrigation, for which blueprints are to be ready and construction may start on short notice. These projects are designed to qualify for a general post-war program.

"The backlog of feasible projects for a post-war public-works program is not necessarily limited to the shelf of 50 projects to which I have referred. Through investigations of individual projects or entire river basins, so far as funds permit, the opportunities for the transformation of the water resources of the West into the most useful channels for the development of the region are being explored. Included in these studies is the Colorado River Basin, an area in which seven States are interested.

"The Bureau of Reclamation is cooperating with the Missouri River States Committee recently formed in Omaha for the purpose of paving the way for the most equitable use of the waters of the Missouri with due recognition of the interests of navigation, flood control, and irrigation. Looking forward to the need for valley-wide cooperation such as has been achieved in the Colorado Basin, Commissioner John C. Page nearly a year ago proposed the formulation of a Missouri River compact as an essential step in the planning of the disposition of the waters of this great basin.

"On the basis of pre-war or 1940 prices, execution of the Bureau's public-works program will entail an expenditure of a billion dollars. More than three-fourths of this amount represents the cost of projects under construction and those authorized by existing laws, where work can begin quickly. Findings of feasibility have been made in all of these cases, and construction awaits the green light.

"The Bureau of Reclamation presents the projects in this program on the basis of what they will contribute to the economic development and stabilization of the West. It is not sufficient that the structures will be durable, that the dams will conserve water to be carried to thirsty fields by canals and laterals, or that the powerhouses will generate blocks of power.

"A crisis second only to the war itself will confront the Nation in finding employment for returning servicemen and temporary war factory workers who have been drained from and will return to the rural areas, and for those who will remain in industrial centers.

"Reclamation public works will aid materially in the solution of this problem in the rural areas of the West. The labor required in off-site activities will distribute the benefits widespread throughout the country.

"On the construction of Grand Coulee Dam, for instance, 40 percent of the labor—49,000,000 man-hours—were expended at the site of construction. Sixty percent—74,000,000 man-hours—were expended in the production, fabrication, and transportation of the raw materials and the finished products. On earth-fill dams, by contrast, 65 percent of the labor is at the site and 35 percent in mines, forests, and factories at distant points.

"The Bureau of Labor Statistics of the Department of Labor has made preliminary studies which indicate that if a billion-dollar reclamation construction program were crowded into 1 year, work would be provided for more than 425,000 men. Perhaps half of these would work at the sites of construction in the West, and the remainder would be scattered through forests, mines, and factories and on the railroads.

"When completed the projects in this program will serve an estimated 7,800,000 acres—an area equivalent to more than a third of the land now irrigated in the West. About 2,500,000 acres will be new lands transformed by irrigation from sagebrush and wastes into productive farms. The remaining acreage will be in established irrigated areas faced with retrogression to the desert as a result of dwindling water supplies.

"Settlement opportunities on newly irrigated farms will be provided for from 50,000 to 60,000 farm families. From 20,000 to 25,000 additional farm families in the Great Plains and other drought-ridden areas will be rehabilitated through a water conservation and utilization program. Security will be given, through supplemental or substituted water supplies, to 85,000 to 100,000 other families in irrigated areas now faced by recurring water shortages.

"The increase in power installations cleared by the War Production Board as a part of the war program will bring the total power capacity on Bureau projects to 2,500,000 kilowatts. On uncompleted and new projects of the post-war program, more than 3,000,000 additional kilowatts will be installed when the market justifies the outlay.

"Hydroelectric power is produced as an incident to irrigation—the major function of the Bureau of Reclamation. In the financial side of the picture, however, it has a major place as a means of repaying nearly 50 percent of the over-all cost of the reclamation program and making possible an expansion of irrigation which otherwise would not be economically feasible.

"Power will continue to be a factor in advancing irrigation in the West. The potential demand for electrical energy in the future is forecast by the tremendous increase in installed capacity in the region between 1920 and 1940. From a total of 2,000,000 kilowatts in 1920, the capacity grew to 6,500,000 kilowatts—a gain of more than 200 percent.

"To maintain an increasing population the West must have irrigation expansion. Dry farming in the arid and semiarid regions reached its peak of production long ago. The irrigated acreage from which comes more than 70 percent of the agricultural production, has not increased in proportion to the growth in population.

"Economic reclamation projects in the post-war program will serve a four fold purpose. They will provide employment during construction, settlement opportunities, a means of increasing agricultural production to make the West more nearly self-sustaining, and provide power for industry, farms, and homes."

The Answer to Justice Roberts

EXTENSION OF REMARKS
OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. DAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks made by me at a Republican rally in Chicago, Ill.:

Congress is taking its true place of leadership. The turn is definitely toward nationalism and away from internationalism. The Constitution is winning its fight against the New Deal!

Peace determined by the mature deliberation of the chosen representatives of the people, under the recognized processes of the Constitution, presents no danger to the American people. Full discussion and debate in the halls of Congress will result in the protection of our American sovereignty and independence of action. We will cooperate with other nations but we will not surrender the free determination of our own destiny. America will remain American! But Congress must hear from the people in no uncertain terms that we intend to preserve our independent destiny!

What threatens us at this hour is the attempt to evade recognized constitutional processes and to attempt to commit the

American people in spite of the Constitution and even in defiance of it. What is this dangerous scheme?

When the millions of our boys are in foreign lands, fighting to save the American flag and the Constitution of the United States, a gigantic trick is to be played on them and the rest of the American people by having a so-called referendum vote in November 1944, placed on the ballot at the same time that we elect a President of the United States. There are those who claim that under the provisions of the tenth amendment to the Constitution of the United States the people have the right to conduct such a referendum and place us forever in a world super-state, supreme over the Republic of the United States and having an executive power, a court, and a legislature, also an army and navy that will tell the American people what to do and when to do it.

This scheme calls for the breaking down of party lines and the creation of one party, thus wrecking the Republican Party as was done at Philadelphia in 1940. By the instrumentality of this one party, we will become a constituent part of one world, tearing up the Declaration of Independence and the Constitution of the United States as waste paper.

How far has this scheme progressed? In an address delivered at the dinner of the American Society of International Law on May 1, 1943, Justice Roberts of the United States Supreme Court said:

"Our recent experience teaches that all the expedients to which the nations have turned are insufficient to keep the peace. We have learned that leagues, treaties, agreements, voluntary submission of disputes to a world court, fall short of reaching the goal. What other recourse is there? Our own national experience as a federation of independent sovereigns seems to point to at least one avenue to be explored. Is it not plain that, so long as national sovereignty remains absolute, no means will exist for preventing the abnegation of the obligations of international good faith? Must there not be a fundamental framework of government to which the people of each constituent nation surrender such portion of their nation's sovereign prerogative as is essential to an international order; that each nation be bound by certain agreed rules so that no single nation, and no group of nations, can, for any reason, or for no reason, assert its or their unbridled will by resort to arms?

"Naturally there will be differences as to detail. But it seems to me that there ought not be much difference of view respecting certain fundamental requirements. Supranational law must be law affecting and binding individual citizens of the nations belonging to the supernational government, in the same sense that the law of the United States, consisting of the Constitution, and the statutes adopted pursuant to it, bind every citizen of the Nation.

"It seems obvious that a world government must have a representative assembly to implement its delegated powers. Equally plain is the necessity for an executive to administer the laws and see to their enforcement. And under that executive there must be an independent police to effectuate the legislative policy and the executive action pursuant to it.

"Lastly, there must be a judiciary to which disputes between the citizens and the supranational government, between citizens and any nation a party to that government, and between nations must be submitted for adjudication."

On June 13, 1943, Justice Roberts, of the United States Supreme Court, a Republican appointed by former President Hoover, while broadcasting over a Nation-wide network on the American Forum of the Air, earnestly advocated this so-called referendum as the only method by which this world super state could be made binding upon the American people.

I am satisfied that the President is delaying union with Britain only because of the doubt in his mind that the people will accept it. He is convinced that he has the power, by Executive agreement, to join with Britain, and he does not intend to submit the question to either the Senate or the House. In other words, he does not want to take an unpopular step. He has been advised that he has the power under the new construction of the Constitution developed in the State Department and silently approved by the new Supreme Court.

Justice Roberts shares this view. I quote from his remarks delivered over the radio in the American Forum of the Air, June 13, 1943, as follows:

"The one and only indispensable condition to a federation of nations is that the citizens of this Nation make the matter the first order of the day; that, laying aside all partisan considerations, they unite in a demand that our leaders stand firmly for the only suggested form of international union that holds any promise for world cooperation and world peace. * * * Another objection that I constantly hear is that this is not the time to federate. My own view is that it is now or never; now in the white heat of war; now in the crisis and suffering of war; now with men's minds bent to this problem and with the sacrifices that are being made; now, and now only, is the time when men will be willing to lay aside certain smaller selfish interests and look to the greater and longer good that will come out of union."

In the course of this debate on the American Forum of the Air, the following dialog took place between Senator GILLETTE, of Iowa, and Justice Roberts:

"Senator GILLETTE. That being the case, assume that we were able to establish a federation along the lines that you have suggested—suggested by Mr. Streit. Would it be your contention that there would be no right of secession, no right of change of form of government in any of the constituent parts?

"Mr. Justice ROBERTS. We settled that in our Union, I think, in 1861. There wasn't any right of secession.

"Senator GILLETTE. Surely.

"Mr. Justice ROBERTS. And I think that if you start with a league of people who are democratically minded and understand the democratic process they must understand that the Federal covenant, the Federal Constitution, binds them each as citizens, as every American citizen understands it binds them now."

In answer to a question by Senator GILLETTE as to the method by which the American Constitution could be superseded and whether it would not take more time than we can afford to spend, Justice Roberts replied:

"I think not. When you compare it to the chaos that is going to be existent in Europe while the United Nations try to settle what they are going to do with a Europe that has no leadership and doesn't know where it is going, I think if Congress could pass a resolution for a constitutional referendum on this question it could be settled by the States in a very short time."

It is our first duty to awaken the American people to this danger. It is more vital than the war. The outcome of the war as it affects our capacity to continue as a nation is no longer in doubt. The war has ushered in this far more important question of our continuation as a nation under the Constitution of the United States, the very safety of the Republic. This attack does not come from foreign enemies. It is nurtured and sustained by our own fellow citizens. Therefore, no possible question of sedition can be raised in the discussion of this issue. The internationalists have asked for it.

Let us analyze what is behind the position taken by those who advocate union now with Britain and world government. They insist that all post-war planning and treaty making should be left entirely to the President, and that Congress and the Supreme Court may safely be ignored. In a recently published book on International Executive Agreements, by Wallace McClure, of the State Department staff, it is said:

"A still greater gulf exists between treaties and Executive agreements on the one hand and ordinary legislative enactments on the other not with regard to domestic procedure but as a matter of international substance: International acts are national law by virtue of the concurrence in their enactment of the government of some other country or countries—a matter highly pertinent to the proposition of their unilateral abrogation. They involve obligations to other peoples and are themselves international law and the subject of international regulation and adjudication. * * *

"It becomes arguable, accordingly, that the courts possess no authority to pronounce an international act unconstitutional."

In this inspired book, carefully prepared to fortify any step which the President may take, the following conclusions are reached:

"It is believed that the President has, and was intended to have under the Constitution, all the powers and functions of the head of a fully recognized member of the society of nations; that he has, accordingly, the authority to enter into any manner of international act, on any subject, that is entered into by other states of the world. * * *. The President can do by Executive agreement anything that he can do by treaty, providing Congress by law cooperates. And there is a very wide field of action in which the cooperation of Congress is not necessary; indeed, where Congress possesses no constitutional authority to dissent."

The advocates of this scheme are trying to confuse the American people by defining the objects for which we fight. A series of broadcasts will be held this summer over a Nation-wide network when several advocates of this scheme will endeavor to convince the American people that we are fighting for objects which will make it easier for them to accomplish the world superstate. It is, therefore, important for us to weigh the objects of this war and to make a sound and just appraisal of what we are fighting for. In this connection, it is well to consider the following quoted from a recent address by Senator ROBERT A. TAFT. We quote:

"We went to war to prove that so far as the American Republic is affected, might in this world will not make right. * * * I do not believe we went to war to establish the 'four freedoms' or any other freedom throughout the world, and I do not believe we went to war for all of the purposes stated in the Atlantic Charter. We did not go to war even to establish liberty throughout the world, except as such a world condition might result from the insurance of our own liberty.

"This is no war of democracies against dictatorships. There is no freedom of speech in Russia. There are benevolent dictators in Brazil, in Cuba, and in China. There was a dictator in Poland. In Greece, which made one of the most magnificent defenses against aggression that has been seen in this war, the people were governed under a dictator, who was so benighted as to prohibit in Greece the reading of The Republic of Plato. Surely we are not going to interfere with the internal governments of Russia and China and other nations in order to insist

on all of their citizens enjoying freedom of expression and freedom of religion. If we are, we will have a permanent army a good deal larger than 11,000,000 men and we will have to suspend for a long time any renewal of freedom in the United States."

Replying to Justice Roberts, I am certain that few Americans actually realize what is involved in the so-called plan of Federal Union or Union Now With Britain. Few realize that under this plan we would forever lose our American citizenship, our American flag and our Republic ordained and established by the Constitution of the United States, also our Supreme Court, our Congress, and our Bill of Rights. There is to be under this plan a common currency to supplant the money which we now use in the United States. Holding 75 percent of the world's gold, the people of the United States would of necessity get the short end of the money angle of Union Now. American labor would face the loss of the high standard of wages paid in America by the abandonment of our protective system for a customs-free plan known as free trade. Impoverished by the losses of the war, Britain would be enabled to dump in the United States without paying any duty articles manufactured by the pauper labor of Britain and her dominions. The peace of the United States would be forever determined by this new Federal Union and whenever Britain became involved in war it would be our war.

People of the United States are not all of British origin. We have here a great melting pot made up of people from all the nations of the world. They have forgotten the nations of the Old World and have given their allegiance to America first, last, and always. They have not asked for union now with Britain any more than they have asked for union now with Germany, France, Italy, or Russia. They are content to remain all American.

Union Now would split America asunder into groups and factions who, at first heart broken, would then become sullen. If you want to see another 1776 and a war for independence, just succeed in fastening the chains of your union now upon the wrists and ankles of the American people. No, Justice Roberts; we do not want union now with Britain, and you shall not impose it upon us. We permit freedom of speech and freedom of thought in America, but there comes a point when even good neighbors must resent an infringement of the sanctity of their own homes.

To lessen the chance of a future war, we must give up our American citizenship and become citizens of a world superstate dominated by Great Britain and the Soviet Union. That is the plan.

Great Britain and the Soviet Union have entered into an alliance lasting 20 years. They do not need us, except to defeat Hitler. The war serves merely as a setting for a surrender of sovereignty far more drastic than any enemy force could ever inflict. And this at a time when we are by far the strongest nation in the world—on land, at sea, and in the air. If Churchill and Stalin want to establish a united states of Europe, that is their business, and we will gladly cooperate with them to that extent. But we want no part of it. We have gigantic domestic problems that will take all of our energy to keep the United States of America a going concern.

The tragedy of this scheme rests in the fact that after we have surrendered our Republic we still would have no guaranty of peace. Then why do it? Why take a step so obviously against our own best interest? We are familiar with the strong pro-British attitude of Winston Churchill, the strong pro-Soviet attitude of Stalin. Is it possible that we utterly lack equally pro-American leadership?

Let us look at this scheme realistically. The weakening of our American citizenship where so many millions are of different foreign origins must result in chaos. As a people we are a league of nationalities. We get along together because we confer American citizenship—"I am an American." Take this away and great, free America dies, just when we are emerging into true greatness.

After this war is over we will face a Europe dominated by the Soviet Union. No one can predict just what this will mean, but it will be safer for us to keep our powder dry and be able to determine and control our own acts. There is serious danger that we will be absorbed in the growing power of the Soviet Union.

Our domestic peace and security could never withstand the spreading of communism among our own people. Already we can see the dire consequences of the inevitable clashing of races and industrial strife. Once we weaken the national loyalty, once we dilute the pure devotion of Americans to our own free America, there will be no bond to hold us together. Today we are under the compulsion of a mortgage on our resources held by foreigners. If that mortgage be foreclosed, bloodshed and anarchy will follow. We do not intend to give a quit claim deed to our hard-won possessions. In this critical hour and in the days to come we must stand by the Constitution of the United States and resist to the bitter end any attempt to weaken this American loyalty and devotion, no matter in what form the attempt is clothed.

If you place world citizenship above American citizenship, you must open our ports to the immigration of all races, colors, and creeds. Where we now have conflicts along these lines they will be intensified and inflamed. American labor has worked for many years for the restriction of immigration so as to keep American jobs for American workers. Under the world superstate advocated by Justice Roberts, we could not refuse the entering of these immigrants because we would have previously surrendered any control over the subject. If this immigration grew to such magnitude that we would be swamped by the new infusions into our American population, all freedom of religion, freedom of speech, freedom of the press, and freedom of assembly now guaranteed to us by our Bill of Rights would be lost in a confusion of tongues and a veritable mob of foreigners demanding the things which we Americans call our own and for which we are justly proud.

Justice Roberts for all practical purposes has foredoomed his scheme to failure by insisting that this is the time to complete the federation which he advocates. In fact, he admits that it is now or never. He would have us in the heat of war, in the suffering of war, make this bargain to surrender the independence of his own country and to undermine the very Constitution which, as a Justice of the United States Supreme Court, he has solemnly sworn to protect and defend. And he would do this without giving our boys who are fighting all over the world a chance to be heard. Would this be fair to our gallant heroes? This but illustrates how far the fallacy of global thinking can carry us.

Our minds shrink from a contemplation of the picture which this sort of false reasoning presents. What father could ever face his returning son who fought so gallantly for the Stars and Stripes and tell him that his job has been filled by a citizen of the Federal Union and that Old Glory would never fly again over the courthouse in his native village!

Justice Roberts has urged us to arouse "an enlivened public sentiment in this country in support of an integration of our own and other nations in a world organization." He has asked us to make this our first duty. Let us accept this challenge and prove to him that the American people love this Republic and refuse to surrender it to any foreign nation or to any international group within our own country. This is the great issue of 1944 and we must rise to the task.

The "referendum" vote will have no binding force in law. But it will serve the purpose of satisfying the moral question in the conscience of the President. If the people in 1944 vote for union with Britain and world government, then the Republic is forever lost, even though we are winning the war to preserve it. And with the Republic goes the blessings of our free American citizenship. Justice Roberts has asked for a referendum. Let us let him know how we will vote. And our boys in the armed forces when they return will say: "God bless you—you saved the Republic for which we were fighting!"

Straight From the Shoulder

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Daily Times, Mamaroneck, N. Y., entitled "Straight From the Shoulder," commenting upon the address made by the Honorable Thomas E. Dewey at the thirty-fifth annual Governors' Conference, recently held in Ohio:

STRAIGHT FROM THE SHOULDER

Franklin D. Roosevelt must have winced in reminiscence when he read yesterday what Thomas E. Dewey, of New York State, had said at the thirty-fifth annual national Governors' Conference out in Ohio. For the attack of New York's Governor on the national administration was exactly parallel to those devastating blows Mr. Roosevelt was himself throwing as Governor of the Empire State back in 1931 against President Herbert Hoover. And none knows better than Mr. Roosevelt that politics moves in cycles.

Said Mr. Dewey, in part: "The domestic job being done now is unspeakably bad. It has been bad, however, for the last 10 years.

"The policy of scarcity, which was not abandoned by the national administration until a short time ago—too late even to affect this year's winter wheat crop—is at the root of the whole trouble.

I have been saying for nearly 2 years that unless the national food policy was changed we were all going to go hungry, and that is what we are now beginning to do.

Our failure to produce adequate food is going to affect this country's future in the world as well as its national well-being. The cornerstone for building peace is that we feed the conquered nations. You can't build peace while people are mad with hunger."

There you find Mr. Dewey going straight into the worst mess the national administration has concocted, and taking astutely the very political weapon which Mr. Roosevelt had planned to use himself in 1944. And it is straight-from-the-shoulder talk like this of Mr. Dewey which the country needs most urgently at this time.

If Mr. Roosevelt plans, as all indications point, the use of a save-the-world-from-

hunger campaign for 1944, Mr. Dewey already has started to tell the world that such a program could not be in worse hands. For the bureaucrats and impractical theorists behind the desks in Washington are the very same who made the farmers kill the little pigs and plow under the corn.

As it was Mr. Roosevelt who 12 years ago was utilizing his office as head of the greatest State of the Union to point to palpable defects in the Hoover administration, so Mr. Dewey now has that same proud platform from which to preach. And do not make the mistake of feeling that his declination of a Presidential nomination next year weakens his position. On the contrary, it strengthens his stand for his views are not simply those of an opportunist—they are, rather, the convictions of a responsible statesman who is not simply grinding a personal political axe.

Our Serious Problems

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. SPRINGER. Mr. Speaker, this war is not yet won. We may have a long way to go before victory comes. We have the reports from the fighting fronts of the valor and heroism of our boys, and that is the most inspiring information that we receive these days. Our boys are fighting on to victory, and they do not indulge in any bickering, confusion, or bungling in so doing. They are fighting for our country. They have no thought of coming elections, and they do not play politics—they have but one thought, and that is for our country and the security of our people and the perpetuation of our form of government under the Constitution.

The heroism of our boys should inspire all those in high places in our Government, and it should make everyone ashamed of their conduct when bickerings arise and when confusion and bungling exists. Those who play the game of politics with war, and when we are engaged in a life-and-death struggle, when our country is in peril, should become ashamed of their actions; the people should denounce that character of conduct in time of this our greatest crisis.

When we take an inventory of some of the things that now exist in this crisis, we find a terrific struggle in which the Vice President of the United States is making serious charges against Mr. Jesse Jones, both of whom are holding high positions in our Government. And in the countercharges made by Mr. Jesse Jones against the Vice President very serious charges are pronounced against him. Recently on the floor of the House I made the assertion that this amounted only to "one bureaucrat calling another bureaucrat a bureaucrat"; but this ugly controversy has more serious implications than the mere calling of names—it tends to break down the morale of the people of this country, and at a time when we cannot afford to have the morale of the people weakened on any front. These men, holding the high positions they now occupy, should realize that this country is at war and that this is the time to exercise ordinary common horse sense and judgment, and not be piloted into a ridiculous controversy which has spread throughout our country and which has resulted in a decreased morale on the part of our people. If this single item of bad judgment was the only one that now exists in this Nation, we would not give it more than a passing consideration. But this is not all.

The Chief Executive continues to attempt to drive every person in the executive branch of the Government to yield to his views and opinions, whether it be on the subject of stock and poultry feed, of which there is a terrific shortage at the moment, gasoline rationing, or our food supply—or any other serious problem which confronts the people. He continues to direct and drive those under his command. The pitiful part of the entire mess of confusion is that the President will not, and he does not, appoint men of superior knowledge and experience in a particular line to aid in the administration of the affairs of Government in that particular field with which they are entirely familiar, and in which they have previously exerted that experience and knowledge.

For instance, in the matter of our terribly reduced food supply—he has failed entirely to give heed to repeated requests that he place in charge men of our country who could, and would if appointed and permitted to handle that situation, bring order out of chaos and establish a fair and reasonable regulation relating to the distribution of food to our soldiers, our own civilian population, and to our allies. Our food supplies are short now. Reports coming in from the great farming areas are alarming, because the food production from the farms will be greatly reduced in 1943; in some sections that reduction will reach the appalling figure of from 25 to 40 percent, all caused by the floods, the rains, the lack of farm labor, machinery, and parts for repairs.

With this tragic situation our minds naturally reflect to the days when the President ordered the pigs killed, and every third row of the corn plowed under, and the reduction of the acreage of wheat and other commodities. Men cannot compete with nature. We need food. If food is not produced we will have hungry and starving people in our Nation. Our soldiers will falter on the battle front if we do not produce the food for them. This is one of our gravest problems at the moment. I cannot imagine a greater tragedy than to have millions of men on the fighting fronts, across the oceans and on foreign soil, deprived of the necessities of life which are so essential to our victory in this war.

Every American of experience and sound judgment knows that there should be appointed a central food administrator, with those qualifications which fit him for the task ahead, clothed with ample and adequate powers to meet and solve this food problem. In the great farming sections of our country great and irreparable damage has already been done because of the utter failure to meet the issue and to solve the problem, but unless something is done about it, immediately, hunger and starvation will be in our very midst next year, and in the years to follow. There must be no delay on this subject if we are to escape famine and hunger at home, and if we are to be able to feed our soldiers who are fighting on the battle fronts.

Mr. Speaker, when we reflect upon the bickerings, the various conflicts existing, and the bungling of material matters in the O. P. A., and when the people try to get food supplies at the various stores and they find that there is very little, or none, in stock—the people become disgusted; they are greatly disappointed. They know of the ills in that agency of Government, and they know that those in charge have utterly failed to solve the existing problem. The people want food, and they want it at a reasonable price. The people know of the curtailment in production of food which the Government directed and fully sanctioned; now there is a great scarcity of food, and the Government, and those in power, and those in charge of the controlling agencies, are unable to cope with the existing situation. It is bungling in Government, and the Chief Executive, who has full and complete control over every department of Government and every department head, is directly responsible for the existing ills. He, and he alone, has the power to hire and fire his appointees, and he, and he alone, can appoint some experienced and qualified person to take charge of these agencies who will be able to solve the problems and meet the existing conditions.

Mr. Speaker, we must win this war. We must go forward, a united people, to victory. We cannot win this war if bungling, confusion, and mismanagement in the departments of government continue. We must feed our soldiers and sailors, and we must feed our own people. When that is accomplished, then we must yield whatever food we may have to spare to foreign countries for their hungry people. In the course of this war, it has been the policy of our Government, under those in power, to give away our resources, our ships, our munitions of war—to finance and to give food and every other necessity—to other nations of the world. Many of those nations have more food than we, and many of those countries who have received gifts from Uncle Sam are not reciprocating in any way whatever. Our country appears to be the paymaster for everyone, and this—remember—cannot continue indefinitely. We are facing a financial crisis, and those in power do not appear to worry; they continue to urge the spending of the taxpayers hard-earned money for many

nonessential things; they are spending huge sums of money—fabulous sums of money—for the prosecution of this war; this war is costing our country, up to the present moment, many times the entire cost of the last World War; and the end is not in sight.

It is my constant fear that our Nation will face a financial break-down before the end of the war. The waste, extravagance, and mismanagement of this war, and in our own economic structure, has been frightful. When the people awaken, and fully realize just what has been done to them—both before the war and since we became involved in it—they will then realize that the words I have spoken here are literally true. The New Deal has been the cause of a greater disaster in this country—which will endure longer—than war, flood, or famine. Yet, the President—and his New Deal—continues to march onward, spending the people's money, and forcing the people into bankruptcy.

Thus, Mr. Speaker, we find ourselves today. These are not idle thoughts; they are the expressions of every American who faces the present situation with great alarm. They know that the future will bring disaster to them—they know the future years will be years of taxation, regimentation, and consternation. This is not a pleasant thought for all of the people. The youth, the maid, and the mature adult face the same foreboding future—the result of waste, extravagance, and bungling. This is not a pleasant future to behold. As Americans—who love our country, who want to win this war, who want our boys to come back home again to live in a republic under our Constitution—what are you going to do about it? We must face the future as Americans.

Appropriations of the Seventy-eighth Congress

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. TABER. Mr. Speaker, the following is a statement of the total amount which will come directly out of the Treasury in one way or another as a result of the bills that have been passed so far in the first session of the Seventy-eighth Congress. These figures include, in addition to direct appropriations, permanent appropriations, contract authorizations, and reappropriation of funds which, without this action, would remain in the Treasury.

The following table shows a breakdown of the amounts made available by bills for each department in the last three sessions of Congress:

The expenditures during the fiscal year 1943 totaled $78,182,348,640.87, and the excess of expenditures over receipts was $55,900,705,931.63.

The public debt increased during the fiscal year from $76,990,704,746.50 to $140,796,033,375.65.

Current expenditures are running at a rate exceeding $8,326,715,991.75 a month, and the deficit is piling up to the tune of over $70,000,000,000.

The following table shows a breakdown of the appropriations of this session into regular, permanent, reappropriations, contract authorizations, and special funds for each department of the Government:

Agriculture:	
Regular	$848,295,883.00

The House of Representatives has made a much better record than the Senate in connection with appropriation bills. Every regular bill that passed the Senate was increased and most of the deficiencies and supplementals. The savings that have been made below the Budget have been as a result of the action of the House of Representatives.

Some question may be raised as to the inclusion of the reappropriations in figuring the total of our appropriations, but if we did not have them, the money would not be spent. Therefore, I can see no escape from the inclusion of these reappropriations to determine the amount that Congress has made available. Contract authorizations, however, including an item in these bills of practically $7,000,000,000 perhaps should not be included.

Awarding of Army-Navy E to Henry Heide, Inc.

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. GAMBLE. Mr. Speaker, on April 29, 1943, I had the pleasure of attending the presentation made on the occasion of the Army-Navy E production award to Henry Heide, Inc.

Under leave to extend my remarks, I insert herewith the speech of Col. John N. Gage, executive officer of the Chicago Quartermaster Depot, United States Army, and the speech of acceptance by Mr. William F. Heide, of Henry Heide, Inc.:

ADDRESS OF COL. J. N. GAGE, EXECUTIVE OFFICER OF THE CHICAGO QUARTERMASTER DEPOT

This typically American ceremony—colorful, yet simple—is symbolic of the complete coordination between government and industry, management and labor, labor and government, for an intimate understanding of the problems of each as correlated one to the other is absolutely essential to win the flag which I am privileged to present here this afternoon.

An Army and Navy E award is the only way a grateful government may recognize your company and each of you as part of the vast army known as essential industry. It carries with it the highest traditions of the Army and Navy and is coveted by all war producers, but realized by only a few. We hear of many E awards, but it is a fact that less than 3 percent of all manufacturers engaged in war production have yet qualified for the recognition you are about to receive. This award, my friends, puts you in the top rank of war production along with the greatest names of industry in every field, for you, too, of Henry Heide, Inc., have been producing an essential munition of war which has materially contributed toward the over-all effort by assuring successful delivery and distribution of the well-known United States Army field ration K.

This ration is the result of long scientific research and development on the part of the Army, nutritionists, and food chemists. Since it was designed for use in emergencies, great care was exercised in the choice of its ingredients, which necessitated adequate protective packaging. One of the important components of field ration K is the powdered lemon juice manufactured by you. This product is highly desirable in the ration and is excellent source of vitamin C, which vitamin is easily lost if the product is carelessly or improperly handled and packed. It presented a most puzzling problem of production.

Henry Heide, Inc., has shown its ability to overcome promptly such manufacturing obstacles by the conversion of existing facilities and resorting to new inventions where necessary. I understand that Mr. Walter Zwoyer has contributed materially toward the success of your production line by his ability and vision to readily grasp the situation by inventing the machines to do the job. It is that kind of energetic versatility which is being shown everywhere by our soldiers of production together with the intelligent leadership of management which gives the Army a feeling of security at home.

You are not dodging shells, sweating and bleeding in the fox holes of some south Pacific island, nor are you buffeted on a raft with your life dependent upon the very product you are making here. You are, in fact, fairly comfortable in this New York factory, but I am inclined to believe that should the opportunity be offered to trade places with our soldiers on any front, each of you would be ready.

But fate has given you an important place in the ranks at home; a private of production is an echelon of energy. You have produced faithfully and have won this distinctive honor comparable only to recognition for outstanding service on the field of battle. This flag will mean as much to you as my own service ribbons mean to me, and let it be a reminder that our job is not yet done, and let its presence be an incentive to keep it flying until the unconditional surrender of all our cowardly enemies.

And so Mr. Heide and your associates of Henry Heide, Inc., on behalf of the Under Secretary of War and the Under Secretary of the Navy, and with the sincere congratulations of the Quartermaster General, I present to you this flag.

My friends, I salute you.

SPEECH OF ACCEPTANCE

(By Mr. WM. F. HEIDE, president, Henry Heide, Inc.)

With deepest gratitude, Colonel Gage, I accept this Army-Navy production award on behalf of our organization.

Truly, this is the proudest day in the history of our firm, established 75 years ago.

The Army-Navy production award pennant will continually remind us of the signal honor which the Army and the Navy have conferred upon us.

Nothing could encourage us more, sir, than to have you men of the armed forces deem us worthy of flying that pennant and of wearing the Army-Navy E token pin.

For your part, please rest assured that our time and our talents are at the call of the fighting forces.

The men and women of our organization have worked ceaselessly to merit this Army-Navy production award, and it inspires us to intensify our efforts toward achieving the desired end. We are in this struggle and we know that there can be but one result—complete victory.

In conclusion, I am glad of this opportunity to pay special tribute to a man who, by his inventive genius, dynamic energy, ceaseless effort, resourcefulness, and tenacity of purpose, has been an inspiration to our entire organization. I refer to Walter R. Zwoyer, whose contribution toward the acquisition of this great honor has been outstanding.

Foreign-Trade Zones in Relation to the Merchandise Warehouse Industry

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by J. Leo Cooke, Jersey City, N. J., vice president, Lehigh Warehouse & Transportation Co., Inc., and chairman of the committee on foreign-trade zones, American Warehousemen's Association, merchandise division, recognizing the value of the Celler Act creating foreign-trade zones in promoting our future foreign trade:

Mr. Chairman, ladies and gentlemen, some weeks ago I was privileged to become the chairman of the foreign-trade zones committee of the American Warehousemen's Association, merchandise division.

The committee has given this subject of foreign-trade zones serious consideration, and we are of the firm belief—

1. That the establishment of foreign-trade zones in cities of the United States is being and will continue to be forced upon our industry; and

2. That the administration of such zones will create competition for public warehouses throughout the country that the warehousemen will be unable to cope with if existing conditions continue on into the future.

We examined into the law creating foreign-trade zones. We found that Congress delegated greater privileges and benefits to the operators of foreign-trade zones than to class 3 United States customs bonded warehouses with class 8 privileges. We found further that although legislative intent indicated that the function of foreign-trade zones would be to encourage or facilitate the transshipment and reexport trade as distinguished from foreign goods received for domestic consumption, the Foreign-Trade Zones Act itself permits a foreign-trade zone to store merchandise entirely unrelated to transshipment and reexport. In other words, every foreign-trade zone established in the United States becomes a public warehouse for the storage of any and all merchandise, with greater privileges, however, than extended to a United States customs bonded warehouse.

We examined into the operation of foreign-trade zone No. 1, located in the city of New York. We found that the warehousing business handled by that zone was obtained largely through cut-rate competitive practices.

We ascertained that approximately 50 cities in the United States and its possessions have inquired of the Foreign-Trade Zones Board in Washington with respect to their own facilities for a foreign-trade zone in their particular port, and that such cities include Newark, N. J., Philadelphia, Pa., and Baltimore, Md., on the eastern seaboard; Los Angeles and San Francisco, Calif., on the west coast; and Gulf port cities.

We found that the establishment of foreign-trade zone No. 1 in New York City has deprived public warehouses in the port of New York of a substantial amount of business, and there is no question but that the establishment of foreign-trade zones in other cities of the United States will have the same dire effect on the public warehouses of such cities.

We found that a storer of merchandise in a foreign-trade zone need not concern himself with the necessity of putting up bonds on either of the two-way movements in connection with foreign commerce. The drawback problem is completely solved for him, whereas a storer of merchandise in a United States customs bonded warehouse cannot, by reason of legislative restrictions, be accorded these same privileges.

We are convinced that in order for the United States customs bonded warehouse to survive, it must be placed upon an equal footing with foreign-trade zones.

The present war will, we all hope, be brought to a successful conclusion soon. The end of the war will bring increased activity to our ports. The principles which fostered the creation of foreign-trade zones should be extended and the field of operation increased so as to include United States customs bonded warehouses within its scope. We warehousemen have the experience, the knowledge, and the facilities to multiply the benefits which might accrue to our Nation in its endeavor to increase the trade and commerce of the United States.

The foreign-trade zones committee of the American Warehousemen's Association, merchandise division, is ready to go forward with concrete steps to accomplish these purposes and once and for all take this program out of the realm of discussion and into the arena of accomplishment.

It proposes that it be authorized to engage counsel familiar with this subject, formulate a program, and seek legislation which will make available to all warehousemen of the United States, at the appropriate time, the opportunity to make the ports of our country the greatest centers in all the world.

Prohibition—Men in Army and Navy Oppose Any Change in Present Laws

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. COCHRAN. Mr. Speaker, my mail clearly indicates there is considerable unrest among the men serving in the armed forces due to the activities of professional drys, together with well-meaning citizens who are advocating legislation prohibiting the manufacture, sale, or transportation of alcoholic liquors in the United States for the duration of the war. There is a daily newspaper issued by the United States armed forces in the European theater of operation known as The Stars and Stripes. This paper is published under the direction of Brig. Gen. F. H. Osborn and Col. Theodore Arter, of the Special Service Section, S. O. S., of the European theater, as well as Africa. It depicts the views of the tens of thousands of our men in Europe, as well as the thousands who won the battle of Africa, together with those who are leading the fight in the Mediterranean. A recent issue contained an editorial entitled "Prohibition." I am now quoting from that editorial:

They are at it again in America, and even as in the days of World War No. 1 we may yet hear that America is dry.

Most of us in the United States armed forces could not be classed as violently opposed to liquor control for most of us believe in moderation. On the other hand, there are few of us who could be included in the group of Americans who felt "the noble experiment" was a huge success.

It is with alarm therefore that we learn of the growing political strength of the anti-liquor crowd in the United States.

Taking advantage of wartime conditions and restrictions the new prohibition group is working night and day for legislation which will give America prohibition in fact if not in name. * * *

Rationing is playing into their hands and gives them a good excuse, and no opportunity is missed to use this excuse in their efforts to limit the production and distribution of liquor of all types.

We can remember the days of prohibition, when moonshine whisky made quick fortunes for bootleggers, crooked politicians, and dishonest police officials. As a result we claim we know what we want in the way of liquor legislation and feel those at home should wait until we return before initiating further legislation on liquor control.

Mr. Speaker, it was organized propaganda that developed the situation complained of in this editorial.

I cannot conceive of anything that will lower the morale of our soldiers and sailors more than to have legislative bodies enact laws restricting or attempting to control their personal habits while they are at the front ready and willing if necessary to sacrifice their lives that the freedom and liberty we have so long enjoyed will not be destroyed.

I am receiving petitions signed by hundreds of citizens protesting the consideration of legislation of this character. I have had these petitions referred to the Committee on the Judiciary where the bills are pending.

They Will Save America

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KNUTSON. Mr. Speaker, whenever I feel pessimistic regarding the future of the Republic and the American people, I take heart and renewed courage from the certain knowledge that our country and people are sound at heart and will therefore prevail against the evil forces that would ignore our traditions and undermine institutions and destroy our form of government.

There is a group of visionaries and dreamers now occupying key positions in all branches of the Government who would make America over, and they are using their positions for that purpose. However, the youth of America is going to save the day. That our young men and women are giving deep study and thought to present problems is indicated in many ways. The other day I was handed a copy of a communication from the United States Junior Chamber of Commerce, a splendid organization made up of energetic young business and professional men from all parts of the country. The communication follows:

Honorable Members of the House Naval Affairs Committee:

One of the greatest assets of this country is the freedom of individual enterprise. Destroy this, and you destroy the Nation. Destroy the freedom of individual enterprise and you destroy the very rock foundation of our heritage.

In recognition of the fact that there is a fifth freedom, the United States Junior Chamber of Commerce adopted the following resolution: Be it

Resolved, That the following statement of principle be adopted:

We believe that in addition to the "four freedoms," we have a "fifth freedom"—the opportunity of individual enterprise—by which America has grown great and through which we can insure her future greatness.

We believe this freedom requires:

The right to an unfettered start in the race of life with no artificial handicaps.

The right to work as hard as we like and enjoy the fruits of that work as our own.

The right to go as far as we can, developing according to our capacities as individual American men and women.

We recognize that the "fifth freedom"—opportunity of individual enterprise—is limited by the similar right of others and that there is an obligation to extend these opportunities to all people who are willing and able to work.

The United States Junior Chamber of Commerce is a group of over 1,000 local organizations of young men. We have over 55,000 members in the armed forces and 85,000 members in civilian life.

We know that the young men of today will fight until victory is ours. We know that the young men of today are paying for this victory with their lives. We know that the young men coming home will want to exercise their heritage of the opportunity of freedom of enterprise.

As stewards of our members who have joined the armed forces, and as spokesmen for the young men of our Nation, we request that in your recommendations as a result of your hearings on war contracts, that you bear in mind your responsibility to these young men as their elected representatives in this greatest democratic country of all time.

In your recommendations we ask that you do not permit the evil forces of bureaucracy to destroy the opportunity of individual enterprise.

More specifically, we suggest that industry be permitted to built a post-war reserve. This should be for all types of industry. All taxes, direct or indirect, such as renegotiation, should be handled by the Bureau of Internal Revenue on a fixed set of standards.

In your hands rests the destiny of this Nation. You, by your recommendations, will determine whether or not private enterprise will exist or if industry will be forced to its knees and succumb to the theory that private

enterprise is a relic of the past and that industry is a part of the State.

Mr. Speaker, I submit that this communication shows a grasp of affairs that should serve as a pattern to their elders for clear thinking and understanding.

Then I want to call attention to an advertisement which recently appeared over the signature of the Nash-Kelvinator Corporation that I commend to the careful reading of every American—man, woman, and child. The advertisement reads:

I'M NOT PLAYING FOR MARBLES

This is it.

We're headed straight for the open doors of hell, and when we get inside they'll slam 'em shut and lock 'em.

Maybe I'll come out alive, and maybe I won't.

I'll take that chance. I'll take it because I know, now, what I'm playing for over here. And it isn't marbles.

I'm not fighting for the right to wait in line for my daily bread.

I'm not using a bayonet and a knife to carve myself a hole where I'll hide in fear for the rest of my days.

I'm not betting my life out here so anyone can tell me where and what and how to worship.

I'm not outguessing madmen with machine guns in their hands for the privilege of being told what to say and when to say it.

I'm fighting for freedom.

I'm fighting for the things that made America the greatest place in the world to live in; that are going to keep America the greatest place in this world to live in.

So don't anybody tell me I'll find America changed.

Don't anybody tell me there's no future any more in America.

Don't anybody tell me there's a ceiling on my opportunity to make a million or be President.

Don't anybody tell me there's a bridle and bit waiting for me with my name on it.

That's what took the humanity out of the men I'm up against now. And I don't want any part of it.

I want to come back to the same America I left behind me; where our way of living has always brought us new and better things, and always will; the America where there's clean, hard work to do; where there's freedom, and justice, and opportunity for all; where, if you can think and plan and act your own, there are no limits on how high you can rise, how far you can go.

That's what I'm fighting for.

That's America to me.

Keep it that way until I come back.

Mr. Speaker, I would say that fine statement breathes anew the spirit of 1776. We hear much about the so-called "four freedoms" which are serving as a sort of catch-all for scheming politicians who only think of themselves. Freedom of worship and freedom of speech, yes. But what about freedom from fear and want? Where would America be if such a fallacious philosophy had been in effect at the time of Columbus? He and his companions would have remained at home and America would never have been discovered. Freedom from fear would have welded the human family to the place of their origin. If I may borrow a phrase, "It is just so much 'globaloney' " and is on par with HENRY WALLACE'S promise to make a bottle of milk daily available to every member of the human race. Again borrowing a phrase, it is just plain "dazzle dust" put out for political purposes.

May the Almighty speed the day when the boys in uniform will return home and help restore America to the role contemplated by the founding fathers. Under their inspiring leadership America will move onward and upward to the more abundant life about which we have heard so much and seen so little the past decade.

Square Meals by the Cubic Inch

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MUNDT. Mr. Speaker, under permission of the House, I extend my remarks by including herewith an article written by me, which appears in the current—July—issue of the Country Gentleman, published by the Curtis Publishing Co. of Philadelphia.

I might add, Mr. Speaker, that since this article was written I have been gratified to receive considerable additional information from Government officials concerning actual shipping space which is being saved by the rapid conversion which is being made to the use of compressed foods in our overseas shipments.

The article follows:

SQUARE MEALS BY THE CUBIC INCH

(By KARL E. MUNDT, Member of Congress from South Dakota)

WE ARE NOW COMPRESSING DEHYDRATED MEAT, VEGETABLES, AND FRUIT INTO COMPACT LITTLE BLOCKS, SO ONE SHIP CAN CARRY OVERSEAS AS MUCH AS TWO OR THREE

"Get us large amounts of shipping space—fast—without using one more boat or one more shipyard and without taking any manpower or metal away from the munitions industries."

That's the substance of an order which went out early in 1943 from the office of the Lend-Lease Administrator, confronted with the task of moving food overseas to feed millions of people at the same time that other war demands were pressing on our shipping space. It seemed to call for the impossible. But the order is being carried out rapidly and on a growing scale by means of the revolutionary new development of food compression.

Strictly as a military measure, food compression is the fastest-moving new factor in our war food program. Coming at a critical time, it helps to meet both the challenge of the submarine and our difficult shipping situation. For the peacetime future, it promises economies in transportation, storage, and marketing, of benefit to both farmers and consumers.

Really a development of the current year insofar as practical usage is concerned, food compression is so new that what follows is being revealed for the first time to any considerable group of people outside of those who have actually been working with this advance in processing, packaging, and preserving foods.

Food compression is now making it possible for 1 ship to carry the foodstuffs formerly transported by 2 or 3, and for some products the work of 8 or 10 carrying fresh produce or canned goods. In saving untold tons of shipping space, it is releasing escort vessels from convoy duty with supply ships so that they can protect additional troop transports. Thus real flesh and blood dividends are being added to the savings in critical materials, ships, and money.

Most Americans are now familiar with dehydrated foods, our first big economy in food shipping. Food dehydration, by removing the water content, reduces the weight of foodstuffs from 60 to 90 percent. Even so, dehydration alone has failed to solve the shipping problem. In overseas shipping bulk is of as great importance as weight. What was needed was a food process that would eliminate excess bulk as dehydration had eliminated excess weight.

Out of this war necessity food compression was born. Compressed foods are obtained by the simple process of squeezing the air out of foodstuffs from which the moisture content has already been removed by dehydration. These foods are subjected to pressure, forcing them into compact blocks or squares of high density. They retain their original taste, their full vitamin and nourishment content, but nothing more.

By compression the bulk of most staple foods can be reduced an additional 30 to 90 percent over the reductions already secured by dehydration. Through these two processes we are able to get the most nourishment to the greatest number with the least burden of space and weight on transportation facilities. The use of these "pressure-packed" foods, as they are sometimes described, provides an additional economy.

Being tightly compressed and of a firm density, they require less packaging material than foods which have been dehydrated only or which are shipped in cans or as fresh produce. This saving in packaging material is no small dividend at a time when tin is so important. Barrels and cans with rounded edges are notorious space robbers. In contrast, these rectangular blocks of compressed foods reduce to a minimum the labor handling and the storage space required on shipboard, in warehouses, and in railroad cars and trucks.

As Col. Paul P. Logan, of the Army Quartermaster Corps, using a unit of compressed dehydrated apples as a case in point, told the Senate Military Affairs Committee late last December: "By compression, and without the loss of texture, flavor, or quality, you can save 86 percent of the space that you would have otherwise used."

One needs to see these compressed foods and to taste them, when reconstituted by the addition of water and air, to appreciate their economy and efficiency. There is the tightly packed block, not over half the size of an ordinary shoe box, which contains beef rations sufficient for a meal for a hundred hungry men. Cranberry sauce enough for 2 dozen men can be pressure-packed into a square smaller than a deck of playing cards. One thousand pounds of fresh cabbage occupies 22.9 cubic feet of space. Dehydration plus compression reduces it to 1 cubic foot of space and the weight to 54.5 pounds, with a resultant saving of 94.5 percent in weight and 95.7 in bulk. Other fruits and vegetables vary in savings according to the nature of the product. Apples, peaches, prunes, onions, potatoes, carrots, and many other foods, including such quick-dried powdered products as eggs, milk, flour, and soups, all lend themselves to compression-dehydration.

A small square of compressed coffee, half the size of a package of cigarettes, provides enough coffee for a breakfast for four people—an indication of how a means may be found of supplying Americans with their favorite breakfast drink if the war drags on and orthodox shipments from South America become more difficult.

Canned milk takes six times as many ships to transport as the same milk dried and compressed. That's why an enormous expansion in milk-drying is urgent, since a quart of milk compresses into a space two-thirds as large as a teacup and weights only 4¾ ounces. This is recognized as a war necessity, but less well known is the fact that liquid milk is now distributed in the United States at a shipping cost 40,000 percent higher than the cost of shipping that same milk dried. This makes our liquid-milk industry such an economic nightmare in its consumption of rubber tires, equipment, and manpower that a switch to dried milk may be compelled by necessity if the war continues long.

While our practical use of compressed foods has come with a rush, the idea is not new nor is the discovery entirely our own. As long ago as 1864, compressed foods were discussed as a wartime method of keeping our military commissaries well supplied in mobile warfare.

Off and on, down through the intervening years, the research experts of the Army Quartermaster Corps have made experiments and tests. Commercial food processors and such scientific institutions as the Massachusetts Institute of Technology have also been studying and developing methods of preparing and packaging these new-type foods. Among those most instrumental in clearing the way was a versatile genius in the packaging field, John C. Donnelly, now with the Auto-Ordnance Co., of Greenwich, Conn., who gave 5 years of intensive experiment to the task.

Pearl Harbor and our consequent difficulties of transporting war foods over all the seven seas gave the impetus to the development of these Victory foods that save transportation and manpower. Our enemies had anticipated the needs for light and compact foods, as they had other phases of fast-moving, modern mechanical warfare.

Something over a year ago an Army officer showed me a captured mess kit used by Japanese fighters in the south Pacific. It contained a small, compact square of powdered rice, some chlorine, and a tube about the size of a toothpaste tube filled with fish oil. The officer pointed out that it contained enough rations to supply a Japanese soldier for about 12 days. The chlorine was used to purify the water in which the rice was reconstituted. The fish oil was to give taste to it. This captured mess kit and the advantages it suggested excited my own interest in the development of processed foods adapted to the kind of war we are fighting.

Our shipping burdens were not all that had to be considered. Fast-moving tank columns and mobile artillery units demand a supporting food service as completely modernized as the fighters which it has the responsibility to feed. The supply difficulties over jungle trails, the expanding use of cargo planes—in fact, all the necessities of this war compelled us to develop light, compact food supplies with a high resistance to perishability.

On January 4 the War Department established a special school for training officers and sergeants in the art of preparing and cooking dehydrated foods. Today they are also using compressed foods in these training courses. Even civilians, without special training, find little difficulty in preparing these new-type foods, since it is primarily a process of crumbling the compressed products into a pan or kettle of hot water where, after a few minutes of mixing, they are ready to use.

A LEND-LEASE PROJECT

The first experiment in shipping compressed foods overseas was made February 22 of this year. It was a shipment of 3,000 pounds of compressed eggs by the Lend-Lease Administration to Great Britain, where they were given "field and kitchen trials" by the British Army and English housewives.

Edward R. Stettinius, Jr., Lend-Lease Administrator, took hold of this new development with the same grasp and efficiency that he has given to the operations of the whole complex lend-lease program. In mid-April he made available to the War Food Administration the necessary funds to speed the work of pressure-packing compressed foods from a variety of products.

The Department of Agriculture in April began preparation of test shipments of these compressed foods: Cheese, whole dry milk, skim dry milk, flour, meat, carrots, onions, and beets. It also began developing a program of concentrated-soup shipments, in which "tamping" the dried soups provides a partial compression. These soups are now going overseas in steadily expanding quantities, and additional economies in soup packaging are growing out of practical experience. On one soup order alone 1,500 tons of shipping space was recently saved. Shipments of roller-compressed flour were begun in April and are steadily increasing. It is hoped to save 150,000 tons of shipping space on flour alone when compression techniques are fully applied to both military and nonmilitary shipments.

PEACETIME PROSPECTS

A number of commercial concerns, with large-scale equipment, are in the make-ready stage for the handling of substantial orders of compressed foods, and developmental work is going forward in plants scattered throughout the country. Those adapting themselves to the food-compression business are a varied sort, including an auto-ordnance company, a coal-cubing concern, a tile company, a leading chemical company, a locomotive works and a pneumatic-scale corporation. Furthering the development is the work of the subsistence research laboratory of the Army Quartermaster Corps in Chicago.

New as food compression is, Government estimates now indicate that before the end of this year an equivalent of 125 10,000-ton Liberty ships will be saved through the use of compressed foods in ocean shipments and the saving of time in ship loading.

The gains will not be limited to the war. The economies in transportation, warehousing, packaging, labor in handling, and terminal deliveries plus the increased resistance to perishability have a peacetime possibility also.

Evidence already accumulated indicates that fresh produce, dehydrated and compressed near its source as it is harvested, can be delivered to the consumer with its full vitamin and nutritive content retained. The losses in nutrient values incurred by wilting, handling, and exposure will be avoided. One company is now experimenting with a portable machine for post-war use which would quickly dehydrate, compress, and package raw produce in the fields as it is harvested and which could be moved to follow the harvest.

This process would eliminate the costly procedure of shipping to market the inedible portions of food products.

Bumper crop years would no longer result in glutting the market with fresh produce. Compressed-dehydrated foods can be preserved without refrigeration, their original freshness can be sealed in by quick drying and pressure packing and an ever normal pantry can be developed.

Moreover, as we take to the air with giant cargo planes after the war, these new-type foods will be strikingly in tune with the times. By reducing weight and bulk, food shipments can be packed into planes in quantities rivaling those carried in freight cars and merchant ships by old methods.

Progress, once begun, can never be chained down by tradition or anchored by history. These Victory foods of 1943 may well crown their war achievement by providing a way for a better-fed world in peacetime. They will bring us one step nearer, at least, to removing that tragic anomaly of the past—food going to waste in one place while hunger exists elsewhere.

COUNTRY GENTLEMAN TESTS COMPRESSED FOODS

It's hard to say whether staff members were more surprised or pleased at the luncheon prepared in the Country Gentleman kitchen from materials that a few minutes before looked like a pile of child's building blocks. While this transformation is uncanny enough in itself, the fact that there was real flavor and all the savory aroma of home cooking was even more amazing. The compressed foods also retained their individuality of texture to a surprising extent. Cream of tomato and soya soup, beef, mashed potatoes, buttered beets, and cranberries were among the foods on the menu. None of the foods was disappointing. The cranberries made the biggest hit, comparing favorably with freshly cooked berries.

Answering Attacks on Rural Electrification Administration Co-ops

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RANKIN. Mr. Speaker, Members of Congress have been flooded with an article from the Public Utilities Fortnightly magazine written by Mr. Judson King which, if taken seriously would do more harm to the cause of rural electrification than anything else I have seen for many a day.

As every Member knows, I have led the fight in Congress for rural electrification for the last 10 years, and I know that many of the statements and implications in this article are not in accord with the facts.

For years I advocated the formation of a national association of the rural electric power customers, as well as the light and power users generally. This association was organized a little over a year ago and I am informed that 643,648 farmers are members through these cooperatives.

This National Rural Electric Cooperative Association has already contributed greatly to the cause of rural electrification. It is a live, active organization that is on the job at all times, striving to promote the cause of rural electrification.

Mr. King attacks Hon. Clyde T. Ellis, the executive manager of the National Rural Electric Cooperative Association, in his article. I knew Clyde Ellis, and knew of the fights he was making for rural electrification and public power in Arkansas, long before he came to Congress. Clyde Ellis is one of the best friends rural electrification has ever had in or out of Congress. He worked hand in hand with me and Senator George W. Norris all the time he was here and made a great contribution to the cause of public power and R. E. A. He is the

ideal man to occupy his present important position, and to promote the cause of rural electrification now and in the post-war period.

Mr. King's attack on Mr. Ellis appeared in the July 8 issue of the Public Utilities Fortnightly magazine. But 2 days before that, on July 6, Senator SHIPSTEAD inserted it in full in the CONGRESSIONAL RECORD. On July 1 Senator SHIPSTEAD introduced a resolution to inquire into the administration of the Rural Electrification Act, which contained statements similar to the ones appearing in this article. One would naturally conclude that Senator SHIPSTEAD's information came from the same source. The Senate did not pass the Shipstead resolution, but I understand the Senate Agricultural Committee, to which it was referred, is going to look into the matter.

Now that it has gone this far, I hope that committee does look into it, for when it does I am confident every member will congratulate the national association and the courageous members of these cooperatives who give expression to their independent thinking through their organization.

I am advised that Mr. King also flooded the cooperative with his article.

It has been charged that Mr. King was on the R. E. A. pay roll at around $6,000 a year as a consultant and that his attacks on Mr. R. B. Craig, former Assistant Administrator of R. E. A., grew out of a demand by Mr. Craig for a reduction of his per diem pay and for his removal from the pay roll of R. E. A.

Mr. King's attacks on Bob Craig are wholly unjustifiable. Rural electrification never had a better friend and R. E. A. never had a finer and more efficient servant than R. B. Craig. It was a great loss to the R. E. A. when Mr. Craig resigned; and I resent these false and unjust attacks on him.

Mr. King attacks these cooperatives for proposing to carry their own insurance. Whatever the merits or demerits of the cooperatives' insurance program may be, certain enemies are using it as a smoke screen in an effort to destroy this splendid national association. In my judgment, if the cooperatives want to save themselves millions of dollars in their exorbitant insurance costs, that is their business, and it is not the business of outsiders to tell them they cannot do it.

The money to pay these premiums is not coming out of the Federal Government. The cooperatives are paying it themselves, and their customers are getting the benefits of whatever savings this service may bring.

In conclusion, I want to say that I know the men on the Board, and the ones in the employ of the National Rural Electric Cooperative Association. I know that the Board members have unselfishly devoted long days and sleepless nights to this great work. I know that this attack on them and their able manager is a part of the organized campaign, led by selfish interests and certain individuals who want to keep themselves on the pay roll.

In my recent fights for rural electrification in the House, I have had the active and effective support of Clyde Ellis and his entire organization. They were extremely helpful in my fight to hold the $20,000,000 provided in the recent bill and in my efforts to raise it to $30,000,000; while these critics were either silent or opposed to the proposition altogether.

I hope the Senate committee will not be misled into joining in these tirades against Mr. Ellis and his organization, which is doing so much to help in our efforts to electrify every farm home in America at rates the farmers can afford to pay.

Negroes Threaten March on Washington

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RANKIN. Mr. Speaker, there is a communistic movement, called the March on Washington Movement, headed by a Negro by the name of A. Philip Randolph, that is stirring up race trouble all over the country.

To my surprise, a whole page advertisement by this March on Washington Movement appeared in yesterday evening's Washington Star.

I was shocked some time ago when the Star published a full-page advertisement for the Communist Party, which, in my opinion, was subversive, and dangerous to the welfare of this country.

Now, this Negro, Randolph, is circulating a pamphlet concerning this March on Washington Movement that is dangerously inflammatory. He was taken to task by President Tobin of the International Teamsters' Union, at their last annual convention in Toronto, Canada. It was shown there by material which I am submitting for the RECORD that he was spreading this dangerous propaganda and doing the Negroes of this country irreparable harm.

Here is a report of what happened in regard to this matter at this Toronto meeting, as published in the Teamsters' Union report of that convention:

NEGRO LEADER STIRS RACE HATE—RANDOLPH CIRCULATES AXIS PROPAGANDA

(By Lester M. Hunt)

When the Japs moved on Burma they got a lot of help from the inside. They got it from Burmese who believed they had been discriminated against by the English.

The Burmese fell—like the suckers they were—for the Jap propaganda against the white race which conveniently ignored the fact that Japan's greatest allies in brutality are the white-skinned Germans.

But the Burmese didn't stop to think about that. When they listened to the Jap propagandists they weren't even as smart as Little Red Riding Hood who exclaimed to the disguised wolf, "What big teeth you have, Grandma."

The Burmese didn't even notice the big teeth of the Jap wolves. All they noticed was the soft, seductive hiss that came through those teeth.

They convinced themselves that they were being mistreated by the white race, which denied them equality. They let the Japs convince them that they would be treated better by their Asiatic brothers when all the white throats had been cut.

THEY GOT JAP EQUALITY

So thousands of them threw in with the Japs and threw off their yoke of fancied persecution and discrimination.

The Japs conquered Burma and the brown-skinned Burmese welcomed them as brothers and rejoiced in their reunion.

What has happened since?

The Burmese want the British back. They want anybody who will throw out the Japs. They have had a sample of Jap equality.

They have seen their relatives hung from trees for infractions of Jap military rules. They have seen the fiendish tortures of the Japs carried on in public to strike terror to the hearts of the Burmese.

Some Burmese who resented the fact that the British didn't sit down to eat with them have found that the Japs don't either. In fact, the Japs won't even let them eat.

They have commandeered the food and when a hungry native is caught stealing any, his hands are cut off and he is proudly exhibited in his agony as a warning to his friends and relatives.

All of this is by way of comment on a recent pamphlet which came through the mails addressed to labor publications.

SOWS SEED OF INSURRECTION

The pamphlet is published by the March on Washington Movement, a Negro propaganda organization. The national director of that organization is A. Philip Randolph, who, as head of the sleeping-car porters, poses as a union leader, but whose remarks about other unions are more unreasonable and vitriolic than any which ever came from the National Association of Manufacturers.

The pamphlet issued by Randolph carries the shocking threat that American Negroes may be lured by the same propaganda the Japs used on the Burmese.

It sows the seed of insurrection by inflaming the black race against the white. It diverts their attention from the foreign foes of America to magnified grievances at home and arouses distrust of the Army now fighting on a dozen fronts so that all men can be free from the threat of slavery.

It deliberately plants the fear in Negro soldiers that they will return to race riots after the war.

And will the Negro soldiers see it? Leave that to Randolph. He plans to circulate one million copies of his hymn of hate which concludes with the following plea to passion:

"After this war we will be lucky if the Army's racial policies inflict nothing worse on us than race riots. A new and sinister kind of political doctrine has arisen since the last war which feeds on racial antagonisms. * * *

"Unless the present policies of the armed forces are greatly liberalized, the veterans of our Jim Crow Army and Navy will make the best possible post-war breeding ground of a new native fascism."

NOT TRAITORS—YET

"Nor is the danger confined by any means to the white veterans. The 'Pacific Movement of the Eastern World' was launched by Japanese agents with the slogan:

" 'The Japanese are brothers of the Negroes and the Negro race will be better off under Japanese rule than under white rule.'

"This kind of propaganda has attracted little support among Negroes—yet.

"But already many sincere and intelligent American Negroes are thinking in the terms expressed in a dialogue recently reported between a Negro teacher and student:

"Student: I hope Hitler wins this war.

"Teacher: How can you make such a statement?

"Student: Because I am convinced that it is the only thing that will teach these white people some sense—their knowing what it means to be oppressed.

"Teacher: But don't you realize that conditions would be even worse under Hitler?

"Student: They can't possibly be any worse than they are for Negroes in the South right now. The Army Jim Crows us. The Navy lets us serve only as messmen. The Red Cross segregates our blood. Employers and labor unions shut us out. Lynchings continue. We are disfranchised, Jim Crowed, spat upon. What more could Hitler do than that?

"When this dialog was reported to a Negro audience recently it was greeted with cheers. On the basis of Jim Crows in uniform to date, it is not hard to understand those cheers."

Such statements are obviously intended to fan the fire of racial antagonism. If the pamphlet succeeds it will be another great propaganda victory for Goebbels. Goebbels will gleefully view it as proof of his theory that the German race is superior to all others and that Negroes are as stupid as the Germans have proclaimed them to be.

Certainly the pamphlet just issued cannot be considered by anyone, no matter how friendly to the Negro race, as any evidence of ordinary common sense.

It is difficult to understand the mental processes of a man who decries against racial discrimination and then does his utmost to stir it up.

It looks like he wanted to create racial prejudice in order to prove he was right when he charged it existed. Maybe it does exist to various degrees in various sections of the country.

But the kind of propaganda the self-appointed Negro saviors are now circulating can do nothing but intensify it where it exists and arouse it where it does not exist.

Consider this, for instance: The pamphlet supports the action of a Negro draftee who refused to serve in any black military unit, probably considering himself superior to his race.

Whatever his motives, this man defied the Government of the United States in war and refused the call to service.

That's good stuff, according to Randolph.

He says the defiant Negro is asserting his rights in refusing to submit to prejudicial treatment.

But is any white man permitted to say where he will serve and where he will not serve? Is he permitted to defy the Government if he does not receive special consideration?

He is not.

Yet Randolph claims this privilege for Negroes. He demands special privileges which are denied to white men. That isn't racial equality or any other kind of equality.

That's what Randolph asks the labor press of America to support. Labor is not sympathetic to such appeals. Almost 2,000,000 members of labor are in the armed services.

They went where they were assigned and did what they were told to do. They did not ask or receive any preferential consideration. They did not refuse to serve with their own people.

The pamphlet cynically quotes another Negro who refused to fight because, he said, "this is a white man's war and it's no damn good."

It is our opinion that the purpose of quoting this Negro is to give others the same idea, and it suggests they can defy the Government without penalty because "you can't send 13,000,000 people to jail."

When Randolph says this is a "white man's war" he must be color-blind. Our allies are the yellow-skinned Chinese, the brown-skinned Filipinos and the black-skinned people of every locality that has come in contact with the Japs.

Our military success in the south Pacific islands has been greatly aided by the cooperation of the black residents of those islands.

Every black tribe that has met the Japs and the Americans is the loyal ally of the Americans.

Let Randolph bear that in mind when he tries to arouse the Negroes of America against their Government in its struggle for survival against the yellow barbarians of Asia and the white barbarians of Europe.

And let Randolph remember the warning given him by President Tobin at the American Federation of Labor convention in Toronto last fall.

At that time President Tobin spoke bluntly to answer a speech by Randolph which was so full of falsehoods, threats, and racial incitement that it could not be permitted to pass unchallenged.

President Tobin told him his actions were undermining the future progress of the Negro race. He said his remarks were an abuse of the rights of free speech.

"Sooner or later this kind of stuff will have to be stopped," Tobin warned.

It would stop very quickly if the Negro people could see what is going on in Burma under the Japs and how the Japs treated every black tribe they conquered.

And they should not forget that it was Hitler who said that Negroes were half apes. It is Hitler's policy to exterminate inferior people, and according to his theory Negroes are not even people.

If Hitler wins, they will be treated like the beasts he says they are.

Why doesn't Randolph tell them that?

Maybe, like Goebbels, he thinks they are not so smart.

Our own opinion is that they are a lot smarter than Randolph.

Note the alleged conversation between the Negro student and his teacher. Can you think of any more dangerous propaganda that could be spread among the American Negroes at this time?

You will note he goes on to quote that alleged conversation between the Negro student and his teacher, in which the student says:

I hope Hitler wins this war.

The teacher said:

How can you make such a statement?

The student said:

Because I am convinced that it is the only thing that will teach these white people some sense. They will know what it means to be oppressed.

Remember that millions of copies of that subversive publication were circulated among the Negroes.

Mr. Speaker, they have had a race riot in Detroit, Mich. They have had one in Beaumont, Tex., and today they are threatening a march on Washington that would probably result in a race riot that might have a disastrous effect on our war efforts, to say nothing of its tragic results to the people of Washington and to the administration.

The inflammatory advertisement that appeared in yesterday's Washington Star is camouflaged with a few catch-phrase quotations.

It reads in part:

I. Demand a democratic army. We call upon the President to enforce section 4A of the 1940 Draft Act which reads: "In the selection and training of men under this act, and in the interpretation and execution of the provisions of this act, there shall be no discrimination against any person on account of race or color."

II. We demand equal access to employment opportunities. This means a fair employment practice committee which has power to enforce decisions based on its findings; and no discrimination in training opportunities, placement, wages, promotions, and membership in trade-unions.

III. We demand an end to disfranchisement in the South. The enactment of a Federal anti-poll-tax law, abolition of the white primaries and other registration device that limits a free suffrage, and enforcement of the fourteenth and fifteenth amendments to the Constitution will guarantee the right to vote to all men.

IV. We demand equal access to educational opportunities. This means equal facilities for the Negro child, equal pay for the Negro teachers, and for the Negro student equal access to public, tax-supported institutions of learning.

V. We demand that the story of the Negroes contribution to America and to the world be told. The newspapers, radio, and screen can thus end the caricature and slander of Negroes.

VI. We demand Negro and minority group representation on all administrative agencies so that these groups may be able to determine policies for all of the people.

VII. We demand an end to residential ghettos and restrictive covenants.

VIII. We demand abrogation of every law which makes a distinction in treatment between citizens based on religion, creed, color, or national origin.

IX. We demand the strict enforcement of the Constitution—especially of that clause which guarantees: "No person shall be deprived of life, liberty, or property without due process of law."

Therefore, in the name of democracy, in the name of the common interests of humanity, in the name of a real victory and a real peace, we call upon our fellow Americans to join with us in this struggle for human dignity and equal justice for all. Moreover, the colored peoples of the world—in Asia, Africa, and Latin America—will test the sincerity of our declaration about world democracy by what happens to the Negro right here in the United States. Let us band together and make democracy a living truth.

I contribute $_____ to the publication of Negroes Are Americans, Too, throughout the United States.

Name _____

Address _____

(NOTE.—The above statement was drawn up on the initiative of the March On Washington Movement and was formally unveiled as a scroll at an interfaith, interdenominational, inter-racial prayer service, Soldiers' Memorial Field, Chicago, Ill., July 4, 1943, in connection with the We Are Americans, Too, Conference,

called by the March On Washington Movement.)

This Negro, Randolph, is at present the head of the Pullman Car Porters Union, and his activities are doing more to create friction between the Pullman car porters and the traveling public, and to destroy that organization and drive the Negroes from these jobs, than anything else that has ever happened. Already white women are becoming afraid to travel in Pullman cars; and if this agitation continues, the Pullman car patronage will suffer, unless they switch to white help—which will likely happen.

In the meantime, this agitation is resulting in riots and bloodshed, to the great detriment of the honest, hard-working Negroes, who invariably become the victims of such disturbances.

The Negroes have never won a race riot in this country, and the chances are they never will.

The farther north these riots occur the more disastrous they seem to be. Look at what happened in Detroit, Mich., recently, when large numbers of Negroes were killed, larger numbers injured, and hundreds of business establishments wrecked.

Yet, in the face of that, and other similar experiences, these self-appointed spokesmen for the Negroes of the country come spreading this inflammatory propaganda here in the Nation's Capital, and the Star carries it in a full-page advertisement.

In the name of God, do they want to start another race riot here in Washington, to soak the sidewalks of the Nation's Capital in human blood while we are engaged in the greatest war of all times?

These agitators are not the friends of the Negroes, and these white radicals that are agitating these communistic movements among them are the worst enemies the Negroes ever had.

And the Washington Star is not doing them any good by carrying these inflammatory advertisements.

One Answer

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Daily Times, Mamaroneck, N. Y., entitled "One Answer":

ONE ANSWER

The question is being asked throughout the Nation, with growing frequency, why the Federal Government requires in many a State twice, and sometimes thrice, the number of employees which the State itself needs. Figures show, in fact, that the Federal bureaucracy now has more employees—and we exclude the armed services for fairness—than do all the States, counties, towns, and villages for their far more intimate and, in many cases, far more vital services to the public.

Well, we know one answer, and we fear it is the real answer: There is no longer a work-relief army upon whom the New Deal may lean—as the Work Projects Administration upon its shovel—for perpetuation in office next year. Others must take over that political role. And if you think those hired by the New Deal are going to vote themselves out of jobs next year by voting against the New Deal, then you just don't understand human nature.

It is significant, too, that these New Deal employees have been placed, by the hundreds of thousands, in pivotal States where their marginal power may swing the 1944 electoral college votes. It was in these States that Work Projects Administration votes made themselves felt in 1940.

This is one answer to the question. And please credit us with not having said anywhere along the line that we believe the election can be bought. All we are saying is that the New Deal isn't above trying.

"Free" Driving Once a Week

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Daily Times, Mamaroneck, N. Y., entitled "'Free' Driving Once a Week."

I sincerely hope that now that the Office of Price Administration has altered its regulations to the extent that one may drive to and from a vacation point, provided he has sufficient gasoline therefor, that the Administration may now give consideration to allowing those who must remain at home to have an equal opportunity for necessary driving for rest and relaxation.

The editorial follows:

"FREE" DRIVING ONCE A WEEK?

There is throughout Westchester, as well as the whole heavily rationed eastern seaboard, full agreement with the necessity for strict regulations governing motoring. We know that gasoline is needed for our armed forces abroad, although we never have fully understood why the East must bear the brunt alone.

In this understanding the following suggestion is respectfully advanced to Secretary Ickes, Fuel Coordinator, and Mr. Brown, Office of Price Administration Director:

Why not, to relieve the ever-growing burden on the railways, to maintain home morale, and to give a reasonable leeway to those seeking summertime rest, permit motorists in the East to drive 1 day each week this summer without fear of disciplinary action?

Why not let motorists drive on Wednesday, let us say, without being considered culprits and without being forced to explain to inspectors the purpose and destination of the trip?

This would relieve the railways of a large part of the coming vacation load; it would not add to week-end congestion of traffic on any transportation facility, but would, instead, lessen that strain; it would give overworked, tired mothers and fretful children at least 1 day at nearby beaches; it would, we firmly believe, make for greater cooperation of the public with the Government's restrictions on other days of the week.

There would, presumably, be unfair advantage taken of this exemption by some persons; but, on the other hand, the benefit to millions who honestly follow their Government's request would be tremendous. There certainly would be better feeling all around, a greater inclination to save precious gasoline on other days of the week, and an opportunity for the Office of Price Administration to bear down harder, with public support, on violators who are not cooperative.

The mechanics would be simple: The No. 5 coupons of A drivers, which are now due to expire on July 22, could be advanced to expire on June 22, with the No. 6 coupons scheduled to give A card holders a normal 3 gallons weekly, the extra gallon and a half for "free" Wednesday driving. There need be no changes for B and C drivers.

This, it seems to us, is not much to ask of our Government, particularly in view of the fact that the West, instead of being limited to 1½ gallons weekly, still has its 4 gallons. And this exemption, this 1-day-a-week lifting of the ban on pleasure driving, could be limited to the period between July 4 and Labor Day, when nearly all of us really need recreation.

If this means 1 minute's danger to any airman or soldier or sailor at the fighting front, Mr. Ickes and Mr. Brown, why, just forget it. If, on the other hand, it has merit, what about it?

The Smith-Connally Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LUDLOW. Mr. Speaker, I submit for printing in the CONGRESSIONAL RECORD a letter which I have written to an esteemed constituent of mine stating the main reasons why I voted against the Smith-Connally bill and to uphold the President's veto of that measure. The letter is as follows:

JULY 10, 1943.

Mr. DWIGHT SHERBURNE,
The A. Burdsal Co.,
Indianapolis, Ind.

DEAR MR. SHERBURNE: I am glad you wrote to me in regard to my vote against the so-called Smith-Connally bill and my vote to sustain the President's veto of that measure.

You certainly are entitled to know what was in my mind when I cast those votes.

Without going into lengthy details, I will state some of my reasons.

In the first place, in all of these important matters connected with the prosecution of the war, I have felt it a duty to give much weight to the wishes of those on whom rests the responsibility of running the war. We are in a desperate conflict, that may last for years, and that certainly will test all of our resources. In such a situation, we must have leadership and unity behind that leadership. All of those responsible for running the war, the Commander-in-Chief, the Secretary of War, the Secretary of Navy, the Under Secretary of War, the Under Secretary of Navy, the Chief of the War Production Board, that

has to produce the materials of war, all asked that this bill be not passed, fearing it would create inharmony and slow up the war effort. We may not like our leaders, but as long as they are our leaders in the midst of a desperate war, I feel that we should go along with them unless there are the most imperative reasons to the contrary.

Then, too, I do not believe in hurting innocent people. My philosophy is to help, and not to hurt, those who are innocent and worthy. It so happens that I was in a position to have an inside view of this entire situation. I am a member of the small subcommittee of twelve on deficiency appropriations, which drafts the large appropriation measures necessary to carry on the war. Recently we had before us Donald Nelson, the Chairman of the War Production Board, and he gave us, mostly off the record, the war production picture. It was an amazing picture, far exceeding all expectation. The production has been truly marvelous. No boy on any of the fighting fronts has suffered for the implements he needs. On the contrary, implements in great abundance are piled up in warehouses and at terminal points, awaiting transportation facilities.

Mr. Nelson was unstinting in his praise of the part labor has performed in producing the implements of war needed to win the victory. In the light of his glowing testimony it seemed to me there was something cruelly unjust in slapping all organized labor—for that is what the Smith-Connally bill did—when organized labor as a whole has done such a wonderful job. It did not seem to me to be right that all well-meaning, faithful, honest, patriotic labor should be punished for the sins of one man, John L. Lewis.

I share the general indignation over the conduct of Lewis. I would vote to put him in jail, if my vote were needed to do that, but I think how much better it would have been and how much more conducive to the harmony and cooperation that is vitally necessary to win the war, if labor as a whole could have been praised for the part Chairmar Nelson says it has done in behalf of the Nation, instead of having this blot and damper put on it by legislative action. The bill that was passed was a punitive anti-labor measure, too sweeping in scope, and it was passed because the pendulum of public sentiment, put in motion by John L. Lewis' misconduct, swung too far. I fear that in the long run the leaders who are responsible for running the war were right in their apprehension that the new law will have a depressing, disuniting, demoralizing effect on the war effort. Production is now falling off; for what reasons I do not know, but I doubt whether the men have the heart in it that they had when they were making such a magnificent record of production.

There were other impelling reasons why I opposed the bill. I did not like its southern sponsorship. Members of Congress from the low-wage section of the South are making every effort to break down the industrial system of the North and to repeal the wage-and-hour law. They want to return to cheap wages and thus give the South industrial supremacy. I have too much regard for the fine industries of Indianapolis and Indiana and the North, and for the welfare of both our northern employers and our northern wage earners to want to play into their hands.

I might cite just one other objection to the measure which alone, in my opinion, would have justified a vote against it. That is the extent to which it goes toward the centralization of government. I am one of those who think that the Government is already mixing too much in business. I voted against the National Industrial Recovery Administration Act and many other measures which I thought tended to augment bureaucratic authority over business and industry. I think we ought to be recapturing the powers Congress has surrendered instead of augmenting those powers. When this war is over I want this country to be the same country of free enterprise it always has been and which, please God, may it always be.

Yet no totalitarian ruler of Europe or Asia has more power over industry than this bill confers on the President of the United States. He can take over plants at will and hold them; his executive instrumentality, the War Labor Board, will write labor contracts all over the United States, and, worse still, the legislation denies any appeal to the courts. I do not want Franklin D. Roosevelt or any other President of the United States to have any such power. I will not, as long as I am a Member of the House, vote totalitarianism into the laws of the United States. It is altogether too dangerous.

The looseness with which the bill was put together in its checkered career of amendments and floor controversies, and what not, is shown by the fact that while it purports to prevent strikes it sets up a way whereby strikes may be conducted and thus legalizes strikes.

I would like for you to believe that as the representative of our people and one of the representatives of the Nation as a whole I take my job seriously. I study all angles of these important matters and try to think them out with what God has given me to think with, and I vote the verdict of my judgment and conscience. No doubt I make plenty of mistakes, but they are honest mistakes, and while you may not agree with me in specific instances, I believe you would want your Representative to go into these matters independently with an open mind and try to reach a fair and just conclusion.

Thanking you very much for your letter of inquiry,

Sincerely yours,

LOUIS LUDLOW.

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HARRIS of Arkansas. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech of Matt Rathert, of Camden, Ark., to the Rotary Club of that city on June 18, 1943, on the post-war world:

At the recent International Rotary Convention in St. Louis, I was impressed by the amount of time consumed and the large number of talks made on the economic phases of planning for the post-war world. Of course, the first objective with AAA-1 priority is winning the war. For that, we must work with all our strength and make whatever sacrifice necessary. But there are many of us here at home who can take time off from our duties as armchair generals (for which we have had a great deal of experience as Monday morning quarterbacks) to talk about something that will reveal no military secrets, namely, Winning the Peace. And I'm sure this will be very important to the next generation.

It took a year and a half for us to prepare for war and it will take even longer than that, before we are really prepared for peace—a peace that will mean a better America—better for you, and for the boys coming home, and for our children. Better for the common man and for his family.

When the trumpets of peace are heard around the world, what can be expected? Is there anything we can be sure of? As Paul said to the Corinthians, "The fashion of this world passeth away; the only thing we can be sure of is—change." So let's do our part to see that these changes are for a better America.

We are fighting for the "four freedoms"—and as you know, one of these is freedom from want. That means economic freedom. The right to work and save, the right to have something to save. The good old individual freedom of the common man for the American way of life. I read in the Arkansas Gazette the other day where the Arkansas razorback was the last remaining example of the rugged individualist. No heavy hand of bureaucracy has descended upon him with restraining force. So may it be with all men when the bluebirds sing again over the white cliffs of Dover.

Freedom from want—economic freedom in the post-war world—that's what we want for all.

But just what do we mean by "economic"? They say an economist is a person who knows just exactly what to do with the other fellow's money. But, I might add, has none himself. Economics, however, is a science—a study of how men produce the things they need, divide them between themselves, exchange them, and use them. It is a practical social science studying this freedom from want.

They say there are only 17 men in the world who understand money. I'm not one of them, and I don't even know one of them; and money is only one small chapter of economics.

There are a few points, however, that I have picked up that apply to this problem of post-war planning—one of them is, We don't have to lower wages in the United States in order to raise wages in any other part of the world. Now I'm not one of those who believe we ought to put a free bottle of milk on the doorstep of everyone in South America, or China, but I do believe in helping them to help themselves. It is self-evident that America must assume world leadership after this war, if there is to be any world leadership, but when I hear a speaker say that the workers of America will have to lower their standard of living in order to raise the standard of living of workers in some other part of the globe, it makes me mad.

As a student of economics and also through practical knowledge gained in the manufacturing field, I have learned long ago that this is not true. To see this very easily, let's take two counties, one with a higher standard of living than the other; when the county with the higher standard of living attempts to raise the other's standard of living, they are not going to do so by gifts or gratuities; they will do it by trying to educate the other people to better methods of agriculture, better methods of industry, and if and when the standard of living is raised in the lower standard county, that county will give the higher standard one more business, will keep its manufacturers busier, and do more trading with it, giving it more cash with which to raise its own standard of living. And each will help the other, thus increasing the standard of living in both.

To carry this further, if we could educate and help other countries to manufacture some certain items cheaper than we are making them here in the United States, it would allow all the purchasers of these items in this country to buy them at a saving, leaving more money to spend for something else, and would only injure the manufacturers of those certain items, who should turn to manufacturing something in which they have a decided advantage over the other country. In this way a general world-wide prosperity

would be developed and it would not be necessary for any country to take a backward step or lower its standard of living. This would go a long way toward preventing future wars.

Another thing I have learned is that we can have higher wages in all industries here in the United States than in any other country on the globe and still carry on a lively trade with all other countries without the aid, or hindrance, of protective tariffs. Yes; believe it or not, that is true. And that leads me to believe that we have arrived in that stage in our national economic life where comparatively free trade would be an advantage to the general welfare of this country.

Every economist talks about depressions and business cycles—why we have them, what causes them—some give one reason, some another, like Mark Twain said of the weather, "Everybody talks about the weather, but nobody ever does anything about it." Well, that's the way with depressions. It is plain that depressions occur because there is no over-all economic plan; no self-regulation on a world-wide scale to keep business running at the right speed. Even the largest and strongest steam engine down at our factory must have a little governor on it to keep it from "running away."

There was discussed in the World Food Conference which has just closed, at Hot Springs, Va., the position of an international economic authority high in the organization chart of the post-war world.

Now, freedom in government, that is government of the people, by the people, and for the people, is called a democracy. But when you take freedom away from one phase of our life, namely our economic life, we simply don't have a democracy, we have a totalitarian state.

That's simple, isn't it? Yet, many of our biggest politicians don't want to see it. They want a so-called democracy without economic freedom. If the Government tries to regulate our economic life, we will first have bureaucracy, which will tend to perpetuate itself as a ruling class. Many economists, such as James Burnham in his book The Managerial Revolution, predict that a ruling class of this type will actually develop and take over the Government after the war. Let us hope not.

Let's keep democracy working.

Did you know there are in existence right now 57 different large Government agencies? If you want to know what they are, I have a list of them right here, all 57 of them, commonly called The No Man's Land of Federal Finance. And, this does not include any Government-owned or operated war plants.

By the time peace returns the United States Government will in addition have become the world's greatest industrialist, owning factory facilities that will represent an expenditure of between ten billions and fifteen billions dollars.

Three billions of this will be in aircraft plants, two billions in shipyards, three and a half billions in facilities for making steel, rubber, aluminum, magnesium, and other key raw materials.

The National Industrial Conference Board reports that the Government will own 96 percent of new shipbuilding capacity, 93 percent of new airplane, 71 percent of new iron and steel, 64 percent of new machinery and electrical equipment, 56 percent of new machine tool, and 41 percent of new petroleum and coal products facilities.

Where will this lead?

There are over 240 agencies in the United States studying post-war planning. Many of them are Government agencies. An example of one of these Government agencies is the National Resources Planning Board, headed by President Roosevelt's uncle, Frederick A. Delano.

My idea is that industry and agriculture should do their own planning. That looks more democratic to me. Let industry call in its economists, professors, labor leaders, and scientists to help plan. The only thing the Government should do is to be sure that they do plan. Let agriculture call in its specialists, its economists, and its dirt farmers, and let them plan—plan out their own Agricultural Adjustment Administration. That's democracy at work. Let's make the Government give them a chance.

The Committee for Economic Development is a private, nonprofit organization, completely independent politically, headed by Paul Hoffman, president of the Studebaker Corporation of South Bend. They get right down to the grass roots, and the first thing they propose to do is to find a job for every soldier, sailor, and marine, and to have it ready and waiting for him before he returns, and take care of those thrown out of war plants, too, with a few jobs to spare. In fact, they don't want to let even one of these returning veterans work for the Government; and they want to take quite a few of the millions of men who are now working for the Government away from their present jobs, too. They figure they will need 58,000,000 jobs lined up, ready to go, and that's quite a mouthful. If we would see, when the war is over, ex-soldiers standing on the street corners selling apples, and people starving in one part of the country while food rots in another, it would mean the end of letting industry and agriculture try to do their own planning. The Committee for Economic Development has already made their first survey in Peoria, and they came up with a very cheerful outlook. They made a canvass, selling each industry there, large and small, on the idea of planning now to employ enough men when the war is over to take care of Peoria's share. And they discovered Peoria could do it. Their field activities division is now spreading the work to other communities.

The Committee for Economic Development also has a research division which is concerned with the creation of a favorable environment or climate, as they call it, in the post-war period. They believe in the revision of tax laws to restore incentives for business enterprise—for those who take risks to create jobs; a restoration of fair competition to the fullest possible extent; and a solution for the special problems of the small businessmen; they want complete, nonpartisan recognition that those who persist in thinking as isolationists are headed down a blind alley—recognition of the fact that true economic development depends primarily on the exchange of interests and commerce not only of individuals but also of nations.

They have other aims and beliefs, and these are all listed in an article entitled "Industry's Plan for Post-War Prosperity" in the June issue of Reader's Digest, page 79. I urge that you read it.

Here is the committee's philosophy (which contains plenty of good economic horse sense):

"Our program originates in and is limited by certain articles of faith. We believe that the common good is prior to and higher than the good of any individual, and of every private interest. We believe in the American system of free enterprise. By that we do not mean that the Government should let business alone, nor that economic opportunity should take precedence over political liberty, nor that the good old days of the twenties should return:

"By free enterprise we mean freedom of opportunity, opportunity to work, to live decently, to educate children in the arts of citizenship and human happiness and in the skills of a trade or profession, to provide against sickness and old age. We stress opportunity, not contrasted with security but identified with security. We believe in socially responsible risk-taking for the common good, with the hope of private profit as an incentive."

Rotary International, through Walter Head, chairman of the committee on post-war participation, has prepared sample programs for discussion on economic and social subjects and invites us to go to it on these programs. They are as follows:

Retail trade: To indicate the direction that small business is taking as a result of, and in relation to, our total war effort, and to point out the types of new opportunities for small tradesmen.

Education—Change and permanence: To help the average Rotarian familiarize himself with some of the changes which have taken place in the last generation in the field of American education; and to stimulate him to think about further changes which may be desirable in the post-war period.

The free enterprise system and planned economy: To stimulate Rotarians to think about the profound changes that their society has been experiencing as a result of its impact with a fully controlled and planned national economy.

Interdependence of agriculture, manufacturing, and labor: To help the average Rotarian realize that agriculture, manufacturing, and labor do not constitute separate interests, but are mutually dependent upon each other for their very existence.

And, changes in human living: To increase the average citizen's awareness of the post-war changes in everyday living which will come as industry and business increasingly apply scientific discoveries—many of them war developments—to the filling of human needs.

These programs are suggested to create interest in the economic and social aspects of the post-war world.

In conclusion, I am going to attempt to show that I have really been talking on my subject all this time.

To summarize: We can say that, in order to secure a just and lasting peace, one that means a better America, better for the common man, we must have freedom from want; economic freedom in the post-war world. A true democracy means economic democracy. We must help others to help themselves through education in practical economics, and its application, thus raising their standard of living and, at the same time, our own; an international economic authority is probably necessary to do this and this may prevent future depressions by controlling the business cycle, but this economic authority should be a democratic one. A start has been made by the committee for economic development and Rotary International is trying to arouse the interest of all Rotarians in this economic program.

Oregon Trail and Preview of Coming Events

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. ANGELL. Mr. Speaker, lest we forget that we are celebrating in America this year the one-hundredth anniversary of the opening of the Oregon Trail and

the historic events which lead the way to the saving of the Old Oregon Country, which now comprises the great Northwest region, constituting the States of Oregon, Washington, Idaho, parts of Montana and Wyoming, and some other contiguous territory, I include herewith letter of Howard R. Driggs, president of the American Pioneer Trails Association, giving preview of coming events in the celebration of this one-hundredth anniversary of the Oregon Trail.

The letter of President Driggs follows:

AMERICAN PIONEER TRAILS ASSOCIATION,
New York, N. Y., July 1943.

DEAR MEMBER: Here is a brief review of recent activities along the old Oregon Trail and a preview of coming events.

1. Oregon's birthday—May 2, 1943—was impressively commemorated with the launching of a 10,000-ton Liberty ship, named after Robert Newell, one of the outstanding founders of Oregon. Three thousand or more gathered at Champoeg, the birthplace of the State, to pay tribute to its pioneers.

2. The story was carried to many schools over the land through fitting programs and pageantry. Further school programs are planned for October.

3. A movement headed by business leaders of Oregon is on to mark every mile of the historic trail, with Boy Scouts and school children cooperating.

4. Oregon is working to add 1,000 members to its State Council of the American Pioneer Trails Association, with Oregon Trail Memorial coin as token.

5. On July 3, 4, and 5, another commemoration in Baker, Oreg., in honor of American pioneers. Fine monument to be dedicated.

6. Sometime during the latter part of July, it is hoped to start the Ezra Meeker oxmobile from Independence, Mo.—with Boy Scouts representing various States along the trail—for Oregon.

7. On August 15 the site of a living memorial to our William H. Jackson to be dedicated at Scotts Bluff National Museum in Nebraska.

8. Ten monuments to be erected by Wyoming Landmark Commission along highways paralleling the Old Oregon Trail across Wyoming.

9. On August 19, 20, 21, and 22, the annual meeting of the American Pioneer Trails Association is to be held at Portland, Oreg. In connection with the historic pilgrimage on August 21, a visit is to be made to the grave of Ezra Meeker. It is hoped that the Boy Scouts with the oxmobile will be there to add their tribute to this pioneer who did so much to save the old Oregon Trail.

In all these activities, the emphasis has been on building our Nation's morale through saving the spirit of its pioneers. Travel has been and will be held to the minimum. Local communities are rising to their opportunities in this patriotic effort aimed at preserving our American way of life.

Cordially yours,

HOWARD R. DRIGGS,
President.

Uncle Sam as Landowner

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 6, 1943

Mr. ANGELL. Mr. Speaker, as a result of the all-out war in which we are involved, Uncle Sam is engaged in many undertakings which in peacetime are carried on by local communities or individuals. One of the problems arising by reason of this fact is the huge ownership of real estate which is coming into the hands of the Government. Many of the States in the West even prior to the war were greatly hampered by reason of a major portion of their area being owned by the United States Government itself. The taxable area in my own State of Oregon has been growing smaller from year to year, due to the transfer of real property from private hands to public ownership. In 1942 only 41 percent of the area of the State was held privately. Out of the 61,644,000 acres of land in the State in 1942, only 25,220,323 acres was privately owned. Many of the counties of the State have a much smaller percentage of privately owned areas as the following tabulation will show:

	Percent privately owned
Malheur County	17
Deschutes County	18
Harney County	21
Lake County	25
Hood River County	26
Curry County	27
Josephine County	27

The Federal Government has gone into many of the States and purchased large tracts of land for carrying on war activities and has added to the burden resting upon the local communities to meet their governmental expenses through the medium of taxation. The Government established a precedent when it took over the O. & C. land-grant lands in Oregon a number of years ago and by an act of Congress provided for the payment to the several counties in which the lands were situated of a sum of money approximating the amount the lands would be charged with taxes, had they remained in private ownership. In many of the counties of Oregon these lands which were in timbered areas constituted a very considerable portion of the taxable value of the county.

Oregon is not alone in suffering from the problem of public ownership of land areas. Information I have is that areas in public ownership in Idaho is 70.9 percent; Montana, 61.5 percent; Washington, 45.9 percent, as against Oregon's 59 percent.

To meet this problem I introduced in the House on March 30, 1943, H. R. 2338, which will provide for the payment by the Federal Government of a sum of money which would be equivalent to the taxes on the lands taken over by the Federal Government for military purposes. This bill, with a number of bills with the same objective, is pending before the Committee on the Public Lands. This committee recently held hearings here in the Capital on this legislation, and I was accorded the opportunity by the committee of appearing before it and presenting facts showing the wisdom of passing this legislation. A resolution was recently passed by the House, authorizing this committee to hold hearings in various districts throughout the United States where this problem is acute. I respectfully urge upon my colleagues to give this matter serious consideration, as it is one of great concern to many of the congressional districts throughout the United States where the Federal Government has taken over real estate of great value and removed it from the tax rolls.

The Japanese War Relocation Program and Its Progress

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 8, 1943

Mr. MUNDT. Mr. Speaker, a great many Members of Congress and numerous representatives of the press have asked for my impressions and observations following the 4 weeks of extensive study which the subcommittee of the Dies committee, of which I am a member, has just concluded. Accordingly, Mr. Speaker, I am appending hereto a brief summary of six factors which were repeatedly brought to the attention of our investigating committee, and on which I have reached some conclusions and am prepared to make recommendations.

It should be remembered that in making the following statement, Mr. Speaker, I speak only for myself and in no way either reflect or refute any views held by either of the other two members of our subcommittee. It is hoped and expected that after due review of all the evidence now before our committee that we may be able to make a unanimous and constructive report to Congress and the country on the whole picture brought to the attention of our committee by personal inspections, by public hearings and by executive off-the-record conferences with Government law enforcement and intelligence officers.

The statement follows:

The 4 weeks which the Dies committee subcommittee, headed by Congressman JOHN COSTELLO, has devoted to a careful and complete study of the methods and policies of the War Relocation Authority have entailed a tremendous amount of work, but I believe the constructive improvements which are already resulting from this investigation and the subsequent correctives which are anticipated have well warranted the time and effort involved. Our committee heard over half a million words of testimony and thoroughly canvassed the entire field of informed witnesses, including Director Dillon S. Myer, of the War Relocation Authority, community leaders, law-enforcement officials, loyal citizens of Japanese ancestry, and members of the Intelligence Services of the War Department and the Department of Justice. Investigators of our committee have personally visited every relocation center but one and the pre-Pearl Harbor Japanese investigations of the Dies committee have been carefully analyzed and rechecked for information to help guide the subcommittee in making its report and recommendations.

The subcommittee and its investigators are now reviewing the entire exhibit of evidence preparatory to writing a report to be submitted to the full committee for approval, after which it will be filed in Congess and

made available to the public as a House document. Until this report is available no final recommendations and conclusions can be made by individual members of the subcommittee. However, each of us has obtained certain definite impressions from his lengthy study of this important problem. Among the factors which appear to me to have special significance are the following, which I offer as my purely personal reactions for any value they may have in informing the public until such time as our official report has been prepared and released:

1. The early and orderly segregation of disloyal Japanese from loyal citizens and aliens of Japanese ancestry within the camps themselves is of paramount importance not only from the standpoint of our national security but also from the standpoint of more efficient project management and the obligation which our Government has to protect loyal residents against unjust suspicions and even bodily injury. Such segregation has not been provided during the past 14 months. I am therefore gratified that Mr. Myer assured the subcommittee this week that War Relocation Authority will definitely get underway with an appropriate program of segregation at an early date.

2. Closely allied with the necessity of segregating the Japanese within the project centers is the desirability of putting into complete operation a more satisfactory and effective program for classifying loyal citizens of Japanese ancestry as such, prior to their release to private employment. When this is accomplished and adequately publicized, communities may be sure that Japanese evacuees entering their localities are loyal and orderly and they should be accorded the same respectful considerations given any other American citizen. It is undoubtedly true that the vast majority of citizens of Japanese ancestry are loyal to the United States and once their identity is established and their loyalty verified no anti-Japanese sentiment should be directed against them. Until it is established, it is unfair to the general public and to the loyal Japanese themselves to give them indefinite leave from the relocation centers. In America it is not racial origin but fundamental loyalties which determine the quality of good citizenship.

3. Relocation centers can be made a highly significant factor in the Americanization of all evacuees in these centers. The War Relocation Authority has made some steps in this direction, such as establishing schools, encouraging Boy Scout troops, and providing certain entertainment features. This tendency should be greatly augmented and encouraged. This Government has never before had, and will never have again, the opportunity now presented to inculcate in people of Japanese ancestry an increased respect for American ideals, traditions, standards of living, and governmental procedures. This opportunity should neither be neglected nor be only partially utilized. If properly used, these project centers may go far toward dissipating any potential racial problem which might otherwise develop after the war with regard to citizens of Japanese ancestry.

4. As a glaring example of what not to do if relocation centers are to serve as Americanization units is the prevailing practice of the War Relocation Authority to display Japanese pictures and decorations in administrative offices, to use public funds to employ tutors to train Japanese in the art of Judo, to teach them Goh, and to provide them instruction in the Japanese language. Especially with regard to Judo, which is a form of Japanese military training in bodily combat in which participants are trained to maim or kill their adversaries, it seems to me this is one of the most indefensible misuses of public funds ever engaged in by this administration. Mr. Myer told our subcommittee that even now several hundred dollars a month is spent for this purpose. It is about as sensible as it would be to use taxpayers' money to provide textbooks in sabotage and give laboratory training in making nitroglycerin bombs to enemy prisoners of war being held in this country. It should be summarily and completely discontinued.

5. Some evidence was presented regarding waste of foodstuffs and materials in the relocation centers. In my opinion, however, the administration of Mr. Myer has not been unduly extravagant in these factors and I do not believe expenditures have been any more excessive, by and large, than those of many other current Government agencies. I think the Japanese are being amply but not lavishly fed. Housing conditions are too meager rather than too expansive and Mr. Myer has assured the subcommittee that as priorities make material available, it is planned to improve living conditions for evacuees who are not released to private life. No right thinking American wants to see the evacuees mistreated or to have them inadequately fed and housed. I believe the War Relocation Authority has met the problems of providing adequate livable standards about as well as could be done under all existing circumstances.

6. While improved policies and correctives are being developed in the lease program of War Relocation Authority it is my hope that Americans generally will refrain from letting imagination and hysteria get the better of good judgment in their associations with Japanese in their communities. Neither mawkish sentiment nor pseudo patriotism should govern our relationships with those of Japanese ancestry in this country. It is a time for realism—not revenge or remorse. I definitely do not agree with those who say that "All Japs are bad" and the evidence in War Department files of many loyal Japanese serving with our armed forces in this war bears eloquent testimony to the fact that real Americanism has a fervent appeal for many of Japanese ancestry just as it has had for the great bulk of all citizens of every nationality who come together in the melting pot which is America to comprise the world's only great corporate state which is based on devotion to ideals and principles rather than to nationality or land of origin. Japanese sincerely endeavoring to prove their good American citizenship should be given that full opportunity and, conversely, those maintaining their loyalty ties with imperialistic Japan should be segregated from the others and should not be permitted to jeopardize either our national security nor the good name of decent and dependable Japanese.

Our committee will make some detailed recommendations toward the above objectives but this statement is given at this time in response to numerous requests for my impressions of the extensive hearings just concluded.

World Literacy Campaign

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the Congress to the excellent review of the book The Silent Billion Speak, by Dr. Frank C. Laubach. This book review is written by Hon. Robert L. Owen, first United States Senator from Oklahoma, a distinguished statesman and scholar. Senator Owen has prepared a global alphabet and is advocating its use in an effort to bring about, through the establishment of a standard phonetic alphabet, a world understanding and literacy, in which in a short time the races of the world, now uneducated, can learn to read their own language and later ours.

Dr. Laubach has done a colossal work of importance to the world in giving to the people of 80 different languages, an alphabet by which they have been taught as individuals to read their own language within a few hours.

Commenting upon this importance, Senator Owen says:

The 80 languages now open through a printed phonetic alphabet opens the door to the printing press of the United States Government, and the President of the United States and the Congress of the United States should immediately set up a publicity agency by which to reach these people, hundreds of millions of them, in their native tongue.

Senator Owen's review of Dr. Laubach's books follows:

WORLD LITERACY CAMPAIGN—THE SILENT BILLION SPEAK

The Silent Billion Speak, written by Dr. Frank C. Laubach, is the most wonderful epic I can recall. It represents the work of a consecrated, loving, humble, faithful soul, rejoicing in the service of the poorest of the poor and of the most helpless human beings in the world.

It represents the overwhelming demonstration of the truth that an illiterate man anywhere in the world can be taught within a few days to write and read his own language in a text he had never seen but which delights his heart and for which he shows at once a deep desire.

This book is of eight chapters, published by the Friendship Press, 156 Fifth Avenue, New York, which outlined the scope of this tremendous human experience in serving mankind. The story is simple in the extreme.

It begins with teaching the Moros of Mindanao Island, the inveterate foes of the white race, who were taught, to their great delight, to read and write their own language in a very simple phonetic alphabet. Some of them learned to read this alphabet in a few hours. One of them is recorded as having learned it in less than an hour. Dr. Laubach got their attention through unaffected loving kindness where he invited their Moslem leaders to teach him the truth of their faith as Moslems. He discovered that they cherished the principles taught by Jesus of Nazareth. In 10 years, under the guidance of this servant of God, the great majority of Moros could read and write their own language, and from fierce, inveterate enemies of the white race they became dependable friends and cooperated in establishing better conditions of government and of life. Listen to what Dr. Laubach says in his book.

"These countries had a simpler problem than ours, however. They can teach reading in half the time it takes us, because their alphabets are regular and phonetic, while our English alphabet is 'confusion worse confounded.' * * *

"Mr. Galia says that he taught nine Moros to read in a half hour. That is better than any record that I have thus far made with a large group. A half dozen Moros interrupted this letter. They came in and said they could not wait until tomorrow, but had to be taught right away. They had only an hour to spare and wanted all the education they could get in that time. So I have stopped this letter to

teach them. While I concentrated on one of them, the rest listened. They have just left the house. I do not expect you to believe me, but here is the fact: This man had finished reading three pages of our newspaper, and could read everything I put before him with fair speed. One hour. Everytime that happens I feel as though a miracle had happened. It is possible only because these people are hungry mentally and spiritually.

"Nine-tenths of our job is sitting close beside the people who flock to us and getting thrills of delight with them as they emerge from ignorance."

On page 38 he describes 60 Moros coming 20 miles in a launch to be examined by him. They had just learned to read and write from other teachers and wanted to be examined and to express their delight.

"In the 10 years following the opening of the Lanao Station the attitude of the Moros toward Christianity swung from one pole to the other. It was unmitigated hatred when we arrived; love, good will, and cooperation when we departed * * *.

"Our Moro teachers kept asking, 'Do you suppose we can really make lessons as easy as these in other languages?' We knew it could not be done in English with its hopeless spelling. But what we were all eager to know was how many of the languages of the world were spelled regularly enough to be taught by our method."

This doubt has been fully answered by the subsequent experience of Dr. Laubach for he has applied his simple phonetic method to 80 other languages in Asia, India, Afghanistan, Persia, Arabia, East Africa, and Latin America and has started a literacy movement by this simple method of phonetic writing which was used by Moses 2,700 years ago when he spoke the words of Genesis transcribed in writing by 22 letters. The meaning of the Book of Genesis has come down to us through many translations from language to language with the meaning recorded by the 22 letters originally used and with the meaning unchanged, intelligible, and convincing as spiritual truth. Dr. Laubach has illustrated in his work the truth of words spoken and recorded in like manner by a disciple, John (ch. 14): "He who hath My Commandments and keepeth them, he it is that loveth Me and he shall be loved by the Father and I will love him and will manifest Myself unto him." Dr. Laubach recites the Moro experience of 10 years, where hate is converted into love. Is not this a manifestation of the spiritual power of the words recorded by John?

In 1937 the National Christian Council held a meeting in Nagpur, India, and endorsed the work of making the people of India literate, and subsequently Dr. Laubach held 226 conferences in different places of India teaching the natives to write in their own tongue their own languages with phonetic letters adopted for each as seemed expedient. The great poverty of the Indian people and their terrible illiteracy and the necessity of teaching literacy by word of mouth was a serious obstacle and at first prevented Mahatma Gandhi from giving support to the fight for literacy. Later he endorsed it.

The phonetic system of writing these languages showed how closely akin many of them were to each other. In some cases a high percentage of the common words were the same and which were discovered when put into phonetic letters.

Commenting on the difficulty of word-of-mouth teaching hundreds of millions of people scattered over the continent, Dr. Laubach says:

"It is impossible to go around and explain the principles to 345,000,000 men and women by word of mouth, but it would be easy to enlist cooperation if only the people could read."

The literacy campaign proceeds steadily in spite of the World War which broke out in 1939.

Indeed, the fight on illiteracy was not confined to the tremendous work done by Dr. Laubach because the Russians under the guidance of Lenin had made it a governmental policy to teach the Russians to read and write with the phonetic alphabet in their 58 languages, and in 20 years the Russians have conquered illiteracy, and this is a major factor in their ability to resist the long-prepared attack of the Germanic power.

The fame of Dr. Laubach in conquering illiteracy led to an urgent invitation to go to Africa, which he accepted, and in 50 days located many centers of instruction of different African languages showing them how to conquer illiteracy. This the Africans received with great delight and showed the same facility in learning to read and write their own language as the Moros had done and the Malays and the people of India. This method is now being used in more than 50 African languages.

"The greatest need of the whole world is to break down all the walls that separate us, of race and religion and nationality and class, so that the pure love of God can tie the world together. * * *

"* * * If that terrible load is lifted from the illiterate half of humanity, it will be one of the most glorious liberations in history.

"* * * The terrible eagerness of India's educated young men and women holds the promise of the making of a new nation—one of the mightiest on earth; and India's wonderful young women will have an immense part to play.

"By the end of 2 weeks our committee had prepared one set of lessons in Hindi and another in Urdu, unlike any we had ever done elsewhere. It is marvelous how working creatively on literacy lessons ties silver threads about our hearts."

Fortunately, the government at last gave its supporting hand to publishing lessons prepared by Dr. Laubach and his friends, to which he makes reference as follows:

"* * * The government agreed to publish all of the new lessons in Marathi, Gujerati, Hindi, and Urdu. They began that afternoon to lay the foundation for what was 2 years later to be one of the most gigantic literacy campaigns in any city in all history."

Throughout this book from beginning to end there is manifested humility, love of man and love of God by the author in seeking to obtain the divine guidance in all that he does or tries to do for the service of man. His pledge to God written in his diary January 1, 1937, page 130, and on April 30, 1937, page 137, should touch the heart of every human soul that worships and reveres and truly loves his divine Creator. On May 21, 1937, he made the following entry on his diary:

"Yesterday and today have filled my heart with boundless gratitude to God. The new charts are working like magic! We have tried them on twelve or more persons with uniformly striking success."

Dr. Laubach quotes the African leaders as saying to him:

"All we Africans ask of you whites is to give us your backing and financial help, and we will do the rest."

Dr. Laubach recites one voice of opposition in the person of an official of a gold mining company and he wrote it down:

"I have nothing whatever against you personally, but I will tell you frankly that professionally you are my enemy. If you teach these savages to read, they will soon think they are as good as we are. Can't you see that you will start unrest and labor troubles all over Africa?"

The fears of the official of the gold mining company are completely answered by Dr. Laubach's experience with the Moros, converted from fierce, dangerous enemies to loving friends.

Dr. Laubach's African campaign was a great success, short as it was, and he makes this observation at the close of it:

"Eight men have reached the reading stage this week. One young fellow was learning the syllables when suddenly he discovered that he could pronounce new words alone. With victory gleaming in his eyes, he shouted: 'Give me a book. I can read.' And he did, as elated as Columbus was when he first sighted the coast of the New World."

Dr. Laubach quotes the words of one of the strongest leaders, Mr. Martin Kyamba, who said:

"I have watched you day by day teaching my countrymen, and I am convinced that this is the greatest hope that has come to Africa since Livingstone."

The importance of giving the natives the Christian teaching in their native tongue is manifested by the following historical information by Dr. Laubach:

"The sections of the Eastern Church—Greek, Armenian, Georgian, Syrian, Coptic, and Ethiopic—from the beginning had the Scriptures in the vernaculars of their adherents, and these churches have survived the storms to which they have been subjected through the centuries. On the other hand, the great churches founded in north Africa had the Bible in Latin only, a foreign tongue which effectively closed the Book to the common people. When the waves of Islam swept along the southern littoral of the Mediterranean, these churches could not survive the storm and they perished.

"The same truth has been demonstrated on the mission field. The church had flourishing missions in China, Korea, and Japan in the fourteenth and fifteenth centuries, but they failed to give their converts the Bible in their mother tongue, and when persecution came, their churches were practically wiped out of existence."

The concluding chapter of Dr. Laubach's book is headed: "Literacy and a good-neighbor policy." On his tremendous background of experience he wisely urges the teaching of the illiterates of Asia and Africa, the lessons of Christian civilization in their own tongue.

Dr. Laubach said in the beginning of his book, page 3:

"They will bless or blast the world. That is why the church must step to the front and take a leading share in the mighty upsurge of the sunken half."

The English speaking people of the world should realize the supreme importance of this message of this consecrated man who converted the warlike Moros into peace-loving cooperating friends. It has given me a deep thrill of pleasure to hear this book read to me and I wish to commend it to the attention of the people of the United States and their Representatives in Congress and in the executive offices.

ROBERT L. OWEN.

A Congressman Looks at Congress

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. DIRKSEN. Mr. Speaker, under special permission granted me by the House to revise and extend my own re-

marks, I include herewith copy of a radio speech that I recently made:

Good evening, fellow Americans. This is Congressman EVERETT DIRKSEN, of Illinois. I am speaking from the Nation's Capital. Just as a bit of background, I represent the Sixteenth Congressional District of Illinois, in the heart of the Corn Belt. This is my eleventh year in Congress. I am on the Appropriations Committee.

Congress went home. Home means the 48 States of the Union. The Members have gone back to their people. They've gone back to commune with those whom they represent. First, here will be a bit of relaxation. Then regulations, and programs. They will have a chance to appraise conditions. They will want to help people with problems which arise from war conditions, from Federal laws, regulations, and programs. They will have a chance to appraise public temper and reactions. They will have a chance to assess the effects of laws and regulations upon the welfare of the people. They will return to Washington not later than September. They will return freshened in spirit, ready to cope with the new problems which arise from time to time. They return home but a few short days after we observed the one hundred and sixty-seventh anniversary of the birth of freedom. The charter of freedom was declared by another Congress 167 years ago.

This is the Seventy-eighth Congress. It has been in session since January. In strict fact, however, sessions of Congress have been continuous since 1939. That has been a long and historic period. It was marked by important legislation on neutrality, military preparation, and domestic matters. Congress remained in session when the Nazi blitz began in late 1939. It watched the progress of conflict in Europe. It speedily met the challenge of Pearl Harbor. It followed with other declarations of war on Axis nations. It voted vast sums and authority for the prosecution of that war. It stood by to meet every challenge and every crisis that might arise. And now, after continuous sessions which lasted nearly 3½ years, it is recessing for a brief period.

The Seventy-seventh Congress which convened in January 1941 and ended in January 1943, was bitterly assailed. It was charged with ignorance and provincialism. One Washington newspaper said the spectacle of Congress was anything but encouraging. Another referred to it as a blind, scared, fumbling Congress which was throwing away its opportunities. A certain publicist spoke of the unhappy slavery of Congress to economic pressure groups. A magazine writer spoke of public esteem for Congress as the lowest in history. It was all very interesting—this attack on the Congress of 2 years ago—and very old.

I say very old because I have compiled similar comment on Congress which goes back more than a hundred years. It was 106 years ago that a New York newspaper in speaking of the sad state of affairs of that day, said, "What then is the cause? It is wholly produced by the indolence, the folly, and the party spirit of Congress." Our history abounds in such comment on Congress. But it is doubtful whether the attacks on Congress were ever so sinister, so malicious and so biased as those leveled against the Congress which preceded this one. And so the Seventy-seventh Congress slipped into history and the present Congress came on in January.

In recent days, this Congress has also been assailed. I suppose it's a part of the American tradition and becomes a favorite indoor sport. In recent days it has been described as hectic and hysterical. It has been charged with spite and partisanship. It has been charged with intent to destroy unity and spite the President. It has been charged with madness and hate. That's all very interesting but it happens to be a parcel of nonsense and balderdash. To be exact, it is a lot of piddling twaddle and scarcely deserves an answer.

But there is a reason for speaking about Congress tonight. When this body is in adjournment and the Members have scattered to their people, they become thereby a voiceless group which does not have the benefit of a sounding board in the Nation's Capital. When attacks and allegations are made against Congress, they cannot be effectively answered. And there is reason to believe that the pastime of attacking Congress will get under way in short order.

It will be a vigorous offensive and will ring all of the familiar notes. Congress will be charged with failure to provide taxes to drain off excess purchasing power as a check to inflation. It will be charged with hamstringing the Office of Price Administration, the Office of War Information, and other agencies by failing to appropriate sufficient funds. It will be charged with failure to provide funds for incentive payments to farmers, thereby hindering the food program. It will be charged with resisting the use of public funds for roll-back subsidies to check inflation. It will be charged with an attempt to weaken or demolish the hold-the-line order. It will be charged with meddling in the manpower problem. It will be charged with obstructing the program of war training by its action in liquidating the National Youth Administration. All this and more too will be said about the actions of Congress during the last 6 months because a good many of these things have already been said and there is good reason to believe that they will be amplified with many tuneful variations. But a great football coach once observed that the best defense is a good offense, and so I merely suggest that these thrusts at Congress may be designed to cover up and smoke-screen the failures and weaknesses in other sectors of the Washington front.

So it might be well to take a look at the 435 Representatives and 96 Senators and see what manner of people they are. More particularly we should ascertain, if possible, whether they are mad, hateful, hysterical, and spiteful, either as a group or as individuals, and find out, if we can, what makes them that way.

I'll begin by saying that Congress is a pretty sound, seasoned, sane, patriotic group and it wouldn't do for anyone to throw too many stones at their patriotism unless the stone thrower is ready to defend his own military record.

Will Kennedy, veteran reporter of the Washington Star, has called this a fighting Congress and then proceeds to prove it. Of the 96 Senators, 35 have served in the Spanish-American War or the First World War, or both. That's about 37 percent of the Senate with a war record. Forty-eight of the ninety-six Senators have sons or daughters in the present war. That's 50 percent. That means that one-half of the United States Senate has a direct blood and kinship interest in victory, in peace, and a free country. Senator MCCLELLAN, of Arkansas, has lost a son overseas. Guess you wouldn't quarrel with the patriotism of a public servant like that.

Now turn to the House. Of the 435 Members, 168 saw service in the Spanish War or the First World War, or both. That means that 39 percent of the House served in uniform. One hundred and twenty-three Members of the House have sons or daughters in service now. If the record needs high lighting, one might observe that Congressman KELLEY, of Pennsylvania, has 5 sons in the service. Representative BATES of Massachusetts has 3 sons, a daughter, and a son-in-law in the service. STARNES of Alabama has a son, 3 brothers, and 6 first cousins in the service. TABER, of New York, has a son in service who was wounded recently. BALDWIN of Maryland lost a son in service. House Members also have a filial interest in victory, in peace, and in the preservation of this Republic.

Now think that over for a moment. Is there any group in the land which for its size could boast a greater service flag? With only 531 Members, the congressional service flag could proudly boast 235 stars. These stars would represent young men and women in all parts of the world, fighting for American principles and free government.

And that's not the whole story. By induction or by enlistment, 1,500 employees of the Congress, representing secretaries, clerks, elevator operators, guards, messengers, mechanics, custodians, and others are today in the armed services. They have lived in close association with the Members for years. When their stars are inscribed upon the congressional service flag, and added to the sons and daughters of Senators and Congressmen, it would represent more than a regiment.

Congressmen and Senators are a part of that great confraternity of fathers and mothers throughout the Republic who are anxious about their sons and daughters, who wish for speedy victory and peace. They are also a part of that other host who wore the uniform to serve the flag and to preserve that sacred birthright of freedom whose anniversary we observed this week.

Can you find cause for madness in this? Can you find cause for hysteria in this? Can you find cause for spite in this? Can you find cause for narrow partisanship in this? When Representative BATES of Massachusetts, a Republican, with three sons in the service, and AUGUSTINE KELLEY, of Pennsylvania, a Democrat, with five sons in the service, or any of their colleagues, are considering legislation and policies which affect the war effort or affairs on the home front, do you believe there can be any question about the zeal, the earnestness, the motives, the purposes which mark their legislative conduct?

So I submit the record and let the people judge whether there is madness, meanness, hysteria, and spite in the Congress, and whether this spirit is more likely to be found in other places where draft exemption was claimed by young men of military age whose services as lawyers, economists, and technicians seemed more important on the Washington front than in the uniform of their country.

But it goes without saying that there has been a spiritual change in this Congress as compared with its predecessors. Do you remember that familiar "rubber stamp" label that was hung on Congress for a number of years? You don't hear it any more. It may be due to the rubber shortage. On the other hand, there may be other and more compelling reasons. Congress is now assailed as a mad, hysterical, malicious, venal, angry lot. It's interesting and strange how labels change. Nearly one-half of the House membership has served 6 years or more. Short days ago they were spineless "rubber stamps." Now they are something else.

Nor is the change due to politics. That word "politics" is always the first refuge of a frustrated person. To be sure, there was a material gain in Republican membership in the present Congress and there is a better and more wholesome party balance. Yet it would be surprising to any person to examine the recorded votes on various issues and observe how party lines are traversed. It frequently happens that a score or more of Democrats will vote with Republicans on one

side of an issue, while an equal number of Republicans will vote with Democrats on the other side of that same issue.

Hysteria, madness, politics, and other charges of the same kidney are not the reason for the change in Congress. It's far more substantial than that.

Congress wants an efficient victory effort. It will vote whatever funds and authority are needed for that purpose. They have 235 sons and daughters and 1,500 employees in the services. They are precious young folks, like the other fine and stalwart sons and daughters of the fathers and mothers of this Nation. They're fighting for the American way and they want those sons and daughters to be provided with the best weapons, the best leadership, the best talent and skill, and the best chance of which the genius of this Nation is capable. They want a victory that all the sons of America might come back home. They want an early victory and want it crowned with a peace that will have a chance to endure. Their flesh and blood is a part of this earnest business and there is no madness or hysteria or politics about that.

There are other reasons for the change in Congress and for the spunk and determination which it has manifested in dealing with affairs on the home front.

Congress is concerned about the bungled food situation and the prospect of real food shortages in the months ahead.

Congress is concerned over the failure to centralize control of food production, food distribution, and food prices under a single head.

Congress is concerned over the constant effort to meet every problem by requests for more and more funds as if the dollar sign is the panacea and cure-all for every economic malady.

Congress is concerned over the insistent and high-pressure demands for the continuation of emergency agencies which have outlived their usefulness and which could well be discontinued in the interest of economy.

Congress is concerned about this mystic new philosophy on national debt which seeks to persuade the Nation that it doesn't matter much how large the national debt is so long as we owe it to ourselves.

Congress is concerned about the inroads upon our farm-labor supply, the failure to provide farm machinery for the production of food, and the failure to adequately appreciate the importance of food as a munition of war.

Congress is concerned over a staggering Federal pay roll of 3,000,000 persons, 55 percent of whom are not directly engaged in the war effort, and of a monthly outlay of more than $550,000,000 for pay checks to Government workers.

Congress is concerned over the rationing programs and the countless frictions which have resulted to erode morale and good will.

Congress is concerned over the many jurisdictional feuds which have developed in the executive branch of the Government and the effect of these feuds upon the war effort and upon civilian morale.

Congress is concerned over the constant and unrelenting effort to impose more and more controls upon the people, and over the effort to socialize this Nation under the cloak of conflict.

Congress is concerned over any misdirected tax programs which will finally break the back of free enterprise, and so destroy its usefulness when the time comes to shoulder the post-war burdens of rehabilitation, that all enterprise must come to Government for financial aid and thus submit itself to control.

Congress is concerned over expenditures. It has just voted $115,000,000,000 in appropriations. Of this amount fifty-nine billion went to the War Department, twenty-eight billion to the Navy, three billion for the various war agencies, six and one-quarter billion for lend-lease purposes, and the balance for other functions of Government. It is prepared to provide whatever funds are necessary for the war effort and for essential purposes. But it wants wise, sane, economical use of the funds.

Congress is and has been concerned over the growing tendency of administrative agencies in Government to so twist or ignore the laws which Congress has provided as to exceed or disregard the clear intent of the people's representatives.

Congress is and has been concerned over labor disputes in war industries and the danger of impairing the efficacy of the war effort.

Congress is concerned over the constant effort to manage and direct public opinion as if the people were not capable of doing their own thinking.

Congress is concerned over waste and extravagance and what must be done to eliminate these twin sins of Government.

Congress is concerned over this recent proposal to use more borrowed money for subsidies with which to roll back certain commodity prices and thus add to, rather than diminish, the forces of inflation and finally let the soldiers who are fighting this war meet that additional burden of debt in years to come.

These and many others are the things which have struck concern into the hearts of Congressmen and Senators and moved them to action. It is not hate and madness. It is not spite and hysteria. It is a growing concern over the future of this Republic, over its solvency, and over the preservation of freedom under law and under a balanced government which made this the greatest Nation on earth.

Now, what are some of the things which Congress has done or attempted to do which have provoked controversy and inspired attacks upon the legislative branch.

It enacted a tax bill to put the Nation on an individual pay-as-you-go basis and ultimately bring all individual taxpayers current.

It passed the war disputes bill to meet a crisis produced by a strike in an essential industry.

It liquidated the National Youth Administration after that agency had expended more than $771,000,000 on various training programs.

It transferred the Farm Security Administration to the War Food Administration and reduced its funds by $46,000,000.

It liquidated the Federal Crop Insurance Corporation after a loss of $41,000,000 on wheat in a period of 4 full years.

It reduced the funds for the Office of Price Administration by $10,000,000 on the ground that the elimination of waste and inefficiency would admit of real economy.

It liquidated the National Resources Planning Board because it had too many theorists and too few practical men, and on the further ground that planning can be done only with public funds taken from the taxpayers and that it was therefore a primary function of the Congress to explore this field and determine the future policies to be pursued.

It provided for the filing of a liquidation plan by the Home Owners' Loan Corporation on or before February 1, 1944, with the view to its ultimate and expeditious liquidation on the ground that it was an emergency agency which has performed its duty and should now retire from the field of Federal financing.

It provided for a number of investigations of the war effort, of the Federal Communications Commission, the administrative procedures of the various Federal agencies, the Farm Security Administration, and others for the purpose of developing complete information as a basis for future action by the Congress.

It has been scrutinizing waste and extravagance for the purpose of saving public funds wherever possible.

It has been carefully examining the language of proposals submitted to Congress by the various agencies of Government, and reasserting the independence of the legislative branch and its constitutional power over the purse strings.

All these are but indications that the Congress proposes to reassert its powers as an independent branch of Government. Obviously, these actions will provoke those who believe that Congress should surrender its powers.

Obviously it will provoke those who follow the debt philosophy of men like Dr. Alvin Hansen, adviser to the National Resources Planning Board and the Federal Reserve Board, who in a recent article said that (an internal debt) "is in fact so different from what we commonly think of as debt, that it should scarcely be called a debt at all."

It will provoke those who believe that the only function of Congress is to provide a blank check for untold billions and turn the expenditure over to the executive branch.

It will provoke those who believe that every economic problem can be solved by greater and greater expenditure of the people's money.

It will not satisfy those like Dr. Tugwell, who believes we should disdain the wisdom of more than 150 years of our national life and remake and remold this country.

It will not satisfy those who look upon Congress as the one instrument that stands in the way of socializing this Nation.

In the days to come when Congress is back home communing with the people and rendering an account of its stewardship and giving aid in connection with the many problems which arise, I trust that those who might be disposed to attack Congress for its sins of omission and commission will answer a few questions for the folks back home, and also tell them about so many other things which are happening on the Washington front which have stirred Congress to action.

They should tell the people about the unending controversies in the executive branch which began in 1941 and have continued to this good day. This will include the conflict between Rubber Administrator Jeffers and the War and Navy Departments over the rubber program. It will include the clash between Mr. Eberstadt and Mr. Wilson over control in the War Production Board. It will include the clash between Elmer Davis, of the Office of War Information, and 15 prominent writers in that agency who charged that misleading statements have been made to the public and to Congress. It will include the tart controversy between the President and Food Administrator Davis over a centralization of the whole food program in the interest of greater food production. It will include the present conflict between Jesse Jones and HENRY WALLACE over the stock piling of critical war supplies. The country will want to know how this intrafamily fight serves the war effort.

They should tell about Edward Pritchard, Richard Gilbert, Ganson Purcell, and other economic magicians in the new brain trust who have thwarted or overruled the regular agencies of Government and whose irresponsibility and lack of experience is a threat to morale on the home front.

They should tell about Mr. Edward Pritchard, former law clerk and one-time adviser to the War Labor Board, who authorized the roll-back subsidy idea before any regulations were prepared and before the matter was ever discussed with livestock producers of the Nation.

They should tell about scores of college professors who have not had a single day's business experience who are directing price policies in the Office of Price Administration.

They should tell the people what lies behind this intense conflict over subsidies and whether or not it is but a preview to a broader program which will involve the purchase by the Government of vast quantities of commodities which will later be resold at a loss to the Treasury and the taxpayers and whether or not it will call for the extension of Government control over even larger areas of our economic life.

They might tell how we can avoid collapse and bankruptcy unless the strictest economy is exercised.

In belaboring Congress for a modest reduction in the funds for the Office of Price Administration, they should tell the people just why the Office of Price Administration is costing the taxpayers as much money as was spent on the entire Navy with 350 vessels and 66,000 officers and men just a quarter of a century ago.

They might tell by what authority the Office of Price Administration regulates inventories, determines the length of women's hose, defines a beef roast, and performs other functions scarcely contemplated by Congress.

They might tell why the Office of Price Administration needs 2,700 lawyers to perform its legal work, whereas in Great Britain it requires but 10.

They should tell the people just what has happened to the abundant life.

They might explain by what magic we made the complete circuit of too much goods and too little money just a few years ago to too much money and too little goods in 1943, and what happened to all the promises of a managed, planned economy.

They should tell the people just why there is such pressure to continue agencies like the National Youth Administration and the Home Owners' Loan Corporation when the Nation is rolling toward a debt of two hundred and ten billions.

They might tell why the 575,000 grocers in the land must be harassed by a score of maximum price regulations and threescore and more of price controls.

They might tell why thousands upon thousands of retail meat dealers are beseeching Congress constantly for relief from impossible Office of Price Administration restrictions.

They might tell why it was that the all-wise leaders in the administration who claimed they foresaw this war a long time ago were continuing to impose acreage restrictions on the production of food as late as last year.

They might tell why the all-wise leaders who said they foresaw this war years ago reduced wheat acreage from 63,000,000 in 1938 to 50,000,000 acres in 1942 and how many people we could feed from the 13,000,000 acres which were not planted.

They might tell why the all-wise leaders who said they foresaw this war continued to reduce corn acreage from 98,000,000 acres in 1939 to 86,000,000 acres in 1941 and how nice it would be if we had the 600,000,000 bushels of corn that would have been produced on the 12,000,000 acres that were not planted.

They might explain how corn-processing plants, which are closing down for lack of corn, might operate with the corn that wasn't planted.

They might tell why as late as last year, when we had already been in war for a year, the administration was still undertaking to control the farmers and reduce acreage by means of benefit payments out of the Federal Treasury, when every available acre in the land should have been planted to food.

They might tell why there is such determined resistance to placing the production, distribution, and pricing of food under one head.

They might well enlighten the people on the real issues behind the Jones-Wallace affair, and whether or not the real issue is the junking of our costly synthetic-rubber plants when the present war is over so that we shall have to depend on foreign sources for rubber.

It might be interesting for them to tell the people why the farm-labor situation has been badly bungled; why we must send to Jamaica and Mexico for labor to harvest crops; and why, according to the official bulletin of the Department of Agriculture for June, lack of an adequate farm-labor supply is now considered a major problem.

These are but a very few of the things they might tell the people when they undertake to assail the determination, the courage, and the forthrightness of Congress in dealing with the welfare of the Republic.

There is no madness or hate or hysteria in Congress. It has become just a little fed up with some of the irresponsibility on other sectors of the Washington front, and it intends to do something about it. It intends to do something about it, because administrative incapacity and bungling might cost additional lives on some far-flung battle front and untold anguish and distress on the home front.

Folks, you can depend upon it, this Congress will do its duty. The Congress which just went home to see the people is as American and as resolute as another Congress, which 167 years ago this week filed a bill of particulars against a king and his ministers, declared the independence of this land, and then did something about it.

H. R. 2703

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ANGELL. Mr. Speaker, on July 7 the House adopted Senate amendments to H. R. 2703 which had for its purpose providing more adequate and uniform provisions in the administration of veterans' laws pertaining to compensation, pensions, and retirements. I favored these objectives, and upon assurance that the amendments proposed were satisfactory to all the veterans' organizations, supported the amendments.

In May of this year I addressed a letter to Hon. Henry L. Stimson, Secretary of War, calling attention to the practice alleged to exist in the War Department in discharging disabled men with foreign combat service on the basis of alleged preexisting disabilities and requiring them to prejudge and prejudice their cases by signing releases of all disabilities before receiving consideration for present disabilities.

I discussed this matter at some length on June 1 in the House and my remarks appear in the CONGRESSIONAL RECORD of that date, page 5168, in which I set forth this letter to the Secretary of War and his reply, and I also included a protest against such procedure, being an editorial appearing in the Disabled American Veterans' Semimonthly, appearing in its issue of April 29.

I am now in receipt of a letter and a statement from Omar B. Ketchum, legislative representative of the Veterans of Foreign Wars of the United States, discussing these amendments and the committee considerations which took place prior to the time that the amendments were presented to the House. When the Senate amendments were considered in the House, July 7, I had no knowledge of the facts set forth in Mr. Ketchum's statement.

Pursuant to authority heretofore granted, I include this letter and my reply, together with the statement of Mr. Ketchum:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., July 8, 1943.

Hon. HOMER D. ANGELL,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. ANGELL: I noted with interest your questioning of Mr. RANKIN during consideration of Senate amendments to H. R. 2703 on Wednesday, July 7.

It is apparent you were concerned as to whether the Senate amendments would weaken the veterans' rights in comparison to the provisions previously adopted by the House in H. R. 2703.

For your information, I am attaching herewith my analysis of the Senate amendments in a statement I am making to the National Tribune. I am not blaming Mr. RANKIN, and realize time was the essence, but the veterans of this war took a beating in that one Senate amendment.

Very truly yours,

OMAR B. KETCHUM,
National Legislative Representative.

STATEMENT BY OMAR B. KETCHUM, NATIONAL LEGISLATIVE REPRESENTATIVE FOR THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, RELATIVE TO THE SENATE AMENDMENT TO SECTION 9 (B) OF H. R. 2703

The decision of the Senate Finance Committee and subsequent action by the Senate on July 6 in amending section 9 (b) of H. R. 2703, destroyed, to a large extent, an outstanding victory which had been won in the House, relative to a presumption of mental and physical soundness for persons in the armed forces.

The House Committee on World War Veterans' Legislation, after comprehensive hearings and studied deliberation on H. R. 2703, reported out the bill with Section 9 (b) incorporating the most favorable presumption of soundness for veterans since the passage of the infamous Economy Act of 1933. It was later approved in the House by a unanimous vote.

Section 9 (b) of H. R. 2703 as approved by the House would have established a conclusive presumption of soundness after 90 days of service, other than for disabilities which were actually noted upon entry into service, and restored to veterans the rights once granted under section 200 of the World War Veterans Act of 1924, but which were taken away by the Economy Act of 1933.

The Senate amendment to section 9 (b) of H. R. 2703 practically destroys the conclusive presumption of soundness approved by the House and will permit the Veterans' Administration to continue to apply a rebuttable presumption as under the infamous Economy Act of 1933. While it is admitted that the Senate amendment is less objectionable than existing law, nevertheless, the Veterans' Administration, acting as judge, jury, and prosecutor, will be able to deny presumption of soundness in thousands of otherwise deserving claims.

The Veterans of Foreign Wars of the United States led the argument before the House Committee to obtain the conclusive presumption-of-soundness clause in section 9 (b) of H. R. 2703, which was approved by the House; and the action of the Senate Finance Committee in changing this clause in an informal conference on a holiday observance during the unavoidable absence of

the Veterans of Foreign Wars spokesman came as a great disappointment. It is regretted that representatives of the American Legion and the Disabled American Veterans who attended the informal conference agreed to such a compromise in their zeal to remove the 90-day requirement. The compromise was like swapping a one hundred dollar bill for a 5-cent piece.

It will always be the opinion of the Veterans of Foreign Wars spokesman that if representatives of the Legion and the Disabled American Veterans had stood pat in the informal conference, the conclusive presumption of soundness would have passed the Senate in spite of opposition from the Veterans' Administration.

Upon learning of the action taken by the Senate, the Veterans of Foreign Wars registered a strong protest with the Honorable JOHN E. RANKIN, chairman of the House World War Veterans' Committee and, at first, insisted that the House reject the Senate amendment and send H. R. 2703 to conference in an attempt to restore the House provision for conclusive presumption of soundness. Conferences between Congressman RANKIN and Senator CLARK and discussions between veteran organizations representatives developed the fear that if the bill went to conference, there would be no final action before the impending recess of Congress.

Rather than be responsible for holding up final action on the entire bill, which contains many other important benefits, the Veterans of Foreign Wars representative agreed to let the tail go with the hide, but with the assurance that if the Veterans' Administration failed to follow the clear intent of the Congress in a liberal interpretation of presumption of soundness, steps would immediately be taken to amend the law and restore the original House provision for a conclusive presumption of soundness.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 8, 1943.

Mr. OMAR B. KETCHUM,
National Legislative Representative,
Veterans of Foreign Wars,
Washington, D. C.

DEAR MR. KETCHUM: I am just in receipt of your letter of July 8 calling attention to the colloquy between myself and Chairman RANKIN, of the Veterans Committee, appearing in the CONGRESSIONAL RECORD July 7, page 7387, when Senate amendments to H. R. 2703 were under discussion. I have read with interest your statement enclosed with your letter in which you detail the negotiations leading up to the adoption of these amendments as they were presented to the House.

At the time the bill was under discussion I had no knowledge of these discussions which had taken place with reference to this bill. I was deeply concerned as to whether or not the amendments proposed were satisfactory to all of the veterans' organizations, and would protect veterans against the injustices now being visited upon them by failing to adhere to the presumption-of-soundness rule. As you will note from the proceedings appearing in the CONGRESSIONAL RECORD of July 7 when these amendments were adopted, we were assured that they were satisfactory to the veterans. Personally, I feel that the legislation should have made certain that there would be a conclusive presumption of soundness in these cases.

If this legislation does not prove to be satisfactory upon a fair trial, I assure you I will be glad to support amendments that will correct any deficiencies.

With kind regards, I am,
Sincerely yours,
HOMER D. ANGELL,
Member of Congress.

Mr. Speaker, as I stated in the House on June 1, I am not fully convinced that the practice as outlined by the Secretary of War is such as to preserve the rights of servicemen who are not only endangering their lives but subjecting themselves to critical disabilities which may disable them for life, and who in many cases are making the supreme sacrifice in the defense of our country. When these men are inducted into service they are subjected to critical and exhaustive examinations to determine their physical and mental condition, and such examination should be binding upon the Government. The Government should not, therefore, be heard to say that such servicemen after undergoing such examinations are subject to disabilities which were overlooked and which existed at the time of the examination. Once examined, accepted, and inducted into service, there should be a conclusive presumption against the Government that any disabilities thereafter appearing in such servicemen were service-connected.

The Time To Feed Our Friends Is Now

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 5, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following interesting article by William Henry Chamberlin on feeding the starving children of occupied Europe, published in the Progressive on July 5, 1943. I hope it will be read extensively, and I am sure it will help to build up in America a humanitarian desire to help save millions of innocent children, victims of the ravages of modern and world-wide wars.

The article follows:

Americans are temperamentally optimists. But optimism would have to take on some of the qualities of blindness to mistake the fact that we are living in an age of singular and in some respects unprecedented cruelty in human relations. Man's inhumanity to man has reached new peaks. The easy assumption that the world always moves forward, morally as well as materially, has received some shattering blows.

There was nothing in the record of Imperial Germany to match Hitler's calculated extermination of the Jews, or the mass killings of hostages and civilians in occupied and invaded countries. Tsarist Russia was no school of humanity. But no act of the Tsarist government took as many lives as such Soviet policies as the "liquidation of the kulaks as a class" or the man-made famine in Ukraine and the north Caucasus in 1932–33. Japan's brutalities in China and the shooting of captured American airmen are in unfavorable contrast to the fairly decent observance of the conventions of war in the Russo-Japanese conflict of 1904–05.

But before we become too smug and self-righteous about the atrocities of totalitarian states we ought to remove a grave blot on our own record in the conduct of this war. This is all the worse because the same problem was handled decently and humanely in the last war. I refer, of course, to the airtight blockading of the occupied democracies of western Europe, Belgium, the Netherlands, and Norway. Since November of last year France has also been under German occupation and even before November the greater part of France was under German occupation and invasion and blockade had reduced the French to much the same condition of grave malnutrition, approaching actual starvation, that has prevailed in Belgium, the Netherlands and Norway.

THIS CHALLENGE EVEN GREATER

Now in the last war a situation that was in every respect identical, except that fewer people were affected, arose as a result of the German occupation of Belgium and a considerable part of northeastern France. At the initiative of Herbert Hoover, then a private citizen, a scheme for neutral feeding of the people in these occupied regions was installed with the consent of the British and German authorities. Adequate safeguards were set up against the diversion of relief supplies to German military use. After the United States became a belligerent the system continued, under the supervision of citizens of European neutral powers.

As a result the people of Belgium and northeastern France were saved from starvation. An inestimable number of human lives were preserved. The grave permanent effects of prolonged malnutrition, physical degeneration, and the development of embittered, warped, antisocial personalities were averted. If voices were raised on behalf of the inhuman theory that the starvation of French and Belgium children would contribute to the defeat of Germany those voices were fortunately neither loud nor influential.

This time the challenge to humanity has been far greater. Not only Belgium but the Netherlands and Norway have fallen under enemy occupation. All France, not only five departments in the northeast, is in the same plight. But the response to this challenge, so ready and generous in the last war, has been completely negative up to the present time, except in the case of Greece.

Cruel and false propaganda, reaching its apex in two downright lies, has confused American public opinion and led to apathy in the face of a very clear moral and humanitarian issue. The two lies are that any feeding scheme would benefit Germany and that the people in the occupied countries and their governments in exile do not desire relief.

ADEQUATE SAFEGUARDS

In regard to the first statement, it should be noted that no one has been so simple-minded as to suggest the sending of food to the occupied countries with eyes closed as to what would be done with it. Every proposal that has been put forward by Mr. Hoover and by others who have been interested in maintaining a minimum of physical health and vitality in these conquered democracies has contained the most stringent safeguards against abuse: Close neutral supervision of the feeding; maintenance of small stocks of food at any one time, so that seizure would be of no practical benefit to the Germans; stoppage of operations in the event of any German effort to violate or evade the safeguards.

Moreover, there have been two practical experiments that disprove the contention that the Germans would misappropriate food sent for civilian relief and child feeding. One has been carried out in Greece, of all Balkan countries the least self-sufficient in food supply, and therefore the hardest hit by conquest and cutting off of contact with the outside world.

It was the Turks, until recently traditional enemies of the Greeks, who crashed the gate of the blockade when starvation in Greece reached appalling proportions. A relaxation of the blockade followed this generous and humane Turkish action. Wheat from Canada, dried vegetables and dried milk from the

United States are now being sent in Swedish ships directly to Greek ports. More than 500 neutrals (Swiss and Swedes) supervise the distribution of the food and see to it that there is no diversion to the occupying forces. Assistant Secretary of State Sumner Welles has publicly testified to the efficient working of the Greek arrangement. There is no reason that would pass the test of humanity and common sense why a similar arrangement could not be made for the occupied countries of northern and western Europe.

A DESPICABLE FALSEHOOD

We also have the testimony of Mr. Howard Kershner, who left Europe recently after serving for years as director of relief for the American Friends Service Committee. Mr. Kershner's testimony, published in a letter to the New York Times of April 20, is emphatic and to the point:

"After having fed 100,000 French children during the past 2 years I know for a fact that the Germans have never taken a mouthful of our food.

"Neither do they take an equivalent quantity of French food. I state this as an unqualified fact, for each child to whom we give a daily portion of imported food had also its full proportionate quantity of French food—everything that could be obtained for it with its own French ration card. This proves conclusively that not a crumb was left over that the Germans could take as a result of our operations."

Mr. Kershner's second point is especially interesting and an engagement to the effect that there should be no reduction in ration allotments to persons receiving relief supplies might well be included in any arrangement concluded for feeding the occupied countries.

As for the statement that the people in the occupied countries and their representatives prefer that the process of slow starvation go on without any attempt at relief, this is a singularly mean and despicable falsehood. There is not a shred of documentary evidence to support it. The "voices" from the occupied countries that supposedly cry out against the sending of relief are invariably, and conveniently anonymous. It is, of course, easy for persons of a certain moral caliber to get up after a comfortable luncheon and declaim about how the heroic Belgians, Dutch, Norwegians, and French are gladly starving themselves for the greater glory of the British blockade.

But actually no responsible spokesman for the occupied democracies has repudiated the idea of relief. The governments-in-exile of these countries are located in London and are under the strongest kind of obvious pressure to do nothing that would embarrass British policy. But members of these governments have repeatedly taken a stand for sending in food. It would not be very easy for them to live in the future among the graves of their countrymen and to face the looks of the emaciated survivors if they had taken any other attitude.

A few instances of support for the relief idea by the governments-in-exile may be cited. On March 4, 1941, Premier Pierlot, Foreign Minister Paul H. Spaak, and Finance Minister Camille Gutt of the Belgian Government, urged Winston Churchill to approve the experiment of setting up soup kitchens for the distribution of foreign relief supplies. After Hoover had delivered an address urging the feeding of the people of the democracies the Norwegian Minister in this country, Wilhelm Morgenstierne, sent the following telegram:

"Permit me to convey to you my personal warm appreciation of the understanding and sympathy regarding Norway and the present predicament of its people."

Quite recently, toward the end of March, 1943, the Belgian Premier, Hubert Perlot, urged that a Red Cross ship with supplies for Belgium be permitted to pass the blockade. This request was denied. The Norwegian delegate at the Hot Springs food conference raised the question of food supplies for his country.

SITUATION IS GETTING WORSE

There is no evidence of opposition to feeding anywhere in the countries that would benefit from it. The only opposition exists in the minds of the devotees of "Britain can do no wrong" theory, of thick-and-thin apologists for a blockade policy that is not only extremely inhuman but also inexpedient, since it starves our friends much more effectively than our enemies.

Germany can and presumably will be beaten by a combination of air bombing and land invasion. Germany cannot be starved into surrender. The improvements in agricultural technique, the possession of much larger farm areas than Germany had at its disposal in the last war, the more scientific rationing—all these factors rule out the possibility of a German collapse through starvation. Given the present distribution of political power, it is obvious that everyone in Europe (the few surviving neutrals excepted) will suffer the pangs of hunger before the Germans.

The food situation in the occupied countries is catastrophically bad and it is getting worse. Here is what Kershner, a recent eyewitness, has to say:

"A whole generation of children is slowly dying from starvation. Hundreds of thousands have already perished, and even larger numbers will be lost unless help is speedily forthcoming. I have seen these children, and grown-ups as well, in all stages of starvation. Some are wracked with tuberculosis, which is quickly fatal where undernourishment exists, and others have distended stomachs and swollen limbs, which tell the same horrible tale. There is, I believe, no question about the facts of starvation."

And Professor Richet, of the French Academy of Medicine, has recently reported to the French Ministry of Agriculture that "as a result of undernourishment 10,000,000 Frenchmen are today condemned to slow death." Conditions are most probably equally bad in other occupied countries. News From Belgium, a publication of the Belgian information center, puts the issue grimly in the following words:

"The whole question is whether the United Nations are fighting to liberate oppressed peoples or to liberate a vast cemetery sparsely inhabited by some wealthy people who survived the ordeal."

The chances of war are uncertain. While we all hope that Germany will crack up this year, there is a considerable body of opinion to the effect that the really decisive onslaught on Hitler's European fortress will come only in 1944. Perhaps the struggle will be prolonged until 1945, or even further. What will become of the starving people in the occupied democracies over that interval of time?

THE TIME TO ACT IS NOW

The evil that has been wrought by the cruel and shortsighted policy of refusing to our friends even a small crack in the blockade which has been imposed on our enemies will not end with the overthrow of Hitler. The physical base of some of the freest, most progressive European peoples will have been undermined for an indefinite period. The difficulties of recreating an orderly and civilized Europe will be enormously enhanced if great numbers of French, Belgian, Dutch, and Norwegian men, women, and children grow up emotionally unbalanced, warped, embittered, quick to follow the lead of any crackpot, as a result of the impairment of their physical strength and mental faculties by near starvation.

It is high time that the American people made their will on this question known in Washington, and that Washington put pressure on London, even if the bottleneck in this matter is Winston Churchill himself. Blueprints for future relief are not enough. The time to feed our friends is now.

Let's Help Europe's Starving Children

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ANGELL. Mr. Speaker, I introduced House Resolution 244 which has for its purpose rendering aid by helping to feed the children of Europe in the over-run, subjugated countries who are starving by the thousands for lack of food and other essential care. Throughout our history we have been known to the peoples of the world for our great humanitarian ideals and for our good-neighbor policy. In the present titanic struggle involving all of the nations of the world we are rendering aid to millions of people through the lend-lease program. Thousands of innocent children of the countries of Europe are perishing day by day, and many more thousands are being gradually starved and blighted for lack of nourishment, and if able to survive this holocaust will be crippled in body and mind.

We in America should come to the rescue of these innocent little ones who are not responsible for the tragedy of war swirling about them. None of us want to render aid or comfort to our enemies who are responsible for this great tragedy, but we can help these children by permitting mercy ships to go through the blockade with food to sustain their lives without aiding the enemy. The International Red Cross in the past has been able to supervise and make certain that food furnished under these conditions does not reach the enemy, nor help the enemy.

I most sincerely plead with you, my colleagues, to assist in the early passage of my bill, or any other bill that will give aid and relief to Europe's helpless children.

I include as a part of my remarks an article dealing with this subject by Vera Britain entitled "One of These Little Ones":

"ONE OF THESE LITTLE ONES"

(By Vera Britain)

A short time ago I was asked by the editor of a children's magazine to act as judge in a competition for Britain's bonniest babies. Into the office of that magazine poured photographs of the loveliest children you could possibly imagine. Even when the office staff had selected 50 for me to examine out of the hundreds submitted, I felt utterly bewildered by the difficulty of choice. And these babies with straight backs, rounded limbs, dimpled cheeks, perfect teeth, and laughing eyes were the products of wartime Britain. Every one of them had been born since the war began. Fresh air, a wise routine, and, above all, a good diet regulated by the loving care of their mothers had made

them the charming little creatures that they were.

On the continent of Europe today there are millions of mothers as loving, as skillful, and as conscientious as the mothers of Britain. But with all the love in the world they cannot rear children who would win prizes in baby competitions. In thousands of homes scattered throughout Europe they cannot rear them at all, for today at least half a dozen nations are slowly dying of hunger. Ever since the summer of 1940, famine and diseases that follow in its wake have gradually tightened their grip upon Europe.

Under famine conditions the first to suffer are the youngest and weakest of the population. Babies die first, then young children and adolescents, then invalids and nursing and expectant mothers. Behind the curtain of wartime silence, thousands and perhaps millions of children and their mothers—all individuals who love and hope and suffer just as you and I do—are dropping exhausted by starvation into nameless graves.

This enormous famine, spread over so wide an area of civilized mankind, is one of the most terrible things that has ever happened in the history of the world. Owing to the tremendous increase of population during the past 150 years, its scale is infinitely greater than the comparable tragedies of the Thirty Years War, the Napoleonic Wars, and even the Great War of 1914.

Say these words over again to yourself, slowly and emphatically, and try to take in their meaning: "This is one of the most terrible things that has ever happened in the history of the world." And it is happening in our day and generation. We cannot escape from the fact that it is happening by trying to put it out of our minds, nor can we, the citizens of a vast commonwealth and a still prosperous, well-fed country, absolve ourselves from the moral responsibility to do something about it.

This catastrophe is terrible, not only in terms of the thousands of innocent children who have died and will die. It is equally dreadful on account of the memories, the bitter grievances and resentments against us, which will go on from generation to generation. By Belgium, by France, by others of the worst-starved countries of Europe, we who think of ourselves as kindly and well-intentioned will be regarded, if we continue to stand aside, as cruel, selfish, and merciless. An American relief worker recently in France told me that again and again he had heard French people say, "We will help the British because we want them to win the war and get rid of Hitler. But we shall hate them forever for letting our children starve when they could have saved them."

This hatred will permanently poison the future relations between Britain and France, or Britain and Belgium, unless we make some effort to help. It will hamper post-war reconstruction beyond calculation, and postpone to an indefinite date the restoration of international friendship. Even a gesture of good will, however small and ineffective, would be better than nothing. Not food alone matters, but the spiritual grace with which it is offered. If the French, the Belgians, the Greeks, and all the rest believe that we are indifferent to their sufferings, if they feel that we do not care how many of their children starve to death so long as our own are strong and beautiful enough to win baby competitions, what else can we expect them to do but hate and distrust us so long as history is written and read?

GREECE

Conditions in Greece have been exceptionally bad because, according to the Greek Government publication, Greece Under Enemy Occupation, Greece was dependent upon imports for all essential foodstuffs. Her annual consumption of wheat was at least 1,200,000 tons, of which a third came from abroad in good years, and much more in bad. Meat, sugar, and rice were also imported on a large scale. All these imports came from overseas. According to Dr. Cawadias, chairman of the Greek Red Cross in London, overland communications were so difficult that "even in times of peace Greece never received food by this route."

Greece was at war with Italy from October 28, 1940. Therefore the autumn (1940) sowing was never completed, and the spring (1941) sowing was not even begun. During the war with Italy, Greece never had more than 2 weeks' food supply, and subsisted largely on shipments convoyed under British protection. The military land operations devastated the whole country. Roads, railways, bridges, viaducts, factories, and stores were methodically demolished by the retreating armies. Land communications broke down completely. At sea, Greek shipping suffered enormous losses. Every ship which survived, including all fishing craft, left Greek waters, so that no means of communication remained between the Greek mainland and the islands.

When the German Army occupied Greece at the end of April 1941, they seized foodstuffs and livestock, thereby aggravating an already disastrous situation. Thus it was that, during 1941, starvation came to Greece more quickly and in a more drastic form than to any other country. By the summer of that year conditions in Athens and the Piraeus, where the population had been swollen to over a million by refugees from the north, were already appalling. The same was true of some of the islands. Bread and meat virtually disappeared, and in some places people were reduced to eating dogs and cats. Children especially had begun to suffer horribly.

By December 1941 nearly 200 Greek men, women, and children were reported to be dying of starvation each day. There was no fish, no wheat, and no bread. At the beginning of 1942 the figure for deaths in Athens and the Piræus was given as 2,000 a day. The Evening Standard (January 28, 1942) reported that those who survived were so cold from the combined effects of hunger and the bitter winter that they even opened the graves and robbed the dead of their garments.

The first concession allowed to Greece was for the shipment of 50,000 tons of food, at the rate of 2,000 tons a fortnight, from Turkey. This was announced in the press on September 11, 1941. The relief was financed by subscription from Greeks in America, collected by the Vanderbilt Committee for Aid to Greece. The German and Italian Governments gave a safe conduct on condition that the ships sailed only in the daytime, and in addition Germany allowed some exports from Greece for exchange against Turkish foodstuffs. This food from Turkey fed 500,000 people daily, and is estimated to have saved 5 to 10 percent of the population of Athens and the Piræus from death.

At the beginning of March 1942 the Catholic press announced that further measures of food relief were being arranged by the Vatican, and later that month plans began for regular relief from Sweden. The possibility of shipments amounting to 15,000 tons a month, in addition to the relief from Turkey, was mentioned in Parliament on April 21, 1942. On December 17, 1942, Prince Carl, the Chairman of the Swedish Red Cross, stated that Swedish ships had so far carried to Greece 76,000 tons of Canadian wheat and 3,000 tons of other commodities, such as dried vegetables, milk powder, and medicines. A safe conduct was given for these shipments by the belligerents. The joint Swedish-Swiss Commission in Athens, with a Swedish chairman, now has a staff of 550, of whom 140 check and inspect the shops and soup kitchens in Athens which distribute the food. At various times, 600,000 Athenians have been fed in the soup kitchens.

In spite of these various small relief measures, Dr. Cawadias stated, at the end of last September that of the 300,000 children living in Athens and the Piraeus when Greece was attacked no less than 110,000 had already died of starvation, malnutrition, or epidemics. Those who still lived survived only as living skeletons, "literally creatures of skin and bone." Children were losing weight at an average rate of 2 pounds a month owing to the rapidly decreasing supply of milk. Milk-yielding livestock, lacking fodder, were being slaughtered for meat. A neutral observer described the conditions in some of the children's hospitals as Dante's Inferno. In one hospital the mortality rate was 88 percent. In another the wards were so overcrowded that each bed contained four famished children.

BELGIUM

Belgium, like Greece, is a small country, and a large-scale importer of food in peacetime. About 50 percent of the energy value of its food supplies comes from outside. Yet in Belgium's case there has been no attempt at relief in this war, much less any endeavor to imitate the magnificent work of the Commission for Relief in Belgium under Herbert Hoover, by which, between 1914 and 1918, the Belgian Nation was saved.

Up to the present, Greece alone, out of all occupied Europe, has been excepted from rigid and unrelenting blockade by the United Nations. The only food reaching Belgium from outside has come from Portugal, Spain, Sweden, and Switzerland. Since May 1941 this has amounted to about 20,000 tons of fish, flour, and oil, and 50 tons of dried milk. This has been distributed mainly to the poor. The country had no stocks when invaded by Germany, and since much of its soil was affected by actual warfare the harvests have been poor.

For Belgium, as for Greece, the Swedes have done their utmost, and a Swedish committee for the relief of Belgian children was formed in the autumn of 1941. An appeal, signed by the Archbishop of Sweden, by Prince Charles, brother of the late Queen Astrid of Belgium, and other prominent persons, brought contributions from the Swedish people of more than 500,000 kronor ($120,000). This money has been spent in Belgium by the committee, who state that the whole of the food purchased and sent to Belgium has gone directly to the relief of the children under the supervision of the Swedish Consul General in Belgium.

Even this assistance, which has been quite inadequate in scope, is on the verge of interruption, as the committee has come to the end of its funds, and the prospect of raising more money in Sweden is not encouraging. Last autumn the committee announced that the mortality among Belgian children is now appalling, conditions being infinitely worse than they were a year ago. Belgium, they say, will soon reach a level of starvation as bad as that of Greece, if not worse.

On December 7, 1942, the Bishop of Chichester wrote to the Times (London) to point out that, while young English children are receiving special rations of cod-liver oil and orange juice, young Belgian children are sick, listless, and dying through hunger. He inquired:

"Cannot the British Government permit the Belgian Government to use its own financial resources to send special rations of powdered milk and vitamins from America now to save the children of Belgium? These would be medical supplies in effect. A scheme has been prepared whereby shipping can be provided, and the International Red Cross would undertake the distribution of the very small amount required—only 2,000 tons a month—for saving children under 16, nursing

and expectant mothers, and invalids. It is little enough for which navicerts only are asked. Its arrival would offer no temptation for German plunder. When we are sending large quantities of food to our own prisoners (in Germany) without any interference by the Germans; when we are making it so easy for our own children to get their special rations if only their parents will take the trouble, can it be right to refuse?"

FRANCE

On January 14, 1943, the Times, in an article on "Control in north Africa," reported the fear of General Giraud that "unless military action is taken in time, starvation may come to the French before liberation."

We have first-hand knowledge of conditions in France from Dr. Howard E. Kerschner, recently director of relief for the American Friends Service Committee, who describes the French of southern France as "a nation slowly dying of hunger."

The famine there began when 5,000,000 refugees from the Low Countries, Luxemburg, and the north of France ate the food reserves during the summer of 1940. From this severe blow it has been impossible for the districts affected to recover, because over 1,250,000 Frenchmen are still prisoners of war, and farm animals have been killed in the fighting, eaten for food, or destroyed for lack of feed. Tools and fertilizers cannot be obtained, transportation has been reduced to 20 percent of normal, and there is so little seed available that in plowed fields in many parts of France nothing is grown.

During the past 2 winters the American Friends Service Committee has supplied extra food to 100,000 of the most needy children in the schools of unoccupied France. Its American members, and their staff of 140 well-trained non-American workers, have found the past year in France a year of deepened suffering. There has been less food, shabbier clothing, almost no heat, less transport, increasing ill-health, and hardships of all kinds. The infant death rate is now nearly twice what it was before the war. Tuberculosis is increasing, marriages are fewer, the number of births is greatly reduced, and the mortality among old and subnormal people has reached extraordinary proportions.

"Those who survive," Dr. Kerschner warns us in a letter published in the Sunday Times (London) on January 17, 1943, "will be dwarfed in body and warped in mind and personality." And in another letter he asks how reconstruction will be possible with these dwarfed bodies and twisted minds:

"Close study and long observation on the Continent convinces me that, in the interest of shortening the war and making reconstruction less difficult, we ought to save what is left of the children of the occupied countries."

The food and clothing which the Americans used for the French children did not come through the Allies' blockade, but was purchased in 1940 and early 1941 from central Europe, Turkey, Switzerland, Africa, and Asia. Since these stocks are exhausted, and no more can now be purchased, even the 100,000 children who have been fed must be abandoned to starvation unless the governments in London and Washington allow navicerts for the food to be brought from America. Dr. Kerschner makes a plea for these navicerts and assures us that—contrary to the belief of many British people—the Germans never interfered with the American relief work.

"We have never lost a mouthful of food. Neither have the small amounts which we have brought into France enabled the Germans to take any more of French food stocks. Up until last summer, at any rate, they were not taking from unoccupied France as much food as the terms of their armistice provided for—because they could not find it in sufficient quantity anywhere to make it profitable to take (i. e. it is economically unprofitable to scour a country picking up an egg here and a carrot there). The fact that we had a little food somewhere in a colony of children or were feeding a few children in some of the city schools did not make any greater accumulation of French food anywhere that they could seize. It only meant that these children were eating instead of starving."

OTHER COUNTRIES

Holland is stated by the Famine Relief Committee to be facing starvation this winter, because the country's capacity to produce food has been so much reduced. The occupying power robbed the country of 40 percent of its pre-war cattle, which were slaughtered or taken alive to Germany. Only a small percentage of pigs and poultry was saved. In 1941 the death rate of children under 4 increased by 31 percent from the 1939 figure. During the summer of 1942 an examination of school children at Rotterdam showed that only 36 percent were getting enough vitamins to prevent rickets. The coming months will mean real starvation for the Dutch people, and the children of Holland will be irreparably weakened unless vitamins and concentrated food can be sent in without delay.

Norway, Denmark, and Finland are in a similar position to Holland. On March 12, 1942, the Evening Standard reported that Mr. John P. Thelen, an American Red Cross representative, had stated while passing through London on his way back to the United States of America to report that in eastern Karelia 70 percent of the children under 7 were dying of starvation. The food shortage was acute throughout Finland. Even black bread and potatoes were scarce, and meat virtually unobtainable. Mr. Thelen had paid $5 for a rabbit. He explained that after the invasion of Russia all food and medical supplies for Finland were stopped. As America is not at war with Finland, he supervised the distribution of the existing stocks, and then remained as an observer.

POLAND, OCCUPIED RUSSIA, YUGOSLAVIA

At a recent gathering in London, Dr. Raymond Gautier stated that in these three countries the situation is probably worse than anywhere else, but very little is known. We have only recently learned that over a million people died in Leningrad during the siege. In Yugoslavia the southern border districts certainly are suffering acutely.

Of Poland, a report issued in 1941 by the Ministry of Information stated that instead of the daily 2,400 calories necessary to maintain a healthy existence the food rations allowed to the Poles do not amount to more than 680 calories daily, and those to the Jews only 400. It was stated that in Lwow the Germans received 4½ pounds of bread per week, the Poles 2½, and the Jews little more than 1 pound. As a result of this policy, the Poles and the Jews are dying of starvation, and in some parts of the country have been reduced to boiling down the bark of trees and the skins of dead animals.

Neither time nor remorse can restore thousands of dead children to life, nor within any measurable period give back vitality to the nation which has lost them, nor will aeons of time remove the blot on our own nation for the self-interest or indifference which permits this holocaust of youth.

One of the loveliest passages in the Bible is that from Isaiah, chapter 43, verse 2: "When thou passest through the waters I will be with thee; and through the rivers, they shall not overflow thee; when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee."

That divine promise must have comforted millions of sick and grief-stricken souls through all the ages of history. Cannot we strive to get somewhere near the solicitude of that God in whose image we are made; to let these suffering children and their parents feel that in their dark hour we are with them in spirit? Even more important than the actual food we send them is their knowledge that we care—that we see their predicament as they see it—thinking not of children in categories or millions but of an individual child dear to his parents; of "one of these little ones" beloved by God.

THE IMMEDIATE TASK

Now receiving general support, says Howard Kerschner, is the limited feeding project for most needy children, women, and unemployed of Norway, Holland, Belgium, and France.

Approximate number to be fed:	
Norway	1,000,000
Holland	2,000,000
Belgium	2,000,000
France	5,000,000
Amount each person would receive daily:	*Grams*
Cereals	100
Fats	20
Meat	30
Milk (powdered or condensed)	20
Tonnage required each month:	
Cereals	30,000
Fats	6,000
Meat	9,000
Milk	6,000
Total	51,000

Proposed Amendment of Section 107 (b)

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. McGRANERY. Mr. Speaker, in order to correct what I consider a gross inequity in the revenue law I propose on the reconvening of the Congress to present to the Committee on Ways and Means the following amendment:

In place of the last sentence of section 107 (b) insert the following:

"If in any period of 12 consecutive months, whether or not such period constitutes 1 or more taxable years, an individual receives gross income from a particular artistic work or invention by him, which is not less than 80 percent of the gross income in respect of such artistic work or invention received in such period, plus the gross income therefrom received previous to such period, and plus the gross income therefrom received in the 12 months immediately succeeding the close of such period, the tax attributable to the part of such gross income received in such period, which is not taxable as gain from the sale or exchange of the capital asset held for more than 6 months, shall not be greater than the aggregate of the taxes attributable to such part had it been received ratably during the entire time from the beginning to the completion of such composition or invention."

In place of (b) reading:

"The amendment made by subsection (a) shall be applicable to taxable years beginning after December 31, 1940, but with respect to a taxable year beginning after December 31, 1940, and not beginning after December 31, 1941, the period specified in such subsection

shall be 60 months in lieu of 36 months, and the percentage specified in such subsection shall be 75 percent in lieu of 80 percent."

Insert the following:

"The amendment made by subsection (a) shall be applicable to taxable years beginning after December 31, 1939, but with respect to a taxable year beginning after December 31, 1939, and not beginning after December 31, 1941, the period specified in such subsection shall be 60 months in lieu of 36 months, and the percentage specified in such subsection shall be 75 percent in lieu of 80 percent."

Re Lt. Col. Andres Soriano

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. COFFEE. Mr. Speaker, the other day I made a speech discussing the Falange movement, with particular reference to recent activities in the Western Hemisphere. In the course of that speech I mistakenly made unfortunate references to Lt. Col. Andres Soriano, Secretary of Finance, ad interim, of the Philippine Government in exile. I deeply regret having cast any reflection upon the patriotism, loyalty to the United Nations and to the cause of Philippine independence of Señor Soriano. I wish now to make such amends as I can by pointing out that Col. Andres Soriano served with distinction in the defense of the Bataan Peninsula in actual combat service at the fighting front, that so outstanding was his service that President Manuel Quezon recognized and honored Colonel Soriano for his bravery and distinguished service, and that also that fearless American general, Douglas MacArthur, decorated Colonel Soriano with the Silver Star for gallantry in action; that Secretary of War Henry Stimson has stated over his own signature that he is impressed with the loyalty of Colonel Soriano and says further "that he is well acquainted with the patriotic record in the Philippine Army of Lieutenant Colonel Soriano and that no suspicion or question of loyalty of Lieutenant Colonel Soriano is borne out by the facts, but, on the other hand, Colonel Soriano has in every way justified the warm commendation and praise of the highest officials of the United States Army and Navy as well as of the Philippine government." Admiral E. J. King, commander in chief of the United States Fleet, over his own signature, has likewise certified to the patriotism, loyalty, and worthiness of Lieutenant Colonel Soriano.

I deeply regret, I repeat, Mr. Speaker, that through a misunderstanding I have said anything heretofore which cast reflection upon the character, patriotism, and loyalty of this distinguished member of the Philippine government in exile, and I wish, so far as I can, to make amends by this statement. I do not want in any way to be a part, wittingly, to any reflection upon brave men who have, by actual combat service subsequent to Pearl Harbor, demonstrated in the most effective way of which man is capable his devotion to the cause of the United Nations and his desire to secure complete independence for the Philippine Islands.

I have learned that Lt. Col. Andres Soriano has a son, now aged 18, who has enlisted in the Coast Guard and is a member of the enlisted personnel of that great and important branch of the Navy Department of the United States. This adds further support to the character and devotion to the cause of the United Nations of the Soriano family. I herewith express to my warm friend, MIKE ELIZALDE, Commissioner in the Congress of the United States representing the Philippine Islands, my regret and sorrow that I have caused to him and to his associates any embarrassment in connection with the mistaken charges or reflections upon Colonel Soriano which I have heretofore made, and I wish herewith to assure him, President Quezon, and the distinguished cabinet of the Philippine government in exile, and through them to the brave Philippine people, my sorrow at having cast any reflection upon Colonel Soriano. I am proud to make this statement and desire now to pay my tribute to Colonel Soriano for having so bravely served his Philippine people and government in actual combat service in the Philippines and for having so distinguished himself in such action.

The Retirement From Congress of the Honorable Jack Nichols

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. O'NEAL. Mr. Speaker, the Honorable Jack Nichols resigned from Congress on July 3, 1943, and throughout the membership of the House of Representatives there were sincere expressions of deep regret that he would not be one of us after that date. Men come and go in Congress and some leave little impression upon their colleagues. The personality of Jack Nichols is such that his retirement meant a loss to all of his colleagues. I have been very fortunate in that Jack Nichols and I entered Congress together in 1935. Our contacts have been many and I have learned to have not only affection for him but a high regard for his character, his fearlessness, and his ability. He should succeed magnificently in any work which attracts his interest. His new associates will be fortunate in having his ability and his fine personality as an asset in the conduct of their business.

He leaves Congress with the good will of men in every part of the United States, and it will be pleasing to any Member of Congress to have Jack Nichols walk into his office at any time. Our best wishes are always with him.

Address of Hon. Leon H. Gavin, of Pennsylvania, Before Annual Meeting of Pennsylvania Grade Crude Oil Association

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the annual meeting of the Pennsylvania Grade Crude Oil Association, held in Pittsburgh, Pa., June 25, 1943:

Permit me to express my sincere thanks to your association for this opportunity to appear at your annual meeting. A great many of you I know, and know well, because I have lived in the heart of the Pennsylvania oil country most of my life, and I believe that I have a clear picture of what this great industry means to our region.

Your problems and their solution are important because you are helping to win the war just as the boys who are flying the planes, manning the ships, and driving the tanks and jeeps.

Pennsylvania grade crude oil is greatly needed—needed and needed badly—to lubricate all of the mechanized equipment to fight the war and I am confident that the producers of the region know how to secure this oil. They are descendants of the men who started the petroleum industry. They have never stopped learning how to improve their skill. However, they are not skilled in combating an element who are seemingly determined to obstruct the production of oil.

The situation in Washington is very critical and gives signs at this time of causing the oil men to regard the New Deal as a picnic by comparison. The New Deal was an effort to cushion the shock caused by what looked like too much of everything. The present situation is an effort to solve the problems caused by what looks like too little of almost anything; and the bureaucratic planners, it becomes increasingly evident, certainly are playing havoc with the economic life and American system of business in their futile efforts to solve the problems. And I say that a terrible day of judgment awaits those who willfully interfere with the productions of this Nation, whether it be in the production of food, equipment, or oil.

We are all concerned over the refusal on the part of the Office of Price Administration to grant a price increase as an incentive to secure additional crude to meet the demands in this all-out effort of America to win the war.

The next great bottleneck in America will be oil.

Let us assume that the Petroleum Administration for War is primarily interested in producing the materials essential to winning the war. Let us, on the other hand, assume that the Office of Price Administration is concerned in restricting prices so as to prevent injurious inflation. We recognize that both have their places in the picture. However, I think it will be agreed that there has been no inflation in the price of crude oil, heretofore, and the small amount of increase in refined products that would be required to take care of an average of 50 to 75 cents a barrel would not produce dangerous inflation.

The first consideration in the entire picture is the winning of the war. This is of primary importance, because without oil we cannot operate the mechanized equipment to fight the war.

Facts, figures, and briefs have been filed by the various associations and others in their efforts to be of assistance and to substantiate their contentions that a price increase is necessary to increase production.

The Petroleum Administrator for War has made very definite recommendations, on April 7 and also forcibly in his letter on June 10. It is a critical situation and it will be a terrible catastrophe and responsibility I would not care to be charged with, if within a few months from now by reason of the short-sighted policy of the O. P. A., we find ourselves without sufficient oil to fully man the machines of war.

We in the Congress have been paying some attention to national oil problems for some little time, and a price increase necessary for Pennsylvania oil applies to the rest of the oil-producing country. What shall we do? Shall we go on dividing up what is left, rationing in ever smaller bits, while the professorial bureaucrats debate endlessly their theories on how to proceed in a dream world? Or shall we return to the world of reality that has always worked when the ingenuity of man was allowed to function in any lawful manner that he desired?

At the western edge of the region that is most desperately pressed for petroleum supplies there are 500,000,000 barrels of crude oil waiting to be coaxed from reluctant sands. The process of coaxing is well understood by you. But it costs more money than you can command. The East needs the additional supply of gasoline and fuel oil that can be obtained by increased crude oil production. The Army, the Navy, and the Air Corps need all the Pennsylvania crude lubricants they can get, and what is true of your situation is true of the oil producing industry all over the land.

All evidence points to the fact of an actual shortage of crude oil in the not too distant future. This has been said by all those who are competent to testify to conditions. The Petroleum Administrator for War has repeatedly sounded the alarm and has recommended certain methods to stimulate production—a price increase on oil. The Office of Price Administration alone refuses to recognize the conditions. That agency has been the wonderland department of this war effort all the way.

It has a curious collection of half-baked, impractical visionaries who never did know the score about anything, mixed up with some who are in there to put over a theory of "production for use and not for profit." A theory that in recent years is the theme song of the bureaucracy.

Gentleman, the shackles on productive effort should not be permitted to continue. The Congress has always withstood the shocks and gotten rid of evils that crept in because the people asserted their basic authority and today the Congress is insisting on corrections. This was evidenced in the manner we handled the Office of Price Administration in the appropriation bills in the House a week ago today. The Congress is responsive to what the people want. On our problems, and those of the rest of the people, the Congress will first demand a solution at the hands of those who have been given temporary authority which Congress was told was necessary to the conduct of the war. If the solutions are not reached in that way, the legislative power will be applied as it has been in the recent appropriation bills and a number of other cases within the year.

There has been too much delay in our productive effort. We, in the Congress, think that we can effect some remedies very soon and we are going to do something about it.

I do feel that the oil industry should pay more attention to their representatives in Congress. Today we, in this Nation, are engaged, as you know, in this all-out war effort. Everybody is concerned about food, wheat, corn, cotton, soybeans, peanuts, lambs, sheep, butter, silver, zinc, copper—but little has been said in the Congress up until recent weeks about the importance of having sufficient quantities of oil to meet the needs and demands of this Nation of ours, now fighting on 17 different fronts, and to meet the demands of our allies, who are depending upon us to furnish the oil to bring this war to a rapid and early conclusion.

This is no time for bickering over price with American boys making the supreme sacrifice every day, but a time for action to build up our inventories and stock piles to meet the demands over the months that lie ahead.

It seems bureaucracy is riding high. Producers of oil throughout the country have been on a starvation diet for the past 10 years. The price of oil has been static with but few exceptions since 1941. No one questions that material costs have greatly increased, that labor costs have gone up several hundred percent in some instances, that manpower becomes scarcer every day, that materials have become scarcer and that production is rapidly declining, that stocks and reserves are rapidly being depleted, no new discoveries are being made, and little or no exploration is being carried on, and we know that we are using more oil than we are producing.

Last year we produced 1,390,000,000 barrels of oil and used 1,400,000,000 barrels of oil, and everything indicates that no new discoveries are being made. The consumption has steadily risen and it becomes evident we need a price increase to induce producers and wildcatters to find new and prolific oil fields, if we want more oil, and we have got to have it or there is a possibility that we may lose the war, as well as the peace that follows.

The one way to get new oil—more oil—is to pay the man who goes out after it a sufficient price to at least pay the lifting costs and make it a profitable venture. The oilmen are the finest group of patriotic Americans that ever lived, and all they ask is a chance to break even.

I am of the opinion that the bureaucrats are determined to hold the line, ignore the oilmen, ignore the Congress, and that little or no attention will be given to the requests and demands made upon them. Their crackpot philosophy of production for use and not for profit becomes more apparent every day, and we all know that back of every successful enterprise is the profit motive, the American way—the system that built America.

If a person can't break even or make a dollar, why sink holes in the earth to find oil?

Permit me to state that when crude prices are increased, new fields will be opened up, old fields rehabilitated, and production will rapidly be increased. When there is no profit there is no incentive for anyone to secure more oil, and the producer doesn't have the money to carry on, even if he wanted to for patriotic reasons. So if this situation continues, there is no question that we are heading for a crisis in this country unless we secure the oil to meet the war demands.

All of these facts have been brought to the attention of the power-drunk bureaucrats, but they say that every war has its casualties, and the oil producer happens to be one of the casualties in the petroleum industry. However, I want to state to the bureaucrats that even in war we look after the casualties by giving them first aid and attention when they are badly hit, wherever they may be. But the economic casualties mean little or nothing to those who never built a business or met a pay roll but who are particularly ambitious to recast the economic structure of America.

During recent months I watched the usurping of power by executive branches of our Government and the creation of agencies which suddenly appeared with a blaring of trumpets and none of which are worth a damn, all of whom are contributing to the breaking down of the entire structure.

I cannot understand why the oil industry has not appealed to the Congress long before they have to check and correct many of these cockeyed programs that have been carried on in the name of emergency and war.

I realize as well as you that in time of war we must proceed as directly and efficiently as possible. A crying need for such action makes it imperative. You understand that it is the duty and obligation of everyone to do what he can and we owe responsibility to our Government and our country. It is our duty to speak up and not accept the crackpot theories that have been choked down the throats of the American people with little or no objection over the past several years for fear we may offend some of these half-wits.

There is approximately a time lag of 9 months to a year between increased drilling and increased production. Nine months to a year—with this country engaged in the most crucial war in its history. But in spite of all of our efforts and the efforts of those Members in Congress several impractical theorists have been able to hold up a price increase on oil to increase our production which may eventually cost the lives of thousands of American boys. There is going to be a terrible day of reckoning on this issue unless we secure action at an early date.

There seems to be within the inner circle a "political and economic planning group" who have blueprinted and charted a set-up to recast every branch and department of the Government to bring about the regimentation of the economic life of our Nation.

I am firmly of the opinion that they have determined to force upon our people a program for the regimentation of agriculture, industry, finance, and labor into a socialistic state operated by a system that might be termed "administrative democracy."

I have concluded that they aim at the elimination and destruction of the middleman, the small businessman, the oil producer, the white-collar class, whom I believe you will agree with me are the backbone of our American life. I feel with a certainty they intend to bypass and eliminate the Congress in event enough support and strength appears on the horizon to do the job. It is quite evident over the past several years that they have bypassed the Congress and will continue to do so unless the Congress reasserts its prerogatives.

There is a question in their minds at times as to the constitutionality of their acts; nevertheless they take a chance to see if they can indoctrinate, as they call it, their socialistic program, and it must be said they have been eminently successful up until recently, when Congress reasserted its position and determination to regain those powers that have been delegated to Congress to enact and legislate laws concerning the welfare of the people of this Nation. The professors, I understand, are outraged and indignant that we have the audacity to question their philosophy of "production for use and not for profit." Their arrogant manner evidences this fact. These White House pets have but one plan, and that plan is a program of "producer to consumer." This can only be accomplished by the regimentation of all of our people, and the economic life of America.

Now it is about time that this crackpot element are eliminated from control of the various departments of the Government.

These impractical visionaries have been coddled about long enough, and why we tolerate them is beyond my powers of comprehension. If we were running a business and there was some particular department head who was conceiving a lot of cockeyed formulas that were particularly harmful for the conduct and operation of the business and these ideas were causing confusion, confliction, and chaos, we would immediately proceed to fire the individual responsible for the disturbance, but not so with the Government.

It seems as though the Members of Congress are hog-tied in their efforts to rid the Government of these saboteurs of our American system of free enterprise. Although it may appear that the professors are visionary and impractical and they do not have any conception of what they are doing or where they are going, let me tell you they may have a very definite purpose, because the more confusion, confliction, and chaos they can cause and the more crackpot it appears, the quicker they will realize their ambitions to socialize American business. They are getting results, and that is tearing the heart out of the economic life of the Nation.

This group has tried everything over the past 10 years. Starting off with the National Recovery Administration, the killing off of young hogs for fertilizer, they distribute the fertilizer to the farmer, this to increase the yield in production, to plow it under. They have hired thousands of new people until the Government pay rolls are cluttered up to 3,000,000 civilian employees. They open up local offices, district offices, county offices, and they plan long into the night with a lot of crackpot ideas to break down the American way.

They have held rallies, folk dances, Maypole dances, and parties, youth movements, plowed under and destroyed our crops, planned scarcity, planned utopias, until they have gotten the country into a damnable mess. I feel the Office of Price Administration is their final big push to blitzkrieg our American way of life and freedom. We stand idly by aghast at their innovations, while they continually insist on cramming their incentive programs down the throats of the American farmers, the oil producers, and businessmen who have steadfastly refused to accept them.

They have had no practical experiences to justify their being placed in control as economic czars over the American people. They did not come up the hard way. They do not know what it is to establish a business and employ people. They do not know what it is to get the money to meet a pay roll or to buy raw materials, but they are brilliant conversationalists with glib tongues and symphonies of words, that seem to make an impression on certain people in inner circles of our national life who permit them to continue these cockeyed formulas that are putting our people out of business. All this with a war going on with good American boys being sacrificed every day on the seas, under the seas, in the air, and on land.

They contend that the American way is more or less the horse and buggy stuff that the methods are old and outmoded, and our minds are getting a little foggy and that it is better for us to get out of the way for the new school of thought and let these visionary, professorial bureaucrats take over to try out their pet schemes which is costing the American taxpayer millions of dollars and destroying our free system of industrial enterprise and impeding the war effort on the home front.

Everything lately is a British design. I was of the opinion that we had declared our independence on July 4, 1776, but a great many people in the Government seem desirous of patterning after the British. Why is it necessary for the Office of Price Administration to put in charge, working in the background, a man like this Israel Moses Seiff who headed up the political and economic planners in England with their document "Freedom and Planning," to take charge as the chief consultant and general counsel of the Office of Price Administration and advisor to War Information? What's the matter with getting some sound American with horse sense?

Here we have one of the important personages from England acting in the background as the spearhead of a movement to regiment the people of America.

It is about time that the Congress of the United States secures action and removes from our Federal Government that element who have but one thought in mind, and that is to recast every aspect of our economic life to regiment our people into some totalitarian form of government.

They are out to crush the people who are responsible for building up this Nation of ours and this American system which is strictly an American-made product that has stood the test of 150 years of trial and experiment under changing conditions, and, my friends, let me tell you, created more wealth and distributed it more widely, wisely, and equitably than any other system in the world, making America the land of opportunity because the American system gives everybody a chance. A ladder which anyone may climb to success if he has the ability and energy and willingness and resourcefulness to use it. There are no barriers in America, unless the Government becomes one, to stop anyone who is ambitious to succeed. This American system is not blueprinted by any authorities, limitations, orders, directives, or decrees. Anyone in America can strike out in any field of effort he chooses and the reward comes to him as his efforts earn it, so my remarks today are for the preservation of a system that I am determined shall be retained.

We have all heard about planned economy. We have all heard of planned scarcity, and over the past 10 years these creators and conceivers of new ideas have been concocting more formulas than the American business system can digest, with the result that confusion, confliction, and chaos exist today, due to Government regulations, restrictions, and strangulations—a condition that has brought the farmers, the merchants, the oil producers, and the American business system to a point of utter exhaustion, and so today the people of America are lifting their voices to the Congress to eliminate that element from the various departments of our Federal Government who are sabotaging this American system—men who have built America to such a strength that we have become the envy and the leader of all the world. We accept this challenge hurled at us and we are going to get rid of them.

When our backs were up against the wall after Pearl Harbor, who did we turn to, to do a job that had to be done if we were to exist? We did not turn to the planning bureaucrats. We turned to the American industry. They took off their coats and secured unbelievable results—results that have earned for them the recognition and thanks of the people of the world. They turned out the foodstuffs, ships, tanks, guns, planes, and mechanized equipment that gave the world a new inspiration to carry on. Several months ago we were sick and disheartened, worried over what might happen. Now, today, we know we are going to win the war, and it is just a question of time, so now the social reform boys are reasserting themselves and attempting to take over the American system and operate it as they feel it should be operated.

However, we, too, are thinking for the future. And if this country of ours is to remain a democracy and not degenerate into a socialized bureaucracy we, then, must maintain at all costs the American business system that built America; and let us not be driven out by the power-drunk bureaucrats who are introducing under the guise of a wartime contribution socialistic reforms for the regimentation of our people.

These economists and visionaries have for years been teaching in schools to a lot of kiddies who, no doubt, sit mystified by the theories, charts, graphs, and plans they advance.

Now the professors are accustomed to have the pupil accept their philosophy without argument and that's that—but when he runs into a practical group of businessmen and they scorn his crackpot stuff he becomes indignant, enraged, and demands action, issues orders and directives that must be complied with. Well, thank God, this is still a free country.

He decrees that these half-baked ideas be accepted although there are no laws on the books compelling anyone to accept any of these plans and they should be rejected as these planners have overstepped their authority. However, they still insist that the American business system accept them, even though the system recognizes that it is impossible to accept them because it would destroy that which they represent and, therefore, they refuse to accept them.

So the professors by directive orders endeavor to push these measures through and in many instances have gotten away with it. However, the mandate delivered by the people on November 3, 1942, insists that the planning bureaucrats who are stifling initiative, eliminating competition, and destroying trade be no longer permitted to ride herd on the American businessman and the American people.

However, my friends, I think this past few years have been boom years for the professional bureaucrats. For years they have been playing around with books, and now a generous Government comes along and gives them the money and the opportunity they have dreamed of—but never hoped to realize—and that is to experiment with their ideas and plans and charts on 130,000,000 American guinea pigs, so they try a little of this and a little of that, and sit back and gloat and glee over the results obtained. If the results are bad and they cost the American taxpayer many millions of dollars, and they fail, they laugh it off and shrug their shoulders and say, "Oh, well, they have at least tried what we have been dreaming of for years and years and it did not work, so we will try something else."

Under this American system we have proven that the American businessman has blazed more new industrial trails, developed more new enterprise than any other system in any other country in the world. Our workers today receive a higher wage and they can buy more for their money than in any other country and under our American system the thrifty and provident have been able to build up insurance to protect them and their dependents which is larger than all the systems of the other countries altogether. This year the American people will pay $4,450,000,000 in insurance premiums. You will have to admit, my friends, that there is no system better than the one in existence here today.

Do not misunderstand me; I admit, of course, that the Government is necessary. The Government should regulate and not destroy. The Government should preserve our freedom of initiative and freedom of effort and not be harassing, haunting, and destroying with restricting regulations.

What does our Nation symbolize today? If it no longer typifies the aspirations of freedmen in this day of dictatorships, if righteous individualism, if the dynamic of in-

itiative must be suppressed by the solace of a static society, if the love of liberty must be surrendered for the security of slavery, if the will to do and the courage to dare no longer exemplifiy the spirit of American manhood and womanhood, if, in a word, American representative democracy has failed in its mission at home and abroad, then the flag must needs be lowered and the hopes of mankind for liberty surrendered.

However, my friends, such is not the case. We have been smug too long. We are just starting to fight back against that element who would have us lower the flag for regimentation of our national life. We are going to rid the Government of this group of classroom guerillas who would destroy us.

You either stand with democracy or you stand with bureaucracy, and you either are going to stand or fall, one or the other. There is not room enough in America for both. This great country has given you what you have. The American business system has opened the door of opportunity for all of us and we want that same opportunity to go over to the generation of tomorrow, the opportunity of freedom of thought, freedom of operation, the liberty to create and do things that build for a great America. We are today here as representatives of the people to protect that American system, so let us have faith in this system, which has done so much to make our country great.

Our fathers fought for this freedom—for this opportunity. We fought for it in World War No. 1. We are fighting for it today, in World War No. 2, and as our fathers passed this freedom on to us I sincerely hope that we will have the courage of our convictions to carry on this fight against this element who seek to regiment the peoples of America through some bureaucratic-controlled and operated form of government. Our compensation for our work will be the satisfaction of passing on this heritage to our boys and girls of tomorrow having played our part to protect the American way of life.

I know that the Pennsylvania oil industry has and will continue to do its share. I believe that your situation not only must be improved, but that it will be.

Some day, and I hope in the near future, this war will be over and we will be on our knees with profound thanks to the God who gave us great victories and to the American boys who paid with their lives.

To those men coming back to their homes and communities, let us on the home front guard well the rights and freedoms for which they fought. You have a duty to those who gave their lives and their all to fight for you—to keep intact these chances to engage in free and unhampered businesses and professions. Let us not lose the fight on the home front.

Our system may not be perfect but we haven't done so bad when we look at the other nations in this world of ours.

In closing I want to say that we in Congress realize the important part the great petroleum industry plays in our country both in time of war and time of peace.

No industry has made greater contributions to the prosecution of the war or the development of our national life. Better gasoline, better lubricants, and a host of new products will be the lot of our country as the result of your untiring and ceaseless efforts and, bear this in mind, made possible because of our system of free enterprise and opportunity, and in spite of what must have seemed at times discouraging, hopeless, and unintelligent governmental control.

The Pennsylvania oil industry is not only the oldest but its preservation is of vital importance to every man, woman, and child in the region. I doubt if very many of our people who unknowingly depend upon its economic structure realize that fact. Your job that lies ahead is not an easy one. But I am confident that if you will all work together, cooperate with the Congress, and retain the unity which has made you strong you will emerge better organized than ever before in your glorious history.

I want you to know that we in Congress are sympathetic and understanding and we are determined that this system of free enterprise again be given an opportunity to proceed under its own power unhampered by irresponsible, thoughtless, bureaucratic planners. So let us here tonight rededicate ourselves to the prosecution of the war, the preservation of a free and independent oil business, and the preservation of our American system of free enterprise.

Paid Newspaper Advertising in Aid of Stabilization Program and War Effort

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 8 (legislative day of Monday, May 24), 1943

Mr. CLARK of Missouri. Mr. President, I had hoped to have the opportunity before the end of the session to discuss at some length the bill, S. 1073, introduced by the Senator from Alabama [Mr. BANKHEAD], authorizing and directing certain aid in the stabilization program and war effort by paid newspaper advertising with special provision that a suitable amount of this advertising be allocated to rural newspapers. I think that this is an extremely meritorious bill. I think that the newspapers of the United States have contributed greatly to the war effort by their free insertion of releases from various Government departments and of advertising in behalf of the Government's financial program. Some of the larger newspapers have largely been able to recompense themselves through the insertion of paid advertising by their own large advertisers in behalf of the various war activities. In case of many of the smaller newspapers there has been no recompense whatever and this work has been done at a very heavy financial sacrifice. Every manufacturer of munitions, every purveyor of any other kind of war supplies expects to be not only paid for what he furnishes but a reasonable profit on top of it. I see no reason why the newspapers should not equally be paid for the only thing that they have to sell—that is, their advertising space—when it is devoted to the Government's interest. It is ridiculous to say that this would be a subsidy or would lead to Government control of the press. All newspapers are treated alike, paid the ordinary rates of advertising, and could be in no sense a subsidy and in no degree whatever lead to Government control of the press.

At this late hour of the session I do not desire to detain the Senate by inserting the matter in great detail. I do wish at this time to ask the unanimous consent for the insertion in the Appendix of the RECORD of a summary of newspaper sentiment in Missouri prepared by Mr. H. R. Long, the very able manager of the Missouri Press Association, with certain articles attached thereto.

I may say, Mr. President, that this matter was called to my attention early in 1943 by Col. W. B. McGregor, editor of the Budget Gazette, Brookfield, Mo. At that time I took the matter up with Mr. Archibald MacLeish, who, at that time, was the head of the interdepartmental committee having to do with such matters.

I further ask unanimous consent that the correspondence between Col. W. B. McGregor, Mr. MacLeish, and myself be included.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MISSOURI PRESS ASSOCIATION,
Columbia, Mo., May 8, 1943.

Senator BENNETT CHAMP CLARK,
United States Senate,
Washington, D. C.

DEAR SENATOR CLARK: You will not be surprised at the interest of the Missouri Press Association in the current proposals, including the bill introduced this week by Senator BANKHEAD, to provide Federal funds for the purchase of newspaper advertising space to be used by the Government in advertising the war effort. Perhaps you will be surprised, however, to learn that instead of clamoring irresponsibly in the manner typical of special interest groups, our organization seeks only to obtain fair consideration to the problem.

With that in mind, I would like to report to you the results of an opinion poll conducted among members of the Missouri Press Association in the effort to verify reports that the publishers themselves are opposed to accepting the Federal Government as an advertiser. We received from 233 newspaper publishers expressions of opinion concerning the following statement:

"The United States Government should purchase advertising space in the newspapers, both dailies and weeklies, for the purpose of informing civilians of their duties in connection with the war effort."

The answers were tabulated as follows:

Strongly approve	152
Approve	60
Undecided	3
Disapprove	11
Strongly disapprove	7

The enclosed copy of a letter from Cowgill Blair, general manager of the Joplin Globe Publishing Co., presents one of the best statements on the case that I have found. I think you may also be interested in the enclosed digest of statements from other Missouri publishers.

From these comments I have been able to glean the following points:

1. The Federal Government is using freely of newspaper advertising space, the only commodity which newspapers have for sale.

2. Newspaper publishers want no subsidy as such.

3. However, if their space is worth to the Federal Government the same rate paid by commercial advertisers, newspaper publishers feel that theirs should not be the only industry expected to serve without pay.

4. Government advertising should be placed on a business basis through commercial channels and not as a plum to be awarded as patronage.

5. The papers are few and far between that are willing to sell their policies with their advertising space.

6. That if the purchase of advertising by the Federal Government amounts to a threat to the freedom of the press, Congress instead of voting money for advertising space should forbid the departments and agencies to submit for publication in the newspapers material of any kind.

One of the interesting sidelights on this question is that the Federal Government is an old-time buyer of newspaper space and that in all probability the very first advertising campaign of truly national proportions was undertaken by the Treasury Department during the War between the States. At first the war-loan issues of that day found little favor with the public. The bond issue of 1862 was a failure until Jay Cooke, a Philadelphia banker, was called in by Salmon P. Chase, then Secretary of the Treasury, to handle the campaign. Cooke did the job successfully—by means of advertising.

In 1864 when Secretary Chase was succeeded by William P. Fessenden, bond sales had fallen off and the Government again needed money badly. Cooke was called back. This time he selected Peaslee & Co., an advertising agency operated by L. F. Shuttuck, to handle the war-loan advertising. Advertisements were placed in every known newspaper in the Union, regardless of size. Altogether war-loan advertising appeared in four or five thousand newspapers—and was paid for by the Government at the newspapers' regular rates. Fessenden had, with difficulty, sold $133,000,000 in bonds in 7 months; Cooke, and the newspapers, in less than 6 months sold $600,000,000 worth.

If the use of paid Government advertising in 1864 caused the newspapers to sell out to the bureaucracy of that day, the records fail to show it. In fact the robust, outspoken policies so characteristic of the newspapers of the reconstruction period definitely were not in keeping with the behavior to be expected of a kept press.

The Missouri Press Association already has had experience in handling successfully advertising paid for out of Government funds. For several years our office has furnished clearing house service for the Missouri State Fair, which is operated as you know by the State of Missouri. We handled State orders and State money for Democrat and Republican administrations alike to the satisfaction of the advertiser and of our members which include newspapers affiliated with both major parties. So far as I know this advertising has never been considered political patronage and so far as I know, there has been no effort to control the policies of publishers through the placing of the thousands of dollars worth of business placed in the newspapers for this account.

I am not aware of your attitude toward this problem. I am sure, however, that you would not be one to deny the newspapers just compensation for their services, provided you were convinced that this compensation in the form of paid advertising did not open the way for serious consequences. I do not think it would be fair to ask you to commit yourself to support just any measure that would appropriate money for newspaper advertising. But I do not believe it is too much to urge you to study the proposals sympathetically and to consult with the publishers of this State in the hope of arriving at a sound basis for rendering just payment for the use of their commodity. On this basis an expression of your view is solicited.

With kindest best wishes, I am,

Very truly yours,

H. R. LONG,

Manager, Missouri Press Association, Inc.

COMMENTS FROM NEWSPAPERS

There is no reason why Government advertising should be any more of a subsidy than any other advertising. (Robert W. Van Pelt, Salem Post.)

Have urged such a program for several months, feeling it was unfair to us to have to donate so much of our space. The publishers do not have to accept the advertising. (B. L. Fishback, Perry Enterprise.)

Talk of subsidy is all bosh as far as I am concerned. (J. Boulton Settle, New Franklin News.)

Such advertising would not be subsidizing the press. I carry regular advertising for five grocers—neither of them figure they have my columns subsidized. (Ernest L. Hubbard, Seneca News-Dispatch.)

Strongly approve on same terms as other advertising is handled, but we intend to be independent. (B. J. Bless, Jr., Weston Chronicle.)

I mean pay for all official announcements only. (Corley L. Overall, Campbell Citizen.)

The Government pays for everything else, why not advertising? (W. R. Painter, Carrollton Democrat.)

The compiling of copy and making of the mats are paid for. We should not be asked to beg or operate a racket. (E. H. Shepherd, Eldon Advertiser.)

Will use all such money for 10-year bonds. (F. L. Stufflebam, Bolivar Herald.)

It would distribute cost to all taxpayers. Advertising should not be borne by publishers alone, or even by business firms. (W. A. Sloan, Bismarck Gazette.)

I am an anti-New Dealer, but a firm believer in legitimate paid advertising. (C. H. McNay, Butler Republican Press.)

Strongly approve, provided it is handled through advertising agencies. (Nelson Hill, Richmond News.)

Strongly approve, if handled through agency plan, like Navy campaign. (R. E. Swain, Kirksville Daily Express.)

Approve, if it is done on a business basis and no suggestion of subsidy. (W. J. Sewall, Carthage Press.)

Approve, providing the advertising is purchased on basis of merit rather than political influence. (Frank W. Rucker, Independence Examiner.)

Approve, if they buy other advertising media. (Morton E. Holman, Maitland Herald.)

Approve, as long as it is strictly on a business basis. (T. Ballard Watters, Marshfield Mail.)

Approve only that it should be straight advertising just as other advertising, with no strings attached. (Meredith Garton, Pierce City Leader-Journal.)

Approve, if other advertising media is paid for. (Morton E. Holman, Skidmore News.)

Approve definite advertising program, but not a subsidy. (Marvin W. Pace, Willow Springs News.)

I don't want any subsidy, but I think the Government should pay for what is advertising, in war or peace. (Lewis W. Roop, DeSoto Republican.)

If the Government is seeking an advertising campaign, expecting full value received, I believed the press can come as near filling the bill as would be possible. On the other hand, if such a program is expected to influence the editorial policy of the press, I think it ill-advised. (J. E. Curry, Douglas County Herald, Ava.)

The Government should promote through legitimate advertising channels the same as any business. It isn't fair to the rural press to expect them to carry the copy gratis or to sell co-op advertising continually to merchants and businessmen. The present bond drive is an example * * * page after page is being sent with almost a "must" to run and without compensation except for the amount merchants contribute. The original mats were not made gratis, the copy writers, the lay-out men, and the compositors were compensated * * * everything was provided for and paid for except the actual publishing cost.

General public information should be carried as news when it is news.

Every publisher in Missouri is contributing time and effort to almost every Government need in the war * * * he can't keep on and give his product away, too. (Harry E. Booth, Lexington Advertiser-News.)

If the Progress could be bought by some Government advertising, in view of the hundreds of columns I have given the Government in scores of ways, I would have to be paid a thunder of a lot to be within a mile of evening the account. (C. L. Hobart, the Holden Progress.)

We do not understand just how paying for part of this advertising would subjugate a paper, when it is already giving until it not only hurts, but almost puts a large number out of business. (E. T. Hodges, the Linneous Bulletin.)

It would please the present antinewspaper administration to get its hands on newspapers. (John H. Wolpers, Daily American Republic, Poplar Bluff.)

April 24, 1943.

Mr. H. R. LONG,
Missouri Press Association,
Columbia, Mo.

DEAR MR. LONG: I am enclosing ballot on the purchase of Government advertising, in which I expressed approval of the proposition.

Any advertising received and published for the Government would be received and published by us the same as advertising from any other client. It would not involve the barter of our soul or have the slightest influence on our policy. Any newspaper that could accept Government advertising on this premise I think would be wholly warranted in so doing, but any paper, the publisher of which felt that the purchase of space by the Government was a subsidy or that the acceptance of such advertising implied the acceptance of Government policies of which he otherwise would not approve, certainly should not sell space to the Government.

In the scrap drive and recent bond drive, the Government could use space to advantage. The newspapers have and will continue to donate millions of inches of free space to Government enterprises. The Government itself has sent out thousands of inches of advertising to the newspapers to sell to commercial sponsors. In this way they are rather like the Medical Association—they want the space and need the publicity, but don't want to pay for it. I can see no reason why the Government should expect the newspapers to donate advertising space any more than they should expect to donate Government bonds to the newspapers. The papers pay their taxes, purchase their quota of bonds, and conduct themselves as any other citizen, and, in addition, give of their news space as any private citizen gives of their leisure time for the welfare of his country.

I think the advertising space in newspapers should be purchased by the Government only for specific projects and that the hazard in Government advertising would be that a political oligarchy would pervert the privilege of spending Government money into propaganda for its own perpetuation. If decency in Government is not entirely obsolete, this, of course, would not occur.

With most cordial personal regards, I am,

Very truly yours,

COWGILL BLAIR,
General Manager, Joplin
Globe Publishing Co.

THE BUDGET-GAZETTE PUBLISHING CO.,
Brookfield, Mo., February 9, 1942.

Senator BENNETT CHAMP CLARK,
United States Senate,
Washington, D. C.

DEAR SENATOR CLARK: I am writing you in the interest of the country press of Mis-

souri, and I hope that you will give this your usual close attention.

During the middle of last year, for 2 months, the Navy had an advertising campaign in all the papers of this section of the country, and a personal letter from Secretary Knox to each of the newspapers following that campaign disclosed that thousands of recruits were obtained all over the country as a result of that advertising campaign, which put the Navy in a much better position to meet the present crisis.

The newspapers of Missouri are daily receiving tons of propaganda from the different Government agencies requesting that we run this matter free of charge, which we have done as far as possible. We all want to do our part to help win the war, but since the order has been made to discontinue the manufacturing of automobiles, and the rationing of automobile tires, it has practically ruined the automobile and tire business of the country. Hence we are receiving no national ads, and the local merchants who deal in automobiles, tires, etc., have nothing to advertise, so you can see how this has hurt our business. If conditions continue as they have been during the past month, there will be many newspapers throughout the country that will have to fold up, and others will have to reduce their size, and hence will not have the space to give to this free advertising that is sent to us now each day.

There have been some rumors that possibly the Government would engage in some form of advertising throughout the country, and particularly in the rural newspapers, relative to arousing the people as to actual conditions existing at this time, but so far nothing has come of it.

I am calling your attention to this matter, particularly in the interest of the rural newspapers, who, I think, have been the hardest hit.

I believe you are in a position to take this matter up before the proper authorities, and see if we cannot have some relief in the way of paid advertising from the Government, as somewhat of a remuneration for the thousands of columns of free space that we are giving for the cause at this time.

Sending kindest regards and best wishes, I remain,

Very truly yours,

W. B. McGREGOR.

WASHINGTON, D. C., *February 14, 1942.*

Col. WILLIAM B. McGREGOR,
Brookfield, Mo.

DEAR BILL: Since writing you I have talked with Lowell Mellett, one of the President's executive assistants who is also director of the Office of Government Records. He expressed great sympathy with the matter I presented to him and promised to take it up in official sources but advised me that it was properly within the jurisdiction of the Bureau of Facts and Figures, headed by Mr. Archibald MacLeish who is also chairman of the Committee on War Information. I have taken the matter up with Mr. MacLeish and discussed it with him fully. MacLeish tells me that there has been a prejudice against newspaper advertising by the Government growing out of discussions which took place on that subject during the last war when the then Secretary of Treasury McAdoo very violently opposed any advertising by the Government on the ground, first, that if the program was once entered upon, it would be necessary to advertise in every newspaper whether the newspaper was good, bad, or indifferent, or effective or ineffective; second, that it would cost a great deal of money; and third, that it would subject the Government to the charge that it was undertaking to subsidize the press and thereby control it. I suggested to MacLeish that the first objection negatived the last one since the advertising was inserted in all the papers the element of favoritism would be lacking. In any event, MacLeish expressed himself as being sympathetic to the proposal and promised to take the matter up at the inner Cabinet committee meeting on Monday. I read him your letter, stating that it was typical of several other letters which I had received on the subject but perhaps more forceful and cogent than any of them. He seemed impressed by the argument in it and asked me to give it to him to take with him to the inner Cabinet committee meeting, which I did.

I will keep in touch with this matter and do what I can in that respect. In the meantime, I have also discussed the matter with Senator MURRAY, who is chairman of the Senate Small Business Committee, and intend to take the matter up also with Congressman PATMAN, who is chairman of the same committee in the House. If it turns out nothing can be done through the executive angle, I will see if anything can be done by legislation. You may be sure I am very much interested in the matter and think it is an extremely meritorious and appealing case.

With kind personal regards, I am,

Yours very sincerely,

BENNETT CHAMP CLARK.

WASHINGTON, D. C., *February 14, 1942.*

Hon. ARCHIBALD MACLEISH,
Office of Facts and Figures,
Washington, D. C.

MY DEAR MR. MACLEISH: Pursuant to our conversation this morning, I am enclosing herewith letter addressed to me by Mr. W. B. McGregor, publisher of the Brookfield (Mo.) Budget Gazette.

This letter, as you will see, graphically and forcefully sets forth the plight of many rural newspapers in Missouri and doubtless throughout the United States. This situation, of course, has been caused by the abnormal conditions due to the war. As a result of these conditions, however, many rural newspapers will be forced to go out of existence or to so reduce their size that they will be unable to render the service which they have heretofore been rendering gratis to the Government in its war effort.

It seems to me that this is a serious situation which merits the most careful attention. The rural press has nearly always had more or less a struggle for existence. I believe that they represent a vital force which should not be permitted to pass out of existence or be circumscribed in its usefulness.

I am sending you Mr. McGregor's letter rather than burden you with others because Mr. McGregor's letter is typical and to the point.

I appreciate your promise of consideration in this matter.

Yours very sincerely,

BENNETT CHAMP CLARK.

OFFICE OF FACTS AND FIGURES,
Washington, D. C., February 18, 1942.

The Honorable BENNETT CHAMP CLARK,
United States Senate, Washington, D. C.

MY DEAR SENATOR CLARK: Mr. MacLeish has read with interest—and I might add with sympathetic interest—your letter of February 14 and the letter of February 9 which Mr. W. B. McGregor addressed to you concerning the plight of the small country newspapers.

The response of the country press to the Government's appeal for free space has been admirably patriotic. The country weekly and the metropolitan daily are both doing their part in getting across to the public information concerning the Government's war effort. County press and city press alike are suffering greatly as the result of curtailed advertising. Since the average country paper runs on a slimmer margin of profit, the country press is doubtless harder hit than its bigger urban colleague.

Because of the present situation, Mr. MacLeish has directed this office to make a study of various proposals which have been made that the Government should embark on a newspaper advertising campaign. The study is still in process, and what its result will be we do not yet know. Whatever the result, word of it will be conveyed to the press committee which was recently established to work with the Office of Facts and Figures. This press committee is composed of the presidents and executive directors of the trade associations representing both the daily and weekly press and covering in membership virtually all of the country's newspapers.

Mr. MacLeish wishes me to tell you how much he appreciated your interest in this matter.

I enclose a copy of this letter in case you should care to forward it to Mr. McGregor. I hope that it will be all right for us to keep Mr. McGregor's letter so that it may be given consideration in the study being made.

Sincerely yours,

JOHN HERRICK,
Acting Chief, Press Division.

The Farming Situation

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 23, 1943

Mr. HULL. Mr. Speaker, one of the difficulties in the present acute situation as to the national food supply is that too few people are acquainted with agricultural conditions, particularly in the Middle West, whence comes the greater portion of the food supply. Had those conditions received proper consideration earlier, production might have been aided and expanded. Because that consideration was not granted, there is less production and less food.

An article by Eugene M. Poirot, of Golden City, Mo., was published in a bulletin of the New York Chamber of Commerce. It was written in support of the Farm Security Administration. Printed also in booklet form, it has been widely circulated, a copy having been sent by the Chamber of Commerce of Springfield, Mo., to every chamber of commerce in the country.

Coming from a practical farmer, it embraces information which should be known by every citizen.

Mr. Eugene M. Poirot, Golden City, Mo., the author of the article, a dirt farmer, lives on his 1,700-acre farm, gets his mail by rural delivery, and talks over a rural party-line telephone. He is also having labor and machinery troubles, as are other large operators. In 1942 he had a farm herd of 440 cattle, 12 sows, and produced 600 turkeys. On another farm in Arkansas he produced 10,000 bushels of rice. He has been a Farm Bureau member for 20 years. Although he does much of the actual farm work

himself, he finds time to participate in many activities away from his farm.

He is a member of the Governor's industrial committee, State land-use planning committee, on the State F. S. A. advisory committee, a member of the National Chemurgic Council—presented a paper at the national meeting in 1941 that received wide circulation. He is a charter member of the State chemurgic commission. He has been recognized in Missouri as a master farmer. In 1942 he received one of four awards made by the Missouri Conservation Commission as master conservationist. Cooperates with State college of agriculture by supplying data on soil and crop experiments conducted on his farm.

The article follows:

South Missouri is a farming section, yet the Springfield Chamber of Commerce prior to September 1942 seemingly had given little thought to the operation and objectives of the Farm Security Administration. The thought occurred to me that if a chamber of commerce located right in the middle of farming activities hadn't taken the time to learn about a governmental function that is so vital to the agricultural production of low-income farmers it is reasonable to assume that your body, located in the heart of our greatest city, probably is totally unaware of their activities.

The Farm Security Administration, thought of primarily as a relief organization by some people for a certain group of farmers, is not a money waster but a money maker for the Nation, and is a pleasant shock absorber for some of the impacts of war. More than $185,500,000 in actual, appraisable food producing, not capital has been added to the national economy directly by its supervision of one-half million farm families who were broke and unproductive a few years ago. This $185,500,000 is not gold or Government bonds; it is dairy cows, beef, chickens, hogs, sheep, and farm equipment. It and the products resulting from its use are those things that people eat and wear. All the money and all the power of Government could not bring into being one of those animals even 1 day sooner than nature has decreed. This is important at a time when we need more food production at once, because it takes a year of care to make a calf and it takes another 2 years before this calf will be giving milk as a cow. The important fact is, however, that they are here now when we need them badly. They were made out of the inorganic dirt of American fields by very poor farmers and their families under the supervision and with the credit extended by the Farm Security Administration.

Were it not for the Farm Security Administration families, who represent only 7.6 percent of all the farmers, last year's increase in milk production would have been 36 percent short, last year's increase in pork production would have been short by 9 percent, last year's increase in eggs, chickens, and peanuts would have been short by 10 percent, and last year's increase in beef production would have been short by 7 percent. These should be significant items in the national economy of a food-rationed people who probably for the first time in their lives realize that all the money they have cannot buy food unless someone has first produced it out of the dirt that lies soft and mellow in American fields awaiting the seed and the rain and the skill of American farmers.

To talk about the economy of saving dollars by abolishing an agency, that makes this kind of contribution to food production while the fires of war consume the treasures of liberty that man has lived a thousand years to create, is a dangerous pastime. This pastime can only be indulged by those who, still well fed, live in the illusion that a nation is only strong if its budget is balanced and it has most of the world's gold buried in its bosom. Their awakening would perhaps come with the burning timbers of liberty's structure falling in a tangled mass about them, but that would again be too late. It is the realist who has long recognized that the strength of a nation runs parallel to the diligence with which it maintains its agriculture and the welfare of its people.

The Farm Security Administration should not need to be justified on the basis of its dollar-and-cents return. Its value in placing a sound economic and social base under that class of low-income, inefficient, underproducing farmers of which there are more than 3,000,000 out of a total of 6,000,000 farmers should cause the public to demand an extension of its duties and services to serve many more than the one-half million it now serves, so as to insure an even greater supply of food than is now being produced. However, it is perhaps significant to the economy-minded taxpayers that the Farm Security Administration borrowers who applied for credit that in the past had been denied them from regular channels, both private and public, have already paid back to the Federal Government 90 percent of the principal of their loans that have become due. It is significant that in my State the Farm Security Administration has loaned, as of December 31, 1942, $27,345,668, of which $15,071,288 principal has matured. Total collections, interest and principal are $16,044,363. Other States will have similar records. It should also be significant to your chamber of commerce and the business interests it represents that these half million farm families have already increased their net worth by 43 percent, which is reflected in added purchasing power through the Nation and will be increased in greater proportion after the war. Remember, the families were broke. Many of them were sick. Many of them had large families, and they were underemployed, underproductive, and undernourished. They were either on, or at the door of direct relief. Their minds and the minds of their children were ready to absorb any of the political "isms" that anyone wanted to talk about. The only "ism" they were questioning was the American "ism" with which they thought they had become familiar. Because of the large families, this group is contributing many sons to protect our Americanism. Many Farm Security Administration families have from 3 to 5 members in the service and are proud of it.

These families and the farms they operate are now going units of production, self-supporting and grateful for the chance they have had. They have increased not only their net worth 43 percent, but also their cash income by 70 percent. They have increased their net family income by 60 percent. They have increased their production for home use by 101 percent. In 1942 they produced and processed on the average for home use 297 quarts of fruits and vegetables, 488 pounds of meat, and 472 gallons of milk with which to feed their families each year. This is an increase of 114 percent over that which they had before, and it is a direct result of the work of the Farm Security Administration, because they insist that a family must first be able to live at home on the foods grown and processed and of the kinds that will make strong bodies and healthy men and women. Significant at this time is the additional fact that this increased degree of self-sufficiency adds that much more in processed food to the general food supply than would have otherwise been available.

I could go on with a string of tables and figures but since they are available at almost any county Farm Security Administration office and in any case in the State office, I will not try to cover all of them here.

I am just an American farmer, the son of a Frenchman who loved the American soil and adopted it as his native land. I love it, too, because it has been good to me and to the nation of my birth. I would have the feeling that I had failed my children and my America if I did not, in my small way, refer to some of the signs that point to a national decay that begins at the grass roots of American fields.

It is dangerous to exploit our American soils because food comes from there. We have already passed the point of diminishing returns in crop yields for much of our soil. The trained minds of skilled and observing men are piling up facts relating to animal and human nutritional diseases that have their beginning in lowering mineral level of our soil. Though we are for the time being producing more, we will have less soil minerals to draw from the next time.

Significantly supporting this thought, according to the 1940 census, is the fact that out of more than 6,000,000 farmers, 3,421,000 or 64 percent live on land that gives them an annual income of less than $800 per year. This is a very small part of the national agricultural income, from a very large part of the land. It suggests an exploitation of land and people that Americans some day may no be able to pay in dollars, but will be paying in terms of the health and lives of their children. Are we perhaps starting to pay now with food rationing?

I do not believe anyone who understands agricultural production, and who is familiar with the degeneration of our soils and accompanying human distress, would be willing to allow its continuation, and allow the agriculture it now supports to drift down the channel of bare economic survival, until in the end it arrives at the level at which it becomes a public burden. Would it not be far better if the Farm Security Administration that has proven its capacity to take the lowest of this group and make substantial producers out of them would be permitted to extend its functions to include many more of them?

I do not mean to leave the impression that we can hope to get enough production out of these low-income farmers and their farms to supply the food production we need now. That job in its staggering immensity, must be done by all farmers and not just the remaining 36 percent who have been carrying the major part of the production load, and who unfortunately have been placed under almost unsurmountable handicaps in the loss of labor and machinery. The fact remains however, that we are not in a position to take chances with so vital a thing as food production so that we can toy with the idea of cutting down Federal expenditures that will interfere with it. This group of 3,421,000 farmers is a lot of people and the increase from each of them would count up as a significant total. If estimates are at all accurate, this group loses 200,000,000 man days labor per year. If this lost manpower were properly applied and directed on good land, it could produce annually 18,000,000 tons of pork, or 4,000,000,000 gallons of milk, or 360,000,000 dozen eggs.

There is no agency in the field with either the authority or the experience that could attempt to do this, other than the Farm Security Administration. It is, however, limited in measure by available funds and personnel. Your chamber of commerce and the various other chambers of commerce could give Farm Security Administration support that would pay dividends in terms of food now, and increased wealth and stability after the war resulting from the utilization of this wasted manpower and improperly used land.

Some day the war will end and our men who have fought well will return. Many of them who have been farmers will want to return to a farm somewhere. Many who because of their injuries, will be unable to find their place in industry. Many of them would

perhaps find comfort and happiness on a small farm somewhere, and, with the guidance and credit available through the Farm Security Administration, would with their families make a living.

In appraising the value of an agency we often forget some of those intangible things that we cannot put down in dollars and cents, the things that keep a man fighting after he is licked. I have known farmers who, with a leaky roof over their heads and a broken floor under their feet, would, in one last gesture of hope for a crop, scoop into the balance all that they possessed, along with a year of their life—well seasoned with the suffering of their threadbare, undernourished family—and then wait for a year to see if they had won or lost. The bitter resentment that must come to a man who in desperation had tried so hard and lost breeds immeasurable hatred of something or someone that he may believe has caused it all. If the facts could be tabulated we would probably find that the Farm Security Administration has to its eternal credit the prevention of this in many of its 500,000 families.

Many of us had better investigate those things we oppose. In my opinion the Farm Security Administration has justified its existence in a national economy by creating through its supervision more than $185,500,000 in new usable agricultural wealth. If this amount with the productive capacity it represents were to be credited to its administrative costs they would appear small. It further justifies its existence in being in a position to further increase the production of food and war crops so badly needed. It has shown that through its supervision low-income farmers can become good credit risks, and that they may again represent significant buying power for the products of industry. The morale it builds is not measurable, but it is perhaps of the kind that makes American soldiers the best in the world. It is in a position to be of important service to these soldiers when they return from the battlefields of the world to try again to find the peace and comfort in a land that is their home.

Agricultural Credit—A Factual Review

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks, I include my statement in answer to an article appearing in the Staple Cotton Review by A. H. Stone, editor thereof, and printed in the CONGRESSIONAL RECORD of June 7, 1943. The Staple Cotton Review is the official organ of the Staple Cotton Cooperative Association. Mr. Stone is vice president of the association, a director of the Staple Cotton Discount Corporation, financing affiliate of the association, and a director of the farm credit administration of New Orleans.

The statement follows:

This article quotes at length from the December 1942 statement of the Reconstruction Finance Corporation to show that it had disbursed $3,365,000,000 of "socialized commercial credit" to banks in the form of loans and capital subscriptions during the depression. Mr. Stone committed the error of overlooking the fact that these highly recoverable funds were not advanced to assist banks but to meet the demands of depositors in a time of general and world-wide economic collapse, most, if not all of whom, wanted their deposits at once and in cash.

These emergency advances cannot be compared to the long-continued and expanding practice of the Department of Agriculture in extending credit on terms made possible only by the subsidy contributions of the Government.

Mr. Stone could have pointed out in his 10,000-word article that one-third, or $1,057,000,000, of the $3,365,000,000 of what he calls socialized commercial credit extended to the banks in the form of Reconstruction Finance Corporation loans and capital subscriptions were advanced in order that depositors in institutions closed by public panic could get their funds more quickly. He could have added that the remaining interests of the stockholders of such banks were assigned to the Reconstruction Finance Corporation as collateral and that such stockholders were obliged to pay assessments on their stock under the double liability provisions of the law, which payments went toward the reduction of the Reconstruction Finance Corporation obligations.

Mr. Stone could also have pointed out that another third, or $1,170,000,000, was reflected in preferred stock or capital notes which the banks were required to sell to the Reconstruction Finance Corporation in order to protect depositors and the Federal Deposit Insurance Corporation.

Far from being a form of socialized credit sought by the banks for their own benefit, these preferred-stock and capital-note transactions were dictated by Government officials. Nor were they free grants of credit but advances on which interest had to be paid. This is far different from the free capital put by the Government into the Production Credit System to increase its earnings but on which no interest is paid.

Mr. Stone could also have pointed out that of the remaining one-third, namely, $1,138,000,000, of the Reconstruction Finance Corporation loans made to going or operating banks all but $51,319,000 has been repaid to the Reconstruction Finance Corporation by the end of 1942. Practically all of these advances were for the purpose of permitting unrestricted deposit withdrawals and to preserve essential banking services in the communities affected.

These Reconstruction Finance Corporation advances were emergency advances to be liquidated. They are not recurring loans nor are they a form of lending that is being renewed.

In contrast with them are Federal funds advanced to farmers, aggregating for the period under discussion more than $18,000,000,000. Also, in contrast, many of these expenditures made through numerous Federal agencies are recurring and steadily increasing.

This figure of $18,000,000,000 demonstrates the fallacy of the argument advanced by Mr. Stone, who declared that:

"It is beyond our powers of comprehension and analysis to understand why the extension of billions of dollars of Government credit to banks, trust companies, railroads, insurance companies, general utilities, etc., is said to mark the high tide of business statesmanship, while the extension to agriculture, by this same Government, of similar credit, but in far less volume, is characterized as the low-water mark of socialistic, governmental paternalism."

The implication thus made that Government credit extended to banks, insurance companies, railroads, etc., was far greater than that extended to farmers is simply contrary to the facts. Not only has the Federal Government disbursed to agriculture more than six times what it has advanced to banks, insurance companies, and railroads, but billions of dollars have been given from the Public Treasury for farm relief. On the other hand, banks have not received grants, benefit payments, or other types of subsidy.

It is difficult to believe that the financial aids to agriculture have been so vast until the figures are marshaled in one place. When they are gotten together the arguments of Mr. Stone fall like a house of cards. The erroneous character of Mr. Stone's statements concerning the assistance given to banks in relation to the assistance given to agriculture is demonstrated in detail by the following statistics:

Reconstruction Finance Corporation loans

Banks	$3,364,713,703.07
Insurance companies	137,668,209.81
Railroads	1,035,626,714.70
Total	4,538,008,627.58

A complete list of all financial aids to agriculture during recent years could be compiled only after intensive study, but would include the following:

(a) Farm Security Administration disbursements to Dec. 31, 1942:	
Rehabilitation loans	$713,000,000
Tenant purchase loans	172,000,000
Grants	151,000,000
Other expenditures	384,000,000
Total	1,420,000,000
(b) Agricultural Marketing Act revolving fund loans July 1929 to Dec. 31, 1942	1,221,000,000
(NOTE.—Includes Farm Board advances.)	
(c) Emergency crop and feed loans:	
1932–33 crop production	122,000,000
1934–35 crop production and harvesting	38,000,000
1934–35 drought loans	72,000,000
1935–36 crop production and harvesting	57,000,000
1935–37 emergency crop loans	17,000,000
1937–39 crop production and harvesting	65,000,000
1940 crop production and harvesting	20,000,000
1941 crop production and harvesting	18,000,000
1942 crop production and harvesting	20,000,000
Total	429,000,000
(d) Commodity Credit Corporation loans to support farm prices to end of 1939 (excludes four billions disbursed since defense program inaugurated)	1,454,000,000
(e) Regular Farm Credit Association agencies supervised by Farm Credit Association, loans from May 1933 to end of 1938:	
Federal land banks	1,343,000,000
Land-bank commissioner	967,000,000
Production Credit Associations	1,121,000,000
Intermediate credit banks (excluding loans to other Farm Credit Association agencies)	776,000,000
Banks for cooperatives	407,000,000
Total	4,614,000,000

(NOTE.—Loans for limited period only are included in above tabulation to give rough approximation of amounts loaned under Federal auspices for relief of distress. While some of the above loans were not made for this purpose

most of the loans made in 1931 and 1932, not included above, were to relieve farm distress.)	
(f) Regional Agricultural Credit Corporations total loans made, excluding renewals from organizations to Dec. 31, 1942	$343,000,000
(g) Reconstruction Finance Corporation loans to agricultural financing institutions	1,451,000,000
(NOTE.—Some duplication with loans of agencies shown above.)	
(h) Rural Electrification Administration loans to June 30, 1942	354,000,000
(i) Payments to Federal land banks and Federal Farm Mortgage Corporation, reductions in interest rates on farm mortgages (estimated to June 30, 1943)	301,000,000
(j) Subsidies to encourage exportation and domestic consumption of agricultural commodities (estimated to June 30, 1943)	868,000,000
(k) Removal of surplus cattle and dairy products (act of May 1934)	116,000,000
(l) For drought relief expenditures in 1935	83,000,000
(m) Some of the payments for benefit of agriculture, fiscal years 1934–43:	
Agricultural Conservation program	3,097,000,000
Parity payments	815,000,000
Agricultural Adjustment Administration of 1933, etc	1,521,000,000
Sugar Act	250,000,000
Crop Insurance	54,000,000
Soil erosion control program	157,000,000
Land utilization program	22,000,000
Agricultural Adjustment Administration administrative expenses	16,000,000
Cotton price adjustment payments	166,000,000
Total	6,098,000,000
Grand total	18,752,000,000

The grand total of this partial list of disbursements for the relief of farm distress is $18,752,000,000. Much of it will not be paid back because it was given, not loaned, to rehabilitate a basic industry. In the light of these facts, however, it is quite unfair for Mr. Stone to picture the banks as receiving the lion's share of financial relief.

GIVES FALSE IMPRESSIONS OF PRODUCTION CREDIT SYSTEM

After making an invidious comparison between the amount of Reconstruction Finance Corporation loans to banks and the amount of interest-free Government capital in the production credit system (which he calls credit advanced, while failing to point out that it bears no interest), Mr. Stone submits numerous statistics on the production credit associations in the district comprising the three States of Alabama, Louisiana, and Mississippi, and derives the conclusion that no banking organization in the country could have made an equivalent showing during the past 9 years.

Mr. Stone does not tell that the 26 production credit associations in the 3 States mentioned enjoy the use of $6,125,000 of capital, and that the Production Credit Corporation of New Orleans enjoys the use of $2,375,000 of capital, or a total of $8,500,000 furnished them without cost out of the Public Treasury.

He boasts that on total loans of $174,000,000 made by these 26 production credit associations since 1934 only $118,000 has been lost. The official report, however, shows that the losses were not $118,000 but $143,000.

Mr. Stone does not tell that if the 26 production credit associations in the 3 States mentioned had had to pay a normal market rate of interest on the capital funds they now get free their red figures would have been increased by $229,500.

It should be remembered that the amount of operating expenses in relation to volume of loans and in relation to amount of service rendered to the community is of much more significance in appraising the merits of production credit associations and banks than is the amount of principal lost on loans. Moreover, no figures are given as to amount of interest earned but not collected, or the amount of interest which should have been charged in order to put these associations on a self-supporting basis, but which was not charged because of the Federal subsidy. These losses of interest are in one sense losses just as much as is the uncollected principal of a worthless loan.

It would appear that the object of Mr. Stone's article is the promotion of a conflict between the farmers and the bankers by creating the impression that organized banking is endeavoring to destroy the cooperative credit institutions of farmers. Whatever may be the opinion of Mr. Stone, there is on record a statement on this question in which the American Bankers Association sets forth the position of organized banking with respect to cooperative credit enterprises and subsidized credit institutions. In a statement promulgated last January by the American Bankers Association, W. L. Hemingway, president of the association, said:

"1. We recognize the rights of farmers or any other group to establish, operate, and maintain cooperative credit enterprises. We believe, however, that such institutions should be operated on a self-supporting basis and that income should be adequate to cover the costs of operation, including credit losses. Continuing losses of any such institutions should not be subsidized out of the Federal Treasury.

"2. The American Bankers Association believes that the agencies of the Farm Credit Administration should be farmer-owned and farmer-controlled cooperative credit institutions, and in this connection it will continue to support the farm organizations in their effort to protect this farmer-ownership and conrol and to provide for the ultimate elimination of Government subsidy.

"3. We believe that the present subsidies enjoyed by the production credit associations in the form of Government capital should be returned to the United States Treasury as soon as practicable."

Food and Inflation

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CHENOWETH. Mr. Speaker, under leave to extend my remarks, I wish to include a statement by Mr. Frank E. Gannett, of Rochester, N. Y., on the subjects of food and inflation. Mr. Gannett is the publisher of 21 daily newspapers in 4 States. His observations on national issues are always timely and of interest:

America today faces two most important problems—food and inflation. These problems are interwoven. They affect the lives of every man, woman, and child. They affect the prosecution of the war, the making of peace, and perhaps the future of the whole world.

One of the excuses for the mishandling of our food problem has been the professed fear of inflation. President Roosevelt has laid great stress on the danger of inflation and thus has tried to justify the position he has taken in fixing the prices of food.

However, judging from the impartial findings of two widely recognized economists of the economics department of the College of Agriculture at Cornell University, F. A. Harper and W. M. Curtiss, President Roosevelt, in the policy that he has been following or failed to follow, has not checked inflation. His recent statements and recent moves make students of these problems wonder whether he fully understands either of these great questions. Or is he merely playing 1944 politics by trying to blame others for the increase in the cost of living? The administration, in any event, has not met the critical situations that have developed and, by that failure, our country is being led straight toward the greatest disaster in its history.

First, in regard to food, President Roosevelt was warned a year ago that there would be an alarming shortage because of the bungling and mismanagement of the bureaucrats and because of the lack of farm machinery and lack of farm labor.

Food is as essential as planes, tanks, or guns in waging a war, but the President not only did nothing to improve the situation, but steps that he favored made the situation worse. His policies have discouraged and stifled production when it should have been encouraged; driven food out of normal channels into black markets; created shortages; raised prices; brought us face to face with disorganization.

Only a few months ahead lies the threat of real hunger, insufficient milk for the children in our cities, and difficulty in supplying sufficient food for our fighting forces, our allies, and our own people.

The appointment of Chester Davis as Food Administrator gave hope for improvement. Immediately, however, there was interference with his work. He was stripped of authority and so discouraged by noncooperation that he resigned. Then the President, in his unfair, ill-tempered letter accepting the resignation, wrote Mr. Davis: "It would be unfair to you to insist that you remain when you feel that, all things considered, you cannot wholeheartedly support a program to hold down the cost of living."

Mr. Roosevelt's statement was a gross, demagogic misrepresentation. Mr. Davis was never against holding down the cost of living. He resigned because he knew that the President insisted upon policies which only would increase the cost of living. Without consulting Mr. Davis, the President embarked on a subsidy scheme which, unless it be rescinded by an awakened Congress, may ultimately cost the Nation untold billions of dollars while actually contributing to the shortage of food and intensifying the inflation.

Subsidies will not give us one pound more of food this year, and they will discourage production next year. Any roll-back of prices eventually will cost the consumer, in taxes, probably two or three times the immediate apparent saving.

If President Roosevelt's policy of a 5-percent roll-back on prices of food had any merit, then a roll-back of 15 percent, 25 percent, or 75 percent would have even more merit. Once started, where will the roll-backs stop? Will they be increased again

and again until the Government supplies all of us—rich and poor alike—with food at the expense of the taxpayer?

Subsidies will destroy our price system, the most effective mechanism for distribution ever devised. Every business and group affected by subsidies could become dependent upon the favor of Government for handouts. Carried far, this policy would destroy our private enterprise system and our constitutional form of government. It would open the door for a dictator who could keep himself in power by the slightly amended formula of "tax and tax, subsidize and subsidize, elect and elect," as did Caesar doling out bread to the Romans.

Subsidies will feed inflation, for although they might seem to the unthinking to lessen the cost of food to the consumer, they actually will increase its cost. The additional money left in circulation by these deceptive lower food prices to consumers made possible through subsidies will be used to bid up the prices of other goods.

The President talks about inflation but ignores the fact that inflation is already occurring. Prices have risen nearly one-third in 2 years, and even greater danger lies directly ahead. In other words, our dollar of 2 years ago, today is worth only 75 cents. Inflation is not only on our doorstep, it is already in our house.

In wartime it seems impossible to prevent some inflation. It never has been done and apparently never will be done. Inflation, however, must be curbed as far as possible. What is alarming is the fact that the Roosevelt administration so far has failed to put any effective brakes on inflation.

Some inflation in wartime is inevitable because a large percentage of our production capacity is turned to the making of war material. The amount of production for civilian uses thus is cut down enormously.

While our supply of civilian goods thus is reduced, the purchasing power of the public is increased through high employment and good wages, with the result that the public has more buying power. It begins to bid more and more for the decreased supply of the many things needed and desired. Then up go prices.

Inflation, unchecked, leads to ruination. After the First World War the wild inflation that struck Germany was in many respects more devastating than the war itself. The value of the mark was so depressed that values of ordinary things, in terms of marks, rose to billions and trillions. For instance, at one time it required a million marks to buy a dozen eggs. A great catastrophe and complete national bankruptcy resulted.

There are many sound measures that can be adopted to check inflation, but according to the Cornell economists, price fixing and rationing will not fully accomplish their purpose. The trouble is in people's pocketbooks, not in their minds. As a group, people spend essentially all their incomes. Therefore control of prices here and there simply pushes inflation in other directions. As a result, the average cost of commodities continues to rise. The cost of living goes up.

Control of prices of necessities, on the other hand, discourages their production. With less of any one thing produced, the relative demand for it increases, higher prices are offered, thus promoting inflationary forces. On the other hand, increased production tends to check an increase in prices.

In dealing with inflation there are two strong opposing forces. Everyone wants higher wages and salaries. Everyone, at the same time, wants lower prices. We simply cannot have higher wages and at the same time have lower prices. You can't eat your cake and have it, too.

After a price rise, a dollar of anyone's income will buy fewer goods than before the rise. It is natural for people to regret this loss of purchasing power of their dollars as this means they cannot buy as many things as they previously thought they could buy. They fail to realize clearly that their hopes and expectations could not have materialized. Failing to realize this, or perhaps for purely selfish reasons, they demand more dollars—that is, higher wage rates and higher prices to compensate them for the loss in buying power of every dollar. If this demand is granted to them, then the spiral of inflation is started.

One of the principal reasons why inflation has already gone so far is due to President Roosevelt's policy of trying to win the good will and votes of misguided organized labor. Under the Little Steel formula increases were made again and again in wages. Only when John L. Lewis made demands for the miners was there any real resistance. This came too late. Time and a half or double time for overtime further increased the income of labor.

Here are reliable figures on what already has happened: Between 1939 and 1942 there has been an increase in our national income of $42,000,000,000. Of this, only 14 percent went to agriculture, while 86 percent went to nonagricultural sources—that is, to industry. Yet we hear repeatedly the false assertion that rising farm prices, not increased wages, have caused the rise in the cost of living. That is absurd.

The number of employed persons since January 1941 has increased 40 percent, rates of hourly pay are up 35 percent, and hours worked per week have risen 15 percent. The combined effect on total pay rolls has been to increase them 117 percent. There is the principal cause of inflation.

It may not be good politics to oppose wage increases, but the facts are that this big increase in wages is responsible for the rising cost of living, which kicks back at the wage earner.

President Roosevelt, in his vitriolic veto message, admitted that wage increases do raise prices. He told the Congress and the country:

"Raising wage rates raises the cost of production, both of war goods and of the goods whose prices make up the cost of living. A 10 percent over-all increase in wages would cause an increase of not less than 4½ percent in the general level of prices; would increase our annual war cost approximately $4,500,000,000; would, moreover, increase the cost of living by at least 4½ percent and would cost consumers at least $4,000,000,000 a year."

But under Mr. Roosevelt's labor policy, since 1941 there has been already, according to statistics, a 35-percent increase in hourly wage rates. Therefore, according to his own estimate of what a 10-percent increase in wages would cost, this 35-percent increase that has taken place is causing an annual increase of $15,750,000,000 in the cost of the war, and a proportionate increase in the cost of living.

You, and everyone else, of course, have noticed an increase in living costs. The blame for this rests on Mr. Roosevelt. He should not try to blame anyone else for the inflation that is under way. It has been caused by his policy of playing for the support of professional union organizers.

Today every workingman, as well as everyone else, in almost everything purchased, is paying his share of the cost of this staggering burden.

It is rather late for Mr. Roosevelt to discover that the policies he has been pursuing, of coddling organized labor leaders, have had the effect of pouring gasoline on inflation fuel. It is rather late to call for the fire department.

On Mr. Roosevelt rests the responsibility for misleading uninformed people. We now know that it is wrong—

1. To believe that labor can escape the inescapable economic sacrifices of war.

2. To believe that the cost of living could be kept from rising, despite inflationary wage increases.

3. To believe that raising farm prices to fair levels was the sole cause of higher living costs.

4. To believe that labor could not only maintain, but could raise its own standard of living, without sacrificing any of labor's gains.

Whether we like it or not, all of us must now face the fact that we cannot go on raising wages without having rising prices. Furthermore, so long as we are at war, there will be shortages of manufactured goods and inevitably rising prices for them.

What can be done to check inflation before it begins to destroy us?

1. We must halt all further increases in wages and salaries.

2. We must siphon off the public's excess spending power or buying power. Taxation, of course, is unpopular, but the cost of this war must be paid and taxation can be used to cut down spending and buying power.

3. Encourage production of necessities by permitting prices of necessities to rise and use the automatic price mechanism so far as possible instead of bureaucratic price fixing.

4. Increase production of foods and necessities. Under proper leadership that might be done. This automatically would check a rise in prices. A surplus would even bring lower prices.

Taxation, however, should not be used to redistribute wealth by soaking the rich, nor to promote visionary social gains—policies favored by the Roosevelt administration. The so-called rich, $5,000 and over, receive, net after taxes, only one-tenth of the national income. If the Government took every cent that the rich receive, it would not be enough to hold the line that way, and would be of little effect in checking inflation.

Taxation, as a weapon against inflation, must be applied fairly to all who have an increased, and therefore inflationary, spending power.

Neither purchase of War bonds nor forced savings, desirable as they are for the present, can remove the danger of inflation. They only postpone the evil day of reckoning.

If we are to check inflation, which threatens to destroy us unless it is checked, we must have a strong, courageous Congress and a change in administration policies. Those Members of Congress who have vigorously and steadfastly fought for a change to a sane and constructive way of handling our food and inflation problems, and who have tried to kill the unwise and unsound subsidy scheme, deserve the hearty praise of the public.

If your Representative in the House or a Senator from your State has taken what you believe is the right stand on these all-important questions, commend him. If, after studying these issues, you disagree with him, tell him so and urge him to support a policy that will ward off national disaster.

As never before in our history, we need men in public life who are not seeking votes by favoring this or that group, but, instead, are seeking to protect this Nation from the perils that directly or indirectly result from war. We need men in Washington who will stand up for their convictions, whatever may be the cost to their personal or political fortunes.

The American people often have shown that they will support those who fight for the right, regardless of consequences. They will do it again. And those who speak out against dangerous policies and courageously oppose them with all their might will in the long run have the appreciation and gratitude of the vast majority of our patriotic citizens.

Inflation

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. RAYBURN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following addresses delivered by myself and Hon. Fred M. Vinson, Director of Economic Stabilization, over the Columbia Broadcasting System, Thursday, July 8, 1943, on the subject of inflation:

ADDRESS OF HON. SAM RAYBURN, SPEAKER OF THE HOUSE OF REPRESENTATIVES

I want to express my appreciation of the public spirit of the Columbia Broadcasting System for allowing Judge Vinson, Economic Stabilization Director, and myself to discuss the question of inflation.

A great part of our industry has been converted to war, and we have brought about a huge expenditure of money for the necessary tools of war. We have seen our sons and our allies march forth with tools unhesitantly to battle. We have seen these fighting men and their tools change the forces of evil from the role of aggressors to the role of defenders, and we shall crush them on their own lands and on the lands of free people they have conquered.

On our home front we are working long and hard. Because our industry is now tuned to war, we have less goods and services for our homes. At the same time our national income has expanded to unprecedented levels. Many more dollars are competing for these scarce goods and services. Under such circumstances there is an inevitable tendency for prices to rise.

It is the wish of the majority of people that rigorous controls be developed to prevent a disastrous price rise from occurring. Your Congress has taken a part in perfecting measures to keep prices down. Through its leadership and with the full cooperation of the people, more barriers will be erected against the dangers of an increase in the cost of living. This will mean, in plain, everyday words, that each of us must begin to think, not of his own individual welfare but as a member of a team—a team of free Americans.

Your Government is working hard to prevent the upward spiraling of prices. Its efforts so far have not been altogether perfect, but more success has been achieved than is commonly realized. For example, in the year before the General Maximum Price Regulations of May 1942 went into effect the general cost of living rose 12 percent. Since May 1942 the rise had been held down to less than 8 percent. Because many food items were not subject to control before January of this year food prices have risen over 17 percent during the last 12 months, as compared to 19 percent during the previous year. But real success has been experienced in other price areas. Clothing prices advanced 23 percent from May 1941 to May 1942 and only a little more than 1 percent from May 1942 to May 1943. House furnishings advanced 17 percent between May 1941 and 1942, and only 2 percent in the next year. Rents, which rose 3 percent between May 1941 and 1942, actually declined nearly 2 percent from May 1942 to May 1943.

The consequences of a runaway price rise are so apparent and so serious it may well be asked, Why does anyone try to beat the game? My answer is that stable prices present difficulties for certain groups in the economy. These difficulties are in the present, not in the future. To escape them some people choose the inflationary path without looking too closely to see where it leads. In seeking to protect themselves against advancing prices by asking for more for what they have to sell, some are using a method which works satisfactorily under normal circumstances. Wage earners customarily seek to protect themselves against rising costs by demanding higher wages. This is effective if there are unemployed resources.

Spending of increased wages leads to the production of a larger quantity of goods, so that higher money means higher real wages. Today, however, we face a dwindling supply of consumers' goods, so that the spending of higher wage income can result only in further pressure on prices. Farmers, too, seek to protect themselves against rising prices by asking more for the things they sell. But higher farm prices mean higher living costs. Higher living costs lead to further wage demands, which force up industrial costs. Hence, a vicious spiral of rising prices is started and if permitted to get out of control, means suffering for all of us. But, let me assure you, we do not propose to permit this to happen here.

Standing beside me here is a gentleman from Kentucky. He served with me in the House of Representatives for more than 12 years. During most of that time he was chairman of a very important subcommittee of the Ways and Means Committee. While still a Member of the House, President Roosevelt appointed him to the United States Court of Appeals for the District of Columbia. He resigned from that bench recently when the President asked him to become Director of the Office of Economic Stabilization. His long experience in the fields of economics, the law, and government was the reason why Mr. Roosevelt requested him to take over this important post. I know of no one better qualified. His office requires the full cooperation of every citizen, and it is to your own self-interest to give him that cooperation. It is my pleasure to introduce to you my friend and my former colleague, Fred M. Vinson, Director of the Office of Economic Stabilization.

ADDRESS OF HON. FRED M. VINSON, DIRECTOR OF ECONOMIC STABILIZATION

My fellow Americans, tonight I want to talk to you about our economic stabilization policy—what the policy is and what tools we are using to make it effective.

To you on the home front I must emphasize the importance of keeping our wartime economy stable. Soaring wages, skyrocketing prices, frantic migration and turnover of labor, uncertainty in food production, black markets, shortages, slow-downs, strikes—these are the body sores of inflation. To throw off this dread disease in its initial stage is our primary task. Failure to win this fight will gravely impair the Nation's effective support of our heroic forces abroad; will delay the hour of military victory, and will sow the seeds of bankruptcy, panic, deflation, and poverty in the peacetime which follows.

Stabilization, on the other hand, will strengthen us in our job of supplying the armed forces; will hasten the hour of victory; and will lay the solid economic foundation for a prosperous and productive peace.

On the home front, then, we are fighting the fires of inflation.

We have not won that fight, but we are making progress. It is my firm conviction that, within the 30 days which have just passed, we have begun to roll back the tide. With your help we shall win.

If we are to conquer inflation, we must first track down its causes. Fortunately, perhaps, its principal cause is easily discovered. It is war. Total war demands a total mobilization of our resources. We must, without limit, produce the munitions of war for ourselves and our allies. To that end, a patriotic Congress has appropriated $100,000,000,000 to be spent this year for the tools of war.

That vast sum of money is an insurance of our national salvation and at the same time the source of our economic difficulties.

The results of its expenditure are obvious.

Factories, farms, mines, and mills are no longer devoting their efforts primarily to the production of goods and services to satisfy civilian needs. We have cut down the production of goods for ourselves in order to produce more for men on the fighting front.

At the same time, we have absorbed into our labor force millions formerly unemployed, and several million women and other new workers as well. Our industrial army is working longer hours and more days than ever before.

Increased employment and increased worktime mean more money in the pockets of the workers. More money in the workers' pockets means more purchasing power.

These are the basic causes of wartime inflation—more civilian purchasing power and less civilian goods in the market.

Money in the market always hunts for goods. Under ordinary conditions what happens when the irresistible force of excessive purchasing power meet the immovable object, a scarcity of consumer goods? The answer is clear. Prices will rise.

When prices rise, the cost of living rises. When the cost of living rises, wages rise. When wages rise, prices rise again, and a new spurt of purchasing power is injected into the economic stream. This is what we call the inflationary spiral.

It is this frantic race between wages and prices which we must halt. For this purpose the President requested sweeping authority. The Congress granted it. On October 2, 1942, Congress authorized and directed the President to stabilize wages and prices at the levels prevailing on September 15, 1942, so far as practicable.

Since that time we have been trying to forge tools strong enough and keen enough to hold the line established by Congress.

Our first line of defense is price control. It is here, on the price front, that the housewife finds out whether we succeed or fail. No matter what other steps we need to take, workable price ceilings are indispensible to our economic stabilization. Despite our efforts the cost of living has risen 6 percent since last September. Our principal difficulty has developed in connection with food prices, which have risen 13 percent since last September.

The difficulties of control are, of course, enormous. Due to these inherent complexities, and to the inevitable slowness of a vast governmental program, some ground has been lost.

But the tide of battle is turning. Between May 15 and June 15 of this year, food prices dropped slightly for the first time in more than a year.

Most major food items are now under specific dollar-and-cents ceilings, readily understandable to the average consumer. The prices of butter, meats, potatoes, cabbage, and onions have been or are being reduced. Other fresh vegetables, fresh fruits, and fresh fish will soon be under more effective control.

In my opinion, price control cannot be made to work without ceilings at every level, from producer to consumer. The President, in his "hold the line" order, directed that controls be established at all levels. When this direction is carried out, our retail ceilings will be constructed on a firmer foundation.

Wage stabilization is the handmaiden of price control. Wage increases, while they

may seem for a time to afford the worker temporary relief from higher prices, can only intensify his difficulty. Neither higher prices nor higher wages can create more goods. For the laboring man there are two alternatives. One is the dissipation of his purchasing power in an inflationary whirlwind. The other is the preservation of that purchasing power for the post-war period.

Therefore, every wage-earner should applaud the resolute determination of the President and the War Labor Board to adhere to the Little Steel formula which limits all general wage increases to a level 15 percent above that prevailing in January 1941.

Subsidies, limited in amount and judiciously used, are also necessary to the stabilization program. The cost of living has risen almost 10 percent since the adoption of the Little Steel formula, largely due to increasing food prices. If we are to hold the wage line, we must make good on our pledge to stabilize prices. At the same time we do not wish to penalize the farmer, or to deprive him of the necessary incentives for all-out production.

The only answer is a limited use of subsidies. Subsidies, used in moderation, will halt the spiral of inflation, thereby saving the Government billions of additional expenditures in higher cost for the goods it buys. Hence, the result in an actual dollars-and-cents saving to the National Treasury.

Furthermore, subsidies prevent the economic assassination of our great middle class and those on the bottom rungs of the ladder. In an inflationary spiral, highly organized workers and farmers may keep in the race. Those who must lose are the substandard wage earners, or the salaried workers; the preacher or the school teacher; the widow living on a small fixed income; and the dependent mother or wife whose son or husband is in uniform serving you and me.

These are the unorganized millions whose welfare is at stake and whose living standards will be ground into poverty if we fail to hold the line. If these inarticulate men and women could make their voices heard, I am confident that the line would be held. Congress will not begrudge the sum necessary to protect their unorganized constituents.

I should mention one other weapon in the stabilization arsenal. The root of inflation is excess purchasing power. None of our other weapons will remain effective unless this purchasing power is siphoned off and immobilized.

That means higher taxes and more savings. To achieve an adequate fiscal policy Congress and the Executive must play on the same team. I have every confidence that there will be effective team play in the future.

From my own experience I bear witness to the unflagging industry, intelligence and patriotism of the Ways and Means Committee of the House and the Finance Committee of the Senate. I am encouraged by the recent announcement of my old chieftain, Hon. ROBERT L. DOUGHTON, that the Ways and Means Committee of the House has determined to commence hearings on a new revenue bill immediately after the current recess. Adequate taxes and savings is an essential bulwark against inflation. We shall work together to make that bulwark strong and secure.

The battle against inflation is on. The attack is not draped in the spectacular. Nonetheless it is deadly insidious. Upon the result of this battle depends the security of every family in America now—and in the days when the roar of the guns is silenced.

As Economic Stabilization Director I am resolved to hold the line. In that difficult task, I need—I ask your confidence and understanding help.

Pancake Flour

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. HERTER. Mr. Speaker, under authority granted to revise and extend my remarks in the RECORD, I am able to state that the two new companies referred to in my discussion of the pancake-flour situation are Confections, Inc., 160–68 West Loomis Street, Chicago, Ill., and Soy Food Mills, 100 West Monroe Street, Chicago, Ill.

Progress of Ship Production

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BLAND. Mr. Speaker, in my last report to the House on the subject of ship production for the year 1943, I said at that time that the shipbuilders and workmen in the shipyards of the United States had almost equaled the record for the year 1942, and that at the time I spoke I believed that the record had been equaled, if not exceeded.

The reports are in for the month of June 1943 and show that the total production for the first half of 1943 are 879 ships aggregating 8,818,622 dead-weight tons, or 133 ships delivered in excess of the record for the whole year of 1942, or stated in tonnage, 728,890 more deadweight tons of ships delivered in the first 6 months of 1943 than in the entire year of 1942.

America surely has reason to be proud of the splendid record that is being made by the United States Maritime Commission, the War Shipping Administration, shipbuilding companies, and shipyard workers everywhere.

In an article which appeared in the Washington Times-Herald, Sunday, July 7, 1943, under the name of Donald Mackenzie, written from London under date if July 6—New York News—he said that naval experts in that capital declared that day that United Nations ship construction for June exceeded U-boat sinkings by more than 1,500,000 tons. Mr. Mackenzie said:

If this rate can be maintained, it was said, our side will be able by winter to move half a million more troops to invasion points than the war planners had estimated.

The Germans claim they sank 149,000 tons of United Nations shipping during June—a figure that Allied sources term absurd and extravagant. But even if true, American construction alone would still be more than 1,000,000 tons ahead of submarine sinkings.

However, these comforting figures should furnish no inducement to reduce production but should prove an incentive to increased efforts by all.

The same writer said:

That grim swath of the western ocean between the thirty-fifth and the fortieth meridian, into which the German prowlers were being driven by shore-based aircraft early this year, is now closed altogether. It is likely to remain closed, or at least be highly hazardous.

While I was crossing the Atlantic in a destroyer during the last 2 weeks of April and the first days of May, I saw this trap being closed on the U-boats, when our aircraft carriers and other striking forces began to patrol that area.

The Germans are believed to be racing the refitting of their whole U-boat fleet in order to be ready for another all-out attack in November. The Germans are said to be confident that there is still fight in their submarines and that Hitler will make a last desperate bid to neutralize British and American war production by the most intensive underwater campaign of the war.

The outcome of that struggle, naval experts here assert, may decide the date of the final German defeat.

The outlook is promising, but there must and will be no impairment in the splendid efforts all are making. It is encouraging to know the progress that is being made and to render tribute to all who are participating in this work of progress.

According to a release from the Maritime Commission under date of July 2, 1943, June construction brought a new record for ships delivered by an individual yard.

The California Shipbuilding Corporation sent 20 Liberty ships into service compared with 18 delivered in May and 19 in April. The Shipbuilding Division of the Permanente Metals Corporation of California turned in a total of 25 Liberties; these were built in the former Richmond Yards Nos. 1 and 2 which until recently were run as separate yards. In the future they will be run as one.

Other high totals turned in included 14 Liberty ships by Bethlehem-Fairfield Shipyard, Baltimore, Md., and 17 Liberties by the Oregon Shipbuilding Corporation, Portland, Oreg.

The total of 168 vessels included 115 Liberty ships, 19 C-type cargo ships, 9 coastal cargo vessels, 11 M. C. tankers, 3 coastal tankers, 3 special types, 6 seagoing tugs, and 2 ore carriers.

The west coast region produced 82 ships totaling 870,000 deadweight tons, or 51.94 percent of the national total. The east coast built 30.39 percent of the tonnage, or 509,400 deadweight tons represented by 45 vessels. On the Gulf coast 25 ships with combined deadweight tonage of 237,800 were delivered, accounting for 14.18 percent of the grand total. The remaining 3.49 percent of the tonnage was delivered from Great Lakes region yards which built 16 ships.

The number and types of ships built by all the yards follow:

Shipyard	Number of vessels	Type of vessel
Alabama Dry Dock & Shipbuilding Co., Mobile, Ala.	1	Tanker.
American Shipbuilding Co., Cleveland, Ohio.	1	Ore carrier.
Barnes-Duluth Shipbuilding Co., Duluth, Minn.	3	Coastal tanker.
Bethlehem-Fairfield Shipyard Inc., Fairfield, Baltimore, Md.	14	EC-2 cargo.
Bethlehem-Sparrows Point Shipyard, Inc., Sparrows Point, Md.	1	C-3 cargo.
California Shipbuilding Corporation, Wilmington, Calif.	20	EC-2 cargo.
Consolidated Steel Corporation, Ltd., Wilmington, Calif.	7	C-1 cargo.
	1	Special type.
Delta Shipbuilding Co., Inc., New Orleans, La.	5	EC-2 cargo.
Federal Shipbuilding & Dry Dock Co., Kearny, N. J.	1	C-2 cargo.
Froemming Bros., Inc., Milwaukee, Wis.	1	Seagoing tug.
Great Lakes Engineering Works, River Rouge, Mich.	1	Ore carrier.
Globe Shipbuilding Co., Superior, Wis.	2	Seagoing tugs.
Houston Shipbuilding Corporation, Houston, Tex.	7	EC-2 cargo.
Ingalls Shipbuilding Corporation, Pascagoula, Miss.	3	C-3 cargo.
J. A. Jones Construction Co., Inc., Brunswick, Ga.	2	EC-2 cargo.
J. A. Jones Construction Co., Inc., Panama City, Fla.	2	Do.
Kaiser Co., Inc., Swan Island, Portland, Oreg.	4	Tankers.
Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis.	1	Coastal cargo.
Marinship Corporation, Sausalito, Calif.	1	Tanker.
Moore Dry Dock Co., Oakland, Calif.	2	C-2 cargo.
New England Shipbuilding Corporation, South Portland, Maine.	8	EC-2 cargo.
North Carolina Shipbuilding Co., Wilmington, N. C.	9	Do.
Oregon Shipbuilding Corporation, Portland, Oreg.	17	Do.
Pacific Bridge Co., San Francisco, Calif.	1	Coastal cargo.
Pusey & Jones Corporation, Wilmington, Del.	1	C-1 cargo.
Pendleton Shipyards Co., Inc., New Orleans, La.	2	Seagoing tugs.
Pennsylvania Shipyards, Inc., Beaumont, Tex.	2	C-1 cargo.
	1	Seagoing tug.
Permanente Metals Corporation (Richmond shipyard No. 1), Richmond, Calif.	8	EC-2 cargo.
Permanente Metals Corporation (Richmond shipyard No. 2), Richmond, Calif.	17	Do.
Kaiser Co., Inc. (Richmond shipyard No. 3A), Richmond, Calif.	2	Special type.
St. Johns River Shipbuilding Co., Jacksonville, Fla.	2	EC-2 cargo.
Southeastern Shipbuilding Corporation, Savannah, Ga.	2	Do.
Sun Shipbuilding & Dry Dock Co., Chester, Pa.	5	Tankers.
Walsh-Kaiser Co., Inc., Providence, R. I.	2	EC-2 cargo.
Walter Butler Shipbuilders, Inc., Superior, Wis.	7	Coastal cargo.
Western Pipe & Steel Co., San Francisco, Calif.	2	C-3 cargo.
Total	168	

The Food Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I desire to bring to the attention of every Member of Congress the results of a survey recently made into the food situation in this country. This is a compilation of 1,000 replies to questionnaires sent to publishers and editors of farm, trade, and other publications on this all-important question. These replies were received from 47 States, so that they truly represent a cross section of the entire Nation.

The food crisis staring this Nation in the face is so serious that the members of the Republican congressional food-study committee, of which I am general chairman, intend to devote their efforts during the congressional recess to more intensive study of the problems involved. That there is unanimity of opinion throughout the Nation of the importance and the seriousness of this question is evidenced by this compilation.

I particularly call attention to the fact that 988 out of the 1,000 publishers and editors replying consider this question of food supply paramount; that 594 reported their communities already suffer from food shortages, and that 781 expressed definite opinion as to the causes. Nine out of ten replying to the question, "To what do you attribute this shortage of food?" blamed it on bungling, incompetency, mismanagement, and waste in Washington; the announcement of freezing in advance; Government regulations and restrictions; too much red tape and too much regimentation; inefficient Government meddling and lack of foresight; Government overbuying and hoarding.

The survey covers eight specific questions which were included in the survey, complete reports of which will be furnished to any Member of Congress requesting me for it. A summary of this survey follows:

RESULTS OF 1,000 QUESTIONNAIRES TO PUBLISHERS AND EDITORS

QUESTION 1

Do you agree with me in general that our food supply is of paramount importance?

	Percent
Yes	98.8
No	.8
No answer	.4

COMMENTS

Yes; both from standpoint of military forces and home front.

Unrest already; hunger would threaten victory.

If the administration had given as much consideration to our good honest farmers as they have to labor racketeers there would be no present problem.

QUESTION 2

Is your community suffering from food shortages?

	Percent
Yes	59.4
No	40.6

If so, what foods are hard to get?

	Percent
Meat	53.1
Butter	17.6
Vegetables	9.3
Canned goods	7.2
Potatoes	3.9
Fats and oils	3.9
Fresh fruits	2.6
Coffee	2.4
Cheese	2.3

QUESTION 3

To what do you attribute this shortage of food?

	Percent
No answer	21.9

Seventy-eight and one-tenth percent gave the following answers:

More than 9 out of every 10 blame bungling, incompetency, mismanagement, and waste in Washington; announcing freezing in advance; Government regulations and restrictions, Agricultural Adjustment Administration, Office of Price Administration; too much red tape and too much regimentation; inefficient Government meddling and lack of foresight; Government overbuying and hoarding.

Unusual war demands; armed forces; shipping food out of country; too much to whole world, to Europe, Russians, British, Arabs; too much for lend-lease; our Army oversized and food wasted; feed America first.

Government-planned economy and hoarding; abundance of scarcity; killing off pigs some years ago; hoarding caused by Government scaring public; stupid bureaus and political chicanery; subsidies for not raising; attempting to change the laws of supply and demand; public lack of confidence in Washington bureaucrats and politicians, especially WALLACE. The "Nudeal" planned it this way, and don't let anyone tell you differently.

High industrial wages lure farmers away from farms; wage inflation; Selective Service drafting men from farms.

Poor distribution—lowered quotas in busy defense areas and near Army camps; poor transportation.

Office of Price Administration refuses to let meat be sold after it is slaughtered; told one meat slaughterer to burn it (this is fact, not hearsay).

Rationing; ration points too high; independent grocers stocked with high-point merchandise, can't get it used; many persons using ration stamps for articles they never purchased before; increased use of nonrationed foods.

Lack of recognition of importance of food production; our farmers (Louisiana) have given too much thought to production of cotton; too little to food, feed, canning, and drying. Too late in getting busy. Reluctance to adopt war economy.

Waste resulting from withholding of farm equipment and machinery; failure of Government to set ceilings on farm prices; too low price ceilings. Shortage of gas and tires.

QUESTION 4

Are the people in your community planning to use all available land for gardens this summer?

	Percent
Yes	76.8
Mostly	7.4
No	4.2
Increase but not all	4.1
More than ever	3.4
Fair number	2.7
Some	1.4

COMMENTS

Surplus of land but using all man and woman power.

Increase in spite of triple A red tape.

City folk will lose enthusiasm quickly.

All the young and able to work have gone away.

Washington discourages city people from doing Victory garden work.

Ban on gas makes it difficult.

There will be more gardens devoted to vegetables this year.

QUESTION 5

Have the chamber of commerce, local leaders of industry, or other groups, formed any organization to stimulate increased food production—

(a) By making available and preparing nearby land for use by individuals wishing to have gardens of their own?

	Percent
Yes	52.5
No	30.5
Not necessary	6.4
No answer	5.3
Individuals	5.0
No organization	.3

(b) By contracting with farmers to produce increased crops for direct consumption, etc?

	Percent
No	41.6
No answer	24.6
Yes	23.6
Individuals	5.0
Not necessary	2.3
No organization	.2
Don't know	1.1
Not farm territory	1.0
Some	.6

Active groups: Chambers of commerce, Kiwanis, Rotary, newspapers, town committees, Lions Clubs, civic clubs, real estate agents, Agricultural Adjustment Administration, 4-H Clubs, War Production Board, Soil Conservation Service, Office of Civilian Defense, garden clubs and committees, Victory garden committees, Girl Scouts, railway companies, mining companies, boards of trade, steel companies, Ford Motor, public schools, grange and home farm bureaus, defense councils, city administration and park commissioner, canneries, hatcheries, auxiliary police, Farm Security Administration, local service clubs, State agricultural departments, county agricultural associations, business men's associations, United States Department of Agriculture War Board, war clubs, junior chambers of commerce, home demonstration clubs, Lord's acre groups, food for freedom organizations, etc.

QUESTION 6

Are the farmers in your territory going to equal last year's production?

	Percent
Yes	40.6
Exceed	25.3
No	12.9
Doubtful	9.7
Probably	4.1
Will try hard	3.0
No answer	1.9
Not farm territory	1.4
Don't know	1.1

(These answers above were qualified as to weather, manpower, and machinery, and essential supplies.)

COMMENTS

Weather is the only item the Government leaves to a higher being to control.

Much depends on whether Government gets rid of bureaucrats and supplies sufficient labor and tools.

Labor is attracted to the mines (Minnesota).

Bean outlook poor due to low prices. Milk will be off.

Will succeed if let alone by dictators.

"Washington Dreamers—Hands Off" is local opinion.

Hard to compete with high factory wages.

QUESTION 7

What, in your opinion, are the farmer's greatest handicaps this year?

	Percent
Manpower	84.8
Machinery and equipment	41.6
Supplies (including fertilizer, gas, seeds, fuel oil, rubber, wire fencing, feeds, etc.)	8.4
No answer	.5

OTHER OPINIONS

Industry and defense get the young men (under 35); farms need young men, as well as older, experienced men.

Negro help scarce or unwilling.

Shortage of peak season and incompetent help.

Transportation. Unfair draft. Black market.

Government meddling, interference, and restrictions; Farm Bureau, Agricultural Adjustment Administration, Office of Price Administration, United States Department of Agriculture, and War Relocation Authority; Office of Defense Transportation truck limitations.

Red tape and price administration; indecision in Washington; too damn much New Deal stuff.

Price uncertainty and Government attitude toward increased prices are handicaps.

Tendency of Government to ride off in six different directions at once.

Lack of confidence in Government control and distribution.

At height of depression, with people starving, Government had us plow under.

Farmer feels picked on. Office of Price Administration rules bitterly resented.

Example of living off Work Projects Administration and other soft hand-outs.

Small farms can't get priorities; Democratic farms get the service.

Waste of farmer's time because of useless regulations and bungling; confused New Deal psychology.

No combines for removing soybeans from ground.

"Did you ever have to go 8 to 10 miles to get permission to buy gasoline for a farm?"

QUESTION 8

What do you suggest we can do to get greater production and conserve our supply of food?

Three and five-tenths percent did not answer this question or had no suggestions to offer.

Ninety-six and five-tenths percent gave the following suggestions:

Defer farm labor; don't allow essential farm labor to take factory jobs; defer older men and high-producing farmers; leave 18- and 19-year-old boys on the farms; white-collar men no good as farmers.

Supply plenty of help to farmers, drafting it if necessary; we need proper allocation of man-and-woman power.

Draft all manpower for Army, farm, or factory.

Release men from armed forces and return them to farms—at least seasonally.

Release farmers from factories and war plants or let them be inducted.

Develop student farming groups; release from school boys of 12 or over for farm work.

Shoot all city farmers in Washington.

Put all conscientious objectors to work on farms.

Assure farmers of ample supplies of machinery and repair parts, fertilizer, lumber, feeds, steel, wire fencing, tools, etc., in addition to labor.

Machinery and labor can be pooled to advantage.

Get a new President and stop this wicked foolishness.

Put bureaucrats in productive jobs; put them to work.

Get rid of New Deal boondoggling; get a new administration in Washington.

We need capable men in Washington, in management; honest men with good programs and common sense.

Administration should leave farmers alone; too much paternalism.

Too much red tape and too much official correspondence; should be cut by 50 percent.

Fire Paul McNutt; he messed up Indiana.

There is nothing wrong with this country that a good election can't cure.

Sick of Government by racket; if F. D. R. would forget politics and fourth term it would help.

Let up cockeyed Washington regulations.

Less interference from high-paid Government employees who don't know anything about farming or marketing.

Cut Government extravagance and damn foolishness; these lower public morale.

Regimented existence futile; too deep for legislative correction.

Return to the laws of supply and demand.

Restore confidence in Government.

Ease truck restrictions; time, gas, and tires are wasted by red tape and delays.

Hundreds of Letters Say "Engel Is Right"

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ENGEL. Mr. Speaker, on June 29 I addressed the House on the subject matter of excessive labor costs in war production. I quoted specifically wages paid to certain classes of employees in war industries. I received hundreds of letters since that time. The letters were

overwhelmingly favorable and more than verified the facts set forth in my talk. They further show that the conditions I spoke about as existing in the plants which I visited exist in every State in the Union. It is interesting to note that 108 letters received in 2 mails came from 33 States. Of the 108 letters, 101 were favorable, 7 were from workers who receive high wages, 5 of whom were violently opposed to my position, the other 2 received excessive wages, but tried to justify doing so on the ground that they were purchasing bonds. The letters came from business and professional men, and persons in all walks of life. A great many letters came from workers whose wages had been frozen by Executive order at pre-war or near pre-war wages and found it difficult to meet the ever-increasing cost of living. I am quoting excerpts from a few of the many letters I received. These come from 20 States. For obvious reasons I am not giving the names of the writers, but the original letters are on file in my office and can be seen.

From Springfield, Mass., comes the following interesting post card:

I am 67 years old. I was on old-age pension, get 40 bucks a month. I left the old-age pension. I am now in a factory sweeping floors; get 50 bucks a week—easy money.

From Lodge No. 810, Brotherhood of Railway and Steamship Clerks, Freight Handlers and Express and Station Employees, Ludington, Mich.:

We do agree with your statement that many workers are being underpaid. * * * The 15 nonoperating railway brotherhoods have had no increase in pay since the war began. After a year of negotiation they were granted 8 cents per hour by a board appointed by the President. This has now been denied by the Economic Stabilization Director Vinson for fear of causing inflation. The majority of these men are married men with large families. In Ludington yard, clerks with 20 years' experience receive $25.28 weekly after pension, tax, Victory tax, hospital insurance, and War bonds are deducted. Section men receive $22.61 weekly after similar deductions. * * * Their families are underfed and underclothed. Many have lost automobiles and insurance. These men are frozen to their jobs and cannot take advantage of higher-paid wages in other industries. We have pledged we would not strike under any provocation for the war's duration. Was this pledge an error, Mr. ENGEL?

From Rochester, N. Y.:

This lavish manner of spending by war industries around Rochester is without a doubt one of the greatest and most apparent tragedies. * * * I have implicit knowledge that in certain factories here * * * there are many girls in their teens making $60 to $85 a week.

From a sergeant in the United States Marine Corps stationed in California comes the following:

Please accept my humble gratitude, admiration, and sincere appreciation for your efforts. It was a splendid job. The serviceman's reward for his efforts and sacrifice in this world's struggle will be the dubious privilege of paying life-long taxes in addition to his struggle to earn a livelihood for himself and family.

From Hartford, Conn.:

There are many college graduates like myself who are receiving less than $50 a week after years of experience. If the present set-up now before the War Labor Board would go into effect, I would receive $45 for 6 days' work including 8 hours overtime. (This comes from the same factory where machine-gun assemblers were paid as high as $8,741.)

From a secretary of state of a Southern State comes the following:

I have wondered for a long time why someone did not make public these facts. I want to congratulate you on your initiative in the matter.

From Illinois, a coal miner's wife, comes the following:

It takes a coal miner, if he works his way down to the face, 4 years' experience to learn to mine coal. I have a husband and two sons mining coal. They get 69 cents per ton—5 days a week with from $3.50 to $5 check-offs. They make a little less than $40 per week; then if they break something or don't get cars, they lose work.

From Buffalo, N. Y.:

The night watchman and janitor's assistant are paid $24.25 a week.

From Oklahoma City, Okla., a doctor writes:

It is absolutely the best statement of facts that I have seen during our present crisis.

From Detroit, Mich., comes a letter from a State employee who receives $1,800 a year. He writes as follows:

I have a niece graduated from high school who was employed at J. L. Hudsons. She left to operate a drill press in one of the plants working on the night shift. Age 19, she makes an average of $82 per week with time and a half for overtime. Friends of hers are being paid $90 a week. When you think of men in the Army and Navy giving their lives at $50 a month, while girls and boys still in their teens being paid $80 to $125 a week, it makes you boil.

From a lieutenant commander of the United States Navy, from the office of Naval Inspector of Ordnance, located in an Eastern State, comes the following:

I noticed the enclosed clipping relative to your recent 44-day trip. Your remarks can be concurred in heartily by one who knows.

From a Michigan industrial town comes the following:

The writer, a graduate chemical engineer, is employed as a chemist in one of the local industries. I often wonder whether it would be better to do janitor work at ——— company in order to keep my head above water. No, we are not starving, but I have been forced to discontinue buying bonds and am selling some of them and have even borrowed money in order to keep going. On the other hand, I am very proud and happy to know that my tax money helps to swell the pay checks of ex-ditch diggers, etc. in the war plants.

From Cleveland, Ohio, comes the following:

It is about time someone is looking into this three-ring circus.

The following from a letter signed by 55 so-called high-wage employees of the Continental Motors Corporation of Muskegon, Mich.—my district:

The undersigned noted the articles appearing in the Muskegon Chronicle. * * * Those whose names follow are employed at Continental Motors and are paid the so-called high wage. Apparently you are opposed to the wages we are being paid for 7 nights per week, 11:30 to 7 a. m. You speak of these plants operating with public money—correct—and we are that public. Show me one Senator or Representative who is buying bonds and stamps proportionately to his past years' income as the average Continental worker. We are continuing to buy bonds * * * we would gladly donate the bonds and have our comrades and relatives back safe and sound—which seems to be more than a lot of politicians are interested.

The $50 a month service man will have to toil and sweat the rest of his life when he is discharged to pay the taxes necessary to redeem the bonds bought with the so-called high wages:

From Philadelphia, Pa.:

It is unfair to the white-collar worker—those whose salaries are frozen. I might say that some of the wages paid here are even higher than those quoted by you.

From Indiana:

I operate a grain elevator, feed mill, and farm-implement store. To lose a very common-plier mechanic to some defense plant, then have him come back and rub a check for $75 to $100 for a week's work under the nose of my experienced men who have stayed on the job because they felt they were giving their best service to the war effort, makes me furious.

From Michigan comes the following:

My sons and myself have about $8,000 invested in our farm. Our neighbor across the road has no investment. He gets $85 a week. That is more than we, with our investment can make together.

From Berkley, Calif., comes the following:

You think you really saw something on your tour, well, perhaps you did, but you don't know the half of it. I am working in the shipyards. I have 10 sons, have served 24 years as a mechanic and machinist, and it took years to become a journeyman. Why is it that we now have young girls who serve 60 days as helpers and then become journeymen and draw the same as a man with years of experience. I work on those large cranes, sometimes I am 75 to 100 feet in mid-air out on those booms doing repairs, still I have to work the graveyard shift in order to draw more money per hour than these girls. I more than agree with you, every word and more is true.

From Detroit, Mich.:

All you say—the ridiculous wages paid women and boys in factories is true.

From Virginia:

Spend, spend, spend—tax, tax, tax. We see this extravagance all around. We, trying to tighten at the spigot drip while the bunghole is wide open. Why can't it be stopped?

From a doctor in Maryland:

I come in contact with hundreds of persons who earned not more than $25 or $30 a week before the war. Now they make as much as $85 a week and more. While war workers make these extravagant earnings, workers in trade, professions, and white-collar classes, make but few dollars more than they did before the war. This inequity is not justified.

From a druggist in Houston, Tex.:

I only wish you had found it consistent to extend your travels to this Houston area where the condition is so deplorable as to be nothing short of a public disgrace.

From Hutchinson, Kans.:

More power to you. You have touched on the one thing that should be given plenty publicity. What you say is absolutely right.

From Kansas:

You have put your finger on one of the spots which should be corrected in our war policy on the domestic front. The American people are entitled to know the truth.

From Knoxville, Tenn.:

Both wages and profits are absurdly and unnecessarily high. I do understand the workers' desire to get all he can when he sees corporations being treated so generously.

From Mississippi:

Here at ——— Field it is disgraceful. There are women taken in as instructors at $2,200 per year and their qualifications are nil—just picked up from the general herd and given such pay.

From a doctor in Tulsa, Okla.:

There are many instances of people who a few weeks ago were working for $15 a week now make over $100 a week—young girls and boys with 2 or 3 weeks' training in riveting make more money than graduates from universities with a doctor's degree. It ain't right, Congressman, and something should be done about it.

From a lawyer in North Carolina:

It is quite evident and a matter of common knowledge that farm boys who were hauling manure last fall are receiving wages and salaries in excess of those who are skilled.

From St. Louis, Mo.:

We represent a group of toolmakers. We know we are chumps for not getting more than we are, but we are constantly reminded that we are unpatriotic if we quit for higher wages, but, as you state, these "hillbillies" come to town and declare themselves master mechanics, toolmakers, etc., starting at wages we skilled men have required years to bring up. Usually a tool maker is required to serve 4 years' apprenticeship as a machinist apprentice, then several years as a machinist, then a toolmaker.

From Dayton, Ohio:

My farm hand who has farmed my place for several years receives $25 a week and he doesn't live on the place. His son, whose best job had been an auto mechanic, works at ——— and makes $100 a week.

From Chula Vista, Calif., come two advertisements from the Minneapolis Tribune—one read as follows:

Wanted laborers for northeastern Canada, wages $300 per month guaranteed, no lost time due to inclement weather or sickness, plus overtime, board, room, and one issue of clothing furnished free.

Signed by the United States Employment Service office. War Manpower Commission, 407 Soutl. Fourth Street, Minneapolis, Minn.

The other reads:

Waiters, dishwasher, kitchen men. Wages, $250, board and lodging. Olympic Commissary, 25 South Washington.

From Abilene, Tex.:

I have over 600 customers, the larger part now in defense work. I have questioned several hundred. Everyone tells me they are not working very much. Some of them are making $200 a week now, and they never made that much in a month before.

A businessman in Birmingham, Ala., writes:

Defense workers here in Birmingham are paid twice as much as we can afford to pay our employees. Frankly it is disgusting.

From Shandon, Ohio:

I have been waiting for a long time for someone to dare to come out and say what you have said about excessive wages.

From a member of the Democratic executive committee of a Southern State I have the following:

I am very much opposed to the New Deal's squander mania and have grave apprehension as to the outcome. We are selling our children and grandchildren into debt slavery.

From California come two advertisements from a local paper both signed by the United States Employment Service. Each has a picture of a young lady, who testifies:

We are paid at least $214 a month while we learn to weld and soon earn over $270 a month as journeymen, 10 percent extra for the swing shift, 15 percent extra for the graveyard shift.

The second advertises for women 18 to 40 years and reads in part as follows:

We will train you to weld and pay you at the rate of $214 a month during a short training period. Soon you will be equipped with knowledge that will win you promotions to pay $270 a month.

From New York City:

You are right regarding excess wages to labor. You are wrong on war profits. Industrialists are making big war profits, but what of it? They are saving the country in this war.

From Ontario, Canada:

I am an American citizen and live in Illinois. Last winter I was amazed at the unheard-of wages girls were making in ordnance plants—$50 to $70 a week for unskilled labor. In Canada a girl living here in the capital considered herself lucky even with a college education to be a grade 2 clerk with $90 a month to spend in a country where everything is high.

From Akron, Ohio:

My husband and I were greatly pleased with your speech. We commend you for your courage in saying what all thinking people know—that the high wages paid inexperienced workers in our war industries is the chief reason that our country is on the brink of inflation and chaos.

From Fremont, Ohio:

I am a school teacher and our salary is fair, but there isn't any way for us to get a raise. I don't mean to complain, but it is very discouraging to see so many young, inexperienced people receive checks so large, it is hard to believe.

From Utica, N. Y.:

The condition of which you spoke prevails in this area—where youths who received $20 a week in the textile mills before the war, are now receiving from $70 to $100 a week in arms plants.

From Los Angeles, Calif.:

I am a steamfitter and pipefitter by trade, having secured my journeyman's card in 1915. I have seen waste on construction jobs to a point where it really hurts below the skin.

From Utica, N. Y.:

Boys just out of high school are drawing down in war plants from $40 to $125 a week. It amounts to a positive debauching of our working people.

From Detroit, Mich.:

Glad you brought out in the open conditions as regards wages. Here is an example—young man 22 learns a trade at ——— Corporation which took 6 weeks. He is now in ——— Motor Co. earning $137 a week besides bonuses.

From Connecticut:

Your statement regarding excessive wages paid by defense plants occasions no surprise here. The only surprising thing is that someone has the courage to make the facts public.

From St. Louis, Mo.:

Just read the morning paper—some cold-blooded facts—my clothes cleaner just cashed a check for a friend for $112—1 week's pay at the cartridge plant.

These are only a few of the many similar letters which I received since I addressed the House on excess labor costs, on June 29, 1943.

A Vital Movement

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. VOORHIS of California. Mr. Speaker, it is with a feeling of profound appreciation for the outstanding leadership he has given to clean and progressive political thought and action in California that I ask consent to include in the RECORD the following radio address delivered by Mr. J. Frank Burke, the "editor of the air," over his own station, KPAS, of Pasadena, Calif.:

It is unnecessary for me to express agreement with the facts and the points of view and the emphasis which has been placed upon the great necessity that confronts our democracies to meet the problem that is presented by insecurity and to plan for the fourth great freedom—that from want—by such a complete security for the people and for the nations as will eliminate the chief cause of war in the world, and also bring to the troubled homes and hearts of the people of America and, indeed, finally of the world, that relief and comfort that can come through such an intelligent cooperation by the people with what nature has done for mankind to drive hunger and want and physical distress from the world.

Since the time that recorded history began, the world has been plagued at different times by famine and by want; and, strangely enough, due to the social and economic system that we have adopted, that distress and suffering and want, have increased in volume and severity, just in proportion as we have increased our interdependence upon one another.

When man was 90 percent self-sufficient, drought and famine and disease took their deadly toll, to be sure, but they all had to attack the individual units, and by that very fact, there was a great limitation on their power and success.

But now, with literally hundreds of thousands of men and women employed in a single institution, upon which they must depend for earning that stipend that will enable them to go into the market place and buy their necessities of life, it is found that the closing of that institution's door means that they have been denied the wherewithal to purchase their food, their clothing, and their shelter, not as individuals, but as the hundred thousand employees in that whole institution.

Thus, we have had brought about in the history of our economic and social and industrial life, a most significant phenomenon:

That, as we advanced in mechanical, engineering, and metallurgical science, we have actually advanced in the woes that come to humanity, which formerly were due to the scarcity of provisions, so that they can now all be suffered with the warehouses almost bursting with plenty.

And, friends, it is the worse today because not only the learned and the intelligent, but even the masses of workers have learned that there is no necessity for this want and distress.

They see everybody busy during the war, with incomes enlarged, with plenteous food and raiment, and they are sane enough to come to the conclusion that if that can be done when one-third or one-half the population is devoted entirely to wasteful production of destructive weapons and materials, together with supporting at least 10 percent of the population as a fighting army, that certainly if the entire physical and mental and moral powers of the people are devoted to the avocations of peace, with the same bountiful Nature doing her part, that poverty and privation can be absolutely banished from the land.

Of this there can be no more doubt. Several years ago two very thorough surveys brought forth convincing evidence of this fact. One was that of Brookings Institution. It showed at that time—and that was a decade ago—that there was potential production from factory and farm in this country for every home of an amount equal in money value to approximately $2,500 per year. More than half our population was receiving less than three-fifths of this amount at that time, and a third of our population received less than 20 percent of this amount.

In another survey that was brought out in what was called Loeb's Chart of Plenty, a considerable amount larger was shown to be the potential production of America than the Brookings Institution indicated.

Undoubtedly these surveys and other facts that were brought before the people must have had their effect upon that civil engineer, the former President of the United States, Herbert Hoover, when he declared in an address, possibly 5 or 6 years ago, that "We have had for nearly a century industrial pioneers who have mainly devoted themselves to building up the great industrial tools provided by scientific discovery. This generation did a good job. They won for America the greatest economic triumph in all history. That is a unique ability to produce a plenty for a wholesome standard of living and of comfort to all the people." Let me continue to quote from Mr. Hoover: "Some thousands of a marginal group out of 120,000,000 got too much of the productive pie. Some millions of another marginal group got too little. But we had so triumphed in the long journey of mankind away from scarcity and want that we began to view the promised land of abolished poverty."

Apropos of these surveys and this opinion of Mr. Hoover's is the testimony of a man who is in a position to know and who feels the responsibility to tell. Donald Nelson, who has been at the head of one of the greatest distributing corporations of the United States, has, in this great world emergency, been appointed Chairman of the most important group, probably, in Washington—the War Production Board. His duties lay upon him the obligation to know what the producing power of our country is, as well as afford him the opportunity to learn first hand by observation what we are able to do, and are doing. In absolute harmony with Mr. Hoover's statement, Mr. Nelson declared in an address 1 year ago before the University of Missouri as follows:

"Freedom from want can become—must become—a reality in the world. Poverty is not inevitable any more. For a generation we have been living on the edge of a new world. We are only now beginning to realize it. For the first time in the history of the human race there can be enough of everything to go around. The sum total of the world's greatest possible output of goods, divided by the sum total of the world's inhabitants, no longer means a little less than enough for everybody. The vast production machine the United States is creating to fill its war needs will provide the industrial plan to assure all the peoples of the world the escape from the misery and degradation of poverty."

This is the statement of the man who, in the United States, from his background of training, from his present position furnishing the ability to know, and with the combined qualifications of natural aptitude and talent, thoroughly developed by a life of experience, I say, this is the statement of that kind of man concerning the opportunity that we have to enter into that promised land of plenty from the deserts and husks of scarcity.

Incidentally, friends, he told us what we need in order to achieve these desired results. Here it is. Listen to him:

"To accept that opportunity, we need only to have the good pioneer sense not to be frightened by it, just because it calls for new mental attitudes and new habits of thought."

Friends, listen! I have been quoting to you the most important and the happiest auguries of a new day, and these possibilities that are assured by these surveys that were declared by this former President of the United States, and of which Mr. Nelson says, they are possible now, can come to us if we simply get busy.

And may I suggest to you today that the conditions which we will confront when this dreadful war is over behoove us to begin now to bring this possibility about.

It is natural, and I think unfortunate, that millions of men and women are totally indifferent to what may confront them tomorrow as long as they are assured of food enough today and a theater ticket in their pockets.

But unless democracy—let me make it specific, unless the United States—has a definite and adequate plan, not only ready but actually put into operation by appropriate legislation through our National Congress, we will, at the cessation of this war, be confronted with not fewer than 25,000,000 unemployed men and women without provision for their future together with returning and disbanding 7,500,000 men, who are now in uniform in the armed forces of our Nation.

I am not speaking here words of hysteria. I am simply delivering to you the prediction of the best informed and up-to-date economists and publicists who are fully aware that unless we have made some preparation to meet this situation, we will have a tragedy more disastrous than that which has ever met any great nation in the history of the world.

These conditions were rapidly being reached even before the war began. Through a special and uneconomic process our country had appropriated Federal money for the feeding and clothing of the unemployed in the most meager manner.

Actually, counting those that were on Government relief, together with those who were idle without relief, there were about 8,000,000 men and women so situated at the beginning of this war. They have been absorbed in industry because we have entered into war socialism as an economy.

Dictatorships have, in part, furnished an answer. Hitler found the German people hungry and unemployed and put them to work on national projects, creating a machine to murder the world.

But at least he had an answer to unemployment. And, in part, it was due to the inspiration that the people received from this employed condition that furnished him with Germany's loyalty.

Russia, through the dictatorship of the proletariat, under the leadership of a man of power and purpose, put all men to work, with the object, the commonweal.

Great Britain and the United States were haltingly doing this by the dole, and that dole route, as far as the United States was concerned, had nearly reached its end, and the leaders of democracy know that they dare not face the future and the close of this war, with this problem of the unemployed and the aged, and the sick and the cripples, without having a comprehensive and adequate program that will immediately go into operation.

In answer to that need, Great Britain has brought forth its Beveridge plan, a plan that comprehends in its outlook all of the needy of the British Isles. It is detailed. It is complicated, and in the minds of most people who have studied it, it is inadequate, but it is a plan.

The leaders in the United States, industrial, religious, social, labor, all have recognized the imperative necessity of a plan here.

Fortune Magazine, one of the most ably edited journals in the United States, exhaustive in its surveys made of each institution, as it publishes articles concerning great industries for management and the well-to-do, lamented some 2 years ago that the United States had, of that day, 25 percent of its population outside of its economic system, and that the other 75 percent had no answer for it.

And, friends, Fortune Magazine a little later appointed able, experienced men to make a survey of the situation, and bring out a program. Last December in the supplement of the magazine they furnished a program to meet the situation.

And, to me, it is remarkable the similarity, in some respects, that that program bears to the program that has been suggested by the National Resources Planning Board, which report was submitted some 2 months ago to Congress by President Roosevelt.

I am calling your attention to this program by Fortune magazine to emphasize to you that the conservatives, the men in high and responsible positions in industry, are alarmed over the condition which will confront the world, unless democracy furnishes an alternative to what the Communists and Fascists are presenting to meet the world's wants.

On the 10th of last March, the President submitted to our Congress this plan of the National Resources Planning Board to cover all the social needs of our population, from unemployment to old age and ill health.

The men who are outstanding in their backgrounds of training and education, and of their known ability, have spent months in making a survey of what must be done, and how it must be done. In this plan they have provided for every contingency, in a broad sense, that might arise, and it is intelligently and thoroughly based upon the known productive power of our country.

In this report, there is contained what is spoken of as the new Bill of Rights, and this Bill of Rights embodies the object which the plan aims to insure and establish.

Let me refresh your memory upon them, if you have read or heard them; or let us rejoice together in them, if you hear them for the first time:

1. The right to work, usefully, and creatively through the productive years.

2. The right to fair pay, adequate to command the necessities and amenities of life in exchange for work, ideas, thrift, and other socially valuable service.

3. The right to adequate food, clothing, shelter, and medical care.

4. The right to security, with freedom from fear of old age, want, dependency, sickness, unemployment, and accident.

5. The right to live in a system of free enterprise, free from compulsory labor, irresponsible private power, arbitrary public authority, and unregulated monopolies.

6. The right to come and go, to speak or to be silent, free from the spyings of secret political police.

7. The right to equality before the law, with equal access to justice in fact.

8. The right to education, for work, for citizenship, and for personal growth and happiness.

9. The right to rest, recreation, and adventure, the opportunity to enjoy and take part in an advancing civilization.

It isn't any wonder that Max Lerner, writing on this plan, under the heading Charter for a New America, in which he called it a job and security plan, says:

"And I can report my own conviction that it is better and sounder and goes farther than the English plan. I must also add my own belief that, difficult as the fight for the Beveridge plan is now proving in England, the struggle to achieve the American plan will prove even fiercer and more difficult. * * *

"It contains political dynamite that could blast the log-jam which is today the domestic New Deal program. It contains a whole armory of economic weapons that can be used in the post-war period. * * *

"It is revolutionary, not because it invokes social violence, but because it would make it unnecessary and impossible. It is revolutionary, above all, because it is the product of that conscious forethought about the future which is the essence of planning, and because its planning is more comprehensive than we have ever thus far had from a nonsocialist governmental body.

"It may fail of adoption—that depends on the American people, upon their courage and clarity and their sense of greatness."

Friends, it must not fail of adoption. This is a definite program worth fighting for. It's worth living for. It's worth dying for. But the way we must get it is to work for it. We must achieve it. We must earn it.

During the depression we saw men's fortunes swept from them through no fault of their own. Rich today, they were poor tomorrow.

E. Stanley Jones puts it pointedly in his timely book, Christ's Alternative to Communism. He declared that it was infinitely safer to have your protection in the cooperative work where all people benefited than in those securities that were simply determined by the state of the market.

He argues very definitely for this kind of program. And, in commenting on those marvelous words which Christ quoted in the synagogue, from Isaiah, on being annointed to preach good tidings or good news to the poor, Stanley Jones says, "What would be good news to the poor? To make them content in their poverty? If so, religion is opium. To offer them a reward in the hereafter? If so, religion doesn't function here and now in human relationships.

"What then would be good news to the poor? The only good news that would be adequate is that there should be no poor. Poverty can be banished."

And then, note, you'd think it was Donald Nelson or Herbert Hoover speaking. Stanley Jones goes on to say, "Even now we have everything for the abolition of poverty. We have the knowledge and the technique. We have everything except one thing, the collective good will."

Donald Nelson puts the same thought in other words when he says, "We must have a new approach." We only need the good pioneer sense not to be frightened by it just because it calls for new habits of thought.

Stanley Jones closes with these words: "Poverty is not God's will. It is ours."

And in his book, he says in conclusion, "A labor leader told us that 'You're too late. The country's going communistic or Fascist.' These are startling words, and they stab us awake. But I believe it's not too late. The Christian way may yet be adopted, but we have no time to lose. We must act now."

We have the program before us. Never was a greater opportunity placed before thoughtful men and citizens in a democracy. We must organize to put this plan over, the democratic plan, the people's plan, the charter for America.

The Food Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. JENKINS. Mr. Speaker, in addition to the remarks which I have already made on the food question, I extend my remarks further.

Mr. Speaker, every Member of Congress knows that the present food situation is the most serious and critical domestic problem facing the Nation today. The President and this New Deal administration are undoubtedly responsible. The destructive theories of Tugwell and WALLACE have contributed greatly to our serious plight, and if they are carried on much further, they will be ruinous. The impractical economic policies prescribed by the inexperienced intellectuals who administer the food activities of the Government have been so inconsistent as to throw the whole thing into chaos. The persistent and obnoxious injection of politics by Harry Hopkins, Judge Frankfurter, and Judge Rosenman into all governmental activities is evident throughout the whole food administration. Proof of this is seen in the refusal of the President to give adequate authority to Chester Davis, whom he himself had selected as one of the most capable food men in America.

There would be no serious food shortage in the country now except for the determination of the President and his advisers to keep the administration of all food matters under the direction of that mysterious coterie that compels every activity of the Government to bend toward the perpetuation of the New Deal dynasty. Although the early policies of the New Deal administration, which advocated that surpluses of foods were dangerous and that scarcity of foods was desirable, had been very disastrous, yet the great productivity of our country would have been sufficient to have overcome this disaster if those in charge of food affairs had been frank and courageous enough to admit their mistakes. As a result of their failure, dire disaster has overtaken us. Apparently it never occurred to them that no one ever went hungry on a surplus. They should recognize the fact that in any food cycle production must come first. Instead of building on a solid foundation they have proceeded to build as one who would build the second story of his house before he laid the foundation or built the first story. Instead of starting at the beginning with the producer and proceeding from production to processing and distribution they thoroughly disorganized the whole food situation. The only way to solve this food problem now is to increase the production of all kinds of basic food commodities to the maximum.

Ten different agencies now vie with each other as to jurisdiction in food matters. Their overlapping jurisdictions produce violent discord and contradictory programs. So, in a land of plenty, hunger and hardship stalk our people. This would only be considered as unfortunate except for the fact that much of it is the result of culpable conduct. In that case it is more than unfortunate. The responsibility should be laid where it belongs—on those who put the perpetuity of the New Deal dynasty ahead of all other considerations.

Those in charge of the administration of the food activities of our Nation are clearly on the defensive. Instead of floundering around in a sea of apologetic indecision they should be leading the people in an aggressive, open, and aboveboard fight against wastefulness. Production and more production should be their battle cry. They should be furnishing inspirational leadership and not leading a hopeless retreat.

After the President had called Chester Davis to Washington and given national publicity to the fact that Davis was to be put in full charge of the administration of all food activities, he should have gone forward with the program that he had led the American people to believe he would carry through. Regardless of what diverted him, the result of his refusal to even give Davis an audience and of his refusal to appoint a capable food administrator and to give him full authority to act has been most disastrous. I think the principal reason for the shabby treatment accorded Chester Davis by the President was the fact that the sentiment of the country was tremendously in favor of placing all food activities under one head. Republicans and Democrats almost unanimously proclaimed Davis as a man eminently qualified to act as National Food Administrator. The President cannot stand to divide the limelight with anybody. The President showed an unusual attitude toward Davis. It is shown in an incident referred to by Walter Lippmann, concerning which he says:

Some 10 days ago he—

Meaning Davis—

wrote his letter of resignation, which was lying on the President's desk at the very press conference in which Mr. Roosevelt was asked about the resignation and denied it.

REPUBLICAN CONGRESSIONAL FOOD STUDY COMMITTEE SET-UP

Because of the muddling of the new dealers in their handling of the food situation, the Republican leadership in the House of Representatives about 3

months ago set up what is known as the Republican Congressional Food Study Committee. This unofficial committee is operating without any expense to the Government. This committee consists of 44 members, which have been divided into 9 subcommittees. Each of these subcommittees has been assigned special activities. For instance, one will study and make recommendations with reference to livestock and meats. Another will study field crops while another considers dairy and poultry products, and so forth. All of these subcommittees have been very active and have done much constructive work. To this committee must go the credit for focusing the attention of the American people on the necessity for the coordination of all food activities of the Government under one food administrator with full power to act. Upon the direction of this committee, and as general chairman of the committee, I introduced H. R. 2739 on May 18, 1943. This bill was immediately approved by the people of the Nation with phenomenal unanimity. In fact not one single responsible person or organization arose to oppose it. The membership of the House and Senate quite generally approve it.

THE JENKINS BILL

The bill to which I have heretofore alluded is known as the Jenkins bill. This bill provides:

First. It establishes a food administration in the Department of Agriculture and gives the administrator thereof full power over all food activities. This power is broad enough to include the control over prices and all other controls now exercised by any of the many food authorities. It also provides that the administrator may delegate his powers to assistants, but he cannot surrender them.

Second. It protects the consumer as well as the producer.

Third. The act could be terminated with the termination of the war.

Because this bill assumed to provide controls for prices, and so forth, it was sent to the Banking and Currency Committee for consideration. Later the Agriculture Committee of the House took up the consideration of the matter, with the result that the gentleman from South Carolina [Mr. FULMER], the chairman of that committee, with my consent, incorporated practically all the principles of my bill into a bill which he introduced, which is known as the Fulmer bill. This bill was recommended for passage by the Agriculture Committee of the House and would have been favorably considered by the House but for the fact that when the President appreciated what Congress was about to do, he forced the resignation of Chester Davis and appointed Marvin Jones. It was generally known that it was the wish of the Republicans and Democrats alike that Davis should be the man to be appointed, whichever of these two bills would have passed. But when the President appointed another man to the position, the ardor of some Members for the passage of that legislation suddenly cooled. They were willing to grant complete authority to Davis or to any other fair-minded man to operate entirely free from any domination even from the domination of the White House, but they were not willing to give the White House any such authority to be exercised by its appointee by remote control.

It is almost a national calamity that we were thwarted in our attempt to give the American people what they wanted. This determination of the White House to hold all authority and its unwillingness to divide authority with anyone, however competent, is frequently noted.

When Congress returns from its recess, I hope it will still be the purpose of this Food Study Committee to renew its efforts to take the food problem out of politics by demanding that a fair and impartial food administrator with full power to act be appointed.

The Food Study Committee also advanced several other constructive programs that have brought relief to the people. I shall discuss a few of them.

THE CANNING PROBLEM

As late as 4 months ago there were some Government authorities denouncing congressional statements that there would be a shortage of vegetables and canned goods. Our committee, several months ago, warned the food authorities and the country of the impending shortage. The failure of the farmers to procure labor in the early spring proclaimed the fact that the vegetable crop would be short. This was supported by the fact that millions of dollars worth of tomatoes and other vegetables were permitted to rot in the fields last year, because of insufficient help to gather the crop. Adding to these sure facts the additional fact of the terribly cold and backward spring season, it should have been evident to any reasonable mind that a shortage of vegetables would be inevitable. The Government authorities defended their position by depending on last year's surplus to supply the deficiency. As a result of this fallacious reasoning the canners of the country descended on Washington a few weeks ago in great numbers. They sought the assistance of our committee for they knew of our efforts and of the fact that Congressman LANDIS, of Indiana, the chairman of our subcommittee on fruits and vegetables, had introduced a bill seeking to provide more ready movement of perishable fruits and vegetables. Our committee arranged for a meeting between the canners and the proper Government authorities which resulted in a better understanding. Shortly thereafter prices were fixed on several vegetables such as peas and beans, and so forth.

The canners were especially concerned over their labor situation. The wages fixed by O. P. A. were too low. Many canners were ready to quit and would have done so except for patriotic reasons. They claimed that an increase of only 1 cent per can would have been sufficient to have enabled them to have paid the required wages. This increase would have increased the cost of the canned goods only 36 cents per person per year. Because of the agitation of the Food Study Committee and others, the O. P. A. authorities have finally consented to an increase of 10 cents per hour on the wages of canning-factory workers. While this will not solve the problem, it will aid materially.

Additional relief has just recently been given to the canners of cherries by reason of the activity of the members of this subcommittee.

THE POULTRY PROBLEM

The Food Study Committee has not confined its activities solely to improving the advantages of the farmer. This committee has carried its investigations to the large centers of population in an effort to assist in the solution of the problems of the consumer. This committee held public hearings in several large cities, including New York City, Boston, Philadelphia, and Minneapolis. These hearings were attended by groups representing a large number of consumers. The packers, the processors, the wholesalers, and the retail merchants were all well represented. Also labor groups were represented at some of the hearings.

Special attention was given to poultry and poultry products and to fish products. The public was awakened when our committee developed the fact that practically 90 percent of all the poultry produced in the eastern and northeastern sections of the country were being handled through black markets. The failure of the administration to control black markets is a black mark on its escutcheon. Black markets come from the failure of the consumer to get available commodities legitimately. When the law fails or those who enforce the law fail, the consumer takes the law into his own hands and thereby encourages the black markets. Not only are black markets proof of the inefficiency of Government authorities, but they are a terribly disorganizing influence on business. When one of the greatest processors and distributors of poultry in the country testified at our hearing in Boston that his business had practically all disappeared to the black market, and that for the first time in 115 years one of the large and famous old markets of Boston on the previous Saturday did not have a single chicken to offer for sale to its thousands of Saturday customers whose lifetime custom had been to purchase their chicken for Sunday dinner at that old market, he told a story that has been typical of markets all over the country. Where are our thousands of O. P. A. inspectors and investigators while this practice is being carried on? Would it not be within the power of our most efficient Federal Bureau of Investigation to take up the matter of the protection of the American people? Likewise, the Department of Justice could well afford to devote their activities to breaking up the black marketers who literally steal millions of dollars from the American people and subject them to serious epidemics by forcing them to buy unwholesome poultry and meat products.

PANCAKE FLOUR

The magnitude of the business done by the manufacturers of pancake flour is

surprising. To a large extent this product is used by the families of working mer who must prepare meals quickly. But it is also used by all classes of people. The O. P. A. set a price of from 5 to 7 cents per 20-ounce package on the unadvertised brands. This is the kind of pancake flour that is sold by many of the chain stores. The prices were based on costs of 1941. The costs of the ingredients have increased greatly but the ceiling price fixed by the O. P. A. remained the same. As a result those manufacturing this kind of pancake flour were compelled to close their operations. There were producing 60 percent of all the pancake flour sold. By reason of the activity of the committee steps have already been taken which we hope will relieve this injustice.

CORN

There should be no serious shortage of corn in this, the greatest corn-producing country, yet many of our manufacturing plants that must have corn products of various kinds face a shut-down because of the failure to get corn into industrial channels. These include paper manufacturing plants and even in some cases foundries and certain classes of steel manufacturing plants. This present corn shortage has been a revelation to most of our people for few people ever knew of the many industrial and commercial usages to which corn is put.

Just recently the Government has been compelled to resort to a most unusual procedure with reference to corn. In fact, I do not now recall of any such procedure having ever been resorted to by the Government. I refer to the procedure by which the Government a few days ago confiscated several millions of bushels of corn from private owners. This procedure was denominated as a requisition; but it was in fact practical confiscation. Of course, the Government paid the regular price for the corn. The amount sought to be secured by this proceeding was 20,000,000 bushels, but I am advised that only about 6,000,000 bushels was obtainable. Let me give you some figures that will prove that this unfortunate situation could and should have been averted. For this year's use we had a carry-over from last year of 350,000,000 bushels of corn. In 1942 we raised a magnificent crop of corn that yielded 3,317,000,000 bushels. Adding these two items we had a total of 3,667,000,000 for distribution. It was expected that this would be apportioned about as follows:

	Bushels
For industrial and food uses	285,000,000
For livestock feed	2,932,000,000
For carry-over from this year	450,000,000
Total	3,667,000,000

From these figures, which are considered to be reasonably accurate, it is seen that there is no shortage of actual corn in the country. The Government agencies have shown their inability to properly distribute the corn so that the maximum of usefulness might be had. While there is yet a great supply of corn in the country there is a terrific shortage for industrial purposes and also for feed for poultry, dairy cows, and for feeder cattle.

This shortage is partly due to the fear of the corn grower to part with his corn because he thinks he may need it next year; and another fact contributing to this shortage is the fixing of the price of corn too low by the O. P. A. It has always been recognized by hog feeders that the ratio between the price of corn and the price of hogs should be about 1 to 10. In other words, if the price of corn was below $1 per bushel and the price of hogs was above $10 per hundred that then it would not pay the farmer to sell his corn but he had better feed that corn to his hogs. When the price-fixing authorities fixed the price of corn at $1.07 per bushel at Chicago, which is about $1 to the farmer, and permitted hogs to sell for $13.75 per hundredweight, the farmers decided to feed their corn to the hogs. It was more profitable. So in the race between the hog and the human, the hog wins out.

WHEAT

There is no doubt that there will be a short crop of wheat this year. In 1942 the yield was 980,000,000 bushels. The yield for 1943 is estimated to be 731,000,000. This will be a falling off of 249,000,000 bushels. It is estimated that our demands for wheat for 1943 will be 1,023,000,000. This will be 292,000,000 bushels more than it is estimated we will produce. Unless this situation is properly appraised and anticipated, we will have a serious problem from this source. Wheat is now being used extensively to bolster up the corn shortage.

The wealth of the Nation comes from two sources. One source is the yield of the ground in grains and vegetables and in minerals. The other is the skill and genius of men in fitting these natural products to the use of mankind. Can you possibly understand any intelligent administration waiting until 1943—4 years after the outbreak of war in Europe—to quit paying farmers for reducing production and fining farmers for marketing a few bushels of wheat in excess of restricted quotas fixed by professors in Washington?

Therefore, Mr. Speaker, I say that in these the most trying times in the history of the Republic, it is the duty of the Government to encourage the greatest possible production of all the grains, fruits, and vegetables that our country can grow so that these may feed our people, feed our livestock and poultry, and operate our industries. And the Government should further encourage the people to employ their genius to the limit so as to enhance the value and usefulness of all our commodities so that we may care for our people and win the war. When the Government shall have done this, our people will do their part. They never have failed.

CATTLE

The meat problem would be funny if it were not so serious. There are more cattle in the country than ever before, still beef is very scarce. The western cattle raisers are clamoring to sell their cattle, still hundreds, probably thousands of slaughterhouses and packing houses have quit business. Fifteen out of seventeen packing plants in Cincinnati are closed. The cattle raiser cannot sell because the feeders to whom he usually sells will not buy because feed is scarce, with poor prospects for improvement. The feeder also is complaining because the O. P. A. by regulations is preventing him from finishing his cattle as he is accustomed to doing.

Let me outline the different steps in the raising and disposing of fat beef cattle. First, the ranger raises the animal until it is ready to be fattened. Some are moved young as baby beeves and others as yearlings or as 2-year-olds. They are shipped to feeders who are usually located in the great corn- and wheat-growing sections of the country. The feeders then subject these animals to intensive fattening processes where they are expected to put on from 2 to 4 pounds of flesh per day. The feeder usually wants to put on as much as possible. Some animals are increased in weight as much as four or five hundred pounds. That poundage that the feeder puts on is the juicy meat that the consumer wants. The O. P. A. has by regulation attempted to prevent the feeder from carrying his process to the final steps and to compel him to dispose of the animal when it has been about half finished. That is now the crux of the delay in many cases. Four well-fed animals will produce as much meat in pounds as five animals not completely finished. Under the O. P. A. regulations it will require 5,000,000 animals to produce what 4,000,000 would ordinarily produce. The loss of a million animals in that transaction must fall on someone.

There is a tremendous black-market business in cattle. The total result is that the legitimate packing business is ruined. The cattle grower is discouraged. The cattle pens of hundreds of men who have heretofore fed and finished cattle are empty. All this is a sorry example of the incompetency of those in charge of the price-fixing program on beef. The lawless black marketer is stealing the business that rightfully belongs to a fine group of businessmen who have done their part to build up America. The black marketer is making millions in a slimy, destructive way, and is endangering the lives of millions who innocently eat his unwholesome product prepared in slimy, stinking, back-alley slaughtering places.

RATIONING—PRICES, ROLL-BACKS, AND SUBSIDIES

To this point in my discussion of the food problem I have dealt largely with production. Personally, I feel that the best antidote to inflation is a plenteous supply of goods. Inflation comes from a surplus of purchasing power and a scarcity of goods. We could forever put an end to inflation in foods and the cost of living if we could produce a bountiful sufficiency of food commodities. Therefore, I maintain that our food authorities should abandon all their makeshift plans of trying to handle this, the most important domestic problem, by attacking it in slipshod manner. It should be met head-on in a sensible, vigorous manner. Every energy should be employed

to produce and produce and produce. When this shall have been done, neither hunger nor inflation will threaten us.

Rationing is a defensive process. It should be employed only when the supply of necessary foods is not sufficient to meet the demand and when there is danger that some will suffer at the expense of others. There is a wide difference between the philosophy which underlies rationing and that which underlies price fixing and roll-back and subsidies. Rationing is supposed to insure fairness to all. It should not be used as a vehicle of unfairness either to the people or to business or to the country.

The fixing of prices, roll-backs, and subsidies are all akin and none of them would have been necessary if the authorities had adopted a plan of plenty against the plan of scarcity. Scarcity leads to starvation, while plenty leads to prosperity.

Mr. Hoover in a recent speech said of these interesting subjects:

Abolish the system of retail and wholesale price ceilings. It begins at the wrong end. Price fixing in a great food-producing country must begin as near as possible to the farmers and controls proceed from there on by regulation of the trades against profiteering. Prices rose less when this system was applied in the last war than they have under the present retail ceilings. We must regulate the flow of water at the nozzle instead of chasing the drops from the shower. This present price system is stifling farm production. It is not stopping inflation.

And who is supposed to benefit by subsidies? It is supposed to be the worker, but the worker is also the taxpayer. So is the farmer. And taxes are, sooner or later, increased by just the same amount as the subsidy. Subsidies consist of taking money out of one pocket and putting it into another with an illusion attached that the cost of living has been reduced. It is both more painful and more costly to take money out of the tax pocket than it is to get it out of the price pocket. A wage based on subsidy foundations will break down sooner or later. Moreover, subsidy money increases Government borrowing and debt to the banks and that adds to inflation pressure. Far more serious, however, is the result to the farmer and the consumer. Price fixing based on any such concept will strangle production. Its operation in the distribution trades will clog the flow of commodities and will in the end increase prices and black markets. Likewise subsidies can become a weapon of favoritism or of punishment in the hands of the huge bureaucracy. They will sooner or later lead to scandal.

Mr. Albert S. Goss, master of the National Grange, says of these important problems:

Price ceilings as a remedy for inflation have been tried hundreds of times during the past 2,000 years. Not once, so far as we can learn, have they succeeded over an extended period. On the contrary, they have resulted in creating food shortages, black markets, and, finally, the very inflation they were supposed to prevent.

As a matter of fact, subsidies, as now employed, do not reach many of the small producers at all, so they are direct victims of the roll-back. Neither are they sufficient to aid many of the high-cost producers. It follows, therefore, that the ceilings are cutting off production just as they have always done whenever tried.

Thus it will be seen that the ceiling method increases the inflationary gap by reducing production. On the other hand, when used in connection with subsidies, it increases the gap at the other end because the Government has to borrow the money paid in subsidies and most of this is borrowed from banks. This increases our national spendable income. The subsidy therefore defeats itself. The present plan attempts the impossible by putting economic law into reverse. Higher prices encourage production and discourage consumption. The subsidy program encourages consumption, and to the extent that the subsidies fail to reach the producers they discourage production.

Why should we cut the price of coffee 3 cents per pound, butter 5 cents per pound, and meat 2 cents per pound to everybody, including the wealthy and those whose incomes have increased more than the cost of living, in order to aid the few with fixed or low incomes? If subsidies are necessary for the relief of, say, 10 percent of our population, it is an enormous waste to subsidize the other 90 percent who do not need it. A far better scheme would be to use the stamp plan, which was employed during the late thirties. Thus the subsidy would go to only those who need it, and it would not be necessary to place ceilings which fast curtail our already diminishing food supply

Both Houses of Congress, just a few days ago, overwhelmingly rejected subsidies. The House of Representatives came within a few votes of having the two-thirds vote necessary to override the President's veto.

The Congress upon its return from the present recess will no doubt renew its attack on these programs.

It was reliably reported on the floor of the House by men high in New Deal councils that because of the tremendous majority in the House and Senate against subsidies, the President and his New Deal food authorities would refrain from the further extension of subsidies except as to butter and beef and coffee as already arranged. I predict that no attention will be paid to these promises and that these authorities will take advantage of the absence of Congress from Washington and that they will extend subsidies to many other commodities, unless they sooner find that the roll-back will not work in which event the Government may go into the market and buy commodities in a big way or it may raise the prices in cases that are pressing. One of the worst features of subsidies is that when once commenced it is difficult to withhold them and that the further they are extended the more destructive they become. There could be nothing more inflationary than for the Government to borrow money to give to the people of this generation to be repaid by the taxpayers of another generation when the earning power of the people of this generation is greater than it has ever been.

COMMITTEE PLANNING ADDITIONAL HEARINGS

The Republican Congressional Food Study Committee is equipped to and expects to make exhaustive research investigation of all the phases of the food problem such as the amount and proportion of our food going to our allies and to lease-lend and to the armed forces. The figures issued by the governmental authorities are notoriously inaccurate and are prepared to suit their own purposes. The committee is also expecting to hold public hearings in the agricultural sections of the country and in some of the large western cities. Livestock and meat products invite a complete study. The tremendous production of fruits and vegetables in California and the great Northwest need to be given great and careful consideration, for their value runs into billions of dollars.

It shall be the purpose of the members of this committee to devote most of the coming recess of Congress to the study and solution of these problems. This would be a most appropriate congressional service.

LAST SESSION OF CONGRESS WAS SIGNIFICANT

I am constrained to make the observation that the last session of Congress was a most significant one. It proclaimed a new declaration of independence. No longer is there any special magic in a peremptory message from the White House. No more is the word "must" used except in the chronicles of those who write of the past; not only has the Chief Executive been held to his proper prerogatives but he has been brought back from the far-away journeys and excursions that he was wont to make into the prerogatives of the legislative branch of the Government. He has been halted in his efforts to legislate by Executive edict—witness his unlawful efforts to limit salaries to $25,000 and the unlawful efforts of the War Labor Board to usurp power which it did not have. I mention this subject, for there is, in my opinion, a battle impending between Congress and the Executive in connection with the power of the Executive to establish roll-backs and to pay subsidies in such a manner and to such an extent as he evidently proposes. There are many who deny that the President can legally put into effect his extensive program of subsidies and roll-backs.

THE PLACE OF FOOD IN OUR WAR EFFORT

The most important contribution to our war effort is the manpower employed. Nothing transcends in importance the lives of our young men and women in the armed services. The next most important contribution is munitions. Men first and munitions next. Then comes food. A willful refusal to produce food by those responsible for its production is unpatriotic. Willful failure by Government officials to do their utmost to plan to encourage the production of food is unpatriotic. Any willful effort to prevent the production of food is sabotage. Therefore, since the production of food is so vital to our war effort, every American owes it to his country to do his utmost to produce and to conserve food. Willful waste makes woeful want.

To sum up, I would say that for the remainder of 1943 those in Government charged with the production and conservation of food from the President down to the humblest producer should lay aside every consideration of personal gain or political advantage and strive to solve our food problem.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LAMBERTSON. Mr. Speaker, a young man in uniform and our country's history are two glorious things.

Senator CLYDE REED and the President agree on Federal crop insurance; Senator TRUMAN and Aubrey Williams on N. Y. A.

We are conservative; we would not say "the end is in sight" until at least one American or English soldier was in German-occupied Europe.

"The Truman committee's watchfulness and courage have helped reduce the temptation to profiteer, and the public would do well to support its vigilance."

Senator CLAUDE PEPPER says his life's ambition is to nominate F. D. R. for President of the United States of the World. Senator CLAUDE is a little late.

Just as Congress adjourned the air-cooling boiler or freezer literally blew up and will be off for 30 days. Don't tell me the Lord is not on our side.

William Green, who once was sensible, now asks for defeat of every Member of Congress who voted for the antistrike bill. The bill aimed only at preventing strikes in wartimes.

The President's expressed sympathy for the three professors for the want of a trial will infuriate the House after all the days they had before the Kerr committee. The gap widens.

We are taught to hate the Japs and at first they were all put in concentration camps, and the F. B. I. is constantly looking for German bunds, but the Italians roam our streets as freely as sin and nobody cares.

After the bill withholding pay from thousands of Federal employees had been agreed to by the two Houses it took another whole week to get it signed because of righteous indignation at limitations imposed on spending.

The copious tears from down Pennsylvania Avenue over the demise of Federal crop insurance on the signing of the Agriculture Department bill is a weak appeasement to the American farmers for the determination to roll them back on the price of their products.

Responsible for Corn Shortage

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LEMKE. Mr. Speaker, just before Congress adjourned the papers carried many articles concerning the shortage of corn. As usual the radio commentators and the columnists guessed wrong. They thought the farmer was responsible. The truth is Congress was responsible because it did not prevent the Department of War from wrecking the food supply by drafting most of the available farm help.

Of course, another cause was the national lunacy of restricting the production of agricultural wealth. We were all to get rich by stopping production, but if the War Department had cooperated as it should have, then there would not be the acute corn shortage that exists today.

I quote from a letter from C. W. Tanner, C. P. S. No. 30, Walhalla, Mich., dated May 3, 1943:

I just returned last Tuesday night from a 9-day furlough that I took expecting to finish husking my 1942 crop of corn. While I was home it rained most of the time so I was only able to husk 2½ days. However, I just happened to be lucky to hire a man who will husk the 7 or 8 acres that are left as soon as the weather permits.

Last Tuesday, May 18, one of my neighbors still had 15 acres to husk and another 25 acres. Many of my neighbors haven't started to plow, some have a small amount plowed, very few have all their plowing done and as a rule everyone has all their corn planted by that date. Because of the rains very little or no corn will be planted in May. Many acres will lay idle this year because of the shortage of farm labor and the lateness of the planting of the crops caused by the rain.

As you and I well know we have never raised enough in normal times to feed our people and that leading agricultural colleges and universities in various States have indicated production declines of as much as 30 percent in numerous localities and by States from 10 to 25 percent reduction over last year's production.

About 10 days ago an article appeared in the Kankakee Daily Republican from Washington saying that Kankakee County, Ill., was one of the counties that ranked high in the shortage of farm labor. Now because of all the rain the farm labor shortage will be more acute than ever. Washington is already asking for farmers to increase wheat production.

Now our Nation and the world is near starvation and I cannot continue to call myself a good Christian and do nothing about this condition. Our work here in the Manistee National Forest planting trees and doing timber releasing, can and should be done when food again becomes more plentiful.

Unless something is done before long to let men go back to the farm many will be considering doing as I have been thinking of, and that is to walk out of camp and go back to farming—at least until I should be picked up. Then if I were sent to prison I would still consider it a great victory because of Thoreau's assertion "Under a government which imprisons anyone unjustly, the true place for a just man is in prison." I am not selfish, I'm sure, in my view, but only want to be able to help humanity by feeding—not only our people but all people of the world that need food. What better service could men in civilian public service camps render to their country? We are being denied the privilege of serving our country in the best way we can conscientiously serve.

Why not reclassify men in civilian public service camps to II-C or III-C, those who will produce food for the duration? I think this would mean about 2,000 men to immediately help out on the farms.

Hope you will do all you can to relieve the farm labor shortage in the United States, any way to produce the full capacity.

North Dakota's Lieutenant Governor Holt Pleads for Small Business—Would Employ Local Lignite and Manpower Resources To Produce Sponge Iron for War- and Peace-time Industries

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. COOLEY. Mr. Speaker, all America, in its eagerness to expend freely of its natural and human resources to win the war, is concerned about the shortage of steel for armaments, airplanes, and ships and demands that the Government somehow effect adequate and unrestricted production of iron and steel.

There are 26 States that possess rich natural resources of iron ore, and there are many more States that possess coal and lignite in immense quantities, with hydroelectric power and human skill—everything that is necessary for the production of iron and steel to whatever extent that may be required for full war production.

We know that there is a steel shortage. Why should we permit such a situation to exist? Why should we continue to rely upon the steel monopoly for these all-important supplies, which they cannot produce in sufficient quantity to meet the Nation's war needs?

That question is being asked today very grimly in those States and communities which have long hoped for the development of their natural resources. The existence of these great riches is something of a mockery, so long as these riches remain in the ground unused. There are vast areas of this country which, despite the existence of such great natural resources, are still retarded areas, so far as industry is concerned.

Yet that is not the whole story. For there are States and communities where the natural resources have been opened up, but not for the industrial benefit of the local population. No; the iron ore that is taken from the earth in such areas is not smelted there; it is taken elsewhere to be turned into iron and steel. And if the people of those areas want iron and steel, they must pay for its transportation back to them, sometimes half way across the continent.

The people of those areas get none of the industrial benefits that should accrue from the exploitation of their natural resources. In order to get such benefits, there must be local facilities for the production of iron and steel. Without such local iron and steel plants, they remain in a condition of colonial dependency in a steel empire whose centers are the blast furnaces of Pittsburgh and the financial offices of Wall Street.

From those centers have come, year after year in the past, the orders which have set men to work today and laid them off next month. In those far-away places have been hatched the plans which, indifferent to the well-being of

the people in such areas, provide 6 months' work a year, and in the other 6 months leave the communities to cope with unemployment and poverty.

TRUE MEANING OF FREE ENTERPRISE

The folks out there have had plenty of time to think about all these things, and they know what they want. They have plans of their own. They want to have their natural resources brought into use, under conditions which will permit and encourage a normal industrial development. They want to have small iron and steel plants of their own. And they are well aware that the day has come, because of technological improvements in iron production, when small plants have a new usefulness of special importance to us now in wartime, and of future importance to the whole country in the years of peace to come.

Out there, let me remark, there have been dug out of ancient slime pits the skeletons of gigantic monsters that once roamed and ruled the land—huge armored reptilian forms that had their day and vanished from the scene. You can see their skeletons in the museums, vast sprawling shapes that have a strange resemblance to some of our gigantic corporations. There are some people who think that the gigantic corporations which have lorded it over us for several decades are here to stay forever. But there is good reason to think otherwise. The giant corporations and combinations whose operations are found to seriously interfere with and restrain the natural development of our country, are like the giant reptiles of the past. They are doomed to extinction. Nature, it would seem, grew impatient of those huge reptilian forms in which there was no promise of a finer intelligence and wiped them out. Man has cause enough to be impatient with the gigantic combinations which are not serving their professed purposes of human society. Man can wipe them out and restore free competitive enterprise.

Right now, in wartime, when the steel monopoly has shown its incapacity for meeting the Nation's needs, is the time to begin the work of restoring independent enterprise in this important field of iron and steel production. We are rightfully concerned not only with our wartime needs but also with our post-war prospects. Why should there be any retarded areas in this country, when those very areas possess such great natural resources?

IMPORTANT BEGINNINGS UNDER WAY

The people's hopes and plans for post-war prosperity are of importance to this Congress. The Boykin steel shortage investigating committee has become a forum for the expression of these aims and purposes. I have in mind particularly a joint session held recently, on June 25, here in Washington, of the representatives of the Governors of North Dakota and Minnesota with the Boykin committee, at which far-reaching plans were discussed for bringing into use for war production the important mineral resources of those two States.

At that joint conference, one of the speakers was Lt. Gov. Henry Hold, of North Dakota, and what he said was of such interest that I am glad to quote it here at length:

Mr. Chairman, our war production program is a matter in which this whole Nation has a direct and vital interest. We are depending upon massive and sufficient production to save American lives in this war. It is an intolerable thought that heroic young lives should be lost because of any insufficiency of war materials.

SHOCKING FACTS ABOUT SHORTAGE OF STEEL

This is a subject upon which I do not wish to expand. But I am bound to say that I have been profoundly shocked by the recent admission made by H. G. Batcheller, Chief of the Iron and Steel Division in the War Production Board, that it has been necessary to cut the supplies of steel asked by—

The War Department, by 14 percent;
The Navy Department, 20 percent;
The Maritime Commission, 22 percent;
Lend-Lease, 32 percent; and
The Office of Defense Transportation, 40 percent.

And as these figures are taken from the official news statement of the War Production Board, I would ask that the complete release be accepted for the record of this hearing.

The reasons for this unfortune state of affairs are not far to seek. The facts unmistakably pointed out the origin of the shortage. It is due to the domination of our war production program by the interests of the steel monopoly, which is reluctant to permit small business to have any adequate part in war production.

The big steel companies that show little or no interest in the future well-being of the States and communities from which they drain their iron ores first assured the Nation through the 1941 Gano Dunn report that there would be plenty of steel for our war program. That complacency, nursed along by well-prepared publicity and propaganda lulled us on doing nothing to get ready for the war, until it was almost too late. When finally the shortage was becoming tragically serious, an expansion of steel production facilities was countenanced. Whereupon the Government next permitted the allocation of a billion and a quarter dollars for the purpose of expanding and modernizing steel plants. But, mark you, thanks to the helpful counsel of Big Steel's advisory committee—more than 90 percent of this huge sum was handed the few big steel companies.

Mr. Chairman, we of the Northwest are thoroughly convinced by what has happened in the last 40 years that there will be no satisfactory expansion of steel production until the strangle hold of the big steel companies is broken. That industry will not be returned to the service of the American people until independent small business is permitted to participate in the war-production program by a utilization of our local iron-ore resources scattered widely throughout the country.

LOCAL INDUSTRY, BASIS OF GOLDEN AGE

We of North Dakota like the stimulus of competition. We sincerely hope for the restoration of that spirit of industrial pioneering which flourished over the Nation in the era of small business which lasted up to the turn of the century.

In those nineteenth century days, which some of us have not forgotten, every town had its own small business concerns, locally owned, locally managed, an integral part of the locality. And back of them you would find, scattered all over the country, local mining enterprises, and local foundries and shops, making use of the great natural resources spread so profusely in our soil.

Our mineral riches were mined from the earth, our ores were processed into metal and fabricated into the finished articles of commerce. These local enterprises were the broad base of an industrial prosperity from which no locality and no region was debarred. For in those days of free American enterprise, no power existed in financial centers to stop the wheels of industry in any town or doom any region to industrial stagnation.

I hark back to those days of free American enterprise, because it was in those days that American industry developed the impetus which has kept it going ever since, in spite of the difficulties which then began to hamper and distort its development. At about that time, taking advantage of the lavish funds available from European sources, our Eastern financiers began to take over the control of business. This process began with their domination of the iron and steel industry early in the new century. It then spread rapidly throughout all industry, until monopoly control was established in practically every one of our key industries.

And with monopoly control and the destruction of competition, there came about a gradual decay of that spirit of pioneer enterprise by which this country had achieved its industrial greatness. The impetus was great, and it carried us far, but the bloated growth of mounting corporate structure and profits could not replace the qualities of free local enterprise that had been strangled to death.

We were accustomed to think of ourselves as the world's leaders in industrial enterprise. Yet the new century was still young when the World War revealed to us the fact that we were dependent upon German industry for strategic chemicals and other essential products which we here in this country had never learned to make. Not, let us say, because our American inventors were less resourceful and ingenious than those of Germany, but because the financial powers that ruled our industrial life did not see fit to promote the research and experiment in such directions.

"HE WHO PAYS THE PIPER"

For the past 40 years we have labored under the system of regimentation in which vast absentee interests paid the piper and called the tune. It was no longer the mining people who decided where the mines should be dug. It became increasingly true that it was not the producers who decided what articles should be manufactured, or the storekeepers who decided what articles should be sold, or the American people who decided what articles they should buy.

STEEL, A CONCRETE EXAMPLE

All these matters were increasingly decided for them by the higher powers of distant corporate finance. Up to a certain point these monopoly interests were anxious for improvement of our industrial methods. Yes; they employ the best engineering skill and inventive genius and direct it along certain definite lines, with a view to intrenching themselves permanently in control. The steel monopoly, for instance, was glad to promote the further development of the gigantic blast furnace from the less efficient units of smaller capacity that characterized the industry at the turn of the century. For it meant an end of the annoying competition of the small forges scattered around the country, which could produce possibly 25 to 50 tons of pig iron a day at a cost of $30 to $50 a ton. These little forges were wiped off the map by the colossal blast furnace, which could produce 1,400 tons of pig iron a day at $20 a ton. And so the little forges were shut down, and with them the local mines, in State after State—unable to compete with the great business and financial interests that became the masters of the industry.

Then mines and foundries and machine shops and factories that had flourished in Connecticut, in New Jersey, in Virginia, in North Carolina, in Tennessee, in Michigan, in Wisconsin, in Missouri, in California, in

Washington, in Oregon—these were now blotted out, leaving the Steel Trust in complete control of this basic industry, upon which all the rest of our durable goods industries depend.

True, the masters of this steel industry are interested in improvement, but not if it disturbs their security. And that appears to be the view of those officials of the big steel companies who now continue in the service of our Government in the War Production Board while continuing to remain on the payrolls of their companies. Naturally, they are reluctant to permit the natural development of improved and inexpensive "sponge iron" plants which, if permitted to prosper with small war orders, would help return this major industry to greater service for the people.

PERMIT INDEPENDENT SMALL BUSINESS TO STAGE A COME-BACK

First and last, it is from the point of view of American lives that I consider this matter now before us—American lives to be saved in this war, and given a chance for prosperity and happiness in the days of peace to come.

This committee points the way, and its work is a step in the right direction. I earnestly hope that you continue to carry on this great endeavor and to help the many retarded and stranded communities of this Nation. Let them share in war production and they will stage a come-back that will enable them to return to peacetime pursuits in a better balanced economy. Recommend legislation where needed that will keep the monopolies from holding this country back by warping our economy.

LET US NOT FORGET OUR BOYS

North Dakota has made and is making a tremendous contribution to the war effort by her agriculture. Industrially we are not in such a favorable position. Our natural resources are available for an even greater contribution—hence we are pleading for consideration of the use of these resources in the war effort, and the building of our industrial enterprises along sound local economic lines.

Our sons have made great contributions in heroic sacrifices of which we are justly proud. It is our desire to provide expanded opportunities for these returning lads, so they won't have to seek employment in already overcrowded large centers.

A COLONY—OR A BALANCED ECONOMY—WHICH?

Let us begin to consider the problem of small business in terms of our boys and the opportunities of which they are worthy. If we continue to tolerate further domination by monopolies, North Dakota is going to become a sparsely populated colony, doomed to be exploited by distant industrial centers. Our notion of a balanced economy is one where there is a modest mingling of industrial employment with agriculture. The basic industry which supports the durable-goods industries is iron and steel. The communities that are producing this master metal from resources found in nearby deposits hold the opportunity for genuine balance, a natural industrial development ensues, with diversified industries and employment. But where monopoly is countenanced, plants are located arbitrarily and oblivious of local situations and sound economics.

THE TIME FOR ACTION IS NOW

Mr. Speaker, the speech of North Dakota's Lieutenant Governor which I have here quoted is an illustration of the great public interest felt in many States with regard to bringing into use for purposes of war production and of post-war prosperity the abundant natural resources beneath our very feet. It is an illustration also, let me say, of a practical determination to bring these purposes into action for the benefit of the whole Nation—not in an indefinite future, but now.

States' Rights and Post-War Programs

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

STATES' RIGHTS

Mr. HARE. Mr. Speaker, the question of States' rights is a very old subject, to which the subject of post-war programs is closely related. The concentration of power in the Federal Government and our post-war programs, both domestic and foreign, are two of the outstanding fundamental problems now confronting the Congress and the American people. Of course, the primary and most urgent problem is that of winning the war, but, as "eternal vigilance is the price of liberty," we cannot overlook and ignore the forces that are using the war situation to promote ideologies inconsistent with the constitutionally established principles of government.

There is a rising or increasing trend on the part of Federal agencies to enlarge the powers of the Federal Government by assuming rights and powers belonging to the States, but we cannot fail to observe there is also an increasing tendency on the part of the States to surrender their rights and powers to the Federal Government for a consideration. That is, instead of assuming and discharging the responsibilities of the States there are frequent and increasing petitions by the States through their representatives to have the Federal Government assume these responsibilities. It is time, therefore, for all State representatives and the people themselves to take stock and courageously insist upon their rights and proceed to assume the responsibilities incident to such rights, because where there is a right there is generally a corresponding responsibility. In many letters and petitions from different sections of the country we find the petitioners insisting in the first paragraph that the rights and powers of the States must be preserved but usually in the second paragraph they will urge that the Federal Government should "pass around the biscuits." If I were called upon to express an opinion as to the cause or underlying reason for this vanishing of rights and powers of the States I would suggest that it may be attributed in a measure to the passage of the seventeenth amendment to the Constitution which repealed the original provision giving the legislatures of the several States the right to elect Senators to the Congress of the United States and transferring this right to the people.

I do not mean to say that the change in any way reflects upon the ability or political integrity of the people because they have been able to choose men just as capable as those chosen by the State legislatures, but it will be remembered that the one outstanding and uppermost purpose in the minds of the makers of the Constitution was the preservation of the rights of the States, and in order to make certain that such rights were to be protected in the new system of government they were setting up it was decided that each State should have equal representation in the Senate regardless of size or population and that the Senators should be elected by the State legislatures for a term of 6 years. The reason assigned for electing them by the legislature was upon the theory that the legislatures would be more jealous of the rights and powers of the States than any other one group of people within the States and would, therefore, be more likely to hold the Senators accountable for the preservation of the States' rights and powers. That is, it was definitely designed in the preparation of the Constitution that the Senators were to represent and preserve the rights of the States against encroachments by the new Government and the Members of the House of Representatives were charged with the responsibility of representing the people, their term of office being limited to 2 years in order that they would always be fresh from the people and in a position to know the will of the people.

The natural and logical thing happened following the seventeenth amendment. Senators then began to cultivate the good will of the people and they were not long in finding that this could be done most effectively by having the Federal Government assume some of the burdens and responsibilities of the people which invariably means the surrender of some right or power of both the people and the States. Furthermore, officials in the executive departments, who are always looking for an opportunity to increase their functions and powers, were not long in learning how to cultivate the good will of Senators, a situation which not only enabled Senators to command but to demand more bacon for the States, and every time there was pork for distribution the rights and powers of the Federal Government were enlarged and every time the bacon was accepted by the people or their representatives, corresponding rights and powers of the States were decreased.

If the trend continues the Federal Government will eventually absorb all of the essential rights of both the States and the people. It is a situation that commands the most serious thought and consideration by the people's representatives, both State and National, including leadership in church, school, business, and so forth. It will not be permanently solved until the war is over. However, it is not primarily a post-war problem, although it may be one of the vital related qualifications of those selected to write the post-war program. The question as I see it is whether the people and the States want to surrender their rights and responsibilities to the Federal Government and then substitute state socialism in place of our former democratic system of government. This will not be an uphill business; it is downgrade all the way.

POST-WAR PROGRAM

Of course, there are many people thinking and talking about postwar programs, and it appears that the percentage or probably the actual number is

larger than those who are thinking, planning, and praying to win the war. We all think we will win the war, but thinking people and those who are actually making the sacrifice to win already know and realize it cannot and will not be won by wishful thinking. Furthermore, too much talk and suggested post-war formulas could make a substantial contribution toward losing the war. If press reports are correct, some of our neighbors and Allied friends are already expressing some apprehension or suspicions as to what the United States may attempt to do when the war is over. They are already suggesting that if they knew for certain the United States would want and demand the biggest half of everything worth while following the war they are not so certain it would be to their best interest to continue to lend us their moral support, irrespective of the other support they have been able to give. Such an attitude on the part of some countries will make this war more difficult to win and make it more necessary to sacrifice the lives of thousands of young men that could be saved through an unselfish, jam-up spirit of good will and cooperation.

My suggestion is that the least said about these post-war formulas may be the easiest mended. We Americans know what the attitude of the United States will be toward our friends and allies when this war is over. We know that we are anxious to see the people of every nation have the right to work out, establish, and maintain a system of government of their own liking so long as they do not trespass upon similar prerogatives of others, but all the people of the different nations do not know this, and we should not deceive ourselves in thinking they are not being told differently every day, and it is this different story that gives rise to their apprehensions and we should be careful to do nothing that would lend support to their suspicions.

There is a great deal of speculation and planning as to what our post-war program will be at home. Some are insisting that they are able to visualize and predict exactly what our problems here will be and are now prepared to write a prescription or formula for their solution. The formula which seems to be uppermost in the minds of some and the one being propagandized to the greatest extent is that our Government will not only guarantee every man and woman a job, but it will be one that will enable them to establish and maintain a standard of living satisfactory to themselves. The objective is one to which every American citizen should certainly aspire and faithfully strive to attain, but the formula suggested can mean nothing less than the destruction of individual initiative, the absolute surrender of our democratic philosophy of life, and the establishment of state socialism. Ten years ago no real patriotic American would seriously have suggested such a program and there are not a great percentage of our population who are willing to admit they wholeheartedly subscribe to such a philosophy of government now, but it is tragic to think how many native-born Americans who seem to be willing to give up or surrender their responsibility to plan, devise, work out and formulate their own life-program and identify themselves with it. I have great faith in the American soldier of today and upon his return I hope to see him repudiate such a philosophy and take the position that he offered his life to sustain a government that will encourage thrift, industry, and initiative—a government that will encourage equal rewards for equal merit or equal productive power, but not a government that will regiment or ham-string business by saying to an employer he shall not have the right to exercise his discriminating judgment as to the productive ability of applicants regardless of whether they be young or old, short or tall, high or low, fat or lean, white or black, blonde or brunette.

A great deal more could be said on this latter observation because much resentment has developed in recent years to a philosophized propaganda that would have everybody believe there is no difference between the productive ability or earning capacity of white and colored people. They admit there is such a difference in white people but that there is none between white and colored, except when applied to Chinese, Japanese, and so forth. They insist further in this enigma or as some will say, "New Deal philosophy," our Government should see to it that all barriers preventing the integration of the white and colored races should be removed and it should no longer tolerate any social distinctions that may have heretofore existed. This situation will present another post-war problem for our returning soldiers provided it is not settled in the meantime. The observation I am making is that instead of creating additional problems for our soldiers to solve upon their return we should be displaying our loyalty and devotion to the principles of government for which they are fighting, for it is somewhat disheartening to find many taking advantage of the war situation to promote principles of government and philosophies out of line and inconsistent to those our soldiers and sailors are fighting to protect and sustain. There is no doubt but what our long-established principles and cherished traditions of government are now in the refining pot and it is no time to be misled or to be led astray by new political gods or goddesses.

Life's Frustrations

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HOBBS. Mr. Speaker, Dr. Peter Marshall, pastor of the New York Avenue Presbyterian Church, in the Nation's Capital, preached a sermon on Memorial Day which is so universal in its application, and so comforting to those of us who see frustration all about us and experience it almost every day, that he has yielded to the importunity of many of us who were privileged to hear it that it be given to the Nation through the columns of the CONGRESSIONAL RECORD.

Two of the illustrations he gave are peculiarly apt and challenging as we begin to approach the glad day when victory shall have crowned our arms and made us free to build the peace upon the foundation of righteous, clear, and constructive thinking that must be done before the imminence of the necessity for action makes thinking hurried.

While challenging all of us to put forth our best efforts, he reminds us of the assurance of Almighty aid when we work in consonance with the divine will and plan for each of us and for His world.

Therefore it is with real joy that I exercise the privilege of presenting in this forum, and through the CONGRESSIONAL RECORD to its readers, the Nation over and the world around, that truly great sermon:

LIFE'S FRUSTRATIONS

(By Dr. Peter Marshall, New York Avenue Presbyterian Church, Washington, D. C.)

(This sermon is based upon a chapter in a book, the Healing Cross, by Herbert H. Farmer.)

"I have caused thee to see it with thine eyes, but thou shalt not go over thither." (Deuteronomy 34:4.)

It is a strange but undeniable fact of history that some of its greatest characters, despite their triumphs and their achievements have been bitterly disappointed and broken. Again and again it happens. Sometimes not until they die does the world discover their shattered dreams or come to know of their withered hopes. Sometimes the world never knows.

Take Moses, for example. A great emancipator, his was the privilege and the honor of leading his people out of bondage into freedom, from the slavery of Egypt to seek nationhood and liberty in a promised land. He was the lawgiver. His the indomitable spirit, the fearless leadership, the dynamic faith. And yet, his too was the broken heart.

Although he led his beloved people toward the promised land, he himself was never to enter it. The record states the fact with reticence and simplicity. The words contain tragedy and pathos—yet they are simple words—for it is only in simple words that the deepest things of the human heart can be described. The text leads us into the presence of an old man as he sits on a mountain top conscious that the end is very near. The sand is running out. He has not long to live. He knows it, and now he is told that the fruit of his anguish and labor is to be plucked and enjoyed by another. And there we are left.

We may never know what thoughts were his as he sat pondering this strange providence. He was a great man, a giant among men, a man of destiny, indeed. And here is a bitter ending.

Does it not sum up all the element of frustration and disappointment in life which to some extent comes to all of us? How tragic, how simple, is God's word to Moses: "I have caused thee to see it with thine eyes, but thou shalt not go over thither."

Come now, take counsel with your own heart, are you not compelled to confess that life has not turned out as you had hoped it would? As you look back upon your

younger years, do you not see the unfulfilled promise and the unrealized hopes of youth, the buds that never came to flower? Isn't there something unresponsive, disillusioning and disappointing in this life?

In our day dreams we see ourselves successful, overcoming difficulties, excelling in the things wherein we long to succeed. But day dreams are of fragile stuff, an enchanted vapor blown away by the strong winds of reality. We all seek the best in life, yet again and again we are forced to accept the second best—and for some it is not even that.

Is it not the wisdom that comes with age and experience that forces us to conclude that we can very seldom receive what we set our hearts upon. We may not make out of life what we once hoped to make out of it. We may not achieve what both circumstances and our own hard work indicated might be our achievement.

The hard fact is that there is a frustrating element in life. Recognizing it and making allowances for it would be the surest way for young people to avoid broken hearts and the bitter tears of disappointment.

There is a good chance that we may not get exactly what we want in life. For people have gained their objective in one direction only to find that they have lost it in another. How many have sought a goal with determination, effort, and even sacrifice, only to find when they reached it, that it was not as satisfying as they thought it would be? This is universally true. Life is full of such discoveries.

Most people will agree with me when I say that we see this truth most plainly in the moral and spiritual side of our natures. There is a vision of an unattainable holiness which haunts even the most devout and the best among us.

Am I not speaking for you also when I say that I am disappointed with myself? I look back with wistful regret on the dreams I once dreamed—how heroic I meant to be. I was to personify every noble virtue. I was going to be different.

Well, I am not different, for the dreams have faded, as dreams will. They have not been realized. And there are memories that cast shadows. Situations revealed moral cowardices, and when the test came the flaws and the weak places in character were revealed. In spite of the day dreams and the highest hopes, I have to realize that I am not of the stuff of which heroes are made, nor do I possess the ingredients for great moral or spiritual achievements, and it is beginning to look as if I never shall.

Are there not many among you who will join me in that confession? We have seen it with our eyes, but it is not for us to go over thither. We have seen the vision, dreamed the dream, given birth to the hope, but we are still struggling on the frontiers of the promised land. We are only poor, ordinary creatures after all, in spite of our dreams and our fine sentiments.

I said this fact of life's frustrations was universally true. It applies also to great causes. It might be appropriate for us on this Memorial Day to think of a historic example.

You will remember that when our soldiers, in 1917 and 1918, marched off to war, it was "to make the world safe for democracy." That was a noble sentiment, an ideal, and an objective for which a man might well give up his life. It challenged the heroism and the sacrifice of thousands of our men who manned the guns in the Argonne, who broke the Hindenburg line, who made immortal such names as Chateau Thierry, St. Mihiel, and Belleau Wood. The men who sleep in Flanders Field did exactly that. They brought that crusade to the very edge of success. They did make the world safe for democracy, but their sacrifice was nullified by the blind selfishness of men at home who had not seen the vision nor understood that humanity is a human family.

Again this same stubborn truth, this fact of frustration and disappointment appeared to dash the hopes of all who were interested in great moral movements and social programs.

More than 20 years ago, when women were given the right to vote, the sentiment was expressed all over the country that a new and better day was about to dawn, for now it was said, women would rally to the great causes of right, justice, morality, and decency. "When a question arises as to morality, or ethics, or righteousness," they said, "the votes of the women will be on that side, and we will be able to carry through some great reforms." One of the tragedies of the century is that the women's votes seem to have made little difference. They have not raised the level of society. They have not established more clean and pure social standards. They have not made marriage a more sacred or holy thing. They have not strengthened the home ties. They have not ennobled womanhood. In short, they have not done what we hoped and prayed they would.

Does not our Lord furnish us with the supreme example of this same truth? Christ seems to have begun His ministry with the hope that the whole Jewish people would respond to His call and become what they were always meant to be—the mediators of God's truth and love to all the world. But it was not to be. He found hardness of heart, opposition, spiritual blindness, and a perverse obstinacy which may not altogether have surprised Him, but which certainly did disappoint Him.

See Him nearing the close of His earthly ministry—how many had responded to His call? True, there were multitudes to receive the loaves and the fishes; but as soon as He began to talk about the cross they turned back and walked no more with Him. Think of the many who were never openly loyal. Think of those who stood on the edge of the crowd, the drifters who chose neither "the highway nor the low, but in between on the misty flats, drift to and fro," the rich young ruler, for example, and Nicodemus, and countless others, who, although they came under the spell of the Nazarene, somehow could never openly acknowledge Him, lacking the courage or the conviction, or both.

We who are only human, we who are sinners, and so lacking ourselves in spiritual discernment and understanding can never fully grasp the meaning of Gethsemane, but one thing seems clear, part of its sorrow was Christ's realization that His call to the Jewish people had failed. We can never take out of Gethsemane the bitterness and the tragedy this must have been for Christ. Yet He went on to the cross, stronger than ever, to turn apparent failure into glorious victory.

Could it not be said of Jesus that He, too, saw something with His eyes that He was not at that time to enter?

What are we to make of this quality of life, its frustrations and disappointments? Shall we allow it to embitter us? Shall we become cynical and give up the struggle?

We cannot know what the old man is thinking as we watch Moses sitting on Mount Nebo looking through his tears, perhaps, at that fair land which he knows now he will never enter. His is a noble face, masterful, strong, yet he gives no sign of the tumult within him, no tell-tale expression, only the eyes are misty. Is he looking back and bitterly repenting the weakness and disobedience which brought about this calamity? He knew when and where he had failed. He had made a mistake. He had disqualified himself. Is he fighting tears of sick disappointment that the glory of the accomplishments for which he had worked so long was to go to another? Or has all that been fought through long ago, so that now without regrets, without envy or jealousy, without rebellion he resigns himself to God? He could say, "I have done the best that I could. I must leave the rest with God." Moses had been frustrated into sublimity.

Life has certain finalities. A broken pane of glass is beyond repair. A burned-out light bulb is a dark and dead thing. An eggshell once shattered cannot be molded again. The broken flower is doomed to death. There is a sense in which we cannot undo things, and some mistakes are irrevocable.

If you take a wrong turning in life, you can never go back to where you were and take the right one. If you fail in some task and responsibility, you are ever afterward the person who failed in that task and responsibility, and the same opportunity will never come again. If you sin, you cannot go back and not sin at that particular point.

Since we all make mistakes, and take wrong turnings, and do disloyal things, and fail to realize our ambitions, life for all of us is a weaving together of a great many might-have-beens.

While this is true we must remember that we are still living in the days of grace, and the Gospel is a gospel of the second chance and the third chance and the fourth and fifth chances—seventy times seven. It is not a matter of mathematics, after all, but a matter of attitude. We are all inclined to take too materialistic a view of what constitutes success and failure in life.

What is God's view of success and failure? Not in accumulation of wealth, for, remember, Christ said to the rich young ruler, "One thing thou lackest." Not in material prosperity, for God said to the men who planned to build bigger barns, "Thou fool, this night shall thy soul be required of thee, and then whose shall these things be?" No; not in these things lies success.

What really matters to God is whether at the end of your pilgrimage you have a mind and character ready for eternity. This life is a preparation for the life hereafter. The end of your pilgrimage is quite a secondary thing. If only somehow we could grasp God's view of life. If only somehow we could be persuaded that the thing that matters with God is not how long you live, but how; not how much of this world's knowledge you have gained, but whether you know Him, whom to know is life eternal. It is not important to God how old you are according to the calendar, but how old you are in Christian experience. It does not matter to God whether you ever make Who's Who; the thing that is important is that your name is in the Lamb's Book of Life. You may become a famous person or you may end up an insignificant nobody; you may achieve a quarter, one-half, or three-fourths of your heart's desires; you may live to see most of your dreams come true or you may see the fruits of your labor given to another; but which it is does not finally matter so long as you have in and through it all learned patience and humility and tenderness and understanding and an utter dependence upon God and His mercy just as you are.

The world's greatest failures may, after all, be best prepared for God's purposes, just as the wood from which the lute is carved cannot sound its sweetest note until the very heart of it has been cut away.

It is a fact of Christian experience that life is a series of troughs and peaks. In His efforts to get permanent possession of a soul God relies on the troughs more than the peaks, and some of His special favorites have gone through longer and deeper troughs than anyone else.

Moses was kept out of the promised land because of a sin—a failure—a mistake many years before. There was no going back on

that sin. There was no escaping its consequences. The ambition which he had cherished for a great many years now lay dead at his feet.

Tragedy, you say? No, not tragedy, if he can die with his eyes uplifted to God in quiet acceptance of it and in calm surrender of this life and all its poor satisfactions for something higher and more spiritual and more completely satisfying in the life to come.

The greatest thing the Bible teaches us about life is that it is a preparation for eternity. We are, after all, pilgrims passing through. We are going through a school that is often hard, sometimes dull and dreary, sometimes happy and joyous, sometimes stern in its discipline, and inexorable in its grades, but always its curriculum points to graduation day and the honors it bestows are given to them who are most prepared for the life that is to come. Its parchments may have gone to some whom the world would regard as the greatest failure of history, and yet they may be best prepared for God's purposes and most ready for eternity.

Perhaps this was the idea Kipling glimpsed in his L'Envoi:

"And only the Master shall praise us, and only the Master shall blame;
And no one shall work for money, and no one shall work for fame;
But each for the joy of the working, and each, in his separate star,
Shall draw the Thing as he sees It for the God of Things as They are."

Surely we can see that if this life must disappoint, if it seems to us to have more than its share of frustrations, is it not to teach us that there is a beyond for which this life is but a preparation, so that we shall concentrate not on the things of the earth, but set our affection on things above and seek treasures not on the earth where thieves break through and steal, and where moth and rust doth corrupt, but lay up treasures in heaven? That is the lesson we must learn.

Richard Cecil wanted to teach his little girl the meaning of consecration, so one day in his library he took her on his knees and asked her if she loved him well enough to give up a little necklace of glass beads which she greatly prized. She wore them constantly and loved them, although they were very cheap glass beads.

She looked up at her father with a very puzzled look, her eyes were sad, her lower lip was trembling, and as she thought of losing her beads she began to cry. She sobbed: "Yes, Papa; if you want me to, I'll give them up."

"Well," said her father, "you take them off, and throw them into the fireplace."

Still crying, and very, very slowly, she made the great sacrifice, and then ran back into his arms and sobbed as if her heart would break. Her father patted her little golden head and gently said: "Now Papa knows that you love him."

Nothing more was said for several days. Then came her birthday, and her father called her, and opening a little casket, handed to her a chain of real pearls. Her eyes opened wide, and she became excited as he asked her to put them on and wear them as his gift of love to her, "because Papa loves you."

She looked him full in the face, and then a great light broke upon her and throwing her arms around his neck, she cried: "Now I know why you made me give up my glass beads. Oh, Papa, forgive me. I did not understand then, but I do now."

That is the consecration which God loves, and loves to reward. One day we shall understand why we did not receive our glass beads, and we shall rejoice in the understanding that if we had gained Canaan we might have lost heaven.

What of America?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HOFFMAN. Mr. Speaker, a reporter of the Detroit Times of July 4 gives his construction of what one Member of the other body thinks of the New Deal. The report is as follows:

BREWSTER BLASTS HOME-FRONT PLANS—END OF LITTLE BUSINESSMAN SOUGHT AS FIRST STEP OF SCHEME, SAYS SENATOR—HOPKINS MOST IMPORTANT MAN IN UNITED STATES, STATESMAN FROM MAINE FINDS

(By Bill Cunningham)

A small but key-positioned and superpowerful group of left wingers "in the Dr. Jekyll-Mr. Hyde administration set-up" is trying to kill our capitalistic form of government and is hailing the war as a heaven-sent speed-up of their carefully laid and long-plotted plans, charged Maine's conservative Senator RALPH O. BREWSTER, in a smashing, exclusive, and on-the-record interview with your correspondent in Portland last Thursday.

The Senator says he'll grant them sincerity. He concedes that they really believe the abolition of the profit system, the "evolution" from capitalism to national socialism, New Dealism, or whatever they prefer to call their translation of totalitarianism, will serve the greatest good of the greatest number.

TIME HAS COME TO LET PUBLIC DECIDE

But the Senator doesn't believe it. He says America won't believe it nor accept it; that the time has come to drag it out into the open and let the American public know what's been done and what's being done under cover of the war emergency. The time has come, he said, to talk—and he talked.

That itself is significant, if not practically sensational.

BREWSTER is not the talking kind. He's not a sensationalist. He doesn't seek publicity. The former Governor of Maine is a quiet, studious type of statesman, who isn't given to making statements just to hear the rafters ring.

Nor does he compound his opinions from what he reads in the newspapers and hears at the Mayflower bar, as do many of his colleagues.

A quiet, conservative, hard-working teetotaler, he stays on the job in Washington even when the Senate is recessed.

He gets his information first-hand and he doles it out the same way.

When he speaks of waste in war plants and kindred skullduggery, he speaks with especial authority, because, as the only New Englander and ranking minority member of the powerful Truman committee, much of his time is spent in hearings, inspections, and investigations at the sites.

He's not an X-card, chair-tilting statesman.

He moves around on the look-see.

He's been in Alaska, the Caribbean, over most of continental America on inspections and investigations since the war emergency began.

You may hear of him next in Africa, Iran, Russia, or China.

Certainly nobody in New England can speak with as much authority and few in the Nation probably can. With the authority he combines courage.

His background of Bowdoin and Harvard Law speaks sufficiently concerning his intelligence.

LEADERSHIP CHAOS MAY BE PART OF PLAN

"What seems to be a leaderless design for chaos," he said, "may all be part of a plan. We know that this cell of left wingers have a plan. What you call 'the do gooders' have been working on it all along.

"You ask me if these men actually meet and scheme. Your answer is in the news. The special House committee investigating the executive agencies has just seized by subpena nine boxes of the confidential files of David Ginsburg, former general counsel of the Office of Price Administration.

"Look at Committee Counsel Harold Allen's public announcement after he had analyzed the secret memoranda * * *."

Here he pointed to the front page newspaper story which read:

"Under guise of wartime price control," said Mr. Allen's analysis of the documents, "the Office of Price Administration is seeking to bring the entire industrial system under bureaucratic control by regulating not the prices of its products but by controlling the sum of its profits. * * * There is no authority for such a policy in the Price Control Act of January 1942 or its amendments, the Stabilization Act of October 2, 1942.

"As to who are the men, they are the Harry Hopkins coterie, although he represents at the moment their reach into the international field and we'll get back to him in a minute.

"The pink Utopians, the ex-professor-social service crowd was already boring steadily away. It is commonly said in Washington that one of the leaders of these administration leftists said, of the war, that whereas they had originally estimated that it would take 15 years to complete 'the transition' in this country, the way things are going now they hope to accomplish it in 15 months.'

" 'Accomplish precisely what?' " I asked.

LITTLE BUSINESSMAN'S END TO BE FIRST STEP

"The 'liquidation of the kulaks,' " he said, kulaks being the Russian word for middle-class, "the elimination of the middle class in business, the small businessman, the farmer, the little, independent fellow.

"Stalin and Hitler used the same tactics. Kill off the little fellow, concentrate your business in a few great firms—say the automobiles to Ford, the soap to Lever Brothers, the mail order business to Montgomery Ward, and then, with your target narrowed, you can center your fire and knock private business out entirely.

"You know the story of Hitler and Thyssen. Stupidly Thyssen backed Hitler and thought he was profiting mightily because Hitler was handing the nation's industry to him.

"As soon as Hitler got it all stored safely there, however, he eliminated Thyssen.

"His erstwhile patron managed to outwit the Gestapo, which would have made the elimination permanent and get across the border and away with his life.

"But the Nazis had the nation's industry, having shrewdly figured out that it was easier to wipe out one big man than a million little ones.

"Deliberately, or accidentally, that's the pattern being followed here. The net result to the Nation is the same. You know what's happening to small business under the guise of 'war emergency.'

"You know about planned-economy, and what its further program is. There's no secret about it.

"The spokesmen of these administration totalitarians are already on record. Publications sympathetic with them have placed the further plans in print.

"These, in our entire fields of merchandise, include the elimination of brand names on

all commodities; elimination of all trademarks; ruthless curtailment of varieties in all products; the establishment of standard grades and styles in very limited numbers; the governmental decree of standard prices for everything.

"This will mean the killing of the profit system, the elimination of free enterprise, the totalitarian take-over. It's the same old planned-economy wine, newly bottled as wartime necessity.

"This death blow to business as we know it, and to a way of life traditional with free men, is apparently to be delivered by directive of War Mobilization Chief James F. Byrnes."

ONLY PROGRESS WE'RE MAKING IS AT THE FRONT

"This is not fighting a war, it's pushing an ideology, the very ideology, as a matter of fact, that we are fighting with guns at the front.

"The only progress we're making anywhere, and with anything you might note, too, is in the actual fighting at the front.

"And the reason we're making it there is because that's the only place where these meddlers and schemers haven't any say.

"The shooting has been left to Admirals Leahy, King, and General Marshall. The President himself, although participating with Mr. Churchill in the very top decisions, has sensibly left the tactics thereafter to these military and naval experts. That's why we're gaining in the fighting, and is the only reason why we are.

"The domestic scene under these others, because the President seems constitutionally unable to delegate authority and because his sympathies seem predominantly in the direction of these theorists, is an horrendous study in stoppage and confusion. There's no head to anything, no authority in anybody, and no pattern of progress discernible.

"Bureaus overlap each other and conflict with each other. Directives ordering great changes the Congress never has sanctioned are sent roaring into the ranks of the people.

"The bureaucrats and those working for them are, many of them, loyal and worthwhile people. They're as amazed and as confused as the rest.

"A commonly accepted saying in the burgeoning bureaus in Washington is, 'You don't have to be crazy to work here, but it helps.' Many of the people can't see any sense in what they're trying to do, but they go on doing it just the same because there's nobody in authority who can tell them to change."

POWER URGED FOR DAVIS ON FOOD, ICKES ON FUEL

"Take the Office of Price Administration, for instance. It has plainly and pitifully demonstrated its utter incapacity to cope with the problem of supplies. All thoughtful men in Washington of both parties know that set-up won't and can't work, and that the Nation's food supply is going to pot as a result.

"They are convinced that food must be placed in the hands of one man, and, in my opinion, Chester Davis would be a good selection.

"The fuel problem should be placed exclusively in the hands of Harold Ickes.

"Despite your recent interchange with that touchy gentleman, and regardless of his wisdom in taking time from his job to pick a private fight with a newspaperman, he is the most honest and capable administrator we have in the Cabinet.

"But he has no authority and can't do much about fuel.

"After the Army and Navy tell him what they need, and they're often pretty slow about telling him, all he can do is inform the Office of Price Administration how much is left for the public, and it's the Office of Price Administration that then parcels it out.

"Davis, or somebody like him, should have the food; Ickes the fuel; and then each should have what every bureaucrat lacks and can't get from the White House, full, hardfisted, and crack-down authority.

"These men must have power—power to act. Our efforts lack leadership, point, and horse sense.

"In the meantime, our Army and Navy are fighting bitterly and victoriously on the toughest fronts in the world, and the home folks are trying their mightiest to get shoulder to shoulder behind them.

"But the dreamers dream, the schemers scheme, and the political collectivists coldly contrive to change our form of government sufficiently to perpetuate themselves and control it forever.

"The entire domestic picture becomes more deeply involved. Congress is ignored, the people aren't consulted. The policy of promising subsidies is a case in point. Congress has never authorized it. All the agricultural agencies are bitterly opposed to it. Freemen don't want the dole.

"The consideration that a laborer is worthy of his hire is traditional with American people.

"Analogies to Britain and Canada don't hold because the backgrounds and the problems are entirely different.

"Yet the planners go right ahead insisting upon subsidies. It's paternalistic government. Mother knows best. It's plainly part of the take-over plan.

"The breaking up of small business, subsidizing the farmer, the promotion of bankruptcy, and general throwing of as many people as possible upon the mercy, and therefore into the control, of the governmental master minds all seems part of a general plan.

"So does the unbelievable waste and lack of any semblance of efficiency in the construction and management of some of our war plants.

"It's almost impossible to look at some of the figures and listen to some of the testimony and not feel that somebody let these things be deliberately done, the sooner to bankrupt the Nation and thus hurry 'the transition.'"

KANSAS CITY ORDNANCE PLANT CASE IN POINT

"I am recently back, for instance, from the Truman committee investigation of the construction of the so-called Sunflower ordnance plant near Kansas City.

"There, a man named Broderick, who looked as if he might be a pretty fair sort of contractor, and who testified that he lived in Denver, said he received a call to go to Washington and report to the office of the Army Corps of Engineers. This was to be in connection with the building of a new $40,000,000 ordnance plant near Kansas City.

"When he got there, Broderick testified, they introduced him to a perfect stranger, a nondescript little individual—Broderick said 'he looked like the last run of shad'—and told Broderick that this was to be his partner.

"They were informed that their fee for building the plant would be $800,000 and were told to go outside and figure out how they wanted to split it.

"The two perfect strangers stepped out in the hall and decided to whack up the boodle 70–30, the 70 percent going to Broderick.

"This was to be a new sort of contract they seem to be using now, the AEM form. That means architect-engineer-manager. The unexplained little nondescript was evidently supposed to supply the AEM color, but Broderick testified that he didn't know a thing, was utterly worthless, and later had to be moved to some post that didn't really matter. Apparently, most of what he had was a political connection.

"He—the little incompetent—later admitted in writing that he didn't go closer to Kansas City than Washington in connection with the negotiation or surveyal of his contract and its problems, didn't know anything about local conditions, local labor supply, nor any of the things his employment as a know-how man placed upon him as an obligation.

"But the project was started. It was to cost $40,000,000 and was to be finished last year. The waste has been so shocking, the progress so slow that it can't be completed now until next year, and the cost will by that time be $130,000,000.

"The incidental revelations were just as amazing. Broderick and his partners got $800,000 as the two know-how men, who obviously didn't know how. They contributed no labor, no materials, nothing, apparently, but their names.

"The war construction man in authority testified that all his previous experience had consisted of looking after Civilian Conservation Corps camps, and the general superintendent of construction, in charge of the full project, testified that he'd never been in full charge of anything before, that he'd always worked for somebody else and that his average salary had been from $3,000 to $4,000 a year.

"The money's gone. We've got nothing for it. The war could conceivably be over before this place is even finished. It'll never be good for anything, as it's located 23 or 24 miles from Kansas City, possibly through some political arrangement. There's nobody to indict, and nothing to get back if there were."

STRANGE-LOOKING EXPERTS MAKE BIG DECISIONS

"That's typical of the enormous and criminal waste of the American taxpayers' war-fighting money, too common to be accidental. HARRY BYRD estimates that in all our $17,000,000,000 construction program for facilities with which to fight the war, we have thrown away $2 for $1.

"Those men out at Kansas City, even the union executives, testified before our committee that the waste of labor there had been from 25 to 40 percent. Their attitude seemed to be 'so what?'

"Turning vital and expensive projects such as these over to incompetents and letting $40,000,000 balloon to $130,000,000, mostly in hand-outs to labor, is certainly too obvious, and it's likewise too common, to write off as merely an accident.

"You find some strange 'experts' handling expert responsibilities in this almost humorously bungled domestic picture everywhere.

"The man who doped out the gas-rationing directive for the Nation testified before us. When we asked his background of experience, we learned that for the last 10 years he'd been manager of the White Rock mineral springs out in Indiana.

"He didn't know anything about the practical handling of gasoline and fuel oil, and somewhat self-consciously admitted it.

"The actual writing of the directive was done by a minor and rather sick-looking professor from Cornell, who didn't look nor talk as if he knew anything about it, either.

"As serious as the domestic picture is, perhaps even more dangerous to our national future is the performance of these same future planners in the international theater.

"The same lack of integration that has bedeviled our domestic policy is now breeding serious trouble for our international postwar position.

"Again without specific authorization of Congress and without not alone the will but the knowledge of the people, these same collectivists and dreamers, such as HENRY WALLACE et al., are gayly promising the world unlimited supplies from our nonexistent reserves.

"They won't be able to deliver. Hatred and catastrophe are our certain lot. It seems more than silly to talk of feeding the world when we're not even feeding ourselves. Why

build up unnecessary disappointment and hatred by promising things we can't possibly do?

"We've got to work with the world and be a part of the world. Isolationism is dead.

"We've got to realize it and to comfort ourselves accordingly.

"But we've got to remember that we're going to have plenty of problems of our very own to take care of, and it would make better sense to figure what we can spare before promising the whole wide world that we're guaranteeing it milk and honey."

HOPKINS SEEN AS MOST IMPORTANT MAN IN THE UNITED STATES

"I mentioned Harry Hopkins a while back. He's admittedly one of the leftists and is the most powerful of all in the international sense because he's head of lend-lease and personally hands out the packages.

"There's been a recent revelation concerning this ex-social-service worker which comes as a surprise even to Congress. It's been revealed that he's chairman of munitions assignment.

"That's something that's been held under wraps. They've been featuring Stettinius in their announcements all along, but apparently Hopkins is the head man, and that makes him, to foreign nations, the most important man in the United States.

"The man who hands you your munitions when you're fighting and your food when you're hungry is, naturally, a more important individual to you than even a President.

" 'Whose bread I eat, his song I sing' * * * Hopkins' song is the original left-wing New Dealism.

"To him the world apparently must look for aid, and this Nation must make good his decisions, although nobody has ever suggested that his background of social uplifting has given him the slightest qualifications either for first-class administration or for obligating our Nation. His theories are his own. They aren't America's."

"Well, what's the answer?" I asked the Senator, "will these planners succeed? Do you figure we're headed for their translation of totalitarianism?"

"No," he said. "I have complete faith in the common sense of America and real Americans. I believe in the kind of America we always have known, and the majority of Americans do, too.

"All the public needs is information, plain talk. It's time to come out into the open and to get this pattern out into the open where real Americans can see it.

"It's been under cover all along, its true pattern unrevealed and unrecognized. They're making speed under the war effort, and they will probably be able to get part of their program in effect as 'war emergency.' But it, and they, will be thrown into the everlasting discard by an inevitable reaction.

"One thing they're forgetting are these boys who are fighting. They don't want to come back to that kind of America, and if they do, they won't put up with it long.

"Those fellows are thinking a lot of home, of freedom, of a job, a chance to advance, to be whatever they're worthy of being.

"I know, because my own son is one of them. He's in Africa now, to the best of my knowledge, and he's been there for quite a while. I know from his letters how the soldiers are thinking.

"They're fighting for the Land of the Free and the Home of the Brave, not a theoretical experiment in goverment patterned by a little group of nonelected pinks after their idea of the Russian 'evolution.'

"This war will be over some day. I'm sure some of these ideological zealots hope it will last long enough for them to get at least their spade work done. But it won't.

"Its momentum on the fighting side is too great. The machine is too mammoth. It's already rolling. They can't stop it now. They can't even retard it. Nobody can slow it by as much as 1 day. If the home folks don't, or can't manage, to throw out the dreamers and their botches, the returning soldiers will.

"The real America, which has already about slept off the drug, will arouse itself and go to work as it can and must."

American Seamen

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BLAND. Mr. Speaker, I submit herewith as a part of my extension of remarks a speech prepared by me to have been delivered on July 7, 1943, at the recent convention of National Maritime Union, New York City. I regret that I was unable to deliver the address in person because of illness. The speech is as follows:

Mr. Chairman and gentlemen of the convention, I esteem it an honor and a peculiar privilege to be with you on this occasion, and to be given an opportunity to express to you the appreciation of the House of Representatives of the Seventy-eighth Congress of the United States for the heroic work you are doing. Men are conscious now as never before of the mettle of the American seamen. Before this war, the world did not know the caliber of the men who sailed the seas under the American flag. They are learning now to know them.

When the history of this titanic struggle is written and its glories recorded, the most glorious chapter in that chronicle will be the splendid service of the men of the American Merchant Marine who have defied death in its most gruesome forms that the Nation might live.

Writing shortly before Pearl Harbor the Secretary of the Navy called upon American seamen for service. He said: "The time may yet come when we shall need ships and men to carry American munitions directly to where the other free nations of the earth are battling with their lives. * * * Never in your history has the American sailorman backed down before a threat or hesitated in the face of danger. I know he will not do so now.

The time which Secretary Knox predicted would come has arrived. How well the merchant seamen, licensed and unlicensed, officers and crew, one and all, are answering that call, time has told and time will tell. In complete disregard of danger, death, privation, hardship, and suffering, without any blare of trumpets or beating of drums, merchant seamen have been true to their splendid traditions through all our Nation's history from early colonial days to this good hour. Before the Navy was, they were. Their work laid the foundations of this Republic, and with the immortal Washington leading, they helped to win this Nation's freedom. They have never faltered. They have never failed. They will neither falter nor fail now. They have confirmed in fullest detail the good opinions of their friends in the Congress of the United States who, in January 1941, said that the greater part of the men who were then sailing the seas were as loyal and as patriotic American citizens, either by nativity or by naturalization, as the men upon the floor of Congress. I said then: "You need have no fear, the ships are safe now under the American merchant marine, and with the American crews who are sailing the merchant ships."

Time has proven the absolute verity of my predictions and confirmed to the fullest the truth of my statement. True to themselves, true to the splendid traditions of a historic past and true to their country, they have faced dangers which might well have caused the stoutest hearts to quail. They have displayed not once only but many times the dauntless courage of the deep. When they returned home the question was asked by some, "Will they go back to the ship?" In the words of the captain and third mate of one of the torpedoed vessels, "Hell, yes! In 2 weeks we'll be back fighting 'em again."

This is the spirit of America. That was the spirit of Lexington, of Valley Forge, and of Yorktown. It was the spirit of John Paul Jones, of Perry, of Farragut, and of Dewey. It was the spirit of the Alamo when the call to surrender was answered with a shot, and the brave defenders died to the last man. It was the spirit of Pearl Harbor, of Wake, of Guam, of Manila, of Bataan, of Corregidor. America still responds to the stirring call, "Don't give up the ship."

It is the spirit that made Tunis possible and is now writing the lines of glorious victory. The men on the merchant marine have faced untold dangers. They are determined that the precious cargoes shall go through. You are keeping them sailing, and I pray that your motto, Keep 'em sailing, may be the motto of a militant America aroused to give the last ounce of its strength to the sacred cause for which we fight.

Many of you men have received the merchant-marine awards of distinguished-service medals, others the merchant-marine bars. They are all badges of honor and memorials of heroic, patriotic service.

Your record in war is an outstanding one of which you can and should be justly proud. You are winning the peace, and you must help to make that peace lasting.

Your mission in the years to come will be as responsible as now for you must help to salvage the ruins, and, out of the debris of the present, to build a new and better world.

We are in the midst of a revolution the immensity of which no man may measure and the limits of which no eye can see.

The people of America desire now as never before that the standards of American seamen shall be maintained on a high level. They realize now as never in the past the immense value of an American merchant marine to the defense of the Nation, the promotion of its commerce, the preservation of its trade, and the extension of its ideals. The American seamen are, more than any other people or group of people, the spokesmen for America. Wherever they go, they are the living representatives of all that America is and all that we wish America to be. More than duly authorized and regularly commissioned ambassadors, ministers, consuls, or other representatives, you are America, and you must typify to all you meet all that you would wish America to be. You are the exponents of the greatest democracy in the world, and you, in your persons, typify its ideals, its objectives, its aims, its dreams, its policies, its past, its present, and its future. Yours is a responsibility such as few other citizens of the Republic may enjoy. You carry to the four corners of the world our aims, our achievements in the past, and our dreams for the future. By you we are judged.

Mr. Wilson, when President of the United States, saw this and in a message to Congress advocating our return to the seas, said:

"Moreover, we can develop no true or effective American policy without ships of our own—not ships of war, but ships of peace, carrying goods and carrying much more; cre-

ating friendships, and rendering indispensable service to all interests on this side of the water."

Mr. Wilson described the merchant marine as the only shuttles that can weave the delicate fabric of sympathy, comprehension, confidence and mutual dependence in which we wish to clothe our policies.

Another great American voiced the same sentiment. The martyred McKinley said:

"We must encourage our merchant marine. We must have more ships. They must be under the American flag, built and manned and owned by Americans. They will not only be profitable in a commercial sense; they will be messengers of peace and amity wherever they go."

President Theodore Roosevelt gave expression to the same ideas when in a message to Congress he said:

"To the spread of our trade in peace and the defense of our flag in war, a great and prosperous merchant marine is indispensable. We should have ships and seamen of our own to convey our goods to neutral markets, and in case of need, to reinforce our battle line."

When this war shall end we shall have the ships, we shall have the seamen, we shall have operators for these ships, but delude not yourselves, we shall have competition of the severest kind and we shall need the cooperation of shipbuilders, ship owners, and the seamen in the merchant marine to hold our own in that future that we face. Without ships and operators and personnel fighting together to preserve and maintain our merchant marine, it is entirely possible that we may be again driven from the seas. The burden of taxation will not be lifted for many years and the memory of man is frequently short-lived. Our competitors will proclaim again the doctrine that they should carry who can carry for the lowest cost. Against such a campaign as this there must be brought the united effort of owners, operators, and personnel working together in harmony and with the united strength of all. To that end wherever differences exist there must be concerted effort of all interests and of the Nation to find harmonious solutions. I am proud to say that for nearly a quarter of a century I have been fighting to create a merchant marine, and I believe today there is more unity of effort, more concernt of action, and greater harmony than ever before in the time of my association with the merchant marine. We have sought to solve some of the problems. Infinite patience has been essential. It is still required.

I am certain that with your intelligent approach to our many problems, your scrutiny of our needs, and your efforts to help we shall win the peace as well as the war. You are winning the war. I implore you to help us to win the peace after the war. For a long time our men of the seas were for the most part forgotten men. We spoke of them as wards of the court, but we failed to realize that our wards had attained their majority and were entitled to be heard in their own right and to speak for themselves. That time no longer exists.

There is something in service at sea that enters the soul. It may be the call of the eternal. It was that of which Dr. Healey spoke in "Fo'c's'le and Glory Hole," when he said:

"But all are men of the merchant service; for the most part a forgotten race until collision, fire, or tempest calls for the gesture heroic. Then the dungareed or the golden striped, the scullion, or the radio operator, the coal passer, the boatswain, and the stewardesses arise to make common cause against Death in whatever guise he comes. Then they ascend to supreme heights of selflessness at the call of duty."

Those who sail the sea must be free. These men have breathed the spirit of the sea. Into their souls has entered that love of freedom which no dictator's hand can ever crush or tyrant's hand destroy. Into the souls of these who sail the sea there enters that mysterious indescribable something that no tyrant can take away. These men have looked into that glorious mirror—

"Where the Almighty's form
Glasses itself in tempests; in all time,
Calm or convulsed—in breeze, or gale, or storm,
Icing the pole; or in the torrid clime,
Dark, heaving—boundless, endless, and sublime—
The image of eternity—the throne of the invisible."

They that sail the seas must be free or die. They must, they will be free.

American System of Distribution

EXTENSION OF REMARKS

OF

HON. EARLE D. WILLEY

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. WILLEY. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted at a meeting of July 8, 1943, by the board of directors, Chamber of Commerce of Delaware, Wilmington, Del., pointing out that the wholesalers and jobbers of this country are threatened with extinction unless Governmental agencies recognize their function as regular trade channels and utilize their services in the placement of Government orders:

Whereas the method of distribution through a jobber or wholesaler developed to economically channel manufactured goods from the manufacturer through to the ultimate user is a practice in distribution which is the net result of many years of experience on the part of industry and has been adopted by almost all classes of manufacturers; and

Whereas in the development of this system of distribution there has been produced a large branch of industry which each in their respective fields are specialists of many years' experience in the sphere of their operation, and their organizations in the aggregate represent an army of workers whose training and experience are of inestimable value to our country in the present emergency; and

Whereas with the tremendous and rapid expansion which has necessarily taken place in our governmental agencies, it is not to be expected that they would have been able to develop any organizations of the same type and character; and

Whereas any policy on the part of the governmental agencies which fails to utilize fully the experience and knowledge of the various local distributing organizations as procurement agencies is not for the best interests of our national welfare and causes unnecessary loss of man-hours through the needless duplication of effort; and

Whereas it is not equitable to expect the jobbers or wholesalers to perform their services only on occasions when the urgency of the case at hand actually demands the class of service which the jobbers or wholesalers are in a position to render, and, on the other hand, bypass them in instances when the same degree of urgency does not exist; and

Whereas nothing in the foregoing preamble is intended to include instances involving engineering problems or contracts placed on an annual service of supply basis: Now, therefore, be it

Resolved, That the Board of Directors of the Chamber of Commerce of Delaware appeal for more complete use of the facilities of the wholesalers and jobbers in the placing of business by the various governmental agencies, and that the above facts be presented to the purchasing agencies of the War Department, the United States Army, the United States Navy, the United States Maritime Commission, other governmental agencies which the board may think advisable, the United States Chamber of Commerce, and the Delaware delegation in Washington.

Attest:

GERRISH GASSAWAY,
Secretary.

Problems of Rural Communities and the Future Peace of the World

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HAYS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Robert W. Hudgens, Assistant Administrator, Farm Security Administration, before the New England Town and Country Church Commission, Old Orchard, Maine, June 23, 1943:

For the privilege of being here today I am indebted to our mutual interest in the problems of rural communities and the bearing which the solution of these problems will have on the future peace of the world. The reputation of the New England Town and Country Church Commission is splendid as an example of cooperation among leaders of community life. You have demonstrated the effectiveness of cooperation between denominations in solving community problems.

It seems to me that the church is facing a serious crisis in its growth, for the organized church has too often denied, through inaction, its own teaching. When the church has failed to get behind something positive it has slipped into something negative. I am here for the purpose of suggesting the type of program which the church must get behind in the present world crisis. I say "must," because the only democracy which can survive will be democracy rooted in Christian principles; therein lies your challenge and at the same time your responsibility.

We're intensely interested right now in winning the war. Everybody is concerned as it should be. It is a terribly rough stretch of the road the world is traveling and that is as it should be. It is a terribly rough stretch of road, but we will get over it one of these days. And then what kind of road will we be traveling? It is high time we were deciding.

There is a lot of talk about the peace, but in order to talk intelligently about peace it is necessary for us to analyze the essentials of peace. It seems to me there are two. One is a proper atmosphere and the other is a proper framework—in other words, a plan and the right attitude toward that plan.

When peace does come it is going to be an active, forceful weapon. We're going to wage peace just as we are waging war now, and the cost of waging peace is going to be comparable to the cost of waging the war. We're not going to get off as easy this time as we did the

last. A deep understanding of this is what I mean by the right attitude.

What are some of the things we did wrong after the last war? We went to great lengths to provide political freedom and then allowed it to be nullified by economic disfranchisement. We saw hunger and we saw poverty. We saw hunger and poverty draw out the spark of democracy in a lot of people. We saw people deliberately throw away their freedom for what they thought was security. Right there before our eyes, we saw what happens when people fail to realize the responsibility that goes with democracy. We saw democracy walk off and leave burdened people for whom it should have felt a primary responsibility.

And now we're at war again. War is one of the formative stages of peace, and so I'm also thinking of peace in terms of its formative stages and its final pattern. Whether we know it or not, peace is being shaped right now. It is being shaped in men's minds and in their attitudes.

When we think about peace in this country, what we're really thinking about is a permanent pattern for our democracy. Down through history, the attitude of a Nation toward its burdened people has measured the quality of that nation's democracy. It seems to me that a democracy is weak or strong in direct ratio to its willingness to accept responsibility for those who are down at the bottom. A nation assumes responsibility for the people who live in it. It spends money and energy for their welfare, but that money and energy are not lost. They constitute an investment that pays big returns. I'm thinking now of my experience with the Farm Security Administration.

When we started out 7 or 8 years ago, and we found a million farm families hovering on the doorsteps of relief—and a million others close at their heels. We found people whose dignity had been stripped off by poverty, people who were hungry and living in shacks unfit for habitation, people who were sick and had no money with which to buy the services of a doctor, pushed out of their homes and dispossessed from the land they had thought was their security.

The Nation made an investment in these people. Through the Farm Security Administration, we did what had to be done to turn them away from relief and head them the other way. We made them loans and, when necessary, we made grants for food. We guided them away from one-crop farming and taught them how to plant and harvest crops by modern methods, how to grow the food they needed. We started small cooperatives so they could use up-to-date machinery and good livestock. We developed low-cost housing plans and helped thousands of families to build better homes. We helped local doctors to start a group medical-care program, which enables families to pay low fees once a year so that afterwards they can call a doctor when they need one. More than half a million farm people are now getting medical care through this program.

We did all these things and many others. We put the props of better living standards under a million families—we gave them a new chance and they responded. We helped them become contributing members of their communities. We have proved that people can be rehabilitated and that people can be made useful.

Now the war comes and these people have an opportunity to make a contribution that would have been impossible except for the work of those pre-war years. The housing we helped people build, the gardens we helped them make, the canning we taught them to do, the livestock we helped them to get—think what all this means in terms of this new emergency.

Contributing members of democracy in action. Thousands of these people are now independent; all of them have better living standards and better health. In four Southern States where we made a survey, the average number of rejections of draftees for Farm Security Administration families was a third less than for other families in the same area.

But the greatest contribution of the families who were given a chance when they needed it, has come through increased food production. Last year Farm Security Administration families increased production more, proportionately, than all other farmers in the country. Their increases alone were enough to supply milk to 3,000,000 active men for a year, eggs for two and one-half millions, and pork for more than one and one-half millions. And they also made outstanding contributions to the increased supplies of beef, dry beans, soybeans, and chickens.

When the war is over, we're going to find that the investment we've made in these families both before the war and during the war, will be just as important as investment and just as essential a part of post-war plans as any other phase that deals with human welfare. High up in the future pattern of a post-war world is going to be how to use and how to protect the production for these low-income farmers.

That comes very nearly being the whole idea that must run through the war period and the peace that follows—how to use the production and protect the freedom and standard of living of all the people. That is democracy, and the idea doesn't change in war or peace.

That is the idea that stands back of the "four freedoms," of the Atlantic Charter, and the Pan-American declarations at Rio. It stands back of all the people, the many little people waging this war against world domination by force.

If we understand that this war is a bridge between the old past and the new future, then we can begin to get a continuity of our ideas that must be preserved and our ideals that should guide our actions. We will then have the proper concept of the relationships of war and peace. The ideas that are sound will carry over when peace comes.

We went through a depression in this country, a depression that made us face many conditions in our social and economic system that we had evaded before. And during that depression we had to develop attitudes and techniques to cope with our problems and correct their causes.

That brings us to more discussion of the framework of peace. Not only can the ideas carry over but also the useful techniques. In agriculture, for instance, we have developed methods not only of keeping people fed but of equipping people to feed themselves and others. In this process we have learned to help people free themselves from poverty and unemployment. We have learned some essentials about the needs of a world at peace. The good health, decent housing, and adequate living standards which constitute the necessary fundamentals to a peaceful and productive people make for rehabilitation in depression, but they also make for strength in wartime and for creative stability when peace finally comes.

When the war is over there will still exist tremendous needs. But, side by side, with these needs, we're going to have great armies of manpower no longer needed for maximum war production and we are going to have great industrial plants no longer needed to manufacture destructive weapons. We will have a chance then to combine all these things—the need and the machine power and the manpower to get some of the things democracy has always lacked but has never made up its mind to afford. Freedom thus will join with productive vitality to give mankind security.

Let's take a look at the scope of this peacetime production job that lies ahead of us. Before this war started, we needed at least 1,000,000 new farm homes to meet even the least acceptable standards for decent and respectable living. By the time this war is over we will need even more.

A few years ago, a rural housing survey showed that 70 percent of all the farm homes were inadequately screened, and more than a fourth lacked any kind of screening. Only 9 out of every 100 farms had indoor toilets, and 1 in every 7 had no toilets at all. Millions of farms are short necessary farm buildings and machinery, and the shortage is increasing as we press for more production.

We need to build up rural health. Before the war started, it was estimated that 75 percent of all farm families did not have even the minimum standards of medical care. Not more than 5 percent of the farm families had full medical, dental, hospital, and nursing service.

These are but samples of the unmet needs for which we can turn the stupendous productive capacity of this country. When the war is over we are going to find out that such conditions will no longer be a problem of national scope, but one of international scope. But it is a problem that is going to be met if democracy is to survive.

Millions and millions of liberty-loving and security-seeking people are fighting on our side for the future. I hope that it will never be necessary for them to ask, For whose future?

Any successful society must provide its people both a status and a function. The laboring people of occupied Europe have a function; their Nazi overlords have seen to that, but they did not have a status. The unemployed in our own country during the depression had a status; their rights in our democracy saw to that, but they lacked a function. What I'm saying is that the framework of the future must provide for the peoples in all countries both the status of self-respect and the function of usefulness. That is another way of saying that they will have security, but it will be a self-made security.

We have been willing to accept food rationing so that our supplies could be shared not only with all the people in this country but also with our neighbors across the seas. There are a lot of things besides food that must be shared if peace endures. The miracle-working idea will be to make people useful in creating and distributing the things they need for a better living. If it can be done for the machines of destruction, it can be done for the tools of a better life. Project this idea into the future, and you have the framework of an enduring peace.

There is another idea that runs like a thread through the historic conversations that made up the Atlantic Conference and the Rio Conference and the agreements between the United States and the United Kingdom.

This idea seems to be expressed in the two sentences that appeared in the preamble and the second article of the latter agreement. For the first time in the history of the world, one major nation has agreed in a crisis to contribute to another nation and has decided on what basis it would make the contribution, without first coming to an agreement and demanding certain terms on which that nation would receive the contribution.

In the post-war world, unless the nations are willing to take the same sort of attitude toward the weaker and less fortunate nations, it will be futile for us to talk about permanent peace in this world.

Six-tenths of the people in the world at the beginning of the war were living in abject poverty. Many people believe that this had a great deal to do with the war, and many believe that, after this war, if peace is to be preserved, the United States will have to join

other nations to protect the economy of many countries.

The proper pattern for the future is also to involve the use of resources. Think how wonderful it would be if all the resources and material now going into destructive war weapons could be converted into the creative use for people and for improvement in the standard of living for those people whose standards have been miserably low. We worry about the cost, but in the Farm Security Administration we are extremely proud of the accomplishment of the past few years, and yet the cost to the country of what the Farm Security Administration has done has been less than the price of one battleship a year. All the educational work that we have given to these people has cost less than one cruiser a year. The loans we have made for medical service—which, to my mind, has created nothing short of a miracle in the lives of many, many people—are less than the cost of one Flying Fortress.

We must think in terms of an all-out peace, just as we think now of all-out war. We cannot have an enduring peace on any other basis or at any lower price. Democracy is neither cheap nor easy. It is very hard and it is very costly. But it is worth any price we need to pay, and it is worth every thought and every effort we give to it today. To have it and keep it depends on the attitude behind it and the framework in which this attitude expresses itself.

We are already witnessing the development of the attitudes of the future in the international world. It has been expressed in our lend-lease policy in the United States. We are already witnessing many of the patterns in our own national life that must be projected into the future if we are going to save the peace. We are going to see more of the attitude that the freedom of one of us is bound up in the freedom of all, and that we can't be realistic about democracy without being realistic about the obligations and the welfare of every person and every group in a democracy.

When peace comes! When peace comes, a thousand years will stretch out before us and we will succeed in our dreams only as we are worthy.

Thank you.

Aviation Legislation

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LEA. Mr. Speaker, the Committee on Interstate and Foreign Commerce of the House has prepared a bill to amend the Civil Aeronautics Act of 1938 which, as chairman of that committee, I hope and expect will be reported to the House within a reasonable time after the session reconvenes on the 14th of September.

Committee Print No. 3 of this bill has been made public and interested persons have been invited to make constructive suggestions as to any phase of this legislation.

The method followed in writing this legislation has mainly been amending and revising the Civil Aeronautics Act of 1938 based upon the experience of the 6 years in which this act has been in operation.

The bill also attempts to anticipate the probable developments in civil aeronautics which will come with the expansion of aviation within the forseeable future. The bill attempts to give aviation its rightful opportunity to expand its usefulness both domestically and internationally.

SUMMARY OF BILL

Speaking in broad terms, the main provisions of the bill may be summarized as follows:

First. The name of the Civil Aeronautics Board is changed to that of the Civil Aeronautics Commission. The Commission is given an independent status and clothed with quasi-legislative and quasi-judicial powers. The Administrator is also taken from the Department of Commerce and given a more independent status.

The bill clearly defines the duties of the Commission and the Administrator in relation to each other. The Administrator is charged with duties as to such matters as the construction of air navigation facilities, and many other administrative matters. In performing the more important of these duties, the Administrator will act under the supervision of the Commission.

Second. The bill provides for a Director of Air Safety and restores accident investigations to an independent status under such director.

Third. It proposes an investigation and report by the Postmaster General and also by the Civil Aeronautics Commission as to the feasibility of carrying all classes of mail by air when delivery would thereby be speeded.

Fourth. It calls for an investigation and report by the Civil Aeronautics Commission, furnishing information with suggested plans for meeting postwar developments in civil aviation.

Fifth. It provides for a broad program of aviation training and education.

Sixth. It proposes a long-range program under the direction of the Administrator of Civil Aeronautics for the development of air navigation facilities including airports.

Seventh. It provides a plan for protecting the safety of flight by furnishing a means for removing or preventing hazards to air navigation on and in the vicinity of airports.

Eighth. It extends and further defines Federal jurisdiction respecting air navigation and air commerce.

Ninth. It strengthens our national policy with respect to the development of air transportation and the protection and promotion of air navigation.

Tenth. It contains more strict provisions against the issuance of passes in air transportation.

Eleventh. It provides for reasonable compulsory extensions of air-line service, particularly in the foreign field.

Twefth. It brings contract carriers by air under economic regulation.

Thirteenth. It has provisions designed to prevent the growth of interstate trade barriers to commerce by air.

Fourteenth. It provides for a study of multiple taxation of persons engaged in air commerce and of their employees in order to develop recommendations to prevent the growth of unjust and unsound tax policies for civil aviation.

Fifteenth. It introduces numerous improvements in the administrative procedure under the Civil Aeronautics Act.

Sixteenth. It provides for strengthening and expanding the Weather Bureau service in aid of our air navigation, both domestic and international.

Seventeenth. It codifies civil aviation law by bringing isolated legislative provisions into the Civil Aeronautics Act.

Eighteenth. It gives the airman in command of an aircraft, or other authorized employees, adequate power to assure safety and prevent disorderly conduct.

Nineteenth. It calls for an investigation and report by the Civil Aeronautics Commission as to matters affecting aviation insurance and reinsurance.

Twentieth. It makes clear that all employees of air carriers are subject to the Railway Labor Act and it extends that act to contract carriers by air and their employees.

Twenty-first. It provides for the cooperation of local, State, and Federal authorities in the promotion and coordinated operation of air transportation.

Destroying Food To Keep Prices Up

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MICHENER. Mr. Speaker, the paper, Labor, published by the railroad brotherhoods in Washington, contains a front-page article this week under the caption, "Destroying food to keep prices up. Wanton waste reported as common practice at big city markets." The article then advises that—

> Vast quantities of freshly grown vegetables are being dumped at the city's markets with the object of maintaining prices which are so high that they are beyond the reach of the pocketbooks of many Gotham families. The same wanton destruction of food apparently is under way in other parts of the country.

Now, Mr. Speaker, this seems unthinkable, yet the source of the publicity gives it credence. If foodstuffs so badly needed by our people at this time are being destroyed in order to maintain prices, then those participating in this policy and in this destruction are not only impeding the war effort but their personal greed makes such conduct reprehensible and unpatriotic. Here is a place where the Food Administrator can do something about it. Here is a place where those in authority should act instanter and not just start an investigation which will only result in the unwinding of miles of red tape. It is instances like this which make for disunity and convince our people that there is something radically wrong with the administration of the laws, rules, and

regulations to which we are asked to subscribe to win the war.

I would not call this matter to the attention of the country if I did not think the article in Labor reported a fact. Only by giving publicity to such conduct and practices can these evils be overcome.

Mr. Food Administrator, the country is depending upon you to prevent such abuses in the future.

Food, Inflation, and Public Confidence

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks, which was contained in a unanimous-consent request made by Representative RAMSPECK, of Georgia, for the benefit of all Members, I submit the following statement:

Mr. Speaker, from considerable study during the recently terminated session and during the days which followed the adjournment of Congress for a recess period, I find that I cannot leave Washington to return home without saying some things which, as a Representative from a great congressional district in Texas and as a Member of Congress, I feel must be said.

As a Representative, and upon my responsibility as such, and as a citizen of this great country, I feel perfectly sure that there has never been a time in the history of our country or of the world when the public confidence of one Nation, the United States of America, has been as important as now. The corrosive effect—yes, the disruptive and destructive effects—of confusion, based upon a combination of things which are going forward, is such that I find myself approaching the subject matter which I desire to present with a feeling of the greatest temerity that has ever possessed me. It is something like approaching a child's tower, built of separate blocks, with the intention of placing one more block atop the edifice without toppling the whole structure—a pile of blocks which has not been superimposed, one upon the other, with special skill, knowledge, or training, but which seems to have been placed at random and with no particular attention being paid to the breadth or stability of the foundation which upholds the structure.

Misconstruction, deliberate and otherwise, of the intentions of man is rampant today, and it is one of the activating forces which keeps the public confidence, wounded as it is, literally aquiver and fearsomely nigh to cracking.

America today has two most important problems about which something must be said and said in a way which will not set up any additional shock to public confidence. These problems can best be expressed as food and inflation. They are indivisible, interlocked, and interwoven, one with the other. They are likewise a part of the lives of every man, woman, and child. To use the language of an American editor, "they affect the prosecution of the war, the making of peace, and perhaps the future of the whole world."

Mr. Speaker, there is a great difference between reasons and excuses. Sometimes, though, an excuse is accepted as a reason for an act or a process. Fear is not a reason. It is, in fact, a very poor excuse. Fear is used in lieu of reason for many of the confusing and destructive things that are being undertaken in the two fields referred to. Fear of inflation is the pretext, shall I say, which is given for the perplexing situation which confronts us with reference to the food situation.

I shall try to discuss the picture as I see it. According to the findings of two widely recognized economists of the Economics Department of the School of Agriculture at Cornell University—F. A. Harper and W. M. Curtis—the administration in the policy which it has followed, or failed to follow, has not checked inflation. Recent occurrences, evidenced by statements, promulgations, and so forth, create in the minds of students the grave question as to whether these problems are properly understood, the question as to whether politics is being used in blaming others for the increased cost of living. These economists claim that the administration, in any event, has not met or coped with the critical situations which have developed, and fear again is expressed that our country is being directed head-on toward the greatest disaster in its history.

First, regarding food, abundant warning was given a year ago that there would be an alarming shortage because of bureaucratic mismanagement, the lack of farm machinery and farm labor. In the midst of a great war, the greatest in the history of the world, apparently food has not received its proper due as an essential. It not only is as essential as planes, tanks, guns, and other implements and matériel of war, but, without food, even the best trained army must fail and fold up. What goes on in the hearts of men back of guns, in the cockpits of planes, men in tanks in the field of battle and in ships at sea, is essential too. If and when the chaotic, critical condition on the home front as to food becomes known to the men in the ranks on far-flung battle fronts, this knowledge will not strengthen but will weaken them. Their mothers and wives at home face the real threat of hunger in many places, insufficient milk for their children in cities and in war industry setups, together with the patent difficulty of supplying sufficient food to our fighting forces, our allies, and our people.

From the beginning of the expression on the part of the administration that inflation was imminent and that the cost of living, if left uncontrolled, would speed the impact of inflation's destructive power, confusion began and has increased without surcease until the present moment. Time does not permit a detailed review, step by step, of the war on the home front against inflation. Before G. M. P. R., May 1942, all sorts of proposals, including subsidies and buying and selling at a loss, were proposed. I was one of the Members of Congress—and there were many—who felt that the appointment of Chester Davis gave hope for improvement on the food front. I knew Mr. Davis as an able administrator, an upstanding and patriotic citizen, with a wealth of experience and high qualification for the place. You all know what happened. And with all kindliness, high respect, and adherence to our Commander in Chief, I cannot but feel the necessity for calling attention to an injustice in this case. I only do this because of the effect this manifest injustice had upon the public confidence, which I am determined, at the expenditure of every faculty and with all of the energy which I possess, to preserve at all cost. This, insofar as my action is concerned, directed by such ability as I possess, may safeguard it.

With one statement in the published letter of the Chief Executive, accepting the resignation of Mr. Davis, I most heartily disagree. I quote:

> It would be unfair to you to insist that you remain, when you feel that all things considered you cannot wholeheartedly support a program to hold down the cost of living.

As a humble citizen, as a member of the party on whose shoulders the Chief Executive was borne to his high seat, and as a Member of the Congress of the United States and a friend both to the Chief Executive and to Mr. Davis, I earnestly hope that the Chief Executive will make no more statements like this. Of course, he knew that Mr. Davis and all other patriotic and thoughtful Americans would support a sound program to hold down the cost of living; and to make such a statement was both beside the point and inimical to the best interests of our country.

As I see it, I submit here for your study a composite picture of the food situation from the standpoint, for instance, of the man behind the counter whose position, I take it, is the terminal at the end of the distribution system which serves the food front. To illustrate, the raw product is produced on the farms and ranches of America. Some foods, such as vegetables, fruits, and nuts, are consumed raw; others must be cooked in the raw, unprocessed state; and others must be processed before consumption. But in any and all events, from origin to the counter where the consumer buys it, we have but to trace the means of its distribution, first by wagon or truck, then by railroad to processing and packing plants, then by rail, truck, or other form of delivery to the retail counter, and you have the picture. From the viewpoint of the man behind the counter, this is a boiled-down summation of one of the most acute problems challenging the people of the United States. The success of the war effort at home and abroad requires immediate action to solve the food problem. We must first

analyze what is wrong, and thereafter what should be done. I feel pretty sure the man behind the counter sees under the heading of what is wrong the following:

I. AIMS

Use of war and fear of inflation to justify domestic measures that fall outside of war needs.

A. Unnecessary expansion of purchasing power for special groups in disregard of economic essentials.

First. Wage and income policy for war-industry workers in contrast with agriculture, processing, and distribution workers.

Second. Weakening of food production, processing, and distribution by a policy of forcing key personnel out of food processing and distribution into so designated war industries.

B. Unnecessary restriction of civilian supply.

First. Affirmative reduction in supply to condition attitude of population.

Second. Absence of full production policy where no conflict with military needs.

C. Unnecessary weakening of the domestic economy by excessive reliance on taxation as an inflationary control measure.

D. Indiscriminate rationing.

First. Rationing of many luxury items, not needed for military purposes, not in short supply, and not essential in diet.

Second. Unnecessarily complicated and burdensome methods and records.

Third. Impairment of purpose by issuance of stamps in excess of available supply of certain rationed products.

E. Imposition of untested reform measures without regard for their effect on supply.

First. Grade labeling.

Second. Profit control.

F. Preconceived determination to impose subsidies.

First. Subsidies and buying and selling at a loss were proposed prior to G. M. P. R.—May 1942.

Second. Unsound and unfair regulations repeatedly imposed on industry, with promises of relief—not fulfilled—allegedly to placate demands for higher wages.

Third. Industry told in August 1942 to petition Congress for subsidies as only means of relief from squeeze.

II. POLICY

Resort to unsound and partially unnecessary price policies.

A. Disregard of the function of price in inducing production and allocating supply.

First. Invitation to false price structure and black markets.

Second. Undermining of moral standards and respect for law.

Third. Presentation of an impossible enforcement problem.

B. Prescription of ceiling prices at wholesale and retail simultaneously and without due provision for controlling essential elements of cost.

First. Disregard of lag between processor, wholesale and retail prices.

Second. Raw material and wages without ceilings.

C. Unnecessary price control of many products.

First. Luxury items; not important in diet.

Second. Items relatively unimportant in inflationary pressures.

D. Disregard of facts and historical pricing policies.

First. Baseless margins arbitrarily prescribed in disregard of facts in hand.

Second. Indirect attempt to change functions and services by prescription of arbitrary and inadequate margins.

Third. An arbitrary classification of stores by ownership and/or volume decreed regardless of functions performed and cost of doing business.

Fourth. Margins prescribed by O. P. A. that in many cases are lower than ever existed and ceiling prices generally that are not sufficient to enable retailers to pay all proper costs and continue in business.

E. Depriving the public of benefits of the normal regulating effects of competition.

F. Apparent disregard of Price Control Act and intent of Congress.

First. Apparent conflict between Price Control Act and hold-the-line order.

Second. Divergent interpretations of law resorted to on bases of expediency.

III. ORGANIZATION

Divided responsibility and insufficient delegation of authority with respect to food production, pricing, and rationing.

A. Responsibility for production with War Food Administration.

B. Responsibility for pricing and rationing with separate divisions of O. P. A.

C. No adequate recognition of controlling effect of pricing and rationing on production and supply.

D. Delegation of authority to W. F. A. and O. P. A. apparently tenuous, nominal, indefinite, and insufficient.

E. Multiplication of levels of alleged authority.

F. Apparent unwillingness to articulate the principal agency—the food industry—which must be relied upon to carry out the policies with the governmental agencies formulating and promulgating these policies.

First. Facts, experience, and practices of food industry ignored.

Second. Provisions of price-control law requiring consultation with industry are negated.

Third. Food industry, in effect, is left with an impossible task.

Fourth. Industry is hamstrung in performing its traditional function.

G. Largely futile attempt to decentralize responsibility because of unwillingness to delegate authority necessary to achieve the purpose.

First. Regional and district O. P. A. price officials have responsibility for computing and establishing community prices but do not have the necessary authority to apply historical margins which have prevailed in the community as a basis for arriving at the prices necessary if local enterprise is to continue.

IV. PERSONNEL

Key administrative personnel not qualified for task by background and experience.

A. Few qualified executives with knowledge of food production, processing, or distribution in first-level positions.

B. Economists and lawyers, inexperienced in food industry matters and in administration placed in control of price making.

C. Predilection for reform, rather than fulfillment of purposes of O. P. A., appears to have been a prime requisite in selection of O. P. A. personnel.

D. Internal conflicts, duplicity, and grasping for power have resulted from employment of personnel inexperienced in organization and unaccustomed to responsibility.

V. METHODS

Unnecessarily legalistic methods, undue multiplicity of conflicting and incomprehensible regulations, and theoretical and generally unworkable plan.

A. Adherence to methods predicated on assumption of universal dishonesty inevitably induces noncompliance and circumvention.

First. General nonviolent noncooperation throughout the population.

Second. Black markets.

Third. Indexes of cost of living rendered valueless.

Fourth. Accentuation of decline in morals.

B. The number and complexity of regulations is without practical relation to need.

First. Over 29 maximum-price regulations on food sold at retail level.

Second. More than 60 price regulations applying to food back of retail level.

Third. Ten ration orders affecting food distributors.

Fourth. Innumerable amendments—G. M. P. R. has been amended more than 50 times and at least 15 supplementary orders have been issued under G. M. P. R., 1 of which has been amended more than 160 times.

Fifth. More than 7,800 pages, averaging at least 2,000 words each, must be comprehended and complied with by food retailers.

Sixth. Average food retailer, among a total of over 400,000, unable to read and digest, much less comprehend and comply with, overwhelming regulations and red tape.

C. Insufficient time allowance for implementing changes and new regulations.

First. Many price orders become effective on date of issue; others 1 or 2 days later.

Second. Copies of regulations frequently not available, even in Washington, for several days after effective date.

Third. Ration point value changes announced publicly and made effective before retailers can post new point values.

D. Unnecessarily complicated and burdensome record-keeping requirements.

First. Innumerable records not usually kept are required for both price control and rationing.

Second. Record keeping imposes requirements beyond resources of available manpower and equipment.

Third. Record-keeping irritation adds increasingly to employee turn-over to number of merchants giving up and discontinuing business.

Fourth. Increased cost of record keeping accentuates business mortality.

E. Discriminatory and inequitable enforcement methods.

VI. MANPOWER

Unrealistic policy with respect to essentiality of manpower in food processing and distribution.

A. Essentiality of manpower in food production on farms now recognized.

B. Food produced on farm must be processed and/or distributed to ultimate consumer.

C. Essential key manpower being driven out of food distribution and into war industries by absence of an official declaration that food distribution is an essential activity.

First. Turn-over in some war industry centers currently at rate of 10 percent a week—over 500 percent a year.

D. As a consequence of an inadequate manpower policy, food distribution becomes progressively less able to carry out price control and rationing measures.

VII. ALLOCATION

Lack of clearly defined and publicly accepted policy for allocation of the food resources subject to the disposal of the United States between (a) its military forces, (b) its civilian population, (c) lend-lease, (d) Latin America, and (e) rehabilitation of foreign populations.

WHAT SHOULD BE DONE

The aims which serve as touchstones for measures taken in the food situation should be the war aims of the people of the United States and briefly are as follows:

I. AIMS

A. Induce increasing production.

B. Maintain the traditional distribution economy.

C. Foster private enterprise.

D. Maintain price equilibrium.

E. Arrange equitable distribution of basic commodities in short supply.

II. PRICE CONTROL

A. Take the necessary legal measures to make possible:

First. Promulgation of a price formula to permit establishing a primary market price range consisting of maximum and minimum prices for basic commodities in short supply which will induce maximum possible production and cover all reasonable costs of the producer.

Second. Promulgation of percentage margins for processors not lower than their percentage margins in effect for 1941 and to be applied to the cost of products procured pursuant to the primary market price range.

Third. Promulgation of percentage margins for distributors not lower than their percentage margins in effect for 1941 and to be applied to the cost of products procured from their sources of supply.

Fourth. Promulgation of one maximum ceiling price at consumer level sufficient to cover the aggregate of one, two, and three, immediately preceding, and to cover only basic food products while in short supply (prescribed percentage margins and resumption of competition should keep maximum prices in various kinds of retail outlets in proper relationship without arbitrary classification which does not recognize functions performed).

Fifth. Requirement of consultation with representatives of the business affected before promulgation of regulations and requirement of publication of a statement of findings and of agreement or disagreement by both parties—Government agency and business representatives.

III. SUBSIDIES, ROLL-BACKS, AND GOVERNMENT TRADING AT A LOSS

Take the necessary legal measures to:

First. Prevent the use of consumer subsidies.

Second. Prevent buying and selling at a loss by Government for the purpose of obscuring an indirect subsidy; at a time when incomes of wage earners are at the highest level in history.

Third. Prevent a roll-back of prices in any way which will result in a squeeze that threatens to deprive producers of their established distribution outlets or deprive consumers of their customary sources of supply.

IV. RATIONING

A. Restrict rationing to basic foods while they are in short supply.

B. Issue ration currency only in amounts corresponding with the available supply of the rationed products.

C. Consider adoption of one ration stamp of one denomination to cover all domestically produced food products.

D. Simplify rationing system and reduce number and complexity of reports.

V. ORGANIZATION

A. In order to carry out the previously stated aims and to execute the policy of price control previously outlined, the following organization adjustments should be made:

First. Such functions as are to be exercised with respect to the production, pricing, and rationing of food should be consolidated in one Federal agency under a single administrator who is qualified by background and experience and in whom is vested all necessary authority.

Second. Proper coordination should be provided between the food administration and other war agencies such as manpower and transportation.

Third. Develop a local organization pattern to decentralize operations with delegation of necessary authority.

VI. PERSONNEL

A. All personnel in key positions should be qualified by background and experience in the function and with the products with which they are required to deal.

B. Lawyers should be confined to strictly legal work; economists should be confined to fact-finding and advising on economic matters.

C. There should be a thorough and disinterested review of personnel in all agencies dealing with food, with a view to a drastic reduction in the number and more effective utilization of those retained.

VII. METHODS

A. Discontinue the present legalistic system with its multiplicity of complicated and unworkable orders and regulations.

B. Substitute minimum possible number of simple and understandable orders necessary to carry out the policy previously outlined.

C. Publication as a part of each government regulation or order of the name and title of each government official whose approval was required for the issuance of such order.

D. Minimize record-keeping requirements and reports in conformity with less extensive needs under policy previously outlined.

VIII. MANPOWER

A. The War Manpower Commission should immediately declare food processing and distribution essential activities.

Summing up, with reference to the terminal of the distribution system which serves food, at the end of the transportation lines which lead from pastures and fields to the counters, I would like to call your attention to the four fundamentals involved with reference to the situation presented by the food problem to the man behind the counter and to the consumer who stands before him patiently waiting to be served.

These four fundamentals are:

First. What specific policy should be laid down to control the allocation of food resources at the disposal of the United States between (a) the military forces, (b) the civilian population, (c) lease-lend, (d) Latin America, and (e) foreign rehabilitation.

Second. What price policy should be laid down to induce increased production, proper allocation of supplies among the civil population, and at the same time to avoid excessive or dangerous price increases.

Third. What consolidation of the functions of Government agencies related to production, pricing, and rationing of food is necessary duly to relate authority to responsibility.

Fourth. What manpower policy can be laid down to assure the producers of food that their system of distribution through processors, wholesalers, and retailers will be reasonably maintained.

These, in brief, are the fundamental questions which confront us as a people. Mere words will not correct this situation. Recent developments which have appeared in the papers published by the press of this Nation, together with many which are still under cover, indicate certainly that action is needed.

What I am about to propose is more than an idea, and instead of expressing it in legal language, may I put the proposition before you in the form of an interrogation? Why not, upon our return, draft and pass a law to generally accomplish the following:

First. The policy to be observed with respect to prices should be very carefully defined and channelized. This, because of the already evidenced avidity on the part of some of the learned philosophers,

pedants, and professors in O. P. A., exhibited in their arrogation to themselves of powers not contained in either the Price Fixing Act or the Constitution. Added to this is their complete disregard of the effect of the exercise of this arrogated power upon the American way of life which the flower of our land is seeking to preserve on the widespread battle fronts of the world.

I wonder if there should not be a provision for establishing maximum and minimum prices in the case of basic commodities where there is a definite need for price limitations? If possible, state in the law the factors which would create the need for price limitations. It would seem desirable. Then it would seem important to specify the factors determining the point at which the base price should be set with a maximum and minimum or a floor and a ceiling. Then it would be important to have a provision that base prices when set must provide for the proper financing of all reasonable costs of production with reference to the article covered.

After that, it should be stipulated that processors and distributors entering into the stream of distribution at stages subsequent to that at which the base price is set, should be required to determine their ceiling price by use of the standard mark-up which they used for pricing in the year 1941.

It would also be desirable to provide in the law for a definite procedure that would require the food manager or administrator to consult leaders in the industry producing the product for which a base price is set before prices or regulations are officially promulgated and made effective.

All of the foregoing is predicated, of course on the assumption that such legislation would aim to concentrate the responsibility for production, pricing, and rationing in a food administration whose offices would be created by law and who would report directly and solely to the President of the United States.

If the roll-back and subsidy issue is disposed of in other legislation, it probably need not be taken into consideration in a situation of this kind.

It seems to me that a bill aiming to do what is suggested in the preceding comments might reasonably include in the statement of its purposes that of fostering production of food by sound economic methods in order to restrain inflationary tendencies and trends, first, by inducing an increase in supply; second, by the fixing of prices where imperative; and, third, a rationing consumption only where a stipulated set of conditions requires, and then only temporarily or during the existence of such conditions. In other words, there should be a stipulation which forces reconsideration of price and rationing actions taken under the act periodically, for instance, at least every 6 months, and a demonstration ultimately made public that there are sound reasons in conformity with the policy stated in the law for continuing price limitations and rationing on each affected commodity.

Now, my colleagues, let us have a look at the transportation situation which affects that stretch back from the retail counter to the processor, or direct from the retail counter to the fields.

Not very long ago, in my district, a serious situation developed by reason of orders by the Office of Defense Transportation, O. D. T., prescribing minimum car-lot loading of onions. Onion shippers were told that 40,000 pounds was the minimum load which could be shipped per carload. For the benefit of those who only know onions when they are present and when their fumes either bring tears to their eyes or their proper use in food tickles the palate, let me give you in a little detail the facts concerning onions and shippers of onions.

The shippers of onions make contracts with farmers who produce onions, giving them indications as to the price onions will bring and the number of crates the shippers' pocketbooks can afford to pay for. One shipper of onions who lives in my home town and who has crating and packing sheds for vegetables ot all kinds, including onions, at railside in various sections of my district, has been in this business for over a quarter of a century. It is, therefore, reasonable to expect that he knows his business. He and other shippers received the orders from the O. D. T. during the time that they were making contracts with growers and after some onions had already been planted under agreements between the grower and the shipper. This shipper had found out that 24,000 pounds was the maximum load of onions which could be shipped safely to distant markets. He had discovered that to load more crated onions into cars than 25,000 pounds inevitably crushed the three lower tiers of crates and the onions in them to a condition where they were no longer merchantable. They would therefore not be accepted by the consignee. Also, the fumes released by the crushed onions at the bottom of the car permeated the entire remainder of the load and caused such complete deterioration as to destroy the merchantability or marketability of these onions upon arriving at destination.

I was requested by the shippers all over my district, as their Representative in Congress, to see what could be done about this matter. Upon my first contact with the O. D. T., I was told that they would conduct a test as soon as the onions were available to see whether the shippers were right in their contention. After considerable effort on my part, apparently my remonstrance reached the attention of the Administrator of Defense Transportation, who, may I say, immediately told the onion shippers to go ahead with their business.

This is merely an illustration of that particular class of problems which arise which in reason should never occur. Basically, the various agencies controlling the operation of the lines of endeavor of people engaged in the production of food should never issue a regulation affecting these producers or distributors without first consulting them in detail.

A long time ago Thomas Jefferson, in a letter to Edward Livingston, wrote this. I quote:

> In one sentiment of [your] speech I particularly concur: "If we have a doubt relative to any power, we ought not to exercise it."

This would be an excellent axiom for all of these agencies who wield power to change or to affect the American way of life to remember and never forget.

Second. I would suggest to them that they remember that the business of producing food and of feeding this Nation through distribution of food has been developed over the years by the know-hows, and, were I in the place of those who indicate that in certain realms of endeavor they are know-nothings, I would attempt to do some finding out before I acted.

The paper this morning, Thursday, July 15, contained references to trainloads and carloads of various kinds of goods that have spoiled or are spoiling, either en route or at points along the lines of distribution. Recently, in the West, in the East, and in the South, during a national dearth of potatoes, transportation facilities were so limited and restricted—I refer to trucks, and so forth—that literally thousands of carloads of potatoes spoiled or sprouted in the fields because they could not be moved.

Many farmers throughout the United States have made applications for the purchase of vitally necessary automobile trucks to move produce to railhead or to concentration point, or to be used on and around farms and ranches, and have either been disastrously delayed in the procurement of these items or they have been flatly denied, and in some cases without apparent or intelligible reasons given therefor.

So much for the distribution situation, which time does not permit me to discuss at greater length.

Now for a suggestion—a well developed articulation between the Office of Defense Transportation, producers, processors, shippers, and distributors, as well, including the O. P. A. and the W. P. B. This articulation is even today a long way from being effective, although in some phases it is partly accomplished.

Let me at this juncture, and for the purpose of bringing squarely before you the unmistakable situation which confronts the slaughterers of meat in this country, present this example. I offer you the following for your review and study.

I called upon the O. P. A. and upon the W. F. A. for copies of regulations, orders, press releases, concerning orders, and numbers of amendments—numerals indicating amendments which appear as footnotes to the papers referred to—solely on the matter of regulations fixing quotas, distribution, prices, and sales of meat as they affect packers, slaughterers, and so forth, of all kinds. I did not include retail or chain stores which handle meat.

From the O. P. A. I received a document in fine print containing 8 pages of 75 lines per page, 600 lines total, and

containing approximately 10,800 words. This document has reference on its first page, alone, to such a great number of amendments and references to other orders that I was unable and unwilling to attempt to give you the pages and words involved.

From the W. F. A. I received copious documents, containing 329 paragraphs, many of which paragraphs referred in footnotes to other documents and laws and regulations, which would bring the total of reading matter required of butchers, slaughterers, and packers up to an imponderable and more than formidable array.

If these tradesmen were to check on the time it requires to read and assimilate, only, without being able to understand and decipher thoroughly, the lack of time for the purpose of conducting their business might constitute a real basis for the meat shortage.

If you were to take the time, as I did, to read through this mass of material, you would have a far clearer understanding of why we have so little beef with so many live cattle roaming the ranges of our country. Such a tremendous surplus of red tape can do no less than produce stagnating confusion.

In these tragic days a surplus is indeed a blessing, if we can devise ways and means of using it to our benefit, rather than permit it to torture us, as seems to be the condition today.

On June 24 I addressed the House concerning the meat situation and the beef-cattle industry of the United States, and made reference to the inflation scare as well as to the adoption of the proposed surplus and roll-back program. I refer you to that address, insofar as what I have to say on meat and inflation has bearing thereon in this discussion.

Let me read to you a statement in which I collaborated, coming from the beef industry and its various elements, to clarify your mind. These elements, generally speaking and without breaking them up, include producers, processors, slaughterers of all kinds who do not process, distributors, and breeders. This statement was prepared in my office, and has particular bearing on the recently much-discussed subsidy and roll-back decision, as well as containing pertinent facts concerning the reasons back of the present mystifying as well as destructive beef shortage of today:

There has been no convincing evidence to show in the last World War or in the present World War that the prices of livestock if left uncontrolled would rise sufficiently to become a dangerous inflationary force. At the present time this is best illustrated by the fact that the price of hogs has remained between 14 and 16 cents most of the time, whereas in the last war hog prices reached 24 cents.

The only evidence of extremely high prices for livestock has been in the black market. We feel that the black market is an outgrowth of the Government regulation inaugurated in November 1942 at which time, among other regulations, all killers were placed on a quota of 70 percent of their 1941 average kill. At approximately the same time as the quota system was inaugurated a wholesale-price ceiling was also placed in effect. Before this regulation was placed in effect there had been no visible evidence of an over-the-counter meat shortage in the country. After this regulation was imposed the Government did buy for Army, Navy, and lend-lease purposes approximately 35 percent of the total meat killed in the United States. All of this meat was purchased from or through federally inspected killing plants, which at that time were killing 65 percent of all the livestock coming to market. As a natural consequence of this heavy buying by the Government and the various requisitions, inducements, and edicts issued to get the federally inspected plants promptly to fill Government orders, the federally inspected plants withdrew to considerable extent from supplying the civilian population in many localities. This left the small plants without Federal inspection, comprising about 35 percent of the total killing capacity, and whose quota was only 70 percent of 1941, with the impossible task of supplying the civilian meat needs of the country. It seems perfectly clear that under this condition black-market operations were to be expected and did exist in very substantial volume.

As far back as August 1942 the announcement of the intention of imposing price ceilings on livestock had so disturbed the confidence of the livestock producers that by the time the quota and ceilings had been imposed the effect of this lack of confidence in the livestock producers was strongly in evidence in the lack of cattle ready for immediate slaughter in January and February 1943. Far more important, however, than this temporary scarcity of finished cattle could be slaughtered to meet the civilian demand, regardless of how many cattle were available in the country. When the consequences of these regulations became apparent, the representatives of the various groups comprising the livestock industry asked for immediate removal of the quota system. The industry was met by the assertion that all would be worked out as soon as the ration-card system was also in effect. The industry again patiently waited to see the results of this system.

It is important at this point to state the facts covering cattle population pertinent to the preceding discussion, as follows: At the time of the 1929 crash there were approximately 59,000,000 head of cattle in the country. While this population was heavy the increase in the civilian population of the country made the number fairly low on a per-capita basis, but still sufficient for all known civilian needs. In 1932 this cattle population had increased to 74,000,000 head and the Government then stepped in and through purchase and subsidy, had 8,000,000 cattle killed. The Department of Agriculture now estimates that the cattle population will reach 82,500,000 head by January 1944. To plan for the good of the beef industry and to avoid similar overstocking conditions to those that prevailed after 1932, these numbers should be reduced during the next few years, so that at the end of the emergency our ranges and farms will not be overstocked. By planning to increase the Bureau of Animal Industry slaughter by 6,000,000 head for the next 2 years we would have enough additional slaughter in the country to provide for the total supply of meat needed for Army, Navy, and lend-lease, plus a surplus over and above normal, of around 1,000,000,000 pounds of beef per year for the civilian counter.

By March 17, 1943, the accumulated bad effects of Government regulation had made it necessary for all branches of the livestock industry to get together for the purpose of working out and submitting a comprehensive plan of their own for the good of the country and the salvation of the industry. It is true that beginning back at the time when price control was first attempted under an Executive order and on down through the period of time after Congress had enacted the Price Control Act, the industry, both the producers and the processors, had separately made numerous recommendations to the Office of Price Administration setting out suggested procedure to be followed that was believed by the members of the industry to be wise. These suggestions had uniformly been disregarded by the officials of Office of Price Administration and the failure to recognize or put into effect any of these suggestions was kept as a Government policy up to the stated date of March 17, 1943. At that time meetings were held by Office of Price Administration and by the Director of the Board of Economic Stabilization in Washington, and by the officials of the Department of Agriculture charged with the duty of administering the war food program, and the various elements of the industry became aware that additional regulations were to be issued by the various agencies dealing with the meat industry. Acting on this information and on the experience gained from observing the effect of the previous regulations, the livestock producers, feeders, marketing agencies, and all elements of packing industry, held a joint meeting in Chicago on April 2 and 3, 1943, which meeting followed separate meetings of the elements of the industry that had been held just prior to that time. As a result of these joint meetings of all the elements of the industry, a unified program or plan was unanimously decided upon and this plan was put into concrete printed form entitled "A Program for Solving Wartime Meat Problems." An industry committee was formed, known as the Livestock and Meat Council, upon which committee there were representatives of all the various elements of the industry. This council came to Washington and presented the above referred to program as the industry's suggestion to the Government of the means to solve the problems in the industry. This plan was presented to the various governmental agencies during the week beginning April 4, 1943. After a little more than a month's deliberation, the Director of Office of Price Administration, Prentiss Brown, the Administrator of the War Food Administration, Chester Davis, and the Quartermaster General of the United States, Maj. Gen. E. B. Gregory, signed a statement endorsing the suggested plan with some minor administrative changes, and the announcement was made that this plan would be put into effect.

This plan is simple. It calls for the recognition of the fundamental law of supply and demand. The supply is known, or at least easily determinable by observation of the slaughter records. The demand has three factors—the armed forces needs, the civilian needs, and lend-lease requirements. All other factors must yield to the proper necessity to meet the reasonable requirements of the armed forces. The civilian needs are controlled by rationing with the point value being fixed but not invariable. The lend-lease demands would be very flexible, being coordinated with the actual slaughtering. Any surplus slaughtering, that is any surplus above requirements for the armed forces and lend-lease, would be absorbed by adjustment of civilian ration points.

Following the endorsement of the plan by the above-named officials, the Government has attempted to put it into operation. The Meat Board has been set up, operating in Chicago, with all essential details of the plan adopted, but, unfortunately and in spite of opposition from the entire industry and from the Office of Food Administration, the roll-back and subsidy plan has been hung on the neck of the plan and it is seriously feared that such an impediment may cause the failure of the entire plan. Certainly it can

and will do no good and only added confusion will result.

There is prevalent a great deal of misunderstanding concerning the effect of the roll-back and subsidy program insofar as it affects meat. Under normal conditions the average per capita consumption of meat in this country was 131 pounds annually. Under rationing the maximum per capita consumption of meat is 104 pounds annually. Actual statistics show the real consumption, now under rationing, quota, and zoning is 87 pounds annually. It is clear that the maximum per capita saving to be effected by the roll-back and subsidy plan, under rationing, is $2.08 and the actual reduction in per capita cost, based on actual annual consumption, is $1.74, which is less than 15 cents per month, or less than one-half of 1 cent per day. In order to effect this infinitesimal per capita saving, the Government's announced plan proposes to spend several hundreds of millions of dollars of public money that must be raised by taxing the people to whom the saving is supposed to be beneficial.

At this point it is well to state that the whole livestock industry is, of necessity, an industry very sensitive to changing conditions in the country and this plays an important part in its successful operation. This is best illustrated by the presence of the largest cattle population on record and at the same time a reduced volume of desirable and edible meat.

The feeling is so strong throughout the entire industry that the subsidy is unsound that the industry wishes to take this opportunity to refuse to accept responsibility for the consequences of the subsidy program, as we feel that it will result, first, in a reduced supply of meat, and, second, in the liquidation of a great many small packing concerns, and the two will greatly impede the war effort.

MEMORANDUM

In 1939 the total number of cattle slaughtered in the United States was 17,201,000 head.

This resulted in consumed pounds of beef, 7,049,000,000; of veal, 934,000,000; total, 7,983,-000,000 pounds of meat from cattle.

From Government estimates we know we will have, by January 1, 1944, a surplus of 15,400,000 head of cattle. This represents a surplus in poundage of 7,700,000,000 pounds. If we slaughtered one-half, or 3,850,000,000, of the surplus, we would produce out of this one-half of the surplus enough meat to feed 74,000,000 people, in addition to supplying our own armed forces and our civilian population with this normal supply of beef, and these additional people would be supplied as bountifully as are our own fighters and civilians. Thus we can, without hurting ourselves, actually supply normal quantities of beef for over 200,000,000 people (Americans, plus 74,000,000). In fact, the use of this surplus would be a genuine service since it would relieve our ranges and our feed lots of a severe strain on their resources.

At this moment, while dictating this discussion, Judge Joseph G. Montague, general counsel for the Texas & Southwestern Cattle Raisers' Association, which, by the way, is an association which has continuously functioned since its organization in 1877 as an organization of producers of beef cattle, is sitting in my office. Some of the members of this organization—in fact, many of them—produce dairy cows.

Judge Montague was born and reared in the cattle country of Texas and, except for the time during which he practiced law and occupied a position on the bench—and, yes, during this time, all of it—he has been in touch with the cattle industry in all of its phases. He has been in Washington a number of times concerning matters of importance to cattle producers in all of the States. Principally, however, in the past, he has represented members of the Texas & Southwestern Cattle Raisers' Association, which has members in 38 States of this Union and in 7 foreign countries.

By way of parenthesis, this association has no political affiliations, inclinations, aspirations, or relationship of any shape, size, or form. Presently, Judge Montague is engaged in attempting to work out ways and means of relieving the beef shortage referred to earlier. You might be interested in Judge Montague's answers to some questions which have occurred to many of you, if not to all of you. He has agreed to answer those questions, and I shall start with a question born of misconception, misinformation, and deliberate misinterpretation of fact. These misinterpretations, and so forth, have occurred mainly in the great centers of population in our country, where the meat scarcity is, of course, felt by most people more than in other sections of the country. I shall now interrogate Judge Montague:

Mr. KLEBERG. Judge Montague, what is there to the statements that cattle producers and cattle feeders are wilfully withholding livestock from shipment to the market? In oher words, as some of the rumors are worded, what is there to the idea that the cattlemen are engaged in a sit-down strike?

Judge MONTAGUE. Well, Dick, there isn't the slightest substance of fact to such a statement. When that statement is made by people who have not studied the question, then it comes from lack of information. When it is made by those who have made a study of conditions, then the statement is maliciously untrue. The cowman couldn't go on strike if he wanted to. His position is like that of a man in a leaky boat. The boat keeps filling up with water. But with reference to the cowman, his grazing land keeps filling up with cattle from year to year and season to season, and, just like the man bailing out a leaky boat, the cowman has to take the cattle off of his range, and a strike is simply an impossibility for him.

Mr. KLEBERG. You mean by that that these cattle must go to market?

Judge MONTAGUE. Cattle mut go to market; the ranges must be relieved.

In order to understand what I am talking about, the fundamental thought must be brought out, and that is that cattle, as such, are not beef. Before cattle can be transformed into edible meat for the supplying of the armed forces, civilian needs, and lend-lease requirements, it is necessary that they be, to use cowman language, "shaped up" for killing.

It is true that right at this time of the year we shall have a very large number of cattle being brought into the markets. These cattle are grass cattle, that is, they have not been given any supplemental feeds of any kind and they come directly from the range country.

Experience in the past has always been that approximately 60 percent of these cattle coming out of the grass are what in the trade is known as two-way cattle, that is, 60 percent of those cattle are bought on the open market by feeders for short-time feeding. Farmers and commercial feeders take them off of the market and feed them from 60 to 90 days, thereby increasing their weight substantially, and also improving the grade of the meat.

This year there are no two-way cattle. All of the cattle that are coming off of the grass are being slaughtered now. This means that for the next 4 or 5 months the country will have a very large supply of meat, but the disaster that will fall on us next winter and especially next spring is due to the fact that there will be no fed cattle, and just can hardly be imagined.

Mr. KLEBERG. Let me at that juncture see if this example has anything to do with what you say with reference to the fact that there will be no fed meat or no fed cattle:

Let's take a 700-pound steer, put him on feed for 100 days, that is, corn, and according to my figures, that steer has to sell for about 16.68 per hundredweight at the present price of corn and feed-lot help in order to pay the cost of purchasing steer and feeding him.

The Office of Price Administration has fixed a ceiling price on the packer who, by the way, is the principal market for range cattle, at $14.50. Is that what you are talking about?

Judge MONTAGUE. That is exactly what I am talking about. The function of the feeder is twofold: First, he increases the poundage and at the same time improves the grade and quality of the meat; and, second, he relieves the market of a pressure during the rush of grass cattle to the market, and brings cattle on to the market at a time when there is otherwise a shortage.

Mr. KLEBERG. That is because of the fact that at the time fed cattle come in to market, the ranges are usually low in grass and range cattle are thin. Is that not correct?

Judge MONTAGUE. That is right. They are not in condition for slaughter at all. The feeder makes his money not only out of the increased poundage that he adds to the animals, but out of the improvement in grade, in quality of the meat.

Mr. KLEBERG. And, also, he makes his money, if he happens to be a producer of corn, out of the increased price he gets for the corn converted into first-class beef.

Judge MONTAGUE. During the last 15 years the economy of the country in reference to cattle and farming has developed so that the grain farmer, principally the corn farmer, has found it to his advantage to market his corn through feeding it to livestock.

Mr. KLEBERG. Right at that juncture, Judge Montague, the ceiling price at which packers can sell pork would indicate that the corn will be fed to hogs rather than to cattle. Do you agree with that statement?

Judge MONTAGUE. That is true. The farmer who has corn on hand can get a higher return from feeding his corn to hogs than he could by feeding the corn to cattle under present conditions. The reason for this is that the ceiling prices that have been fixed on high-grade beef are out of relationship as established by history to pork. There has always been a margin on the market between beef and pork that brings about a proper relationship so that there is practically no difference between the return to the farmer from feeding corn to hogs or cattle.

Under present conditions, however, the farmer gets a far greater return by feeding his corn to hogs. This is proven by the fact that during the last month we have had a tremendous run of hogs on the market, showing that hogs have been finished for slaughter and at the same time we have had practically no cattle on the market, showing that cattle have not been fed.

Mr. KLEBERG. Now, Judge Montague, to make the maximum out of the blessing of having a surplus of livestock in this country, do you or do you not think it is important to utilize this surplus to its maximum advantage at the present time?

Judge MONTAGUE. That is an absolute necessity. We have not only a maximum number of cattle on hand, but the demand is

far greater than has ever been known in this country. Those two elements should be brought into relationship with each other.

Mr. KLEBERG. In addition to that, isn't it equally true that the increase in the purchaseable supply of beef across the counter would constitute a formidable addition to the stock pile of consumer goods which must be increased if we are to fight against the inflationary situation which presents itself in excess capital and purchasing power over low consumer goods?

Judge MONTAGUE. That is absolutely true. I think it is axiomatic that if you have a bountiful supply, you cannot have an inflationary tendency in that commodity.

Mr. KLEBERG. Isn't it equally true that if the available across-the-counter supply of beef which could be developed by putting the beef cattle industry to work as it alone best knows how, that is to say, reinstituting the orderly process of feeding, as well as the shipping of two-way cattle that you just referred to, increasing thereby the poundage of beef by the distribution of properly marketed corn through livestock, this problem can best be met?

Judge MONTAGUE. Yes; there must be some order brought out of chaos that exists today. The most important thing to do today is to eliminate the confusion that exists in the industry because of so many regulations placed on the industry by the various governmental agencies.

Mr. KLEBERG. You mean regulations and restrictions?

Judge MONTAGUE. Regulations and restrictions, yes; though nearly every regulation is a restriction.

And what is just as important, the constant threat of additional regulations and restrictions, these threats coming by way of press releases from the Office of Price Administration and other such agencies, all of which tend to aggravate the confusion that exists today.

Mr. KLEBERG. Among those things you are referring to is the statement in this morning's paper that the Office of Price Administration is proposing to fix ceiling prices on live animals. What do you think of that?

Judge MONTAGUE. That has been one of the strongest factors leading to the confusion that exists today for over a year. The entire industry, from the man who raises cattle down to the processor, knowns that no one can or is able to write an order fixing ceilings on live animals that is susceptible of enforcement.

We have all studied this proposition, and if such an order could be drawn it would not receive the serious opposition of anyone. But for over a year we know that various governmental officials have been trying to draw such an order, always without success. We ourselves have attempted to draw such an order for the purpose of proposing it to the Government, and no one in the industry has ever been able to draw an order that could be enforced. To try to enforce an order that is not based on reason and which would not assist in dissipating confusion, but would just add to confusion is not feasible nor reasonable.

A committee of the industry worked on this problem for 60 days, and finally submitted a plan with the statement that "This is the only plan we can offer to the industry, and it won't work."

Mr. KLEBERG. Now, with reference to what you say about the industry committee, this committee, as I understand it, recently held meetings in Chicago in an effort to find and offer a solution to the beef situation. Did you attend that meeting?

Judge MONTAGUE. Yes, sir, I did.

Mr. KLEBERG. As I understand it, the committee offered a plan. Could you give a brief outline of that plan, Judge Montague?

Judge MONTAGUE. Yes; the plan can briefly be summarized like this: It calls for a recognition of the fundamental law of supply and demand and lends the entire industry's efforts to bring about a balancing of the demand with the known supply. Specifically it calls for a meat board to be established by the Government, which board would sit in Chicago, which is the center of the meat industry, and have authority to do all of the buying for the Government, both for the armed forces and for lend-lease requirements. By unifying that purchasing power, we have the Government purchasing approximately 40 percent of the entire meat supply of the country. Any single agency in any industry that has the purchasing power over 40 percent of the supply automatically is placed in the position of controlling the price on the entire supply.

This meat board would have working with it a committee from the industry, which committee would represent a complete cross section of every element in the industry from the breeder of cattle to the man who sells the meat across the block. This committee would sit with the board from day to day, and they would agree as to what price the cattle should bring on the market that date for governmental purposes, and thereby reflect back the price that the civilian beef would bring.

The board would necessarily have to have authority to fluctuate prices somewhat, so that when there was an oversupply of livestock on the market, it could shorten that supply by reducing prices, and if there was a shortage of supply on the market, it could attract the supply by increasing prices slightly.

This plan worked most efficiently in the First World War, and the industry can see no reason why it would not work during this war. Of course, it calls for one fundamental thing which we know we have, and that is every segment of the industry and every individual in it would have to eliminate from his mind all thought of selfishness, and the entire industry would have to work for the good of the country.

Mr. KLEBERG. Don't you feel perfectly certain, knowing the men who are engaged in this business, that this would be done?

Judge MONTAGUE. I know it would be done. There is no more patriotic group of men in the world than the cowmen.

Mr. KLEBERG. Don't you know, too, Judge Montague, that knowledge of the cattle industry and the delicate balance which involves its operating parts is only known to men of experience in that industry?

Judge MONTAGUE. Of course, that is true.

Mr. KLEBERG. There is also a big difference, is there not, between the man from one segment of the industry attempting to make recommendations for another segment of the industry with which he is not acquainted? For instance, the man who has been a clerk in a packing house would patently know little of the operations of range or feed-lot management in business, and vice versa.

Judge MONTAGUE. That is true.

Mr. KLEBERG. So, therefore, isn't it patent that if the best results are to be obtained and if the "know how" represented by the industry is to be put to work, it is necessary for the whole industry to select a representative from each group forming this committee to be a part of this operation?

Judge MONTAGUE. That is absolutely essential. No level in the industry can be overlooked in the formation of this industry committee.

Mr. KLEBERG. I am thinking of one other thing that you may help out on in this discussion, which has to do with the direct effect of restrictions.

You were brought up in a section of Texas which, in addition to cattle, produces more sheep and wool than any other part of the United States. I have before me a telegram under date of June 15, which I would like to read to you, and after you hear it, I'd like you to tell me what you think of the present set-up with reference to quotas and other restrictions, compared to the plan you have just discussed.

This is the telegram, addressed to H. J. Flynn, War Food Director, War Food Administration, Los Angeles, Calif.:

"Press reports Los Angeles meat supply reached new low yesterday, and with nothing to sell, scores of meat markets failed to open. Also, that you explain meat quotas virtually exhausted and that new quotas would not become effective until July 1.

"Through your San Francisco office last week we notified Washington of over 50,000 surplus lambs on hand, looking for buyers in northern California at this time, and urge special consideration be given so these lambs, largely of commercial and utility grade, can move to market immediately before their bloom is gone. Ranges are drying. Lambs must move. Lamb feeders all filled up, so only outlet is to slaughter. Present Office of Price Administration and War Food Administration regulations prevent orderly market-ward movement. Urge temporary removal of all points and other restrictions on these lambs so that they can be slaughtered at once.

"CALIFORNIA WOOL GROWERS' ASSOCIATION,
"By W. P. WING, *Secretary.*"

Judge MONTAGUE. Dick, that telegram illustrates a thought that I have had for a long time in which it is absolutely true that the livestock and meat industry is by nature a very sensitive business. It responds more quickly to the vagaries of a fickle nature than any other industry in the world. That telegram illustrates this point, that out there in California they have a bunch of lambs that are ready for market, even getting past the point where they are ready, and yet the attempted regimentation of the industry that depends on nature for its subsistence prevents those animals from going to market.

There are two reasons why you cannot regiment the livestock business. In the first place, no human-made rules, regulations, or restrictions can make a rain come or keep the flood from attacking the range land. It can't keep off a frost, and can't raise the temperature during the summer.

The second reason why you can't regiment the livestock industry is the nature of the livestock man. The man engaged in raising livestock is essentially an individualist. He is perfectly willing to surrender everything that he has for the good of his country, but he doesn't like a college professor telling him what he has got to do, and he won't stand for being so told.

Mr. KLEBERG. Well, I think, summing up, Judge Montague, that it is a fair statement, to judge from what you say, that you believe that the industry can only serve the public best by being given an opportunity to cooperate under requests and regulations which are made by those who understand it.
